

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

### Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

### About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

## SUNDRY CIVIL APPROPRIATION BILL.

---

HEARINGS CONDUCTED BY THE SUBCOMMITTEE, MESSRS. J. A. TAWNEY (CHAIRMAN), W. I. SMITH, W. P. BROWNLOW, G. W. TAYLOR, AND J. A. SULLIVAN, OF THE COMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES, IN CHARGE OF THE SUNDRY CIVIL APPROPRIATION BILL FOR 1907, ON THE DAYS FOLLOWING, NAMELY:

### PUBLIC BUILDINGS.

(See also page 26.)

TREASURY DEPARTMENT,  
OFFICE OF THE SECRETARY,  
Washington, January 2, 1906.

Hon. JAMES A. TAWNEY,  
*Chairman Committee on Appropriations,  
House of Representatives.*

SIR: In response to the request of your committee, communicated to this Department through the Supervising Architect of the Treasury, I inclose herewith statements relative to the condition of appropriations for public buildings under the control of the Treasury Department, showing, under separate headings, the buildings in course of construction December 1, 1905, and also the buildings appropriated for but not in course of construction on the same date, the information given being grouped under descriptive captions indicating the various classes of expenditures incident to public buildings.

Appropriate footnotes, with explanatory references, embracing information which it is thought will be of service to the committee, are appended to each of the statements referred to.

It is requested that 12 copies of these statements, as printed, may be supplied for the use of the Office of the Supervising Architect of the Treasury.

Respectfully,

H. A. TAYLOR,  
*Acting Secretary.*

*Statement prepared for House Committee on Appropriations relative to amounts  
Treasury*

*f* Bids for construction will shortly be opened.

*g* To be constructed under the provisions of the Tarsney Act.

*h* Site or additional land not yet selected.

*i* Government reservation.

*k* Site or land selected, but title not yet vested in United States.

*l* Site partially acquired.

TREASURY DEPARTMENT,  
Washington, December 5, 1905.

MR. JAMES C. COURTS,  
*Clerk to the House Committee on Appropriations,  
House of Representatives.*

SIR: Referring to the estimates of appropriations prepared in this office for the fiscal year ending June 30, 1907, I forward herewith statements explanatory thereof relative to each item.

Respectfully,

J. K. TAYLOR,  
*Supervising Architect.*

UNITED STATES POST-OFFICE, ALLENTOWN, PA.

Limit of cost .....	\$110,000
Amount appropriated .....	85,000
Amount to be appropriated .....	25,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$25,000 will be required. Contract expires August 15, 1906.

RENT OF BUILDINGS, BALTIMORE, MD.

In order to meet the obligations incurred for rented quarters for Government officials pending the completion of the new custom-house building \$1,000 will be required. For offices for Light-House Service.

## UNITED STATES CUSTOM-HOUSE, BALTIMORE, MD.

Limit of cost.....	\$1,851,611.19
Amount appropriated.....	1,501,611.19
Amount to be appropriated.....	350,000.00

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$350,000 will be required. Contract expires March 4, 1907.

## UNITED STATES POST-OFFICE, BATTLECREEK, MICH.

Limit of cost.....	\$110,000
Amount appropriated.....	80,000
Amount to be appropriated.....	30,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$30,000 will be required. Contract expires November 15, 1906.

## UNITED STATES POST-OFFICE, COURT-HOUSE, AND CUSTOM-HOUSE, BILOXI, MISS.

Limit of cost.....	\$125,000
Amount appropriated.....	76,250
Amount to be appropriated.....	48,750

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$48,750 will be required. Contract expires May 16, 1906.

## UNITED STATES MARINE HOSPITAL, BUFFALO, N. Y.

Limit of cost.....	\$125,000
Amount appropriated.....	90,000
Amount to be appropriated.....	35,000

Drawings have been completed for this work and bids obtained thereon, which it was necessary to reject, as they exceeded the amount available. As soon as such drawings are modified the work will again be placed on the market, and the balance of \$35,000 will be needed to complete the work. Work held up subject to action of Congress.

## UNITED STATES POST-OFFICE AND CUSTOM-HOUSE, BURLINGTON, VT.

Limit of cost.....	\$210,000
Amount appropriated.....	180,000
Amount to be appropriated.....	30,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$30,000 will be required. Contract expired February 1, 1906, but work was suspended and six months extra time allowed.

## UNITED STATES POST-OFFICE, CUSTOM-HOUSE, AND COURT-HOUSE, CLEVELAND, OHIO.

Limit of cost.....	\$3,000,000
Amount appropriated.....	1,700,000
Amount to be appropriated.....	1,300,000

Contracts have been awarded for the construction of this building exceeding the amount appropriated by \$570,000. In order to meet such deficiency and to provide funds for continuing the work, a further appropriation of \$800,000 will be required. Contract expired February 15, 1906, but practically a years extension must be allowed.

#### RENT OF BUILDINGS, CLEVELAND, OHIO.

In order to meet the obligations incurred for rented quarters for Government officials, pending the completion of the post-office, custom-house, and court-house building, \$51,428.20 will be required.

#### UNITED STATES POST-OFFICE AND COURT-HOUSE, COLORADO SPRINGS, COLO.

Limit of cost .....	\$175,000
Amount appropriated .....	125,000
Amount to be appropriated .....	50,000

Bids have been received for the construction of this building, which are within the limit, and it is expected that the contract will be awarded in the very near future, to complete which it will be necessary that the balance of \$50,000 be appropriated. No contract yet awarded. Should an increase of time be granted and new drawings required no money need be appropriated at this session.

#### UNITED STATES POST-OFFICE AND COURT-HOUSE, DEADWOOD, S. DAK.

Limit of cost .....	\$200,000
Amount appropriated .....	155,000
Amount to be appropriated .....	45,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$45,000 will be required. Contract expires June 15, 1906, but an eight months' extension of time has been allowed.

#### UNITED STATES POST-OFFICE, DEKALB, ILL.

Limit of cost .....	\$100,000
Amount appropriated .....	70,000
Amount to be appropriated .....	30,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$30,000 will be required. Contract expired April 1, 1906, and building is about ready for occupancy.

#### UNITED STATES COURT-HOUSE AND POST-OFFICE, ELIZABETH CITY, N. C.

Limit of cost .....	\$140,000
Amount appropriated .....	100,000
Amount to be appropriated .....	40,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$40,000 will be required. Contract expires May 31, 1906.

## UNITED STATES POST-OFFICE, EVANSTON, ILL.

Limit of cost .....	<u>\$90,000</u>
Amount appropriated .....	72,500
Amount to be appropriated .....	17,500

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$17,500 will be required. Contract expired March 1, 1906, and building will be occupied in a few weeks.

## UNITED STATES POST-OFFICE AND COURT-HOUSE, EVANSTON, WYO.

Limit of cost .....	<u>\$179,000</u>
Amount appropriated .....	150,000
Amount to be appropriated .....	29,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$29,000 will be required. Contract expires July 1, 1906.

## UNITED STATES POST-OFFICE AND COURT-HOUSE, FARGO, N. DAK.

Limit of cost .....	<u>\$80,000</u>
Amount appropriated .....	50,000
Amount to be appropriated .....	30,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$30,000 will be required. Contract expires February 1, 1907.

## UNITED STATES POST-OFFICE, GENEVA, N. Y.

Limit of cost .....	<u>\$75,000</u>
Amount appropriated .....	60,000
Amount to be appropriated .....	15,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$15,000 will be required. Contract expires December 1, 1906.

## UNITED STATES POST-OFFICE AND COURT-HOUSE, HAMMOND, IND.

Limit of cost .....	<u>\$140,000</u>
Amount appropriated .....	105,000
Amount to be appropriated .....	35,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$35,000 will be required. Contract expires September 1, 1906.

## UNITED STATES POST-OFFICE AND COURT-HOUSE, HUNTINGTON, W. VA.

Limit of cost .....	<u>\$150,000</u>
Amount appropriated .....	111,250
Amount to be appropriated .....	38,750

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$38,750 will be required. Contract expires August 1, 1906.

UNITED STATES POST-OFFICE AND COURT-HOUSE, KANSAS CITY, MO.

Contracts for the extension have been awarded in excess of the amount appropriated by \$120,000. In order to meet these obligations and to provide for the completion of the building, it will be necessary that an appropriation be made of the entire balance of \$140,000, and in view of the above facts it is recommended that the amount be included in the urgent deficiency bill. Building is about completed.

UNITED STATES POST-OFFICE, COURT-HOUSE, AND CUSTOM-HOUSE,  
LAREDO, TEX.

Limit of cost.....	\$150,000
Amount appropriated.....	92,500
Amount to be appropriated.....	57,500

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$57,500 will be required. Contract expires December 15, 1906.

RENT OF BUILDINGS, LOS ANGELES, CAL.

In order to meet the obligations incurred for rented quarters for Government officials pending the completion of the post-office and court-house building \$20,000 will be required. Twenty-five thousand dollars required.

RENT OF BUILDINGS, MACON, GA.

In order to meet the obligations incurred for rented quarters for Government officials pending the completion of the enlargement of the court-house, post-office, etc., \$6,080 will be required.

UNITED STATES COURT-HOUSE, POST-OFFICE, ETC., MACON, GA.

Limit of cost.....	\$306,000
Amount appropriated.....	156,000
Amount to be appropriated.....	150,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$150,000 will be required. Contract expires July 1, 1907. Appropriation of \$100,000 will be sufficient.

UNITED STATES POST-OFFICE, McKEESPORT, PA.

Limit of cost.....	\$110,000
Amount appropriated.....	90,000
Amount to be appropriated.....	20,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$20,000 will be required. Contract expires February 20, 1907.

## UNITED STATES COURT-HOUSE, POST-OFFICE, ETC., MONTGOMERY, ALA.

Limit of cost .....	\$65,000
Amount appropriated .....	65,000

The limit placed upon the extension of this building proved inadequate to complete it in all respects as appeared to be necessary for the best conduct of the business, and therefore it was necessary to omit certain items connected with the approaches, and as it was absolutely necessary to install an elevator, a contract was awarded therefor in amount \$2,359.14 less than the lowest proposal, with the understanding that unless Congress made an appropriation therefor there would be no obligation on the part of the Government to pay the above-mentioned deducted sum of \$2,359.14. As, however, the low figure was reasonable, funds should be provided for paying such balance. To meet these different items it will be necessary that a deficiency appropriation of \$6,000 be made.

## UNITED STATES POST-OFFICE, MUNCIE, IND.

Limit of cost .....	\$80,000
Amount appropriated .....	60,000
Amount to be appropriated .....	20,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$20,000 will be required. Contract expires March 1, 1907.

## UNITED STATES POST-OFFICE AND CUSTOM-HOUSE, MUSKEGON, MICH.

Limit of cost .....	\$70,000
Amount appropriated .....	47,500
Amount to be appropriated .....	22,500

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$22,500 will be required. Contract expires August 1, 1906.

## UNITED STATES CUSTOM-HOUSE AND POST-OFFICE, NASHVILLE, TENN.

Limit of cost .....	\$280,000
Amount appropriated .....	220,000
Amount to be appropriated .....	40,000

The extension of this building has been practically completed and obligations under the limit incurred in excess of \$3,000 of the amount appropriated. To meet this deficiency and to provide for certain items which are still lacking, and in order that the account may be closed and the balance unused turned back into the Treasury, it will be necessary to appropriate the balance of \$40,000. Building is practically completed except some small items.

## UNITED STATES POST-OFFICE, NEWCASTLE, PA.

Limit of cost .....	\$125,000
Amount appropriated .....	86,250
Amount to be appropriated .....	38,750

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$38,750 will be required. Contract expires July 15, 1906.

RENT OF OLD CUSTOM-HOUSE, NEW YORK, N. Y.

In order to meet the obligations incurred for rented quarters for Government officials pending the completion of the new custom-house building \$130,600 will be required.

UNITED STATES CUSTOM-HOUSE, NEW YORK, N. Y.

Limit of cost.....	\$6,744,977.52
Amount appropriated.....	5,944,977.52
Amount to be appropriated .....	800,000.00

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$800,000 will be required. Contract expires October 15, 1906.

UNITED STATES POST-OFFICE, NIAGARA FALLS, N. Y.

Limit of cost.....	\$150,000
Amount appropriated.....	83,750
Amount to be appropriated .....	66,250

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$66,250 will be required. Contract expires March 31, 1907.

UNITED STATES POST-OFFICE AND COURT-HOUSE, OGDEN, UTAH.

Limit of cost.....	\$200,000
Amount appropriated.....	100,000
Amount to be appropriated .....	100,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$100,000 will be required. Contract expires December 1, 1907.

UNITED STATES POST-OFFICE AND COURT-HOUSE, PIERRE, S. DAK.

Limit of cost.....	\$175,000
Amount appropriated.....	125,000
Amount to be appropriated .....	50,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$50,000 will be required. Contract expires October 1, 1906.

UNITED STATES MARINE HOSPITAL, PITTSBURG, PA.

Limit of cost.....	\$125,000
Amount appropriated.....	80,000
Amount to be appropriated .....	45,000

Drawings are being prepared for this work, and as soon as completed the work will be placed upon the market and the balance of the appropriation will be required to complete the work. Work held up awaiting action of Congress.

UNITED STATES POST-OFFICE, COURT-HOUSE, AND CUSTOM-HOUSE,  
PROVIDENCE, R. I.

Limit of cost .....	\$1,000,000
Amount appropriated .....	500,000
Amount to be appropriated .....	500,000

Contracts have been awarded for the construction of this building exceeding the amount appropriated by \$73,000. In order to meet such deficiency and to provide funds for continuing the work a further appropriation of \$250,000 will be required. Contract for superstructure expires December 1, 1906.

UNITED STATES POST-OFFICE, ROME, GA.

Limit of cost .....	\$83,000
Amount appropriated .....	63,000
Amount to be appropriated .....	20,000

The extension of this building has been practically completed and obligations under the limit incurred in excess of \$3,500 of the amount appropriated. To meet this deficiency and to provide for certain items which are still lacking, and in order that the account may be closed and the balance unused turned back into the Treasury, it will be necessary to appropriate the balance of \$20,000.

It is recommended that \$5,000 of this amount be included in the urgent deficiency bill. Building practically completed except small items.

UNITED STATES CUSTOM-HOUSE, SAN FRANCISCO, CAL.

Limit of cost .....	\$1,500,000
Amount appropriated .....	350,000
Amount to be appropriated .....	1,150,000

Contracts have been awarded for the construction of this building exceeding the amount appropriated by \$940,000. In order to meet such deficiency and to provide funds for continuing the work a further appropriation of \$950,000 is needed. Contract expires March 1, 1906. An appropriation of \$500,000 will be sufficient.

UNITED STATES POST-OFFICE AND COURT-HOUSE, SHERMAN, TEX.

Limit of cost .....	\$145,000
Amount appropriated .....	61,250
Amount to be appropriated .....	83,750

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$83,750 will be required. Contract expires March 1, 1907.

## UNITED STATES POST-OFFICE, SPARTANBURG, S. C.

Limit of cost.....	\$60,000
Amount appropriated.....	30,000
Amount to be appropriated.....	30,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$30,000 will be required. Contract expires November 1, 1906.

UNITED STATES POST-OFFICE, COURT-HOUSE, AND CUSTOM-HOUSE,  
SUPERIOR, WIS.

Limit of cost.....	\$300,000
Amount appropriated.....	181,250
Amount to be appropriated.....	118,750

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$118,750 will be required. Contract expired February 15, 1906.

## UNITED STATES POST-OFFICE, WASHINGTON, PA.

Limit of cost.....	\$80,000
Amount appropriated.....	60,000
Amount to be appropriated.....	20,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$20,000 will be required. Contract expired March 15, 1906. Building will be occupied by May 1.

UNITED STATES POST-OFFICE, COURT-HOUSE, AND CUSTOM-HOUSE,  
WHEELING, W. VA.

Limit of cost.....	\$400,000
Amount appropriated.....	280,000
Amount to be appropriated.....	120,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$120,000 will be required. Contract expired March 1, 1907.

## UNITED STATES POST-OFFICE, WINSTON, N. C.

Limit of cost.....	\$60,000
Amount appropriated.....	50,000
Amount to be appropriated.....	10,000

Contracts for the completion of this building have been awarded, and in order to meet the obligation thereunder an appropriation of \$10,000 will be required. Contract expires February 15, 1907.

TUESDAY, April 10, 1906.

## PUBLIC BUILDINGS—Continued.

## STATEMENT OF MR. JAMES K. TAYLOR, SUPERVISING ARCHITECT, TREASURY DEPARTMENT.

The CHAIRMAN. Mr. Taylor, you are the Supervising Architect of the Treasury Department?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. And through the Secretary of the Treasury you have submitted, in response to a request of the committee, a document here, showing the conditions of appropriations for public buildings under the control of the Treasury Department. Has there been any change since this document was submitted in regard to these several items that you know of?

Mr. J. K. TAYLOR. None that I know of, Mr. Tawney.

The CHAIRMAN. I will call over the list in its alphabetical order, and it may be we will want additional information in special cases. If so, you can give it as we proceed.

## BALTIMORE, MD., CUSTOM-HOUSE.

The CHAIRMAN. Take up the item of the Baltimore custom-house.

Mr. J. K. TAYLOR. That is under contract. The contracts for the interior finish are let, and the contracts expire March 15, 1907. I think, however, we need the whole balance of the authorization—\$350,000.

The CHAIRMAN. Will that all be expended during the fiscal year 1907?

Mr. J. K. TAYLOR. Yes; it will all be expended during the fiscal year 1907. By the time Congress adjourns next year there probably will be some \$50,000 or \$75,000 that will not be expended.

The CHAIRMAN. When did you say you expect to have the building completed?

Mr. J. K. TAYLOR. March 15, 1907; between that and the 1st of July the contract will close and the balance of the money will be paid over.

## BALTIMORE, MD., POST-OFFICE.

The CHAIRMAN. Have you seen this bill that has been introduced?

Mr. J. K. TAYLOR. By Mr. Wachter—No. 12989?

The CHAIRMAN. Yes; H. R. 12989. Has your attention been called to that, for the erection of an addition to the post-office at Baltimore?

Mr. J. K. TAYLOR. Yes, sir; in fact, our office called Mr. Wachter's attention to it.

The CHAIRMAN. Do you think that authorization has not been exhausted?

Mr. J. K. TAYLOR. It has not, I know; there is \$497,000 of it still left. It has never been annulled by legislative action and has not been appropriated, and consequently it has not lapsed. It was distinctly left, Mr. Tawney, at the time the building was done. On the back of the third of the lot was an old court-house that belonged to

the Government. That was used by the courts at the time that the new building was being built—the United States courts—and when we finished the Baltimore building and the courts moved out the city was just about ready to build a new city hall, and they asked the privilege of using that old court-house and constructing on the grounds adjacent to it an addition, to occupy for their other offices, which was done, and these two buildings are now occupied by the tenants of the custom-house that were taken out of the custom-house while the new custom-house was being built. As soon as they can move into their building the other building will be torn down. When this building was finished there was \$497,000 left unexpended. The reports of the office show that it was intended to finish the approaches of the building when these other buildings were removed. That data is on file there. That was the original intention. That is why that \$500,000 was left. We never had occasion to use it, and in consequence never asked an appropriation for it.

MR. TAYLOR. How does that stand now—as an unexpended balance?

MR. J. K. TAYLOR. An unappropriated balance.

MR. TAYLOR. Do you remember the date of the original law?

MR. J. K. TAYLOR. It was 1885 or 1886.

MR. TAYLOR. Does the law authorize the retention of that fund?

MR. J. K. TAYLOR. By the general law it stands for the building until it is turned in, or it has to be appropriated before it can be turned in.

MR. TAYLOR. I notice this bill provides that it shall be paid out of the Treasury unless otherwise appropriated. Do you not think that this bill ought to read that it should be paid out of the unexpended balance in the Treasury?

THE CHAIRMAN. There is no unexpended balance.

MR. TAYLOR. He says there is.

MR. J. K. TAYLOR. I imagine that that would read just as the rest of it, Mr. Tawney. For instance, Allentown is for the continuation of a building under the present limit, so much money.

THE CHAIRMAN. For the information of the committee I will read a letter which I have here from the Secretary of the Treasury, and incorporate it in the hearings as a part of Mr. Taylor's statement. [Reads:]

TREASURY DEPARTMENT,  
OFFICE OF THE SECRETARY,  
*Washington, February 27, 1906.*

THE CHAIRMAN COMMITTEE ON APPROPRIATIONS,  
*House of Representatives.*

SIR: In response to the request contained in your communication of the 26th instant for a report upon bill H. R. 12989, "For the erection of an addition to the post-office in the city of Baltimore, Maryland," this Department has the honor to advise you that in its opinion there is an urgent need for the enlargement of said building for the proper transaction of the public business.

It is estimated that an extension of the first floor of said building, having approximately 7,000 square feet of area, and for the necessary changes and alterations in the present building incident to such extension and including provision for suitable approaches, etc., can be made within the limit of cost provided therefor in the bill above referred to.

In reference to your further inquiry as to whether in the opinion of this Department the limit of cost of the building in question has been appropriated in full, you are advised that it is apparent from an examination of the records

of this Department that appropriations to the amount of such limit of cost have not been made.

The building was completed and occupied in March, 1890, and the following statement taken from the annual report of the Supervising Architect for the year 1891 shows that at the time of the completion of the building it was recognized that the extension of the building at some time subsequent thereto was in contemplation. I quote from said report, as follows:

"An examination of the various acts of Congress authorizing the acquisition of site and the erection of the post-office, court-house, etc., building, with the accounts of the expenditures thereunder and the appropriation asked in the estimates, shows the fact that the work on the building and the work to be done on the approaches to the building, that the building has been entirely completed and the work on approaches will be completed largely within the limit of cost, and that \$447,890.62 of the limit of cost prescribed by acts of Congress approved June 18, 1879, March 5, 1880, and March 3, 1881, remains to the credit of the limit of cost.

"Congress will not be asked to appropriate all of the amount fixed as the limit of cost of the site and building by the acts above specified, unless it should be decided at a future time that the needs of the public service render it necessary to erect an extension to the new building after the old building shall have been sold and removed, which will receive consideration at the proper time."

Respectfully,

L. M. SHAW, *Secretary*.

Have you gone into the matter of the necessity of this extension at this time, Mr. Taylor?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. In your judgment do you say it is necessary?

Mr. J. K. TAYLOR. Absolutely necessary for the proper conduct of the post-office business over there.

The CHAIRMAN. Will you prepare and submit the language for the proper appropriation for the purpose as you intend?

Mr. J. K. TAYLOR. I would simply say, "For the continuation of the work under the present limit," just the same as at Allentown here.

The CHAIRMAN. "For the continuation of the work under the present limit of cost?"

Mr. J. K. TAYLOR. Yes, sir; or rather let it be this way:

Post-office and court-house, Baltimore, Maryland: For the continuation, extension, enlargement of, and necessary changes in the post-office and court-house building in the city of Baltimore, Maryland, within the limit of cost heretofore fixed by Congress, \$150,000.

The CHAIRMAN. Under that you would have the authority to go on and build under the present conditions?

Mr. J. K. TAYLOR. Yes, sir.

Mr. TAYLOR. So that language could be stricken out in the bill without any additional words?

Mr. J. K. TAYLOR. I think so.

Mr. SMITH. Which way is this extension to run, as you understand?

Mr. J. K. TAYLOR. East.

Mr. SMITH. The east frontage of this building is completed?

Mr. J. K. TAYLOR. Yes.

Mr. SMITH. With marble or granite, or something of that kind on the front?

Mr. J. K. TAYLOR. Yes; I think it is a granite building.

Mr. SMITH. It was finished all around alike?

Mr. J. K. TAYLOR. Yes.

MR. SMITH. Do I understand that your understanding of the law is that if an authorization be given to build a building to cost \$1,000,000, and after the completed building is erected with the usual outside walls, without any further legislation, we have the right to appropriate money to build a distinct addition to that building?

MR. J. K. TAYLOR. So long as you have not gone outside the limit.

THE CHAIRMAN. Do you know of any instance where that has been done?

MR. J. K. TAYLOR. I never knew an instance of where there is any money left. [Laughter.]

THE CHAIRMAN. Except this one?

MR. J. K. TAYLOR. Yes; except this one.

MR. SMITH. It looked to me very doubtful whether a Chairman of the Committee of the Whole would rule it to be in order to make such an appropriation, if the building is in effect completed.

MR. J. K. TAYLOR. The existing building is not complete, and by the records and reports of the office it is shown that it is not complete, and that it was intended to complete it later. That portion of it that is occupied is completed.

MR. SMITH. You would not have put a front on the east side if you had thought of completing it later? Or would you have considered it completed when you put the outside finish clear around?

MR. J. K. TAYLOR. When they completed that portion I do not imagine they had any idea of putting an addition there. They intended to put the approaches there.

MR. SMITH. The appropriation here without the authority is valid unless it is completed; but, as a question of the rules of the House, I would say it was doubtful, if the authorization is made not to exceed \$1,000,000, because the authorization is not to cost the million, but not to exceed a million. The building is completed, say for twenty years, and there is a finished building all around. I doubt whether it would not be deemed a new structure to tear off the outside of the building and extend it.

THE CHAIRMAN. Will this extension necessitate the removal of the outside?

MR. J. K. TAYLOR. In a small portion of it; one story in the central portion will be all.

THE CHAIRMAN. Do the post officials in Baltimore occupy any other rooms than those in the present building?

MR. J. K. TAYLOR. We have got only one set of rented quarters, I believe, occupied by the Light-House Board. It is not very much, \$1,000; two or three officers I think. Then there are people from the custom-house.

THE CHAIRMAN. Is it because the work is congested in the present building and crowded?

MR. J. K. TAYLOR. Yes, sir. It is absolutely necessary to have more room for the main building.

THE CHAIRMAN. Absolutely necessary to have more room for the proper conduct of the post-office business of the United States?

MR. J. K. TAYLOR. Yes, sir. They are so congested that they can hardly move around, and they have taken a portion upstairs needed by the other officials.

THE CHAIRMAN. Is the court held in that building, too?

Mr. J. K. TAYLOR. Yes; the court and the internal-revenue offices are in the same building.

The CHAIRMAN. Do you know how many employees there are occupying that building?

Mr. J. K. TAYLOR. No, sir; I do not.

Mr. SULLIVAN. Where has this money been all these years?

Mr. J. K. TAYLOR. It has not been appropriated.

Mr. SMITH. It is an authorization by the statute?

Mr. J. K. TAYLOR. Yes, sir.

POST-OFFICE DEPARTMENT,  
OFFICE OF THE FIRST ASSISTANT POSTMASTER-GENERAL,  
Washington, April 17, 1906.

Hon. F. C. WACHTER,

*House of Representatives.*

SIR: I beg to inform you that, in accordance with your request, a representative of the Department was recently detailed to visit Baltimore, Md., for the purpose of investigating the necessity of securing additional floor space for the post-office at that place, and that a report from him has just been received stating that the office is greatly congested, and recommending that immediate action be taken to provide at least 7,000 additional square feet of floor space.

This Department concurs in the recommendation of its representative, and the hope is expressed that Congress may see fit to make provision for an adequate enlargement of that part of the Federal building at Baltimore occupied by the post-office.

Respectfully,

F. H. HITCHCOCK,  
*First Assistant Postmaster-General.*

POST-OFFICE DEPARTMENT,  
OFFICE OF THE FIRST ASSISTANT POSTMASTER-GENERAL,  
Washington, January 17, 1906.

Hon. FRANK C. WACHTER,

*House of Representatives.*

DEAR SIR: With reference to your letter of the 9th instant, in regard to an addition to the post-office building at Baltimore, Md., the files of the Department did not contain the information you desired, and therefore the postmaster at Baltimore was requested, on the 12th instant, to make a full report concerning the necessity for additional floor space.

His letter, which explains the situation fully, was received yesterday, and a copy is inclosed herewith.

Respectfully,

F. H. HITCHCOCK,  
*First Assistant Postmaster-General.*

BALTIMORE POST-OFFICE,  
OFFICE OF THE POSTMASTER,  
Baltimore, Md., January 15, 1906.

Hon. F. H. HITCHCOCK,

*First Assistant Postmaster-General,*

*Salary and Allowance Division.*

SIR: In compliance with the directions of your communication of the 12th instant, I have the honor to advise you that the floor space occupied by each division of the post-office at Baltimore, Md., is as follows:

First floor:	Square feet.
Mailing .....	4,039
City, including box department and general delivery .....	7,703
Registry (divided into 3 rooms) .....	1,668
Money order .....	948
Special delivery .....	368
Inquiry .....	348
Basement:	
Paper dock .....	2,520

These areas show actual floor space in each instance, without deduction for fixtures, which in the mailing and city divisions occupy 7,044 square feet. The executive division, including the cashier's department, is upon the second floor of the building and is not included in the above, nor are the two rooms occupied by the assistant postmaster and superintendent of city division, respectively.

The gross receipts of the office for year ending June 30, 1896, were. \$871, 802. 33  
The gross receipts of the office for year ending June 30, 1905, were. 1, 584, 138. 22

An increase in the latter above the former of----- 712, 335. 89

The clerical force was at the earlier date 200 and at the latter date 338, and the number of letter carriers 287 and 357, respectively.

It is beyond question that this office is in urgent need of increased space in which efficiently to discharge the greatly increased business which reaches it as compared with that transacted fifteen years ago, when it was moved to the building it now occupies.

The arrangement of the post-office building is such that the working floor, intended for the accommodation of the city and mailing divisions, is not susceptible of enlargement within the walls of the present structure. Of its net area of 11,742 square feet, 7,044 square feet are occupied by the furniture, leaving but 4,698 square feet for the use of the combined forces of the two divisions, numbering at times as many as 225 men simultaneously at work in this circumscribed space, considerable portions of which are also permanently occupied by the box department and general delivery.

It is believed that when the new custom-house in this city shall be completed, perhaps by the summer of 1907, additional space in the post-office building will become available for post-office use; but, while this will relieve some of the smaller divisions and materially assist the proper discharge of business in them, it will in nowise increase the size of the working floor, nor afford any greater space for the labors of the mailing and city divisions.

The enormous increase in the bulk of mail handled in more recent years requires for its speedy and accurate dispatch or distribution, as the case may be, abundant space for the installation of the necessary furniture and for the passing of trucks and men. This is sought to be accomplished by securing an appropriation whereby an addition to the building might be erected, enlarging this working floor only, no effort being made to secure increased accommodations in any other portion of the building or for any division of the office.

The completion of the new custom-house will, it is understood, be followed by the removal of buildings upon the land already owned by the Government and immediately adjoining the eastern front of the post-office building. Upon the lot so vacated the proposed addition might readily be placed, and the present is deemed an appropriate time to make efforts to secure necessary action by the Congress to meet not only an existing necessity, but a need which will constantly become more imperative.

Very respectfully,

W. HALL HARRIS, *Postmaster.*

#### BALTIMORE, MD.—RENTAL OF TEMPORARY QUARTERS.

The CHAIRMAN. The next item on page 2 is for the rental of temporary quarters.

Mr. J. K. TAYLOR. That is the Light-House Board. That formerly was in the custom-house and will return to it when the custom-house is finished. We had to rent quarters for a time.

Mr. SMITH. You got enough last year for it?

Mr. J. K. TAYLOR. I think we had an amount left over in some way or other that we could run on, and so we did not ask for anything last year.

Mr. SMITH. This would not be a continuing appropriation?

Mr. J. K. TAYLOR. There was a rental appropriation made for some previous year that worked in there—

The CHAIRMAN. Made in 1905, or made in 1904 for the fiscal year 1905, \$1,850.

Mr. SMITH. I know of no rental appropriations, Mr. Taylor, that are not annual. That is why I inquired.

Mr. J. K. TAYLOR. It is either because one of these lapsed over, or it came out of the \$23,000 of rental. That was a continuing appropriation in 1901, and we found that they had enough left over. I am not sure.

Mr. SMITH. Is that \$23,000 item still carried in the bill in any form?

Mr. J. K. TAYLOR. No, sir; that is eliminated now in any form. It is expended. I can find out why that was not asked for last year, and give you the reasons for it.

BILOXI, MISS.

The CHAIRMAN. The same is true of the next item, Biloxi, Miss.?

Mr. J. K. TAYLOR. Yes. The contract expires May 15, 1906. It will probably be three months late on account of yellow fever last year.

The CHAIRMAN. You will expend this \$48,000 after July 1 next?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. In the completion of the building?

Mr. J. K. TAYLOR. The building will be completed probably before this appropriation becomes available, but the entire settlement will not. It is about three or four months late on account of yellow fever last year.

The CHAIRMAN. The contract you speak of is a contract for the completion of the building?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. And this money is to meet the obligations under that contract?

Mr. J. K. TAYLOR. Yes, sir.

BUFFALO, N. Y., MARINE HOSPITAL.

The CHAIRMAN. Now, "Buffalo, N. Y., marine hospital."

Mr. J. K. TAYLOR. The marine hospitals, both there and in Pittsburgh, are held up. Just what they are going to do with them I do not know yet. I have my notes on the copy of this "Work held up." If allowed to go, money will be required. If not, there will be no need of it." They are proposing to sell those marine hospitals, and I do not know what the Treasury Department will do with them. That is under the charge of the Secretary.

The CHAIRMAN. The appropriation has been made?

Mr. J. K. TAYLOR. An appropriation of \$90,000 has been made, and we have bought a site up there.

The CHAIRMAN. Nothing has been done as yet toward the construction of the building?

Mr. J. K. TAYLOR. Nothing has been done to it.

The CHAIRMAN. The Government owns the site?

Mr. J. K. TAYLOR. Yes; and has drawings made for the building; but no contract has been let for the construction, because about that time the Secretary proposed to dispose of these marine hospitals and close them up.

The CHAIRMAN. Do you know the reason why?

Mr. J. K. TAYLOR. Because it cost more to run them than it did to provide the service required in private hospitals.

Mr. TAYLOR. You do not state that of your own knowledge?

Mr. J. K. TAYLOR. That is the reason given by the Secretary—that it costs \$4 for what they can do for \$1.

Mr. TAYLOR. I do not understand that the question applied to what the Secretary said. It is not your opinion that you give?

Mr. J. K. TAYLOR. No, sir; not personally.

Mr. SULLIVAN. It would be a good plan to abolish some of the others, would it not?

Mr. J. K. TAYLOR. That is what we are doing.

Mr. SMITH. They are advocating it, you mean?

Mr. J. K. TAYLOR. No; they have closed the one at Cincinnati. The property will be closed shortly.

Mr. SMITH. When was that authorized by law?

Mr. J. K. TAYLOR. Under the general law. The Secretary has the right to sell any he wants.

Mr. SMITH. You mean there is an act allowing the Secretary to close and sell them?

Mr. J. K. TAYLOR. Yes, sir.

Mr. SMITH. Can you tell us what that law is? It seems to me it is strange.

Mr. J. K. TAYLOR. Yes, sir. That authority goes back a good many years.

Mr. SULLIVAN. That authority is limited to marine hospitals?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. What did the site at Buffalo cost, Mr. Taylor?

Mr. J. K. TAYLOR. About \$23,000; in that neighborhood. I do not remember the exact amount.

Mr. SULLIVAN. Has the Secretary any authority to sell buildings other than marine hospitals?

Mr. J. K. TAYLOR. No, sir. He has got to have Congressional authority to dispose of other buildings.

Mr. SMITH. I am satisfied the law exists, since Mr. Taylor is so positive about it, but it is a most extraordinary law.

Mr. J. K. TAYLOR. The way I happen to be so sure of it was that I suggested, when they were talking of closing it up, that we should ask Congress for the right, and the Secretary discovered that they had the right already.

Mr. TAYLOR. I would suggest that the law originated at the time when the marine hospital was established, which was in the eighteenth century.

Mr. J. K. TAYLOR. I believe there was at one time a discussion as to whether they could not be eliminated, and I think the act was passed at that time, if I remember rightly, from listening to the conversation.

Mr. TAYLOR. What is that section?

Mr. COURTS. Section 4806 of the Revised Statutes.

Mr. TAYLOR. What is the date?

Mr. SMITH. The date seems to be 1866, amended in 1875. The section reads:

SEC. 4806. The Secretary of the Treasury is authorized to lease, or to sell at public auction, to the highest and best bidder, for cash, after due notice in the public newspapers, such marine-hospital buildings and lands appertaining

thereto as he may deem it advisable to sell, and to make, execute, and deliver all needful conveyances to the lessees or purchasers thereof, respectively; and the proceeds of such leases or sales are hereby appropriated for the marine-hospital establishment. But the hospitals at Cleveland, in Ohio, and Portland, in Maine, shall not be sold or leased. And this section shall not be construed to authorize the Secretary of the Treasury to lease or sell any such hospital where the relief furnished to sick mariners shall show an extent of relief equal to twenty cases a day on an average for the last preceding four years, or where no other suitable and sufficient hospital accommodations can be procured upon reasonable terms for the comfort and convenience of the patients.

I do not know what that language means—"shall show an extent of relief equal to twenty cases a day on an average for the last preceding four years." It is unintelligible to me. Do you understand that?

Mr. COURTS. It means unless for the last four years an equivalent to twenty cases a day have been treated.

Mr. SMITH. He is not authorized to sell lands without buildings under that section.

Mr. TAYLOR. The question of these new hospitals has to be referred to Congress.

The CHAIRMAN. The Secretary has written a letter and sent in a bill asking that the authorization of these two hospitals be repealed, and that he be given authority to sell the sites; and on this question, gentlemen, Mr. Alexander and Mr. Dalzell have asked to be heard, and the Secretary of the Treasury also wants to be heard.

Mr. J. K. TAYLOR. Yes; it came to me when that question was raised as to the authority to sell new sites. The Secretary said they would refer the question to Congress to see what was their idea in regard to closing up those hospitals.

#### CLEVELAND, OHIO.

The CHAIRMAN. What is the present status of the building at Cleveland, Ohio, Mr. Taylor?

Mr. J. K. TAYLOR. It is about up to the third-floor beam lines. The contract expired on February 15 last, but by the delays of the Government on the granite question it has practically been extended one year, although that question is not definitely settled yet, whether they will allow the extension or the contractor will be taxed for it.

Mr. SULLIVAN. Why is this limitation as to granite stricken out? Do you know?

Mr. J. K. TAYLOR. That was the specific appropriation in last year's bill.

Mr. TAYLOR. That was a big fight between the Ohio Senators and the Ohio Members. Don't you remember?

Mr. SULLIVAN. Yes; but have the outer walls been finished?

Mr. J. K. TAYLOR. Yes.

Mr. SULLIVAN. So that there is no possibility of changing the outer walls now?

Mr. J. K. TAYLOR. Oh, no; they would not be changed.

#### CHICAGO, ILL.

The CHAIRMAN. House joint resolution No. 61 authorizes an appropriation to be used in the interior decoration of the Federal building at Chicago. Has that been referred to you? It carries \$100,000.

Mr. J. K. TAYLOR. No, sir; I have not seen it.

The CHAIRMAN. There has been no reference to you and no recommendation on it?

Mr. J. K. TAYLOR. No, sir. The only thing I have seen in regard to Chicago is the \$138,000 appropriation that was allowed in the urgent deficiency bill.

The CHAIRMAN. That is House joint resolution No. 61. I will give you a copy of the resolution and refer it to you, and will be very glad to have you look into it and make such recommendations and give us such information as you may touching the necessity for it.

Mr. SMITH. There is one matter in that connection I would like to ask a question or two about. This joint resolution provides that \$15,000 of this money—

shall be used for the paving of the east side of Clark street, between Jackson and Adams streets; the south side of Adams street, between Clark and Dearborn streets, and the west side of Dearborn street, between Adams and Jackson streets, with such material as may be designated by the city authorities of the city of Chicago and under the supervision and direction of said city authorities and in accordance with the laws and ordinances of said city.

Is it not a fact that the Government for many years has refused to pay for paving in front of public buildings?

Mr. J. K. TAYLOR. Yes.

Mr. SMITH. So that if this should pass it would give preference to Chicago over any other city in the United States?

Mr. J. K. TAYLOR. Yes.

Mr. SMITH. We have paid for the paving of our public building out of our own money.

Mr. J. K. TAYLOR. Congress never paid any attention to estimates of that kind, and we let those things drop.

Mr. SMITH. A number of local bills passed a number of years ago, but we paved ours twice and could not get the money back, and I do not believe in letting Chicago have it.

Mr. TAYLOR. Chicago got the street paving done once, in 1879.

Mr. SMITH. I am opposed to letting it get more than the rest of us got.

TREASURY DEPARTMENT,  
OFFICE OF THE SECRETARY,  
Washington, April 30, 1906.

CHAIRMAN COMMITTEE ON APPROPRIATIONS,  
*House of Representatives.*

SIR: In response to your verbal request of this date for a report on House joint resolution 61, "appropriating money for the decoration of the new Federal building at Chicago, and for other purposes," I have the honor to advise you that the sum of \$85,000—the amount set apart by the bill for the purpose—could be advantageously expended for the interior decoration of the building, no part of said building having yet been decorated.

With regard to that part of said bill which provides for the expending of \$15,000 for paving of streets around said building, you are advised that the State of Illinois having ceded jurisdiction over the Federal building site, the same is exempt from all taxation or assessment, and it therefore remains with Congress if, in its wisdom, it deems such course expedient, to make provision for street paving by special appropriation.

Respectfully,

L. M. SHAW, *Secretary.*

COLORADO SPRINGS, COLO.

The CHAIRMAN. Is there anything additional as to the next item, "Colorado Springs?"

Mr. J. K. TAYLOR. Yes; there is. If you want to cut your bill

down, you can take \$25,000 off what we ask for there, and divide it in half. You can reduce the amount to \$25,000 instead of \$50,000.

Mr. SMITH. And restore the word "continuation" instead of "completion?"

Mr. J. K. TAYLOR. Yes, sir.

Mr. BROWNLOW. It is not completed?

Mr. J. K. TAYLOR. No, sir; the contract has not been let. It has been held up, subject to a bill that is going through another committee of this House.

Mr. TAYLOR. In that bill you propose to increase the appropriation and extend the limit?

Mr. J. K. TAYLOR. Extend the limit.

Mr. SMITH. As a matter of fact, are the plans drawn at all, Mr. Taylor?

Mr. J. K. TAYLOR. Yes, sir. They have been on the market. The contract is all ready to let.

Mr. SMITH. You expect to have new plans if this other bill carries?

Mr. J. K. TAYLOR. Not necessarily. We are holding the figures until after this bill passes to see whether we will have to get new ones or not, or whether we will have to enlarge this.

The CHAIRMAN. If the contract has not yet been let, what is the necessity of appropriating anything for the next fiscal year? The appropriation will be immediately available when made, if it is made next March.

Mr. J. K. TAYLOR. I know, if it is made next March, Mr. Tawney.

Mr. SULLIVAN. If there is no need, it might be well to see how much the limit will be increased also.

Mr. J. K. TAYLOR. There is a balance of about \$80,000 there. That would hardly carry us through if we commenced work right away. It would hardly carry us through over December.

The CHAIRMAN. December of this year?

Mr. J. K. TAYLOR. Yes; that is the building season. We have not the prepared drawings, but the contract is all ready to let.

The CHAIRMAN. The limit of cost is not extended yet?

Mr. J. K. TAYLOR. No, sir.

The CHAIRMAN. If not extended, the amount of balance would be ample, would it not?

Mr. J. K. TAYLOR. No; it would hardly carry us over to the 1st of January. Out of the \$125,000 appropriated, \$35,000 or \$40,000 is paid for site. That would leave a balance of \$85,000.

Mr. SMITH. As a matter of fact, the increase of the limit of cost would decrease what you would expend?

Mr. J. K. TAYLOR. Yes; but if they do not increase it the \$85,000 would not carry us over until the 1st of January. But if they increase the limit of cost we will not need anything on it. We will have plenty of money, because we will not be able to let a contract until the 1st of August, and then they can not carry it forward.

The CHAIRMAN. Is there a proposition to increase the limit of cost before the Committee on Public Buildings and Grounds?

Mr. J. K. TAYLOR. Yes; I understand it is allowed.

The CHAIRMAN. If it is allowed you will not need this?

Mr. J. K. TAYLOR. Yes; you can take off the other \$25,000.

The CHAIRMAN. All right, we will watch that.

## DECATUR, ILL.

Have you anything to add to your recommendation in respect to Decatur, Ill.?

Mr. J. K. TAYLOR. No, sir.

The CHAIRMAN. You make no estimate there whatever?

Mr. J. K. TAYLOR. No; that is another one that is held up for an increase of the limit of cost.

## ITHACA, N. Y.

The CHAIRMAN. Ithaca, N. Y.

Mr. J. K. TAYLOR. Nothing is asked for.

Mr. SULLIVAN. What is the reason for that?

Mr. J. K. TAYLOR. It is held up.

Mr. SULLIVAN. You mean a bill is pending to increase the limit?

Mr. J. K. TAYLOR. Yes, sir.

## LOS ANGELES, CAL.—RENT OF BUILDINGS.

The CHAIRMAN. You estimate for rent of building at Los Angeles, Cal., \$20,000?

Mr. J. K. TAYLOR. Yes; and we have sent in a letter since, asking for \$5,000 additional, making \$25,000. In order to cover it entire we have asked for a deficiency of \$5,000. On March 22 it was suggested to Congress that the appropriation be made \$25,000 instead of \$20,000, you will remember.

The CHAIRMAN. Twenty-five thousand dollars is necessary for the next fiscal year?

Mr. J. K. TAYLOR. Yes, sir.

## MACON, GA.

The CHAIRMAN. Macon, Ga.

Mr. J. K. TAYLOR. The contract does not expire until July 1, 1907. You can deduct \$50,000 from that estimate, making the appropriation \$100,000 instead of \$50,000 and "continuation" instead of "completion" of the building.

## MACON, GA.—RENT OF BUILDINGS.

The CHAIRMAN. Rent of buildings, \$6,080.

Mr. J. K. TAYLOR. Yes; that is to accommodate the courts and internal revenue and weather bureau.

The CHAIRMAN. Where are they accommodated now?

Mr. J. K. TAYLOR. Under the rental for which you have appropriated.

Mr. SMITH. You had no item until last year?

Mr. J. K. TAYLOR. No. There was a continuous rental for that until we got the thing settled—three years ago, I think it was. That was applicable until it was settled. We have paid the rent up to this year on that. It was for remodeling the building and all, so that it was continuous.

## M'KEESPORT, PA.

The CHAIRMAN. McKeesport, Pa.

Mr. J. K. TAYLOR. The contract expires February 20, 1907.

The CHAIRMAN. Do you need this \$20,000 before March 4, next?

Mr. J. K. TAYLOR. Well, it would be a pretty close shave; we will be ready to settle about that time.

## MUNCIE, IND.

The CHAIRMAN. Muncie, Ind.

Mr. J. K. TAYLOR. Contract expires March 1, 1907. That is another one just exactly like the previous one. Of course, we could get through without it, but it would be a close shave.

The CHAIRMAN. March 1?

Mr. J. K. TAYLOR. Yes; March 1.

The CHAIRMAN. There was nothing appropriated for this fiscal year for Muncie?

Mr. J. K. TAYLOR. No, sir; there was nothing doing on it. We had sufficient for the previous year. The contract was let along in September or October.

## NASHVILLE, TENN.

The CHAIRMAN. "Nashville, Tenn."

Mr. J. K. TAYLOR. There are certain items that we will have to pay—about three or four thousand dollars—out of that; but the balance of that appropriation of \$40,000 will probably be turned in. We are simply asking this to be appropriated to be turned back into the Treasury. We have the work all done.

The CHAIRMAN. Will \$5,000 cover the items you refer to?

Mr. J. K. TAYLOR. I think so; yes.

Mr. SMITH. Can an appropriation lapse without an appropriation of this kind? Will it not be available until expended?

Mr. J. K. TAYLOR. It never does lapse, but we turn it back into the Treasury.

Mr. SULLIVAN. Suppose twenty-five years from now you want to put an addition on this building?

Mr. J. K. TAYLOR. We do not do it. We turn it back.

Mr. SULLIVAN. You are preventing a recurrence of the Baltimore proposition?

Mr. J. K. TAYLOR. Yes.

Mr. BROWNLOW. About this Nashville appropriation, the custodian told me there that he had more money than he could use, and had to turn back something.

Mr. J. K. TAYLOR. That is what we are providing for on this. We have a small amount of deficiency that will go against this \$40,000, and the balance can be turned back into the General Treasury.

Mr. SMITH. Is this building completed?

Mr. J. K. TAYLOR. Yes; completed and occupied. It is an addition.

The CHAIRMAN. What are the items you want to spend \$5,000 for?

Mr. J. K. TAYLOR. Certain lamps to light the building in front of

the entrance, and one or two small items like that. It is the completion of odds and ends around the building.

The CHAIRMAN. How long has the building been occupied—I mean the addition?

Mr. J. K. TAYLOR. About six months.

TREASURY DEPARTMENT,

Washington, April 11, 1906.

The CHAIRMAN COMMITTEE ON APPROPRIATIONS.

House of Representatives.

SIR: Referring to the United States custom-house and post-office building at Nashville, Tenn., I have the honor to state that a further appropriation from the balance of \$35,000, under the present limit of cost of \$5,000, is all that is necessary for the completion of the work.

Respectfully,

J. K. TAYLOR,

Supervising Architect.

#### NEW YORK CUSTOM-HOUSE, NEW YORK.

The CHAIRMAN. "The New York custom-house."

Mr. J. K. TAYLOR. The contract expires October 15, 1906.

Mr. SMITH. Is it going to be done by that time?

Mr. J. K. TAYLOR. Yes, sir; just about that time.

Mr. SMITH. Then we will be able to hear the last of the famous lease in New York about that?

Mr. J. K. TAYLOR. Yes; then you close it up.

The CHAIRMAN. Are they not endeavoring to extend the limit of cost?

Mr. J. K. TAYLOR. That will not make any difference. We have got to finish that anyway inside the time.

The CHAIRMAN. Whether the limit of cost is extended or not?

Mr. J. K. TAYLOR. Yes. It simply changes the kind of material, you know; a certain finish of marble, and that sort of thing. It does not take them any longer to get out a better grade of marble than a poorer grade.

The CHAIRMAN. The limit of cost has to do with the interior finish?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. Finishing in marble?

Mr. J. K. TAYLOR. Yes; instead of plaster.

The CHAIRMAN. What is that additional cost estimated to be?

Mr. J. K. TAYLOR. The bill calls for a million dollars. The Department recommended \$500,000. I do not know what they put in.

Mr. SULLIVAN. That will make the building cost \$5,000,000?

Mr. J. K. TAYLOR. Yes; \$5,000,000.

Mr. SULLIVAN. There is one good thing about that building. It is self-supporting—the New York custom-house is.

#### NEW YORK, N. Y., RENT OF OLD CUSTOM-HOUSE.

(See also p. —.)

Mr. SMITH. Then comes the item, rent of old custom-house.

The CHAIRMAN. "New York, N. Y., rent of old custom-house." Have you anything to add in addition to what you have submitted?

Mr. J. K. TAYLOR. Absolutely nothing.

Mr. SMITH. It was stricken out, was it not?

Mr. J. K. TAYLOR. The law says the Secretary of the Treasury shall sell the building and pay 4 per cent on the amount of money paid in—lease money—and occupy it until paid in.

The CHAIRMAN. That is the item that I think we will have the Secretary here upon; and Mr. Sulzer, a member of the House, wants to be heard on it.

Mr. SMITH. The only thing to do is to report it and let the House strike it out if it wants to.

The CHAIRMAN. I know, but this is also true, that in reporting it I think the committee ought to have the benefit of the statement of the Secretary of the Treasury in regard to the matter on the other side as well. If we have our controversy here we will be better able to defend our action on it on the floor of the House.

## NEW YORK COURT-HOUSE AND POST-OFFICE.

(See page 60.)

## NIAGARA FALLS, N. Y.

The CHAIRMAN. Niagara Falls, N. Y., post-office.

Mr. J. K. TAYLOR. The contract expires on March 31, 1907.

The CHAIRMAN. Will you use that much—\$66,000?

Mr. J. K. TAYLOR. You can shave it off if you want to. Give us \$30,000 instead of \$66,000.

Mr. TAYLOR. That will take off \$36,000?

Mr. J. K. TAYLOR. Yes.

Mr. TAYLOR. And strike out "completion?"

Mr. J. K. TAYLOR. Yes; and make it "continuation."

## OGDEN, UTAH.

The CHAIRMAN. Ogden, Utah.

Mr. J. K. TAYLOR. That is a long contract. I think you could deduct fully 50 per cent of that. Make it for "continuation," and \$50,000 instead of \$100,000.

Mr. SULLIVAN. What is the date of completion?

Mr. J. K. TAYLOR. December 1, 1907.

## PHILADELPHIA, PA.—MINT.

The CHAIRMAN. Do you know anything about the estimate submitted for coal bunkers at the Philadelphia Mint—\$20,000?

Mr. J. K. TAYLOR. Mr. Roberts, the Director of the Mint, brought it down to our Office, and I suggested that he submit it to the Secretary. For some reason he did not want to, and he submitted it. The coal bunkers there are under the court and hard to get at, and not very large in that building, so that what they want to do is to build coal bunkers on Buttonwood street, back of the building, large enough to hold a sufficient supply of coal to run them probably six months.

The CHAIRMAN. How much coal would that be?

Mr. J. K. TAYLOR. I do not remember now; 400 or 500 tons, I believe; something like that.

The CHAIRMAN. What supply are they carrying now?

Mr. J. K. TAYLOR. They do not carry over three days' supply. Their bunkers are very small.

The CHAIRMAN. After the matter was submitted to you, did you give it such attention as to enable you to say whether or not this estimate is right?

Mr. J. K. TAYLOR. Yes; this is our estimate.

The CHAIRMAN. What material do you expect to construct the bunkers of?

Mr. J. K. TAYLOR. Simply rubble, stone, and cement. It is the excavation of the building and replacing of the street and cutting the walls through to the boiler room that will make it cost the entire sum.

Mr. TAYLOR. Do you think it is a good business proposition?

Mr. J. K. TAYLOR. Yes.

Mr. TAYLOR. And an economical investment?

Mr. J. K. TAYLOR. Yes. It will enable them to save a proportion of the cost of coal delivered, because it can be shot right from the wagons; and more than that, it will enable them to buy coal in car-load lots, which they are not able to do now.

The CHAIRMAN. Do they not contract for the full amount required for the year?

Mr. J. K. TAYLOR. Yes; but the coal men charge them storage for it. They contract for the full amount, but can only deliver a small portion of it at a time.

Mr. SMITH. This building has just been finished, has it not?

Mr. J. K. TAYLOR. It was finished in 1898.

Mr. SMITH. Was this an error of judgment in designing the building?

Mr. J. K. TAYLOR. It was an error of judgment as to the amount of coal they would need there.

#### PROVIDENCE, R. I.

The CHAIRMAN. Have you anything additional, Mr. Taylor, on page 10, with respect to the Providence, R. I., court-house and custom-house?

Mr. J. K. TAYLOR. No, sir.

The CHAIRMAN. When does that contract expire?

Mr. J. K. TAYLOR. The present contract expires September 1, 1906.

The CHAIRMAN. It is not necessary to have \$250,000?

Mr. J. K. TAYLOR. Yes; to carry forward the interior finish.

Mr. SMITH. I understand you have enough to cover the contract now made?

Mr. J. K. TAYLOR. No; we need \$250,000 to cover it and carry it forward. We have contracted for more than we have actual cash for.

Mr. TAYLOR. Do you strike out these words in between the brackets, Mr. Taylor?

Mr. J. K. TAYLOR. Yes; that is already done.

Mr. SULLIVAN. You have sold it?

Mr. J. K. TAYLOR. Yes; to the city of Providence.

Mr. SMITH. That did not make the money available, did it?

Mr. J. K. TAYLOR. No, sir; that was turned into the Treasury.

## ROME, GA.

The CHAIRMAN. "Rome, Ga." When does that contract expire?

Mr. J. K. TAYLOR. Rome, Ga., is completed and occupied. That is another Nashville case.

Mr. SULLIVAN. You are going to turn in \$5,000?

Mr. J. K. TAYLOR. We got \$5,000 on the urgent deficiency bill to close up some deficiencies, and I believe there is a small balance still of that. A balance close to \$15,000 will be turned in.

Mr. SMITH. You refer to having got something on the urgent deficiency bill. How about these estimates here?

Mr. J. K. TAYLOR. This went in in October. You see it is recommended that \$5,000 of this amount be included in the urgent deficiency bill.

Mr. SULLIVAN. There was \$20,000 remaining, and they used \$63,000.

The CHAIRMAN. A thousand dollars is all you need?

Mr. J. K. TAYLOR. I would like to be sure about that. I can tell you from the books. We do not need the money particularly, except to turn it in. The work is done.

The CHAIRMAN. You do not need the money except to exhaust the authorization?

Mr. J. K. TAYLOR. Yes; and to turn the money back into the Treasury.

Mr. SMITH. It seems to me economical, then, to appropriate it, considering the Baltimore experience.

Mr. J. K. TAYLOR. It can be accomplished in another way. You gentlemen can legislate it out of existence.

The CHAIRMAN. We can reduce the limit of cost.

Mr. SMITH. That is subject to a point of order, but this is not.

Mr. TAYLOR. You better take this plan.

Mr. J. K. TAYLOR. In the case of Rome, Ga., it might be well, because I understand the Representative of that district is after another appropriation to put an addition to that building.

The CHAIRMAN. Is not the building of sufficient size for the needs of the Government?

Mr. J. K. TAYLOR. It does not seem to be.

The CHAIRMAN. You are now stating that from the standpoint of the member or of the Government?

Mr. J. K. TAYLOR. Simply from the standpoint of the member. I do not know anything about it personally. I simply have his statement for it.

TREASURY DEPARTMENT,  
Washington, April 11, 1906.

The CHAIRMAN COMMITTEE ON APPROPRIATIONS,  
House of Representatives, United States.

SIR: Referring to the United States post-office building at Rome, Ga., I have the honor to state that no further appropriation from the balance of \$15,000 under the present limit of cost is necessary for the completion of the work.

Respectfully,

J. K. TAYLOR,  
Supervising Architect.

SAN FRANCISCO, CAL.

The CHAIRMAN. On page 11, "San Francisco custom-house."

Mr. J. K. TAYLOR. You can deduct \$450,000 from that, reducing the appropriation to \$500,000.

Mr. SULLIVAN. When does that expire?

Mr. J. K. TAYLOR. That expires December 1, 1907.

Mr. TAYLOR. What about that additional amount, Mr. Taylor, in the supplemental estimate for power and light at the new custom-house building at San Francisco?

Mr. J. K. TAYLOR. That is simply a provision that we want incorporated. I am glad you speak of that, because I did not remember it. That is a provision to allow us to use a portion of this appropriation to put the electric-light plant in the appraiser's warehouse, rather than in the custom-house itself, as there is no basement in the custom-house and we have got to put it in the other to carry the power and light across.

Mr. TAYLOR. That simply asks authority to use the allowance already made?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. Your recommendation is to incorporate in the bill the language you submit in Document No. 411, which reads as follows:

San Francisco, California, custom-house: That the appropriation heretofore made, or which may be hereafter made for the construction of the custom-house, and so forth—

Why do you put "and so forth" in?

Mr. J. K. TAYLOR. It carries the rest of the language for that item in the appropriation act.

Mr. SMITH. That is a provision of the title.

The CHAIRMAN (continuing). "Are hereby made available for installing in the building appliances, light, heat, and so forth." This is the power, light, and heat for the custom-house building which was included in the original cost?

Mr. J. K. TAYLOR. Yes. It will go across the alley instead of in the building itself.

#### SARATOGA SPRINGS, N. Y.

The CHAIRMAN. "Saratoga Springs, N. Y., post-office." You make no estimate for that?

Mr. J. K. TAYLOR. No, sir; not having a site there yet, we make no estimate for that.

Mr. SULLIVAN. No site there?

Mr. J. K. TAYLOR. No, sir.

Mr. SULLIVAN. What do these appropriations mean?

Mr. J. K. TAYLOR. They were holding them up until they could get enough money to buy a site.

Mr. SULLIVAN. They have \$90,000 for site and building, and now they have \$60,000 actually appropriated out of the \$90,000?

Mr. J. K. TAYLOR. Yes. First they authorized a site at \$15,000. We could not touch a site outside of \$35,000. The sites have now gone up to \$40,000, and we asked for \$45,000 to buy a site.

Mr. SULLIVAN. Your site will cost about \$45,000?

Mr. J. K. TAYLOR. Yes; leaving a balance of about \$20,000 to commence work on. But when you get a site it will take you at least eight months to get it, and long before what is already appropriated has been expended—

Mr. SULLIVAN. It will take eight months on account of the peculiar circumstances of this case?

Mr. J. K. TAYLOR. No, sir; not on account of peculiar circumstances, but the site has to be selected first and then turned over to the district attorney, who has to pass upon the title, and then it has to be turned over to the Attorney-General, who has to pass upon the title, and that takes usually about eight months' time.

The CHAIRMAN. Does not the legislature surrender?

Mr. J. K. TAYLOR. No, sir. We have a general act of jurisdiction.

The CHAIRMAN. This is in Mr. Littauer's district?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. And the omnibus bill, I believe, carries an increase of the limit of cost?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. But in any event you will not need any money this year?

Mr. J. K. TAYLOR. No, sir.

Mr. SULLIVAN. You say this Saratoga Springs limit is going to be raised?

Mr. J. K. TAYLOR. Yes.

Mr. SULLIVAN. Undoubtedly it is, if a site is obtained.

## SHERMAN, TEX.

Mr. J. K. TAYLOR. At Sherman, Tex., the contract expires March 1, 1907. You can cut off \$43,000. You can make it \$40,000.

## SUPERIOR, WIS.

The CHAIRMAN. "Superior, Wis."

Mr. J. K. TAYLOR. The contract expires February 15, 1907.

The CHAIRMAN. Will you need all that \$118,000?

Mr. J. K. TAYLOR. Pretty close to it. You can reduce it to \$75,000, if you want to. If we get short, we will come to you in the urgent deficiency next year. Deficiencies of that sort do not send me to the penitentiary. I can have those. [Laughter.]

## TACOMA, WASH.

Mr. TAYLOR. Tacoma, Wash. What are you going to do with that?

The CHAIRMAN. Nothing is asked for.

Mr. J. K. TAYLOR. There has never been money enough to build a building to accommodate all the officials.

## WHEELING, W. VA.

The CHAIRMAN. Wheeling, W. Va.

Mr. J. K. TAYLOR. The contract expires March 7, 1907. You can cut \$30,000 off of that.

## WINSTON, N. C.

The CHAIRMAN. Winston, N. C.

Mr. J. K. TAYLOR. The contract expires February 15, 1907.

The CHAIRMAN. I do not suppose you will need it.

Mr. J. K. TAYLOR. I do not suppose we will. You can leave it out altogether. In all those small amounts we put them all in.

## REPAIRS AND PRESERVATION OF PUBLIC BUILDINGS.

The CHAIRMAN. The last item on page 13 is yours, is it not? Repairs and preservation of public buildings.

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. What is the necessity of inserting new language here—the words “and improvements?”

Mr. J. K. TAYLOR. It was to cover the Comptroller's decision, in order to make changes in the construction of the interior of these buildings.

Mr. SMITH. Why do you ask a raise here from \$40,000 to \$50,000 for employment of assistants outside the District of Columbia, superintendents and others, including mechanical labor force, and so forth?

Mr. J. K. TAYLOR. We have asked in all those 10 per cent.

Mr. TAYLOR. That is not 10 per cent. That is over 20 per cent; 25 per cent.

Mr. SMITH. You did not get 10 per cent last year?

Mr. J. K. TAYLOR. No; I know we did not. We needed it.

Mr. SMITH. I would like to know, Mr. Taylor, how this appropriation of \$450,000 has been absorbed in the last two years; whether it has all been consumed in this way or whether there has been any balance left?

Mr. J. K. TAYLOR. There has never been a dollar's balance left of that.

Mr. SMITH. You always have to quit allowing repairs and improvements because of the money being exhausted?

Mr. J. K. TAYLOR. Yes; always. If you have had anything to do with real estate, you can figures it very rapidly. They have nearly 600 buildings, and we had \$450,000 last year with which to take care of them. I think there are actually 538 buildings.

Mr. SMITH. What has been the total cost of those 538 buildings, aside from grounds?

Mr. J. K. TAYLOR. About \$144,000,000.

The CHAIRMAN. I see you have inserted new language here at the bottom of page 13, “and sites acquired for public buildings.”

Mr. J. K. TAYLOR. That is to cover an allowance to clean sidewalks on sites that have been acquired. There is absolutely no allowance in different towns for cleaning sites. We have 45 sites, you see, and I think in one of the bills passed we have asked for an allowance to be made to cover the cleaning of snow around it. We have to take care of those sidewalks.

Mr. SMITH. What do you call that—repair, improvement, or preservation of the site?

Mr. J. K. TAYLOR. We call that preservation of the site.

The CHAIRMAN. Why not put in language there that would express just what you mean?

Mr. J. K. TAYLOR. It is things of that sort, Mr. Tawney. You would have to put in a long clause. For instance, it is sprinkling the streets of the sites, and the cleaning of sidewalks, to protect the passers-by, and that sort of thing.

Mr. TAYLOR. You ought to have the language “of sites.” You ought to have the preposition “of” inserted, so that the language would run, “improvement of custom-houses, etc., and of sites required for public buildings.” From the language used it would apply to

the sites themselves, and would not bear the construction you put upon it. It needs the preposition "of."

Mr. SULLIVAN. Why was Sitka, Alaska, inserted in the bowels of this paragraph? That is a peculiar place.

Mr. J. K. TAYLOR. It has always been there.

Mr. SULLIVAN. Why should it not be put in the proper place in the bill? What has Sitka, Alaska, wharf to do with the preservation of public buildings?

The CHAIRMAN. That is under the jurisdiction of the Treasury Department.

Mr. J. K. TAYLOR. There is a wharf at Sitka, Alaska. It designates that wharf.

Mr. SULLIVAN. That is the only wharf that is in any Territory?

Mr. J. K. TAYLOR. Yes; except we have piers under quarantine stations in outlying possessions.

Mr. TAYLOR. I see there is a supplemental recommendation here to reduce this appropriation from \$500,000 to \$425,000.

Mr. J. K. TAYLOR. Yes; and to add \$75,000 that was taken off there to the heating, hoisting, and ventilating apparatus, making that so much more. It comes in under "Heating apparatus for public buildings"—plumbing. We have changed plumbing, which formerly came under "Repair of buildings," over to "Heating apparatus," and as that is a large item every year, we have deducted \$75,000 from the amount of "Preservation and repair" and added it to the "Heating apparatus of public buildings," so as to keep up the mechanical plant, the plumbing and heating and all that under one head and this construction under the other.

Mr. SULLIVAN. When you say "other public buildings and the grounds thereof," what does that refer to?

Mr. J. K. TAYLOR. Custom-houses, court-houses, post-offices, and other public buildings. It would include mints.

Mr. SULLIVAN. Under the rules of construction it would refer to wharves at Sitka?

Mr. J. K. TAYLOR. That is a particular thing. It has to be put in there that way. Otherwise they won't get any money. Mr. Courts will remember about that.

Mr. COURTS. We used to appropriate \$15,000 for repair of public buildings in Alaska. The Comptroller held that those buildings did not come within the benefits of this appropriation, and in order to bring it there, and in order to avoid a special appropriation to be made spasmodically, they wrote it in here, at the suggestion of the Treasury, within four or five years.

Mr. SULLIVAN. I think we had better redraft the section and put it somewhere else.

Mr. SMITH. It has rather an unfortunate effect on the cloudiness of the section.

Mr. SULLIVAN. We should redraft that section.

The CHAIRMAN. Mr. Taylor, as to the limit fixed in this paragraph with respect to compensation at \$6 a day—do you ever pay less than \$6 a day?

Mr. J. K. TAYLOR. Oh, yes. We must not exceed \$6 a day. We do not pay \$6 very often. We pay the market rates for these people in the towns where they are. For instance, plumbers, where they get \$4.50 a day as the union rate, are paid that much. Whatever the

market rates are in that town they get them. A carpenter may get \$3, and whatever market rates are, we pay them. We find out what the market rates are. All this amount is expended, by the way, for plumbers, carpenters, and that character of men, and steam fitters around the public buildings throughout the country.

The CHAIRMAN. In the care of the public buildings?

Mr. J. K. TAYLOR. Yes. They do the minor repairs around the building, and save the necessity of going to a local dealer outside to get small repairs done. Instead of that, the plumber goes up and takes care of what has to be done.

#### HEATING APPARATUS FOR PUBLIC BUILDINGS.

The CHAIRMAN. I see in the next item you have added the word "plumbing."

Mr. J. K. TAYLOR. Yes; that is, to take that out of "preservation and repair" and put it with the mechanical plant; and we have reduced this \$500,000 that we have estimated this year to \$425,000 and added that \$75,000 to the heating-apparatus appropriation to cover that plumbing work.

The CHAIRMAN. You have appropriated for this fiscal year \$450,000 for this purpose?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. Now, in the event that the committee should not increase the amount beyond the present appropriation, would you still have out of this appropriation \$75,000 to be added to the other in order to take care of the plumbing?

Mr. J. K. TAYLOR. Yes; that is the proportional amount that goes into plumbing out of that.

The CHAIRMAN. Whether the appropriation is the same or more than the current appropriation in the law?

Mr. J. K. TAYLOR. Yes; but for heaven's sake do not cut down the estimates of those things. We are adding new buildings every day, and the old buildings are getting older, and I do not see how we can keep them in order if we do not get the extra amount.

Mr. SULLIVAN. Fifty thousand dollars more, you mean, this time?

Mr. J. K. TAYLOR. Yes; that is what we ask for. You see, with the buildings we have, that is a little less than a quarter of 1 per cent.

Mr. SMITH. I thought it was a third of 1 per cent.

Mr. J. K. TAYLOR. It is between an eighth and a quarter.

The CHAIRMAN. You have no deficiency in this item of \$450,000 for the current year?

Mr. J. K. TAYLOR. We have had none, because I would not let them send it in. We could have had a deficiency as big as the original appropriation if we had carried out everything that ought to have been done.

Mr. SMITH. I have had some little experience with Mr. Taylor under this very item, and of course we all know that repairs in the public buildings, like repairs in a man's house, can be done next year or this year.

The CHAIRMAN. Yes; and they can be done extensively or can be done to a limited extent.

Mr. J. K. TAYLOR. I do not think you will find, Mr. Tawney, in going around through the buildings, that they are extensively re-

paired. Considering that the average is seven or eight hundred dollars per building throughout the country, they can not be very extensive.

The CHAIRMAN. I am not criticising the Supervising Architect's Office. I am talking more from personal experience in repairing my own house.

Mr. SULLIVAN. Has the Treasury Department found it cheaper to employ a steady force of mechanics to make the minor repairs?

Mr. J. K. TAYLOR. Yes.

Mr. SULLIVAN. Is that true of large cities like Boston and New York?

Mr. J. K. TAYLOR. Yes, sir.

Mr. SULLIVAN. Do you carry a large force in cities of that size?

Mr. J. K. TAYLOR. In New York we carry a large force. We have eight buildings there, and we carry four or five carpenters, two plumbers, and two steamfitters.

Mr. SULLIVAN. The reason I asked was that in the city of Boston we had a repair department a few years ago, which after several years' experiment they abolished, returning to the old contract system.

Mr. J. K. TAYLOR. That is all right, Mr. Sullivan, for anything over the immediate small repairs around the building. We always contract out of the fund for anything that goes probably beyond \$100 or \$150; but anything that is \$5, or \$10, or \$15 we find it better to do with the force in the building. For instance, for easing a door or fixing a lock it would cost a great deal more to bring a man in to do that than to have a man in there.

The CHAIRMAN. This force to repair public buildings in large cities is shifted from one building to another? It is not maintained for each building?

Mr. J. K. TAYLOR. Wherever we have a number of buildings in a single city we shift them around.

The CHAIRMAN. You do not have an independent force on each building?

Mr. J. K. TAYLOR. We usually keep a plumber and possibly a steamfitter and carpenter on all the big buildings.

#### VAULTS, SAFES, AND LOCKS.

The CHAIRMAN. The next item, at the bottom of page 15, is under your jurisdiction—"Vaults, safes, and locks for public buildings." I see you propose to increase the amount that may be expended for personal services.

Mr. J. K. TAYLOR. To 10 per cent. We have asked for \$60,000, and reduced it 10 per cent.

The CHAIRMAN. It is \$3,000 more than the current law.

Mr. J. K. TAYLOR. Yes; it is double the amount. We have asked for \$60,000. You remember we came to you for \$25,000 deficiency this year, which made our appropriation for this year \$65,000.

The CHAIRMAN. You had a deficiency appropriation last year of \$20,000.

Mr. J. K. TAYLOR. Yes. The appropriation for 1906 was \$40,000.

The CHAIRMAN. And a deficiency of \$25,000.

Mr. J. K. TAYLOR. Yes; that made \$65,000. We think we can get through with \$60,000 now.

Mr. SULLIVAN. Most or all of this appropriation, I suppose, is expended in repairs?

Mr. J. K. TAYLOR. No; it is expended not only in repairs, but a proportion of it; a small proportion, is expended in vaults, safes, and locks, in the purchase of safes in new buildings, and also in old, where we have to put in new safes.

The CHAIRMAN. Vaults are included in the cost of construction?

Mr. J. K. TAYLOR. Yes.

Mr. SULLIVAN. So that " vaults " here means repairs?

Mr. J. K. TAYLOR. Yes; repairs to vaults.

#### PLANS FOR PUBLIC BUILDINGS.

##### LAW AND RECORD DIVISION.

The CHAIRMAN. This next item, on page 16, is " Plans for public buildings: For books of reference, law books," etc. What occasion has your division for law books?

Mr. J. K. TAYLOR. Our law and record division has to make all the contracts for all the public buildings that are let under our office and has to pass upon all legal questions that come up under the laws that particularly govern our office. The law books we have tried to get would not exceed \$150 or \$200 in cost. They are books that refer particularly to contract work that comes under our office.

The CHAIRMAN. What law books outside of text-books on contracts do you need?

Mr. J. K. TAYLOR. There is not very much of anything to this. That would be all that would be necessary, but we can not even buy those.

The CHAIRMAN. You would not want \$200 for buying text-books on contracts?

Mr. J. K. TAYLOR. I think Mr. Wetmore in our office said all the books necessary to carry on that work completely would cost from \$100 to \$150.

The CHAIRMAN. How many law libraries are there in the Treasury Department?

Mr. J. K. TAYLOR. I have no idea.

The CHAIRMAN. Have you ever inquired?

Mr. J. K. TAYLOR. No, sir.

The CHAIRMAN. But there is a library?

Mr. J. K. TAYLOR. Yes. There is one, I know, in Solicitor's office, and one in the Comptroller's office, and I suppose the Commissioner of Internal Revenue has law books.

The CHAIRMAN. When you have questions arising in connection with contracts for public buildings, can you not call upon the Solicitor for an opinion, if it is a matter of importance?

Mr. J. K. TAYLOR. We call upon him for an official opinion in contracts. He has to approve all our contracts. He has the final approval of them, but he does not draw them. He has nothing to do with the drawing of them.

The CHAIRMAN. I understand; but when any question of law arises in your division concerning a contract, or the parties to a contract,

can you not in advance of making a contract call upon the Solicitor for an opinion on the questions involved?

Mr. J. K. TAYLOR. No; I think not. We would call on the Comptroller. He is our reference law officer.

The CHAIRMAN. He has a law library, has he not?

Mr. J. K. TAYLOR. Yes, sir.

The CHAIRMAN. And the Solicitor of the Treasury has a library?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. And the Commissioner of Internal Revenue has?

Mr. J. K. TAYLOR. Yes; I think so.

Mr. SULLIVAN. Who makes the contracts—the contract clerk?

Mr. J. K. TAYLOR. Yes; under the supervision of the law division.

Mr. SULLIVAN. And you want these books so that he may draw the contracts so that the Solicitor will approve them?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. These other libraries are accessible to him?

Mr. J. K. TAYLOR. Yes; to a reasonable degree they would be; but no one interested who has got much work in other lines would want a continuous chasing in on the part of some other division.

The CHAIRMAN. I know; but lawyers themselves do not have law books that relate to every subject that comes along. They are continually borrowing books.

Mr. J. K. TAYLOR. We are simply asking for books on the subjects that relate to us every day in the week.

The CHAIRMAN. How have you got along heretofore?

Mr. J. K. TAYLOR. Simply by interfering with other people's business and getting them in their places. It is a matter of simple convenience.

The CHAIRMAN. You do not increase the appropriation, the amount, for books which you propose to buy?

Mr. J. K. TAYLOR. No, sir.

The CHAIRMAN. Do you know whether the appropriation for last year has been expended?

Mr. J. K. TAYLOR. It has not.

The CHAIRMAN. How much balance have you?

Mr. J. K. TAYLOR. We have a balance—a small balance.

Mr. SULLIVAN. Is your contract clerk a member of the bar?

Mr. J. K. TAYLOR. Yes, sir.

Mr. SULLIVAN. What is the salary of your contract clerk?

Mr. J. K. TAYLOR. Two thousand dollars.

The CHAIRMAN. What effect will this bill have upon the new appropriation for plans?

Mr. J. K. TAYLOR. It will not affect us very much.

The CHAIRMAN. Will you have any balance left over this year of that appropriation?

Mr. J. K. TAYLOR. I can very frankly say that if you gentlemen will reduce that \$2,500 it will be ample for all purposes. I never could see why it should be \$4,000. It has never been expended. There has always been a balance since the time permission was given for duplication paper out of the general fund.

Mr. TAYLOR. Do you see any objection to limiting the amount that is paid out for law books to \$150?

Mr. J. K. TAYLOR. Not the slightest.

Mr. SULLIVAN. I can see an objection to raising it to that amount. I would like to see the books.

Mr. SMITH. How many men are employed in the law division?

Mr. J. K. TAYLOR. The law and record division is one division now. It formerly was two. They put all the force in the law division proper. Of men that do the law part of the work there are seven; four men who are directly engaged in that work are graduates in law and members of the bar—that is, they have their diplomas as students of law; and then there are three stenographers and clerks.

Mr. SMITH. Some of us were a little surprised the other day to find a necessity for law clerks in the office of the Surgeon-General of the Army, and we are a little more inclined to inquire as to the necessity of law clerks since then.

Mr. J. K. TAYLOR. Our office is operated under about 60 pages of laws that have been passed at intervals ever since 1860. They have never been codified or collated in any way, and in passing a subsequent law they have never gone back and looked at one that was passed, so that it is like going up the Charles River, in Massachusetts, to get around in between those two. I have sailed up the Charles River and know what it is. There is a necessity for a law clerk to keep us straight in that.

Mr. SULLIVAN. I do not see why you do not get some clerk in his leisure hours to straighten out this serpentine thing.

Mr. J. K. TAYLOR. The chief of the law division has intended ever since he has been in there to do that, but we have kept him so busy that he has not had time.

TREASURY DEPARTMENT.

Washington, April 12, 1906.

CHAIRMAN COMMITTEE ON APPROPRIATIONS.

*House of Representatives.*

SIR: Referring to your inquiry regarding the necessity for the purchase of law books for the use of the chief of the law and records division of this Office, I have the honor to state that this Office is called upon to take the initiative regarding matters of a legal character relating to titles, leases, cession of jurisdiction, taxation and assessment, branches of contract, defaulting, insolvent and bankrupt contractors and sureties, licenses, ordinances, easements, encroachments and trespasses on Federal building property, etc., in addition to the preparation of contracts aggregating many millions of dollars and the handling of questions arising in the administrative work connected therewith.

The "library," if it can be so termed, supplied for the use of the chief of the law and records division consists, generally speaking, of the Revised Statutes, the Statutes at Large, a broken set of Attorney-Generals' Opinions, a broken set of Court of Claims Reports, the decisions of the Comptroller of the Treasury, and about twenty text-books of a miscellaneous character representing the accumulation of several years, most of which are old editions, and many of which have been superseded by better publications on the same subjects.

There has been no purpose, in including in the estimates submitted an item for the purchase of law books, to make expenditures unnecessarily on that account or to endeavor to accumulate a law library; but in view of the importance of the duties performed by the chief of the law and records division of this Office and the responsibilities put upon him, it is believed that provision should be made for the purchase of such books as would constitute a small working library, and if your committee deem it necessary to place a limit upon expenditures which may be made annually on this account the Office has no objection to interpose to that course.

Respectfully,

J. K. TAYLOR,  
*Supervising Architect.*

## ELECTRICAL PROTECTION TO VAULTS.

The CHAIRMAN. The next item is at the bottom of page 16, "Electrical protection to vaults in public buildings." You add the language "for installation of burglar-alarm devices."

Mr. J. K. TAYLOR. The Comptroller has held as to the buildings in San Francisco and Indianapolis that already under the old installation of three years ago, which named specific cities in which we should install burglar protection, we have installed it in the old buildings. We afterwards tore the old buildings down, and he says we can not put it in the new buildings. Therefore we put that item in to restore this service in the new buildings.

Mr. SULLIVAN. That act here cited relates to those two buildings mentioned. I presume?

Mr. J. K. TAYLOR. Yes.

Mr. TAYLOR. Before passing that item, here is another supplemental estimate for \$25,000 more. That includes other buildings?

Mr. J. K. TAYLOR. Yes. I was going to speak of that in a minute. This was for buildings specifically authorized. There were 13 cities in that act of 1903, and \$30,000 was provided to do it, and, as I say, it was installed in the old buildings in these two cities, and after tearing down the old buildings the Comptroller says we can not restore it to the new buildings.

The CHAIRMAN. You had appropriated for this year \$20,000?

Mr. J. K. TAYLOR. Yes; we had \$20,000, which covered the original installation—that is, it covered the rental for the original installation. This \$35,000 asked for covers the cost of original installation in the two buildings and the maintenance of installations throughout the rest of the Department. For instance, the Holmes protective appliances in the Treasury Department are paid from "Vaults, safes, and locks," I think, or were originally; but now we propose to pay all of this out of this one fund. That is the reason for the increase.

Mr. TAYLOR. And the change in the language?

Mr. J. K. TAYLOR. Yes.

Mr. TAYLOR. That gets out from the limitations of the act of 1903?

Mr. J. K. TAYLOR. It does not, so far as installation goes. That act says it shall be installed in 13 cities named, but it permits us to reinstall two of those cities where we have already installed, and the Comptroller says we can not under the old act.

Mr. TAYLOR. But you have recommended to strike out the words in brackets there. If you strike out those words that strikes out the limitation of the 13 cities, so that those words ought to be left in unless you intend to leave it wide open.

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. I understand you intend not only to install this service in the two buildings you have mentioned, but to use this appropriation of \$25,000 for the installation in other public buildings throughout the country?

Mr. J. K. TAYLOR. No, sir; I think not. I think there is another appropriation of \$25,000 asked for for the installation in further buildings.

The CHAIRMAN. Is this exclusively for the installation in these two buildings?

Mr. J. K. TAYLOR. Yes; and for maintenance of all those already installed.

The CHAIRMAN. The maintenance of these two or the maintenance of others?

Mr. J. K. TAYLOR. The maintenance of the others.

The CHAIRMAN. Including these two?

Mr. J. K. TAYLOR. Yes; those two, and the maintenance of all other safes and vaults that are protected under the Government.

The CHAIRMAN. I understood you to say that this item had been heretofore carried in the appropriation for vaults, safes, and locks of public buildings?

Mr. J. K. TAYLOR. Certain of the electrical protection is carried in "vaults, safes, and locks," notably the Treasurer's office in the Treasury Department. The protection of the vault doors in the Philadelphia mint is carried in the Mint appropriation. It is a very small sum, \$365 a year, or \$1 a day. We propose to put them all into this one fund and pay them all from this one fund.

The CHAIRMAN. How much, then, would you have increased your estimate of \$60,000 for vaults, safes, and locks for public buildings if these items now carried over to the other item had been included? How much would your estimate have been above \$60,000?

Mr. J. K. TAYLOR. It would have been only a small proportion, a thousand dollars, or something like that, paid from that appropriation for vaults, safes, and locks. But the main appropriations are of larger amounts. We propose to pay them all out of one sum.

The CHAIRMAN. Then this increase of the sum for electrical protection is not due to the transfer of any part?

Mr. J. K. TAYLOR. It is a transfer of some of the protection to that, and this other installation, which is expensive.

The CHAIRMAN. What I wanted to get at was if you had taken into consideration this transfer. If not, we might reduce the sum of \$60,000.

Mr. J. K. TAYLOR. No. We had \$65,000 last year. We only ask for \$60,000 this year.

Mr. SULLIVAN. Under this act the Treasury will have authority to install and maintain burglar alarms and vaults and safes under all the buildings of the Treasury Department, wherever situated?

Mr. J. K. TAYLOR. Yes.

Mr. TAYLOR. It extends the amount from \$13,000 to \$65,000?

Mr. J. K. TAYLOR. Yes; but that would be covered also by the amount of money. We will not have money enough under this appropriation to more than maintain what we have already installed and these extra ones that we are taking into it.

Mr. SULLIVAN. But this language will allow you to take it from other appropriations in another year?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. I see in Document No. 368 that you suggest an additional amount of \$25,000 to the \$35,000 to be used by the Secretary of the Treasury for the installation of these burglar-alarm devices in such other buildings as he may deem necessary.

Mr. J. K. TAYLOR. Yes; that is an increase of the service.

The CHAIRMAN. Has experience demonstrated the necessity of this increase?

Mr. J. K. TAYLOR. Yes; I think it has. It is a wise thing to do.

The CHAIRMAN. Has there been any loss in consequence of not having this electrical protection?

Mr. J. K. TAYLOR. I think not. But last year Congress reimbursed the internal-revenue collector at Peoria for the loss of stamps by a burglary.

The CHAIRMAN. There was no protection there?

Mr. J. K. TAYLOR. There was none then, but there is now. The barn is locked after the horse is stolen.

Mr. BROWNLOW. What was the amount of the reimbursement?

Mr. J. K. TAYLOR. I do not remember, but it was some \$10,000 or \$15,000.

The CHAIRMAN. In this electrical protection at Indianapolis and New York do you use the same material?

Mr. J. K. TAYLOR. Yes; all that is good for anything.

The CHAIRMAN. What is it?

Mr. J. K. TAYLOR. The interior of the vault is lined with wood first, and then on that is applied tin foil and over that is copper wire interlaced with an eighth or a quarter-inch mesh. That is covered with tin foil again and another coating of wood put on the inside, and that is connected with a current from the main office, which is governed by a machine inside the vault, which changes the weight of the current three times in ten minutes. In each ten minutes there are three changes of the weight of the current that is going through that entire circuit of the vault all the time.

That is the protection. You can not cut any of those wires without ringing a bell in the main office, and they are supposed to send an armed force to the building if the alarm is rung, and we are having reports made every month now to see that they do it.

TREASURY DEPARTMENT.  
Washington, April 11, 1906.

#### ELECTRICAL BURGLAR PROTECTION.

To maintain burglar-alarm systems which have been installed under authority of act of March 3, 1903, covering certain designated buildings	\$20,300
To maintain systems in the Chicago post-office, Treasury, Boston post-office, Philadelphia mint, San Francisco subtreasury and mint, and the New York subtreasury, heretofore paid from other appropriations under control of different branches of Treasury Department	7,892
For reinstalling systems in new post-offices at Indianapolis and San Francisco, not included in list of designated buildings, act of March 3, 1903	4,500
For extending above systems, if necessary, from time to time and for incidentals	2,308
	35,000
Add to extend systems to buildings which are not designated in act of March 3, 1903, or at present equipped, at the discretion of the Secretary of the Treasury	25,000
	60,000

Detailed explanation of appropriations requested for electrical burglar protection in this year's appropriation bill.

#### TELEPHONE SERVICE FOR PUBLIC BUILDINGS.

The CHAIRMAN. The next item is "For telephone service for public buildings."

Mr. J. K. TAYLOR. That is a new one that we are asking for. That is for the telephone service in connection with those three buildings—

Chicago, San Francisco, and Indianapolis. In those three buildings we have a private switchboard, a private exchange, installed in those buildings. They are now paid pro rata by each one of the Departments. For instance, they figure up what the total amount of rental is and then the custodian figures out what proportion or number of 'phones each Department has, and each Department pays its own bill, and that is turned in to the telephone company, which makes a rather bulky and unwieldy way to do the thing. This \$25,000 will cover the total rental for all three of those, and the corresponding deduction should be made for telephone service for the different Departments.

The CHAIRMAN. The switchboard is connected with the city exchange?

Mr. J. K. TAYLOR. Yes; and run by the telephone company.

The CHAIRMAN. Do you know, or do you not know, that the telephone company puts these exchanges into private and business houses?

Mr. J. K. TAYLOR. Yes; they put them in.

The CHAIRMAN. Themselves?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. Do you know how the cost compares with the cost paid by private institutions?

Mr. J. K. TAYLOR. It is a trifle less.

The CHAIRMAN. That the Government pays?

Mr. J. K. TAYLOR. Yes; and it is less than the Government pays for a single phone.

The CHAIRMAN. What does the Government pay for a phone or drop?

Mr. J. K. TAYLOR. It varies in different places. In Chicago it started out at about \$45.75 a year, and it has come down now to about \$44 on account of the additional phones put in there.

The CHAIRMAN. That is \$44 a year for each individual phone?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. Do you know how many there are in the Chicago post-office?

Mr. J. K. TAYLOR. Some 300 with the extensions.

The CHAIRMAN. Are they all single lines?

Mr. J. K. TAYLOR. No; they are like any switch board. Each room is wired for itself. The building is all wired for telephone service.

The CHAIRMAN. I understand; but does the city exchange give each office a separate, independent line?

Mr. J. K. TAYLOR. Oh, no. There is carried into the building of the central 12 trunk lines, which are distributed—6 going out and 6 coming in. When a phone is rung from office, say, No. 406, it goes to the main central, and that is put on a trunk line that is vacant at that time, not carrying messages. These big trunk lines are carrying all the messages out and in.

The CHAIRMAN. Those big trunk lines consist of cables 200, 300, and 400 pair cables?

Mr. J. K. TAYLOR. Yes.

The CHAIRMAN. What I wanted to get at was whether each office had a separate wire in that cable independent of any other, or whether they were all on party lines.

Mr. J. K. TAYLOR. They are on what you might call party lines.

The CHAIRMAN. Then they are charging too much.

Mr. SMITH. That is not the same as a party line. His statement of it does not correspond with a party line.

The CHAIRMAN. Here in this city you can get an independent line directly connected with the exchange, with nobody else on, for \$5 a month. If you have another person on, the price is less \$3 or \$4. The price is reduced in proportion to the number of people on the line.

Mr. J. K. TAYLOR. This is practically the same thing. There is never anybody on the line that you are on in those buildings.

The CHAIRMAN. They can not get on if it is independent?

Mr. J. K. TAYLOR. No; you are right on the central switchboard in the building, and when you are connected on the trunk line nobody else can get on. They do not put anybody else on that line. You have got a private phone, just as much so as if you had a single wire running into your house.

Mr. SMITH. All those on a party line connect with the main line without passing through the exchange, so that everybody can hear what is going on the line—

Mr. SULLIVAN. And only one person can talk at a time?

Mr. SMITH. Yes; by this system everybody has a separate line to the substation, a separate and distinct line.

The CHAIRMAN. That is what I wanted to get at. The price seemed to be exorbitant at \$44 a year, where the Government was taking 300 phones in the same building.

Mr. J. K. TAYLOR. In this connection, Mr. Chairman, there is another letter from us suggesting that all telephone service under the Government be put into one fund and paid out of one fund.

The CHAIRMAN. In the city here?

Mr. J. K. TAYLOR. No; everywhere, except in the city here.

Mr. TAYLOR. All outside of the District of Columbia?

Mr. J. K. TAYLOR. All the telephone service put under one appropriation, rather than have it paid for by each individual Department.

Mr. SULLIVAN. And have one man in charge and responsible for the whole thing?

The CHAIRMAN. Responsible for the whole appropriation?

Mr. TAYLOR. Yes.

The CHAIRMAN. I think, perhaps, better contracts could be made that way.

Mr. J. K. TAYLOR. I was going to say, in that connection, that if that appeals to the committee at all, I should like to have an allowance made for the use of a thousand dollars of that to investigate those points. We have had to take our custodian's say so. We have had no fund to send anybody to look into the matter. I would like to send some one to investigate the matter and get the best rates and the best plans. For instance, the man who suggested this to me says:

In the Chicago post-office and court-house there is a large system, the trunk lines being in proportion to those originally proposed by the telephone company when they contemplated the installation of a larger number of telephones. The company have since installed additional trunk lines and now want the Government to pay for them. The office took the matter up with the custodian, who referred it to Inspector Chappell, and the report received is not sufficiently definite on which to base intelligent action.

The man does not know what we want. In other words, he is not an expert in telephone work. What we want to do is to send a man who makes a study of that and get the best system at the cheapest rates.

The CHAIRMAN. Can you give the committee any data to show what the cost of telephone service is at these outside places?

Mr. J. K. TAYLOR. Yes, sir. We have submitted an estimate of \$120,000 to cover the whole thing, and in order to arrive at that we must get the cost of it throughout the country. I know we wrote a number of letters to different places to get that information.

The CHAIRMAN. In letting contracts for this service where there is competition between telephone companies, does the Government avail itself of the benefit of that competition, or does it simply take the contract with the Bell people?

Mr. J. K. TAYLOR. We take it with both.

The CHAIRMAN. Both services?

Mr. J. K. TAYLOR. Yes; we have both services at Indianapolis. Both services are contemplated at St. Louis, I think also at Salt Lake. We find some of the officials use one, and some use the other, and we had to put in both. At least their business makes them do it.

The CHAIRMAN. Is this service maintained at the large post-offices for the convenience of the offices in connection with business houses in the city?

Mr. J. K. TAYLOR. No, sir; it is the business offices themselves in communicating with the offices in the building itself, as well as with the outside.

The CHAIRMAN. What is the necessity for the service, then?

Mr. J. K. TAYLOR. The customs department, for instance, has to have connection with the business houses outside.

The CHAIRMAN. I know; but in cities where they have two exchanges every business has both inside and outside; but the Government of the United States, it seems to me, should be accommodated with one service.

Mr. J. K. TAYLOR. That is one of the things we want to investigate. The officials themselves say, "No; we can not get along with one."

The CHAIRMAN. When the appropriation is made, you want the appropriation so drawn that you can use \$1,000 for investigation?

Mr. J. K. TAYLOR. Yes.

Mr. TAYLOR. To what do the words "telephone service" apply?

Mr. J. K. TAYLOR. To everything connected with the telephone service in the buildings—operators, insulations, switchboard, and rentals of the telephone, and the entire cost and connections of the telephone service.

TREASURY DEPARTMENT,  
Washington, April 13, 1906.

HON. JAMES A. TAWNEY,

*Chairman Committee on Appropriations, House of Representatives.*

DEAR SIR: I beg leave to submit the following for your information in connection with the estimate of \$160,000 submitted to-day by the honorable Secretary of the Treasury for an appropriation for telephone service in Government buildings.

As you are aware, there is no single fund available for all telephone service in Government buildings. The practice in vogue is that each official is allowed a certain sum for this service from some appropriation under the control of

the office or bureau to which he is attached. This is the method pursued by all the Executive Departments, and it is not the most satisfactory or economical arrangement. I may add in this connection that the Attorney-General in a letter of September 6th last complained of it to the Secretary of the Treasury, and requested that the Treasury Department endeavor to secure an appropriation which would cover all the service.

In many of the buildings private branch exchange systems with local switchboards could be installed, if the matter was controlled by some one branch of the Government, giving the various officials in the building direct communication with each other, and also with the telephone company's central exchange.

Under the present conditions this is not practicable, there being so many appropriations involved and so many officials authorizing the expenditures. The result is that the telephones are installed independent of each other, with not as good service, and at a greater cost than if they were united.

I may cite the New York court-house and post-office building, where there are three switchboards independent of each other and all operated by the New York Telephone Company. In the Cincinnati custom-house and post-office, a building of much magnitude, there is no switchboard. Neither are there any switchboards in the St. Paul buildings, while there are 40 telephones installed in the various offices. In the Philadelphia post-office and court-house building, the post-office has a switch board, but all the other offices with their 32 telephones are connected direct with the companies' central exchanges. This is the case in quite a number of the large buildings.

There are also about 50 buildings in which there are no telephone connections whatever. The custodian of the Federal building at Bristol, R. I., in which the custom-house and post-office are located, reports that they have a great many inquiries over the telephone, and as there is no connection in the building they have to depend upon the courtesy of their neighbors.

Also in quite a number of other buildings certain of the Government officials are compelled to pay for their service from their private funds, for the reason that the appropriations are inadequate.

This matter has been pretty thoroughly canvassed, and the estimate submitted is based upon the actual cost of the telephone service now furnished to offices in buildings under the control of the Department, so far as it can be determined. It was found, on further investigation, that the estimate originally submitted was not sufficient to provide for connecting the main buildings in the larger cities with the post-office substations, etc., and \$15,000 has been added on that account.

If the appropriation is made in the sum requested, it is the intention in all the larger buildings to have these private exchange systems installed connecting the various offices in the building and where necessary, also, to connect direct with the main building the post-office substations, customs stations, railway mail stations, etc., in order that all the Government officials may be in close touch with each other. This can be accomplished at less cost than is at present paid for the inferior service. It is also desired to so distribute the telephones in the smaller buildings as to make them available for use by all the officials.

Respectfully,

J. K. TAYLOR, *Supervising Architect.*

TREASURY DEPARTMENT,

Washington, April 19, 1906.

Hon. JAMES A. TAWNEY,

*Chairman, Committee on Appropriations, House of Representatives.*

SIR: In reply to inquiry contained in your letter of the 17th instant, I have the honor to state that, based on information received in response to a circular sent to the various buildings under the control of this Department, it is estimated that the total amount now being expended per annum for telephone service in and connected with these buildings is \$170,058. This is believed to be approximately correct.

It is believed that with economical administration the entire service can be provided for within the \$160,000 requested, if the matter is handled entirely by some one official of the Government.

Respectfully,

J. K. TAYLOR,  
*Supervising Architect.*

THURSDAY, *April 26, 1906.*

NEW YORK CITY, REPAIR OF COURT-HOUSE AND POST-OFFICE.

STATEMENT OF MR. W. R. WILLCOX, POSTMASTER, AND MR. ALFRED B. FRY, CHIEF ENGINEER OF TREASURY DEPARTMENT, NEW YORK CITY, N. Y.

The CHAIRMAN. Mr. Willcox, you desire to be heard with reference to House bill 18086, making appropriations for the repair of the court-house and post-office building at New York City, N. Y., and the sidewalks surrounding the same?

Mr. WILLCOX. These estimates were prepared by Chief Engineer Fry, representing the Treasury Department. We had several conferences, or many conferences regarding the various items that have finally been incorporated into this bill; and in order to avoid repetition I would ask that you hear Chief Engineer Fry on these items. While I am thoroughly familiar with them, yet I know that he can give better expression than I can upon the subject.

The CHAIRMAN. You are chief engineer of the Treasury Department?

Mr. FRY. Chief engineer and superintendent of construction and of maintenance and repair under the Treasury Department and the Department of Commerce and Labor for the ports of New York and Newark.

SIDEWALK.

The CHAIRMAN. The first item in this bill is, "For a new sidewalk covering the entire area about the building, \$15,000."

Mr. FRY. That is asked for because the present sidewalk does not conform to the present grades and lands as laid down by the city. It was installed in 1875. It has frequently been altered, patched, and repaired; it is unsightly; it is composed of a species of granolithic compound that becomes exceedingly slippery in slippery weather, and moreover presents a very discreditable appearance and out of keeping with the big building, being of various colors and various qualities on the surface.

The CHAIRMAN. What are the dimensions?

Mr. FRY. Roughly speaking, the building is over all 296 feet by about 260 feet on the base. The building is triangular in form.

The CHAIRMAN. What is the length of the sidewalk?

Mr. FRY. The total number of square feet in the walk is approximately 15,000 square feet.

The CHAIRMAN. What material do you contemplate constructing the walk of?

Mr. FRY. We will renew the foundation and put in a more modern, improved, granolithic walk.

The CHAIRMAN. How many square feet?

Mr. FRY. If we have to remove the foundation, and including the necessary repairs to the ironwork beneath, we would have to allow about \$1 a foot for that work, if we have to renew the entire line. Of course money not expended would not be used, but if we have to

remove the iron beams beneath the walk we should probably allow \$1 a square foot.

Mr. SULLIVAN. How much for the walk itself?

Mr. FRY. About 30 cents a square foot, I should say, approximately, for the walk, or five or six thousand dollars.

The CHAIRMAN. You can not determine what the character of the work beneath is, or whether it is necessary to construct a new foundation?

Mr. FRY. We can only reason inferentially about that. We have found considerable settlement in the granite supports of the portico along the south end, and we infer from that that there has been some scaling of the iron, and corrosion.

The CHAIRMAN. What is the difference in grade between this walk and the adjoining walk?

Mr. FRY. It is in some places from 2 to 2½ inches higher, and in other places 3 or 4 inches lower, than the grades fixed by the city for that walk.

The CHAIRMAN. At the places where these walks connect with the adjoining walks is there any difference?

Mr. FRY. No, sir; we are practically situated on an island there. That building is triangular in shape, as you may recollect.

The CHAIRMAN. There are no connecting walks?

Mr. FRY. No. It is fair to state that this improvement is asked for more as a matter of appearance and more as a matter of decency and to make it more in keeping with the other large private buildings in New York than as a matter of actual vital necessity.

#### RESURFACING STONework OF BUILDING.

The CHAIRMAN. The next item is for the resurfacing of and repairs to the stonework of the building, \$18,000. Please state the condition of the building.

Mr. FRY. The building is, in the main, granite. The outside portion of it was completed about 1873 to 1875. It has been once partly cleaned with acid, when the joints in the stone were pointed. The stone is very much discolored, very dirty in some places, and in some places streaked by the iron in the cement, or what iron may have been contained in the granite. The lower portion of it has been outrageously defaced, and this estimate contemplates the resurfacing of the lower courses of the building up to the height of from 6 feet 6 inches to about 7 feet, so that it can not be readily defaced and marred as it is at present. And they have also sand blasted the outside of the building. I want to say that I appreciate the dignity that age gives to old buildings; for instance, the subtreasury at New York is not covered with dirt, but it has become time stained, and presents a venerable appearance. The New York post-office I don't think has ever been cleaned so that it has a uniform appearance throughout. I do not believe in overcleaning, but I do think, considering the prominence of that building, and considering the fact that it is viewed by thousands of foreigners yearly and hundreds of thousands of New Yorkers daily, it is not unbecoming to ask for sufficient money to put it in condition so that it will present a proper appearance.

The CHAIRMAN. What was the process used in cleaning the Treasury building?

Mr. FRY. Sand blast.

The CHAIRMAN. I thought the sand blast proved a failure, and that they had to resort to some other process.

Mr. FRY. When I was down here they were sand blasting it. The present system of sand blast is now, and has been during the past few years, successfully used on a number of buildings in New York, notably, for example, the Drexel Building, on Wall street, a white marble building, which was very dirty and very much discolored.

Mr. SMITH. They abandoned the sand blast on the Treasury building, as I understand it, and substituted some sort of a chemical process.

Mr. FRY. I understood they were using it.

The CHAIRMAN. They started a sand blast, and it proved to be a failure, as I now recall it. There was some employee who invented an acid process, and they went all over the building, so that its present appearance is the result of the use of that process. I think if you will inquire of the Secretary of the Treasury you will find that that is the fact—that the sand blast was not satisfactory, and that they were obliged to resort to this other process, invented by some one in the Department, I understand.

How do you arrive at the amount estimated for this work?

Mr. FRY. By taking what has been paid for similar work on other buildings, municipal buildings and various private buildings. And as regards the stonecutting, by actual estimate; that is, as regards the rock facing of the lower courses, by actual estimate from measurements and getting actual estimates from stonecutters as to what it will take.

The CHAIRMAN. How much do you estimate for that part of the work—that is, the refacing?

Mr. FRY. The rock facing alone, as I recall that portion of the estimate, was about \$7,500. A good deal of it is very difficult of access, being in recesses, etc. May I be permitted to say that the lower portion is rock faced and the upper portion left in its present condition?

The CHAIRMAN. I understand that. I just wanted to know the relative cost of the rock facing.

Mr. FRY. May I be permitted to say that the sidewalk idea is put in more with reference to the appearance of the building and more with reference to consideration of its improved uses, than because of any necessity for either repairs or preservation?

#### INSTALLATION OF ELECTRIC ELEVATORS.

The CHAIRMAN. The third item is "For the installation of an electric passenger elevator and its approaches, to replace freight elevator on the Broadway side of the building, \$10,000."

Mr. FRY. The position of the building and the elevator service is exceedingly peculiar. Facing to the south—that is, the form of the building [indicating on blueprint plan]—this being the north front, and the building being as previously stated practically on an island of its own. Now, as originally, the building has for passenger serv-

ice two elevators, one located here in the northeast tower and one in the northwest tower. As soon as the building began to be occupied, it evidently became apparent that that was absurd, especially as these elevators reach only from the street floor to the fourth story, not reaching the fifth or top story of the building. Accordingly the Department, through the courtesy of Congress, which in its wisdom made an additional appropriation, installed two small passenger elevators at the front end, shown here [indicating]. Those elevators were made as large as structural conditions permitted. It will be recalled when that building was built the steel frame was not used at all. The framing was iron, and practically all of it was gotten out in a special order, so that the framing, instead of being standard, is almost a hodgepodge, so that to increase the number of elevators here [indicating] would necessitate the entire reconstruction of all the framework and these floors. Moreover, the post-office service practically covers, one may say, excepting the corridors, the whole of the first floor. It is obvious that to attempt to increase the number of elevators here would not only cause an enormous expense, by reason of the reconstruction on each floor, but you could give no adequate access on the ground floor without cramping the quarters of the post-office. Therefore what we have done recently, under our routine appropriations, was to take this old steam freight elevator out from this tower on the Park Row side, and substitute for it a modern electric freight elevator, which is to some extent used for passenger service by post-office employees only. These mail lifts are used to handle mail only from the post-office basement to the post-office proper.

The CHAIRMAN. From the basement to the ground floor.

Mr. FRY. Precisely. They are available as mail lifts only. This item contemplates the removal of the steam machinery, which is of an antiquated pattern and entirely unfitted both by lack of speed and lack of safety devices for passenger purposes. We propose to install a modern elevator in this shaft. That shaft has the advantage that no other elevator in the building has, because it gives access from every floor and from the subbasement, where a very large steam and electric plant is located, up to the top story, where at the present time, from the efforts of the present postmaster, this part of the building is now available for post-office uses, being now occupied by the money-order department and to be occupied by the inspectors for examination rooms, for dead-letter service, for inquiry rooms, and the money-order offices—that is, the clerical force of the money-order service. Hence it becomes obviously necessary, since there are 200 employees in that story, to provide some method for getting the passengers up and down.

The CHAIRMAN. It is essential in the operation of the building and the working of your office.

Mr. WILLCOX. Let me just say that we put this extra number of people on the top floor—about 200—which necessitates not only their going up in the morning and down at night, but, unfortunately, our money-order division is divided, and some of these employees have to go down two or three times in the day to the other departments, it being absolutely necessary under our arrangement. I will not go into the details of explaining it, but we need rapid communi-

cation between those places, and we lose a good deal of time now by not having elevator service.

The CHAIRMAN. There is no other elevator that reaches that floor?

Mr. WILLCOX. Excepting away over at the other end—the two elevators at the south end. That is crowded by the people who come up to use the money-order and registry division, and these rooms that we have opened up are on the north corridor.

Mr. FRY. The south elevators do not reach the basement where they handle the second-class matter.

The CHAIRMAN. What is the distance from the elevator on the south end, which you say the patrons of the post-office use, back to the money-order division?

Mr. FRY. About 160 feet, as they have to walk it. Moreover, the south elevators, as I say, do not reach to the lowest story occupied by the Post-Office Department, which is the basement.

I would like to strike out that application for an electric passenger elevator—that is, the term “electric,” for this reason: It is the desire of the Treasury Department to install, where experiments can be made with it, as regards economy (not experiments as regards safety or commercial use, because that has been determined already by many large installations, but experiments as regards economy), the plunger elevator, there being now competition between two or more firms. And it is the desire of the Supervising Architect's Office, if we get the authority, to install this elevator with plunger machinery and electric-driven pumps, in order to compare the cost of operation of that for future development and consideration with the cost of operating the direct-driven elevators, which we have a number of in the District. So, with your permission and with the approval of the postmaster, I would like to eliminate the word “electric” in that request. We propose to add, and undoubtedly shall have to do so if the courts increase their business there, one court room, and we shall have to better the whole elevator situation in that building.

We have considered the replacing of these two very old and very large passenger elevators in these two towers, the northeast and northwest towers, but we have not been able to give it serious consideration, because the roof construction is not strong enough to carry any overhead elevator gear above the fourth floor, and because we have large tanks which we would have to install and support elsewhere, and which the roof could not carry elsewhere without expensive changes. If, on the other hand—and assuming that Congress grants the authority—we install the plunger elevator in here, and that operates properly, we then could do away with the present old-fashioned elevator, with its chains, counterbalances, and old elevator gear, in the installation of this modern plunger machine. Very likely that will also prove serviceable in other buildings where the roofs are very light. So I say that we wish to strike out this word “electric,” this plan for a plunger elevator having come up since.

The CHAIRMAN. The next item is for extension of mailing platform on north front of the building, including such grading as appears needful to Mail street, within Government lines, \$20,000.

Mr. FRY. The location of the building, as I previously stated, is practically on a triangular island. This is Broadway [indicating]: this is the square formed by the junction of Broadway and Park

Place. This is Park Row, and here is Mail street across here. This reservation differs from a good many Government reservations in the large cities in that the Government holds actual ownership out to the sidewalk line on two sides, here and here [indicating]. We have a right to add 17 of the 10 inches, if your wisdom gives us the money, to this mailing platform, and we have a right to go out 7 feet north.

The CHAIRMAN. Is it necessary in the transaction of the business of your office?

Mr. FRY. Of course I am an engineer and not a post-office official, but I should judge from the tremendous congestion of mail wagons there every morning and afternoon, and especially during bad weather and during the holidays, that there is no question about the necessity of that from a post-office standpoint. I think the postmaster can state the necessity for that very much more clearly than I can.

Mr. WILLCOX. I did not bring any figures on that, because we are so terribly crowded. We have been trying to figure out some way by which this congestion could be relieved. We have so much second-class matter to send to Station H, that since I have been postmaster I have tried to get publishers of large publications to take their matter direct to the railroad stations, and have succeeded in one or two instances. "Colliers" take their material to the railway station at quite an additional cost to them. But the fact remains that an enormous amount in tonnage of second-class matter is brought down to the post-office to be mailed, and one of the things that we try to do when it is brought there is to put it on the platform instead of taking it into the building, where we are so greatly cramped for space. We at once unload it on the platform and there it is loaded onto the wagons.

The CHAIRMAN. It does not go into the office at all?

Mr. WILLCOX. No.

The CHAIRMAN. That is, your present appliances could handle more mail if you had this extension?

Mr. WILLCOX. It would enable us to handle the matter quicker and better. It would not add to the force. We need the space to relieve the congestion.

Mr. SULLIVAN. Do you separate mail on that platform?

Mr. WILLCOX. Not at all. This is the heavy bag mail that will be relieved largely; the tons of mail, the dray loads that come down there of second-class matter. I should have brought along some figures to give you an idea of the daily tonnage that comes there to be rehandled.

Mr. SULLIVAN. This would accommodate the mail that you do not have to pass through the office?

Mr. WILLCOX. I am talking now of only one feature of the congestion. Of course the enormous amount of first-class mail that we handle—the whole thing—tends to make this congestion; but I am figuring now on one of the principal features of the trouble, namely, the enormous amount of second-class matter turned onto the platform, and loaded from the platform into our wagons to be taken to the station.

Mr. TAYLOR. Where is it weighed?

Mr. WILLCOX. It is weighed on the platform, on the platform scales.

## RAISING VAULT LIGHTS UNDER PORTICO.

The CHAIRMAN. The next item is "For raising vault lights under portico outside of main entrance, southern end, and such changes in grade of said lights as will cause the grade to be away from the building, \$800." Explain the necessity for that.

Mr. FRY. The conditions there are peculiar. Let us assume that that is the main wall of the building, and this arch represents the main portico [indicating]. It is as though this floor had settled backward toward the front of the building from an inch and one-eighth to an inch and one-half. The result is that in rainy weather you walk into a pool of water from an inch to an inch and a half in depth in getting into the south entrance.

It is a little uncertain what the condition of that old-fashioned ironwork is, and it is difficult to determine whether that is the result of the settlement of the foundations or whether it is due to the rusting off of the ends of the beams themselves, or the webs, rather.

The CHAIRMAN. Has this accumulation of water any deleterious effect on the foundation?

Mr. FRY. No, sir; it can not run anywhere. It settles there until the laborers come in and sweep it away after each rain. It is disagreeable to walk through it.

The item is small. It was put in there because it illustrated the need of asking an entire reconstruction of the sidewalk, although, if desired, we could obtain that authority from the ordinary appropriations.

## ASH ELEVATOR AND CONVEYORS.

The CHAIRMAN. The next item is "For system of ash elevator and conveyors on the Broadway side, \$5,500."

Mr. FRY. If I might be permitted to read from my report on that. I would say that the east end of the north mailing platform is used for from an hour and a half to two and one-half hours daily by ash teams and laborers getting out ashes from the large steam plant of the building. This process interferes with access to the north platform by parties transacting mailing business there, and also interferes with the clerks handling the mails on the platform, and the wagons calling for and delivering mail. Moreover, getting out ashes by this method from the subbasement in cans is very slow, exceedingly laborious, and a very dirty process.

An adequate modern system of ash elevator and conveyors can be installed at a convenient point on the Broadway side of the building, where no valuable space will be taken, and in a position that will not interfere with the customary use of Broadway or any material part of the sidewalk while ashes are being hoisted and delivered.

The east end, here, is where one ash lift is situated. It is just such as may be found in any United States Government building, connecting with the pneumatic plant, 14 horsepower. We burn there from 20 to 26 tons of coal per day, and we get out from  $1\frac{1}{2}$  to  $2\frac{1}{2}$  tons of ashes per day, according to the quality of coal furnished.

All those ashes have to be hoisted by one of these machines. It blocks off 20 feet of this very much used eastern-end platform. It is a nuisance to the post-office people, and it results often in a great deal of friction between the men serving under me and those serving

under the post-office. For that reason a special request was made for the installation of an ash hoist and a conveyor ash system, such as exists now in almost all modern ash plants, to convey the ashes away by a tram and trolley and carry them to a point not very much used on the Broadway side and hoist them out by chute into the wagons early in the morning, when they would not block Broadway or the cars. We have them in stores over in New York, and they have proven to be very satisfactory.

#### ESCALATOR AND INSTALLATION OF STORM SASH.

The CHAIRMAN. The next item is "For escalator from fourth to fifth floor, \$16,000;" and the next, "storm sash, \$2,500."

Mr. FRY. The necessity for that is that that building was originally completed with hard-wood sash. It has shrunk and warped considerably during the last twenty-five years, and the building on the northwest side not being cut off by high buildings from the northwest winds coming from the river, it is found necessary now either to put in an entire new set of sash on the northwest side or else a new storm sash. We feel that the appropriations for public buildings have increased so much that it is not well to load up the expenses on the structure.

The CHAIRMAN. Would this be outside storm sash?

Mr. FRY. Yes, sir; to be taken away during the summer months.

The CHAIRMAN. Have you ever tried storm windows?

Mr. FRY. I personally would not have them in my office. I am personally opposed to them, but I think the judges clamor for them. I believe they do. They would be used outside the existing sash; that is, the sash that we would put on in the winter. It would consist of a frame.

The CHAIRMAN. A closed sash?

Mr. FRY. Yes, sir.

The CHAIRMAN. That is what we call storm window in the Northwest, where I live.

#### INSTALLATION OF TOILET ROOMS.

The next item is "For installation of toilet rooms, \$4,500."

Mr. FRY. May I be permitted to read something that I have written down here, because we have boiled it down more closely than I can give it to you orally?

The CHAIRMAN. Certainly; go on.

Mr. FRY. The toilet facilities available in this building are entirely inadequate to meet the wants of the large number of post-office and court employees occupying the rooms above the gallery floor. For instance, on the fifth floor, when present alterations are completed, there will be over 200 men. There are available only eight toilet fixtures. It is proposed to install a women's toilet room on the second floor, having four fixtures and slop sink, also three wash basins, a small private toilet room adjacent to room 15, with one fixture and one wash basin for the Auditor's use, and a women's toilet room on the fifth floor, generally similar to that proposed for the second floor. There is now no women's toilet on the fifth floor at all, although there are a number of women employees up there belonging to the courts.

The CHAIRMAN. What is the number of toilets you have in that building?

Mr. FRY. I should say offhand there are something over 70 fixtures, including those available for public use. The total number of permanent occupants of that building, I should say, is about 1,400.

Mr. WILLCOX. And besides those, then, there are the carriers—

Mr. FRY. Yes; and obviously there must be a certain number of available toilet fixtures for the use of the courts.

Mr. WILLCOX. And there is a lot of extra employees on the fifth floor. That is what calls this up. The rooms heretofore used as storerooms are now filled with clerks.

#### RENEWAL OF ELECTRIC WIRING.

The CHAIRMAN. The next and last item is "For renewal of and new electric wiring and improvements in electric wiring, \$9,500."

Mr. FRY. Up to 1897 the Government hired or purchased steam from the New York Steam Company and purchased current from the various electric companies, under competition. That cost in round numbers from \$78,000 to \$80,000 a year. In 1897 we fitted a steam and electric plant into that building, the running expenses of which rarely reached \$34,000 a year. They have averaged in the last three years \$33,000 and some dollars under. When we put that plant in we did it out of savings from the appropriation known as fuel, lights, and water. We had to repair some of that old wiring which was previously in the building. It is desirable now to renew much of that which has been in there for eleven or twelve years, some of it longer, and also to extend and rewire.

The CHAIRMAN. Does that necessity arise from the fact that you are using a stronger current?

Mr. FRY. No, sir; from the fact that the installation used twelve years ago is not so good as that used to-day, and that old wiring has many times been pieced and patched and relocated and moved according as the furniture in the room has been rearranged, and the furniture in that building has been changed three or four times a year in the last five years; and there has been an entire readjustment of this furniture, and that old wiring has been almost cut to pieces, and that it is desirable to renew.

The CHAIRMAN. Have you any additional statement to make?

Mr. WILLCOX. No, sir, Mr. Chairman. Mr. Fry has already fully covered it, and I have already trespassed too much upon your time.

The CHAIRMAN. Have you any questions to ask, gentlemen?

#### EXTENSION OF MAILING PLATFORM.

Mr. SULLIVAN. I thought you might be enlightened somewhat as to the construction and the cost of the mailing platform, the length of the addition, and the dimensions of it.

Mr. FRY. The foundation would be carried on small concrete piers, and the framing of the platform would be established on steel pillars. The column supporting the roof would be of iron, and the roof of the platform, as in the present platform, would be of copper. There has been a great increase in the cost of structural metals in New York. If we could afford copper we would prefer it, but we can use sheet

iron heavily painted instead. We installed this platform about 1899, the present platform somewhere between 1899 and the year 1900, and the new construction will be generally similar to the present platform. For the floor of the platform we would like to use maple an inch and an eighth placed on edge. At present prices I fear we can not afford such a luxury. The maple floor we had put in before had the hardest sort of wear, and has never had \$1 expended on it in repairs.

The CHAIRMAN. What material is it?

Mr. FRY. Maple, laid on edge. It is exposed to the weather and to the hardest sort of traffic. We could not afford, perhaps, a floor of that description now.

Mr. SULLIVAN. What is the area of the proposed extension?

Mr. FRY. It would be to add 7 feet to the width of the platform and 17 feet and some-odd inches, as I recollect it, on the end.

Mr. SULLIVAN. How long a surface would 7 feet increase of width add to it?

Mr. FRY. The entire length of that thing, over all, is now 132 feet.

Mr. WILLCOX. That would be lengthened by your end addition—

Mr. SULLIVAN. So that you would have 1,050 feet of surface?

Mr. FRY. Yes, sir; I find in New York, at present prices, that for any inclosed structures if you figure \$5 per square foot for modern style of brick and terra cotta construction it seems to come out very nearly, and for open construction \$3.

Mr. SULLIVAN. You call that close construction?

Mr. FRY. Yes; from the fact that we have to tie on to the existing work; and if it is desired it would be well to use copper for the roof and maple laid on edge for the floor.

Mr. SULLIVAN. For 1,050 feet length the cost of the proposed extension, as I take it, at \$5 per foot, would be \$5,250.

Mr. FRY. Yes, then, in addition to the platform work alone, this includes necessary regrading in Mail street. Mail street is in a very curious position legally. Mr. Willcox used to be park commissioner, and curiously enough he was brought up to this same question when park commissioner. The United States actually owns about 19 feet beyond the pier line on that north side, but I think it was generally agreed at that time that we could claim jurisdiction to the right of way clear to the center of the street. Now, of course if we move our platform out there 7 feet we throw out the grade of the street, because now it crowns both ways. We have to rearrange the sewers on our side and grade the streets so that all water will run toward the park, and this estimate of \$20,000 covers not only the construction of the platform itself, but, as stated here, the extension of the present mailing platform and also such grading as may prove needful to Mail street within Government lines.

The grading there is going to be very inconvenient and expensive work. It has got to be performed at night, because in the daytime we can not block that street to general traffic, and we have also got to make provision for the mail wagons. When we did that work before we did all the grading that is immediately adjacent, between the platform and the front of the building, from midnight until 5 a. m. in the morning.

Mr. SULLIVAN. How much do you estimate for the grading?

Mr. FRY. Such resurfacing as we would have to do and the grading of the street, as I remember, represented an expense something like \$15,000.

Mr. SMITH. Do you repave that street?

Mr. FRY. We did that before, because the city just lay down on us.

Mr. SMITH. The Government of the United States does not pay for the paving of any other city except New York City.

Mr. FRY. There is the fiend [jocularly indicating Mr. Willeox], who made us do it, gentlemen. [Laughter.]

Mr. WILLCOX. That was when I was park commissioner. We required that part of the street should be kept in repair by them. Now, if the Government comes in and destroys the street, which is in very good condition, I suppose they can ask us to put it in proper shape.

The CHAIRMAN. In making this extension on this present platform do you destroy the present paving?

Mr. FRY. We have to destroy the present grade of the street.

Mr. WILLCOX. It is shown on the map there, but the street runs on the park and Mail street.

Mr. SULLIVAN. Can you give us the area of that new grade?

Mr. FRY. No, sir; I can not. Asphalt, as we get it in New York, costs approximately \$3 a yard for a patch job of that description. You would have to add 25 per cent to that for overtime and difficulties of access. Call it, roughly, \$4 a yard. If you divide \$4 a yard into \$15,000, that would give you the number of square yards you would disturb. The street is a wide street, with a wide sidewalk on the side of City Hall Square.

Mr. LITTAUER. Is there one on the park side and one on the Mail street side?

Mr. FRY. No, sir. We abolished the one on the park side before. That gives you an idea of the location there [indicating on map]. Here is the street [indicating].

Mr. WILLCOX. Here is Broadway [indicating], and here is Park Row, and here is Mail street, which is a wide street.

Mr. FRY. That shows the mailing platform. When we abolished this sidewalk on this side and closed the street to travel, an agreement was made legally, with the details of which I am not familiar, that required us to widen the park sidewalk. You can see our work there now [indicating]. We got a little different coloring in the granolithic from the other, and they required us practically to regrade the entire street.

Mr. LITTAUER. Was there not a sidewalk there, and you abolished it?

Mr. FRY. Yes, sir.

Mr. WILLCOX. The Mail street side, if we could have our own way, should be controlled by the Government and used entirely as a mail street.

Mr. SULLIVAN. How wide is that?

Mr. FRY. I should say 65 feet.

Mr. SULLIVAN. What is the length from here to here [indicating]?

Mr. FRY. The length of that reservation on that side, as I recollect it, is about 150 feet.

Mr. SULLIVAN. That is about the estimate at \$4 a foot. No; it would not be. That would be 9,750 feet.

Mr. FRY. Our reservation lines there are 288 feet long.

Mr. SULLIVAN. Do you have to pave that entire distance?

Mr. FRY. That would depend very largely on the attitude of the city as to our approaches in Broadway and Park Row. I imagine that estimate probably allowed for any contingencies that we might meet in that respect. My hope would be that they would require us only to repave what would be necessary to turn the water away from us.

Mr. SULLIVAN. What length would that be?

Mr. FRY. About 180 feet.

Mr. SULLIVAN. You would have to pave, roughly, 288 feet as a maximum and 180 feet as a minimum?

Mr. FRY. That depends upon what attitude the city people took, very largely.

Mr. SULLIVAN. I find, Mr. Chairman, that the total width of the street to be paved is definite—namely, 65 feet. The length is indefinite, because of the uncertainty of the attitude of the New York authorities in the matter of paving; but the maximum length estimated is 288 feet and the minimum length 180 feet. Taking the maximum, we would have 2,080 yards, which, at \$4 a yard, would be \$8,321, while taking the minimum it would be 1,300 yards, at an estimated cost of \$5,200. Therefore, assuming that we took the minimum, and adding to it \$5,250 estimated for the construction of the platform, we would have \$10,450, while if we added the cost of the platform to the maximum estimate we would have \$13,570.

Mr. FRY. But to that we have got to add the cost of the catch-basin drain, which would be essential.

Mr. SULLIVAN. That is a fixed item?

Mr. FRY. Yes; in any event.

Mr. SULLIVAN. What do you estimate for that?

Mr. FRY. About \$2,000. The city may insist on our making the same changes in the Park Row sidewalk and the park as they did before, because Mail street may become very much congested. The effect of this is to narrow that approximately 8 feet. The teams in delivering stand at right angles with the platform. The sidewalk on that park side—although Mr. Wilcox, as park commissioner, compelled us to widen it—seems to me needlessly wide for the traffic there, and we made a figure for the repaving of that curve and the taking away of a restriction of that sidewalk, as they might require.

Mr. SULLIVAN. You are not certain about that?

Mr. FRY. That, again, is a matter that would depend on the action of the city authorities.

Mr. SULLIVAN. How much did you estimate for that?

Mr. FRY. Probably somewhere from \$2,500 to \$3,500.

Mr. SULLIVAN. You do not know how much you estimate it?

Mr. FRY. No, sir; I do not.

Mr. SULLIVAN. Take it at \$3,500. Are there any other items?

Mr. FRY. No, sir; there are no other items.

Mr. SULLIVAN. Neither of these figures carries the estimate up to \$20,000; neither the maximum nor the minimum. Figuring everything adversely, the maximum would make it \$19,017.

Mr. LITTAUER. It is the one additional absolutely necessary thing they ask for here, to make the working of the post-office more practicable. It is not a fancy structure. It is a patchwork structure in

reality, and there may be little contingencies about which you can not tell.

Mr. FRY. We can not predicate on the action of the city authorities.

Mr. LITTAUER. It is not like building a new structure.

Mr. FRY. You can not compute within reasonable limits the actual cost in the building if you do not know where the city will compel you to stop or begin; or if you do not know their action, it makes the figuring on the sidewalk somewhat difficult.

#### INSTALLATION OF ELEVATOR.

Mr. SULLIVAN. I would like to be enlightened somewhat as to the cost of these modern elevators. That is all.

The CHAIRMAN. Have you any data that would enlighten us any in respect as to the cost of these modern elevators?

Mr. FRY. The estimated cost that was put in here was based on the contract cost of an electric freight elevator on the other side of the building with an allowance of 10 per cent for contingencies.

Mr. SULLIVAN. When was the other one installed?

Mr. FRY. It was contracted for last year, and the installation was completed last February.

Mr. SULLIVAN. The well is there?

Mr. FRY. Yes; the well is there.

Mr. SULLIVAN. All you would have to put in would be the car and the necessary machinery?

Mr. FRY. Yes; the new slides and the plunger and its casing, if we used a plunger elevator, and the electric pump, and the accumulator, and tank, and the wiring and connections with the Park plant.

Mr. SULLIVAN. What is the width of the well?

Mr. FRY. That is 7 feet by 9.6 over all.

Mr. SULLIVAN. And the height of the well?

Mr. FRY. The total lift in that particular well, as I happen to remember, is 128 feet.

Mr. SULLIVAN. Is it a six-story building?

Mr. FRY. It is a subbasement building with five stories above the subbasement.

Mr. SULLIVAN. I had no idea they were so expensive.

Mr. FRY. Of course, in making up these estimates we have to estimate what will probably be the maximum charge. Then we can take bids and get the best competition possible. But I question whether you gentlemen, experienced as you are in public affairs, realize the difficulty of working upon accurate estimates in New York City at the present time. Doubtless you are informed, I suppose, of the increased prices of building materials, and also concerning the labor troubles we are having over there.

Mr. SULLIVAN. Can you get competitors now as against the Otis elevator trust?

Mr. FRY. There is actual competition. It is possible to get actual competition on all types of machines; certainly on pumps.

Mr. SULLIVAN. That is recent, is it not—within two years?

Mr. FRY. In the East it has always been possible to get competition, but in the West it has not been possible to get it, except within two years past.

The CHAIRMAN. I would like to ask you one question: Why is it

that these improvements and expenditures can not be made out of the appropriation for preservation and repair of public buildings?

Mr. FRY. To quote a statement made this morning to us by the Supervising Architect, the amount for preservation and repair of public buildings throughout the United States is \$450,000, and if my memory serves me aright, we have 382 public buildings that have to be repaired and preserved and maintained out of that allowance.

The CHAIRMAN. And the amount—\$450,000—is not sufficient to meet this expenditure?

Mr. FRY. If I may be permitted to say it with every deference to the committee, I would answer, yes, sir; the amount is not sufficient.

The CHAIRMAN. Could these improvements, all of them, be made and paid for out of that appropriation, if the appropriation were increased accordingly?

Mr. FRY. They could; yes, sir.

The CHAIRMAN. There is nothing in the present law that would prevent it?

Mr. FRY. No; save one item. By Departmental usage the appropriation known as fuel, lights, and water carries repairs to electric wiring and additions to electric-light plants. New wiring and new plants are paid for out of construction accounts of various buildings; but by usage and by law, if my memory is right, the appropriation for fuel, lights, and water covers repairs to existing plants, so that that one item for wiring would have to be in addition, as I understand it, to fuel, lights, and water.

TREASURY DEPARTMENT.

Washington, April 27, 1906.

Hon. JAMES A. TAWNEY,

*Chairman Committee on Appropriations, House of Representatives.*

SIR: In response to your verbal request made this morning, I have the honor to advise you further in regard to the necessity of a special appropriation on account of the court-house and post-office, New York, N. Y. The chief engineer and superintendent located at the building has prepared an outline of a sum required, in aggregate amount \$102,400, necessary for the improvement and alterations at the building, which if undertaken would materially improve existing conditions. The present conditions in the building as to light, room, and facilities are very bad, and would certainly prompt the adoption of some measures to furnish needed relief. Some of the changes suggested are not in the nature of "repairs," notably the extension of mailing platform, and it is questioned whether the legal officers of this Department would permit charging the "Repairs and preservation" appropriation with these items, especially the mailing platform. In addition to this it is apparent that if the annual appropriation for "repairs" was increased to such an extent as to give this specific building money sufficient to carry out the improvements under consideration, receiving that sum as its fair proportionate share, it would swell that appropriation to a startling amount.

Attention may be called also to the concluding paragraph of act approved February 27 last, making appropriation to supply urgent deficiencies, where it will be found that on or before the beginning of each fiscal year that the appropriation be so apportioned by monthly or other allotment to prevent expenditure in one portion of the year, which may necessitate deficiency, and should this prevail it would prevent work being let under contract to the best advantage, and if all the work contemplated for this building now the subject of consideration be carried on in the most advantageous way it would stop all other repairs on public buildings for nearly three months. For these reasons it would seem to be wise that the appropriation should be made available in some other way than as part of "Repairs and preservation of public buildings."

Respectfully,

J. K. TAYLOR,  
*Supervising Architect.*

WEDNESDAY, April 18, 1906.

### LIFE-SAVING SERVICE.

#### STATEMENT OF MR. S. I. KIMBALL, GENERAL SUPERINTENDENT LIFE-SAVING SERVICE, ACCOMPANIED BY MR. HENRY L. GOSLIN, PRINCIPAL CLERK.

The CHAIRMAN. You are connected with the Life-Saving Service?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. What is your position in that Service?

Mr. KIMBALL. That of General Superintendent.

The CHAIRMAN. Do you have anything to do with the making up of estimates for appropriations for the Service?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. What is your duty in that respect?

Mr. KIMBALL. To prepare estimates of the requirements of the Service and submit them to the Secretary of the Treasury.

The CHAIRMAN. You prepare the estimates and submit them to the Secretary of the Treasury?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. Upon what information and from whom do you obtain the information upon which your estimates are based?

Mr. KIMBALL. Well, from my general knowledge of the wants of the Service, the experience of prior years, and so forth.

The CHAIRMAN. Are you governed almost entirely by the appropriations for previous years in making your estimates for the coming fiscal year, or do you have additional information?

Mr. KIMBALL. Oh, I have additional information. Where, for instance, the number of stations has been increased, the estimates are larger in consequence of that increase. My estimates are of course affected by such matters.

The CHAIRMAN. Do you make any examination into the matter of the expenditure of the appropriations for the past fiscal year and the current fiscal year in order to ascertain whether there can be any economy or any reduction in the appropriations for the coming fiscal year?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. You do?

Mr. KIMBALL. Yes, sir. Nothing is expended in the Life-Saving Service except upon my authority, or the authority of the Secretary upon my recommendation. I am familiar with every expenditure that is made from one day to another. I never authorize any expenditure without examining into its propriety before authorizing it.

The CHAIRMAN. All the expenditures are authorized by you, subject to the approval of the Secretary?

Mr. KIMBALL. Yes, sir; unless I am absent, when the Assistant General Superintendent acts. I try to be very careful about it.

#### SALARIES OF SUPERINTENDENTS.

The CHAIRMAN. I observe that your appropriations have been quite uniform for a number of years. Turn to the bottom of page 19 of the bill. The first item there, under this Service, is for salaries of the superintendents for the life-saving stations, and provisions for these

salaries are also carried on page 20 and on top of page 21. You ask for no increase for the coming fiscal year over the current appropriation for salaries of superintendents?

Mr. KIMBALL. No, sir. That is all provided for by law.

The CHAIRMAN. Those salaries are all fixed by law?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. And the number of superintendents?

Mr. KIMBALL. That is fixed by law.

Mr. TAYLOR. Could you explain how these salaries differ one from the other—some \$2,000, some \$1,700, and some \$1,800?

The CHAIRMAN. They are statutory salaries, I understand.

Mr. TAYLOR. All right.

Mr. KIMBALL. Every one is fixed by law.

Mr. TAYLOR. The salaries are not fixed by you and the Department?

Mr. KIMBALL. No, sir.

The CHAIRMAN. There was a complete revision of the law governing this Service a few years ago, was there not?

Mr. KIMBALL. As to the salaries of superintendents, yes sir.

# SALARIES OF KEEPERS.

The CHAIRMAN. The next item on page 21, for salaries of 287 keepers of life-saving and life-boat stations and of houses of refuge. I see you have included, or recommended, 287 instead of 286 keepers of life-saving stations. Is that because of the creation of a new station?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. When was the law passed creating that new station?

Mr. KIMBALL. There are about 16 stations now authorized by law that have not been built. This was one of those. It is at Nome, Alaska.

The CHAIRMAN. Have you a list there of the stations that have been authorized and have not been constructed yet?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. Kindly give that to the stenographer and let him insert it in the minutes of your testimony.

Mr. KIMBALL. Yes, sir. Here it is:

The following is a list of life-saving stations, the establishment of which has been authorized by law but which have not yet been built.

Date of act.	Name of proposed station.	District.
June 20, 1874	Point Conception <sup>a</sup> .....	13
May 4, 1882	Cape Ann.....	2
	1 on Brigantine Beach, N. J. <sup>a</sup> .....	5
	1 between Capes Henlopen and Charles.....	6
	Key West.....	8
	Georgetown.....	8
	1 house of refuge on the eastern coast of Florida <sup>a</sup> .....	8
June 19, 1886	Cape Poge.....	2
	Fisherman's Island.....	6
Oct. 13, 1886	Lynnhaven Inlet.....	7
Mar. 3, 1891	Port Orford.....	13
June 3, 1902	On Monomoy Island, Mass.....	2
Mar. 3, 1903	Mouth of Black River, near Lorain, Ohio.....	10
Apr. 22, 1904	On Delaware coast between Indian River Inlet and Fenwick Island station.....	6
Apr. 27, 1904	Near Eagle Harbor, on Keweenaw Point, Mich. (Lake Superior).....	11
Apr. 28, 1904	Near entrance to Tillamook Bay, coast of Oregon.....	13
Mar. 1, 1905	Nome, Alaska.....	13

<sup>a</sup> Probably will not be built.

The CHAIRMAN. Now, notwithstanding you ask for an increase of one keeper of a life-saving station, you do not estimate for any increase in the appropriation for the coming fiscal year over the current appropriation. Why is that?

Mr. KIMBALL. You will find we do not appropriate for all the keepers that we ask for the reason that there is an act of Congress authorizing the continuance of members of the crews upon the rolls where they have incurred disability in the line of service. They are continued for one year, and possibly for two years if the general superintendent shall so recommend and the Secretary of the Treasury approve the recommendation. The Comptroller has decided that there must be a place among the keeperships for a keeper so continued upon the rolls. He is not on duty, you understand. Another man has been appointed in his place when he has left the station on account of disability; but in order that the latter may have a continuance on the roll there must be a keepership provided by law, and there may be six or eight disabled keepers entitled to continuance on the roll. In that case we would want that number of places for these men, but we would not want the appropriation in this place because the expense of the continuance upon the roll is paid out of an appropriation for carrying into effect sections 7 and 8 of the act of May 4, 1882.

The CHAIRMAN. So you have stations in charge of men who have become disabled in the service and are paid from an appropriation under the sections of the statute you refer to for disabilities, instead of being paid out of this appropriation?

Mr. KIMBALL. No; such a man is not a keeper of a station. He has no station. He is not in charge of a station. He is on the retired roll, as it were, or rather the disability roll. It is not a retirement, but he is continued on the pay roll for a limited period.

The CHAIRMAN. For one year, or what?

Mr. KIMBALL. For one year and such part of a second year as the general superintendent may recommend and the Secretary of the Treasury approve as just and reasonable. That is the provision of the law.

Mr. SMITH. How many stations are there?

Mr. KIMBALL. Two hundred and seventy-seven, and you see here I have left 10 places for that provision.

The CHAIRMAN. Where?

Mr. KIMBALL. You called my attention to the fact that salaries for 287 keepers were appropriated for. We added one to the 286 of last year.

The CHAIRMAN. It was 286, and you added 1, making 287, and you have how many stations?

Mr. KIMBALL. Two hundred and seventy-seven. We generally keep the number of keeperships about 10 ahead, so as to be sure we will not get caught without a place for a keeper entitled to continuance upon the rolls.

The CHAIRMAN. In that way you provide for this disabled roll?

Mr. KIMBALL. Yes; but the payment of that disability roll is provided for elsewhere, as I have stated.

The CHAIRMAN. Then we are actually appropriating for 277 keepers in this appropriation, and the number of active keepers has not been increased?

Mr. KIMBALL. It has been increased one from last year.

Mr. SMITH. And so you increase this one?

Mr. KIMBALL. Yes, sir.

Mr. SMITH. It is your plan to carry this and 10 more in the bill all the time, in order to cover whatever number may chance to be on the retired list?

Mr. KIMBALL. Yes, sir; that is it exactly.

Mr. SMITH. You say after this language is used that, notwithstanding this item purports to provide for all of them, the accounting officers will allow you to pay them out of another fund?

Mr. KIMBALL. There must be a place. There must be a keepership or else that man can not be a keeper. It is a very technical construction of the law, I think, but that is the ruling of the accounting officers.

Mr. TAYLOR. Where is the fund out of which you pay that?

Mr. KIMBALL. On page 22, at the bottom of the page:

For carrying out the provisions of sections 7 and 8 of the act approved May 4, 1882.

Mr. SMITH. What is the salary of the keeper? Is it uniform throughout the country?

Mr. KIMBALL. Nine hundred dollars a year, except for the keepers of houses of refuge on the coast of Florida, where there are no crews; the salary of these is \$600 each.

Mr. SMITH. How many of them are there?

Mr. KIMBALL. Eight of them.

Mr. SMITH. At \$600 each?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. No keepers get more than \$900?

Mr. KIMBALL. No, sir; that is fixed by law.

Mr. SMITH. I understand that; yet it may be my stupidity; you have 277 keepers, counting those on the retired list and all, aside from these eight?

Mr. KIMBALL. No, sir; that includes the eight.

Mr. SMITH. You ask for 287?

Mr. KIMBALL. Yes, sir.

Mr. SMITH. Oh, I understand it now.

#### PAY OF CREWS OF SURFMEN.

The CHAIRMAN. The only change in the next item is omitting the language in respect to the temporary station at Portland, Oreg., Exposition?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. Will you explain to the committee the necessity of increasing the aggregate appropriation under the head of pay of crews, and so forth? I see you estimate for the coming fiscal year \$1,602,850, while for the current year the appropriation is \$1,563,215.

Mr. TAYLOR. That is an increase of \$39,635.

Mr. KIMBALL. Twenty-six thousand nine hundred and ten dollars of it is pay of surfmen.

Mr. TAYLOR. Twenty-six thousand dollars or \$36,000?

Mr. KIMBALL. Twenty-six thousand dollars. That is to pay surfmen at new stations that are authorized. We expect to build a larger number of stations this year than last by a considerable number. We

have been getting titles, and so forth, and are now situated so that we can go on and construct these.

The CHAIRMAN. Have you appropriations with which to build these new stations?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. How do you account for the remainder of that increase? The increase is over \$39,000, and you account for \$26,000.

Mr. KIMBALL. Twelve thousand seven hundred and twenty-five dollars of the increase is for pay of surfmen at old stations that have been destroyed, or have not had crews yet, or have to be rebuilt. For instance, at Coney Island Station we have authority to rebuild, but it has not yet been done. The amount needed for the compensation of that crew would be \$4,550.

The CHAIRMAN. Have you no crew there now?

Mr. KIMBALL. No, sir; we have none there now.

The CHAIRMAN. A station, you say, is established there, but has to be rebuilt?

Mr. KIMBALL. Yes; but we have not rebuilt it, and therefore there has been nobody employed there; but we propose to rebuild it.

#### LIFE-SAVING STATION, PORTLAND EXPOSITION, OREGON.

The CHAIRMAN. Now, you strike out the provision for the station at Portland, Oreg. How much did the maintenance of that station there last year cost the Government?

Mr. SMITH. The exposition station?

The CHAIRMAN. Where was that crew taken from, and where did it go after the exposition was over?

Mr. KIMBALL. The men were taken from various crews on the Pacific coast, one man from one crew, another from another crew, etc. They were men from the various crews on the Pacific coast.

The CHAIRMAN. So that that station did not materially increase the expense of the Service?

Mr. KIMBALL. When a man left his own station to go to the exposition station his place was filled by another man.

Mr. SMITH. That increased it by the number of men that were there?

The CHAIRMAN. It increased it by the number of men taken from those other stations?

Mr. KIMBALL. Yes, sir.

Mr. SMITH. Was the Lewis and Clark Building erected from this fund, or was it a separate appropriation?

Mr. KIMBALL. That was erected out of a separate appropriation and was under the charge of the Supervising Architect.

Mr. SMITH. So that all that came out of this item was the expense of men, such as would be at any life-saving station after it was erected?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. Could you not give us a rough estimate of what that would amount to during the life of the exposition?

Mr. KIMBALL. Yes, sir; about \$3,100.

The act of Congress authorizing the Government to participate in the celebration names May 1 as the commencement and November 1 as the end of the exposition. As a matter of fact, the Life-Saving

Service exhibition ran from about the middle of May to a little after the middle of October, and the cost to the Life-Saving Service was about \$3,100, nine hundred and some odd dollars being paid from the appropriation for 1905 and two thousand two hundred and some odd dollars from the current appropriation.

Mr. SMITH. So that the increase you ask for—the apparent increase—should not have this amount of \$2,200 added to it, as that expense will not be incurred next year?

Mr. KIMBALL. No; the exposition will not be on next year. The amount of our expense at the St. Louis Exposition for the crew was \$5,581.46. Our total expense at the Portland Exposition for the crew was \$3,154.85.

Mr. TAYLOR. What exposition do you speak of?

Mr. KIMBALL. The Portland, Oreg., Exposition.

The CHAIRMAN. I suppose it is carried in the current law for the purpose of enabling you to clear up any outstanding obligations that may have been incurred in consequence of that service there?

Mr. KIMBALL. No, sir; but to cover that portion of the exposition expenses which was incurred during the present fiscal year—that is from July 1, 1905, to the close of the exposition.

The CHAIRMAN. The exposition was not over at the beginning of this fiscal year?

Mr. KIMBALL. No, sir.

Mr. SMITH. So that in all it makes in reality your increase about \$42,000?

Mr. GOSLING. We paid the exposition expense out of moneys already estimated for.

Mr. SMITH. This item in the bill carried it last year?

Mr. GOSLING. It simply carried the right. It was paid out of the general appropriation. I mean to say we did not ask for any more money by reason of it.

Mr. SMITH. But you had the money, and you do not have the work to do this year.

Mr. KIMBALL. You are right. When we came to make our estimate for the Portland exposition it was some time after we had made our original estimate, and we became satisfied that we would have money enough from the appropriation as we had first estimated without adding any sum to it, so that you gave us simply the estimate that we asked for before that language was introduced.

Mr. SMITH. While that is true, still your expenses would have to increase that amount this year if you had the same appropriation that you had last year.

Mr. KIMBALL. I think your view of the case is right.

Mr. GOSLING. The appropriation is based upon the actual needs of the service and is figured out carefully according to the needs.

Mr. SMITH. The increase, counting this \$2,200, would be \$42,000. As I understand it, you have accounted for to us only about \$28,000 or \$29,000 of the increase. We are simply trying to see what increases you had for general uses this year.

Mr. KIMBALL. I began to account for the entire increase, but while I was doing so the conversation relative to the Lewis and Clark Exposition ensued. The increase of \$42,000, as you state it, is accounted for as follows: For pay of crews for new stations, \$26,910; for pay of crews for old stations, \$12,725, making a total of \$39,635,

as I have heretofore stated. Now, the \$2,200 which you have added (being the amount of our expenses during the current fiscal year at the Oregon exposition) makes up the sum of \$41,835, or, as you have expressed it, "about \$42,000."

I hope the committee will not deduct from my estimate even this \$2,200, for our margin of safety is very narrow. I was anxious to make my estimate as low as possible, and in preparing it I was very careful to ask for no more than I believed would be absolutely required. We shall certainly need all I have asked for. It is only by the practice of the most rigid economy that we shall be able to get through the current year without a deficiency. Many repairs that ought now to be made and other needed expenditures have been postponed to avoid such a condition. These will have to be made next year, and if any unusual expense that can not now be foreseen should arise, as, for instance, on account of a coal strike or a great devastating storm upon the coast, our financial condition would be extremely embarrassing. Even now it is highly probable that several of our stations on the Pacific coast may have suffered to such an extent as to require extensive repairs, and it may be found that one or more will have to be entirely rebuilt as a result of the earthquake.

#### ESTABLISHING NEW LIFE-SAVING STATIONS.

The CHAIRMAN. On the next item your estimate is \$10,000 less for the establishment of new life-saving stations for the coming fiscal year than the current appropriations for that service?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. How many life-saving stations did you establish or will you establish during this current year?

Mr. KIMBALL. This appropriation, you know, is available until it is expended, so that we will have a surplus, something remaining over.

The CHAIRMAN. How much have you available of this fund?

Mr. KIMBALL. With this \$20,000 we shall have about \$130,000.

Mr. SMITH. You have \$110,000 now?

Mr. KIMBALL. Yes.

Mr. SMITH. Is that an available balance as distinguished from a Treasury balance?

Mr. KIMBALL. That is a separate appropriation.

The CHAIRMAN. How much of that is allotted—any of it?

Mr. KIMBALL. None of that is allotted. That is a permanent appropriation.

The CHAIRMAN. It is all available for expenditure during the current fiscal year and the next fiscal year?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. With this appropriation it will be \$130,000?

Mr. KIMBALL. Yes, sir; and we shall come pretty near using it up if we build a station that has just been authorized by Congress. The bill has not been signed by the President. It is for a station at Neah Bay or Waada Island. On account of the wreck of the *Valencia* up there Congress has passed a bill authorizing the establishment of a station in Neah Bay and a sort of wrecking vessel.

The CHAIRMAN. Authorizing the construction of a wrecking vessel?

Mr. KIMBALL. Yes, sir; a seagoing tug.

The CHAIRMAN. And the establishment of a life-saving station?

Mr. KIMBALL. Yes, sir; to work in conjunction.

The CHAIRMAN. The bill has passed both Houses?

Mr. KIMBALL. Yes, sir; it has passed both Houses. It has not been signed by the President, but I suppose it will be.

Mr. TAYLOR. Where is that?

Mr. KIMBALL. Near the entrance to the Straits of Fuca, where the *Valencia*, on its passage from San Francisco to Seattle, was lost.

Mr. TAYLOR. It was on its passage from Alaska, was it not?

Mr. KIMBALL. No, sir; from San Francisco. She overran her distance and ran on the British coast, on Vancouver Island.

The CHAIRMAN. What do you estimate that station will cost?

Mr. KIMBALL. I estimate it will cost in the neighborhood of \$30,000. It will be a pretty expensive station, because we will have to make a sort of headquarters for the vessel; and besides that, the law provides that there shall be two self-bailing and self-righting lifeboats, fitted with power. Those will cost considerable. They are expensive boats, very large boats, the best lifeboats in the world.

Mr. SMITH. Have you a further balance of this fund in the Treasury not allotted?

Mr. KIMBALL. Nothing but this that I have mentioned.

Mr. SMITH. In most of these items which continue available they have two balances—the Treasury balance and the unallotted or available balance. You have not designated any of this money to be used at any place yet?

Mr. KIMBALL. No, sir.

Mr. SMITH. And have you any money in the Treasury that has been assigned to anywhere else?

Mr. KIMBALL. No, sir. I do not understand how there can be two balances.

Mr. SMITH. It is perfectly simple. For instance, the plans would be drawn for a station and the money allotted to that station, but not paid out in whole part. That is still in the Treasury, but it is practically gone, in a sense, because it has been set apart for the direction of a particular work; and in the items, usually, of this kind under the appropriation they have what is called a Treasury balance and an unallotted balance.

Mr. KIMBALL. That is with reference to public buildings and construction generally?

Mr. SMITH. No; not only public buildings, but ordnance, and works of every kind. They usually have an available balance and an unallotted balance.

The CHAIRMAN. Have you at this time plans or specifications for the building of any new stations, the cost of constructing which must be paid out of this fund; and have you set aside any part of this balance for that expense?

Mr. KIMBALL. No, sir. We have plans and specifications nearly completed for several, but those plans are not quite finished yet. As soon as the plans are finished we shall advertise for proposals, and when we receive proposals for a station and make an award we set down that sum as the amount from which to build that station.

Mr. SMITH. The money is still in the Treasury?

Mr. KIMBALL. Yes, sir.

Mr. SMITH. But it is practically allotted?

Mr. KIMBALL. That you might call an allotment after the contract is made.

The CHAIRMAN. You have no contract outstanding now for the doing of any work, the expense of which would be paid out of this fund?

Mr. KIMBALL. Not any, I think.

The CHAIRMAN. That would make your present balance about \$110,000 and this additional would make it \$130,000?

Mr. GOSLING. The amount available for the establishment of any new stations.

The CHAIRMAN. Yes; any that in the judgment of the general superintendent may be advisable, and approved by the Secretary.

Mr. GOSLING. I suppose there are probably four or five stations now on the way to obtain sites.

Mr. SMITH. About what does an average station cost?

Mr. KIMBALL. They used to cost about \$5,000 or \$6,000. Now they cost from \$10,000 to \$12,000, and sometimes more.

Mr. SMITH. So that you have on hand enough for 12 or 13 stations?

Mr. KIMBALL. Sixteen stations.

Mr. SMITH. The \$130,000 would build 10 or 12 stations?

Mr. KIMBALL. Oh, I did not understand you. I do not think it would now. A station costs a good deal more than it used to. Everything has gone up pretty high. This includes the equipment, also, of the station—not the building merely. I should say it would average now at least \$12,000 to build and equip a station.

Mr. SMITH. That would give you over 10.

Mr. KIMBALL. From twelve to fifteen thousand dollars each.

Mr. TAYLOR. Some stations may cost more?

Mr. KIMBALL. Yes; some stations cost more than others. As a rule I have managed to get the people interested in the location of a life-saving station in the neighborhood to donate to us the land necessary. We have authority to acquire sites by donation, and for the majority of our stations the sites are donated to us. But in some cases we have to pay quite a large sum for a site. In these cases, of course, they are more expensive.

The CHAIRMAN. How many men do you say there are at one of these stations?

Mr. KIMBALL. They differ; the numbers vary from 7 to 8 or 9 men.

The CHAIRMAN. Are they all housed at these stations in the buildings constructed by the Government?

Mr. KIMBALL. Yes, sir.

The CHAIRMAN. What is the character of the building—frame?

Mr. KIMBALL. We have only one brick station; that is at Evanston, Ill. The others are frame buildings, containing the necessary living apartments, and a large boat room and lockers, and so forth, for the supplies and equipment.

#### RELEASE OF LAND AT SEA ISLE CITY, N. J.

The CHAIRMAN. There has been referred to this committee a bill authorizing the Secretary of the Treasury to release land for street

purposes in the borough of Sea Isle City, N. J. Do you know anything about that? Is it in Congressman's Gardner's district?

Mr. KIMBALL. No, sir; I know nothing about it. I remember that at Sea Isle City we have a tract of land, that the city has an avenue which abuts up against our land, and they go around and come out on the other side. I suppose they want to run the avenue right straight through.

The CHAIRMAN. "So much land held by the United States in said borough for purposes of the United States Life-Saving Service as lies within the boundaries of both Landis avenue and Twelfth street."

Mr. KIMBALL. They want to go right through.

The CHAIRMAN. Will you take that bill and examine it and report to the committee your judgment in regard to it?

Mr. KIMBALL. I will, sir.

TREASURY DEPARTMENT,  
OFFICE OF GENERAL SUPERINTENDENT OF LIFE-SAVING SERVICE,  
Washington, April 24, 1906.

The CHAIRMAN COMMITTEE ON APPROPRIATIONS,  
*House of Representatives.*

SIR: I have the honor to transmit, with my concurrence, the accompanying report of the General Superintendent of the Life-Saving Service on bill H. R. 15732, Fifty-ninth Congress, first session, "To authorize the Secretary of the Treasury to release land for street purposes to the borough of Sea Isle City, New Jersey," which has been prepared by him in accordance with your verbal request for suggestions touching the merits of the bill and the propriety of its passage made when he was before your committee on the 18th instant.

Respectfully,

C. H. KEEP, *Acting Secretary.*

TREASURY DEPARTMENT,  
OFFICE OF GENERAL SUPERINTENDENT OF LIFE-SAVING SERVICE,  
Washington, April 24, 1906.

The SECRETARY OF THE TREASURY.

SIR: On the 18th instant, when I was before the subcommittee of the Committee on Appropriations, House of Representatives, having in charge the bill making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1907, where my attendance had been requested to explain the estimates for the expenses of the Life-Saving Service, the chairman of the committee handed me the bill H. R. 15732, Fifty-ninth Congress, first session, "To authorize the Secretary of the Treasury to release land for street purposes to the borough of Sea Isle City, New Jersey," and asked that I would furnish a report giving information touching the merits of the bill and the propriety of its passage.

In compliance with this request, I have the honor to submit the following:

The bill provides, in effect, that the Secretary of the Treasury be authorized in his discretion and upon such terms as he may prescribe, to release to said borough of Sea Isle City, for street purposes, so much of the site of the United States life-saving station as lies within the boundaries of Landis avenue and Twelfth street as laid out in said borough. Inclosed herewith is a copy of a portion of a map showing the location of the site of the Townsend Inlet life-saving station, which is the station referred to in the bill, and the streets and avenues in the immediate vicinity. It will be observed that the station site projects into Landis avenue a distance of about 50 feet, and also that a small triangular portion of the site is located in Twelfth street as laid out. It seems that the borough of Sea Isle City desires to obtain control, for street purposes, of these portions of the site which project into the avenue and street, respectively, in order that the lines of its streets and avenues may be straightened.

The right to use and occupy the site of the Townsend Inlet life-saving station was acquired by the Secretary of the Treasury by donation, by conveyance from Henry Whelen and wife, under the authority contained in act of March 3, 1875 (Stat. L., vol. 18, p. 372), which provides as follows:

"And the Secretary of the Treasury is hereby authorized, whenever he shall deem it advisable, to acquire, by donation or purchase, in behalf of the United States, the right to use and occupy sites for life-saving or life-boat stations, houses of refuge, and sites for pier-head beacons, the establishment of which has been, or shall hereafter be, authorized by Congress."

With respect to sites for life-saving stations, the right to use and occupy which has been acquired under the provisions of law above quoted, it has been held that the Government does not obtain a fee simple title to such sites, but that whenever the sites are abandoned and no longer used or needed for life-saving purposes they revert to the grantors, their heirs or assigns. It appears, therefore, that no title is vested in the Secretary of the Treasury which he could properly release to the borough of Sea Isle City, and that the only step he could take in that direction would be to abandon the use of the property for life-saving purposes. It would then be necessary for the borough of Sea Isle City to acquire the reversionary interest of the grantors before it could obtain full title to the property for street purposes. It is believed that the Secretary of the Treasury has authority under existing law to abandon the property in question, and it appears from the records that, under date of July 3, 1905, a suggestion to that effect was made by this office to the secretary of the Board of Trade, Sea Isle City, N. J. This suggestion was made in response to a letter from the secretary of the board of trade dated June 19, 1905, setting forth that the site of the Townsend Inlet life-saving station, as inclosed by the fence surrounding the property, extended to the middle of the avenue on which a trolley line was then running, making it necessary for the line of the street cars to curve around the lot and rendering it a dangerous point of passage for pedestrians and vehicles. He asked consideration as to the most proper and expeditious manner of adjusting the condition described.

The following is quoted from the reply by this office to the above:

"Upon investigation it appears that at the time the lot in question was conveyed to the Government it did not interfere with any of the streets or avenues by which it was bounded as the tract of land surrounding it was then laid out. Some years after the Government obtained possession, and the present buildings and fence were built, it seems that the tract was resurveyed and the streets laid out in an entirely different manner, so that one of the avenues cut off about 50 feet of the rear or west end of the life-saving station lot. The lot now occupied by the Townsend Inlet station is not larger than is required for the needs of the Service. It is therefore suggested, in reply to your request, that consideration will be given to a proposition from the proper authorities to convey to the Government a 50-foot strip of land adjoining the station lot on the east, to grade and topsoil the same, remove the fence, etc., provided the 50 feet of land projecting into the avenue as indicated above be abandoned and no longer used for life-saving purposes."

No reply to this letter has been received.

As the entire area now occupied for the purposes of the Townsend Inlet station is requisite for the proper conduct of the affairs of the station, this Office would not recommend that the portions of the present site which project into the street be abandoned unless compensatory strips of land adjacent to the station site be conveyed to the Government for life-saving purposes in consideration of such abandonment.

Respectfully,

S. I. KIMBALL,  
General Superintendent.

WEDNESDAY, April 18, 1906.

## REVENUE-CUTTER SERVICE.

### STATEMENT OF CAPT. WORTH G. ROSS, CHIEF OF DIVISION OF REVENUE-CUTTER SERVICE, ACCOMPANIED BY LIEUT. J. E. REINBURG.

The CHAIRMAN. Are the estimates which have been submitted to Congress for this Service for the coming fiscal year made up by you? Captain Ross. Yes, sir.

The CHAIRMAN. What is the basis upon which you make your esti-

mates? How do you arrive at the amount necessary for the coming fiscal year?

Captain Ross. We usually arrive at our estimates by the expenses of the preceding years; by working them up from what it has taken to run the Service, particularly the last year.

The CHAIRMAN. In the discharge of your duty as chief of division, are you in touch with the expenditures, so as to know whether or not all the expenditures that have been made in the previous year under the appropriations are necessary?

Captain Ross. Yes, sir; I am in touch with all the expenditures of the previous year.

The CHAIRMAN. Are you personally in touch with the expenditures, so that you can form a judgment as to whether they are any greater than they ought to be?

Captain Ross. Yes, sir; I want to make this statement, however: I have been in this position for a year only. I assumed the duties of chief of division on April 1, 1905, so that I can not say I am positively in touch with the expenses previous to that time further than the records of the office show.

The CHAIRMAN. In making up these estimates for the coming fiscal year, you were guided almost entirely by the expenditures of the previous year?

Captain Ross. I was guided largely by the expenditures of previous years, and also by my knowledge of the service and the situation in which I found it to be when I took charge.

The CHAIRMAN. How long have you been in the Service?

Captain Ross. This is my thirtieth year. When this calendar year is over I shall have been in the service just thirty years.

#### SKETCH OF THE SERVICE.

The CHAIRMAN. Can you describe the character of the Service and the extent of it at the present time?

Captain Ross. Yes, sir; I will commence by saying that our service has 41 vessels. We have 12 vessels designated as first class. These are our best ships, nearly all of which are modern. We have 13 vessels of the second class; a large number of them are old vessels, about half being built in the seventies. Then we have a third class composed of tugs, numbering 10, and about 6 launches. These vessels are stationed along the coast of the United States from Eastport, Me., to Alaska, on both sides, and also on the Great Lakes.

We have in the service 221 officers and cadets on the active list, and 58 officers on the retired list, making 279 officers and cadets all told. The next fiscal year about 8 officers will be added to the retired list on account of age. The number of petty officers and men we employ varies considerably, but I can make an approximate estimate by saying they number between thirteen and fourteen hundred, according to circumstances.

As I stated before, our stations are on both the Atlantic and Pacific coasts. Our first station on the Atlantic coast is at Portland, Me., and our vessels have headquarters at large ports at intervals as far south as Galveston, Tex. But there is a good deal of coast where we have no vessels at all, because some of them have been withdrawn on account of being old and unserviceable. On the Pacific coast

our stations run from southern California up to Alaska. Four vessels and a launch do duty on the Great Lakes. Now, would you like to know the duties of the Service?

The CHAIRMAN. One moment before you leave that.

Captain Ross. We also have vessels stationed at San Juan, P. R., and Honolulu.

The CHAIRMAN. I was going to ask you if you had one at Honolulu.

Captain Ross. Yes; we have one at Honolulu.

The CHAIRMAN. How far west do you extend in Alaska—as far west as the Aleutian Islands?

Captain Ross. As far west as Attu, the westernmost island of the Aleutians.

The CHAIRMAN. Have you any vessels in service on the Pribilof Islands?

Captain Ross. We have had at times a whole fleet of vessels there in Bering Sea to protect the fur seals. The last year or two we have employed two vessels only up there in connection with the vessels employed by Great Britain.

The CHAIRMAN. I want to ask you, for information, if in recent years the Revenue-Cutter Service has come in contact with Japanese pelagic sealers just outside the 3-mile zone?

Captain Ross. No; but we have done a good deal of work for the purpose of preventing pelagic sealing. We ran across the Japanese last summer at the island of Attu. We found four of their vessels, which were fishing for salmon, and they had some shacks on shore. One of our cutters, the *Perry*, warned them off, and they left, and the shacks were burned. But we have found no Japanese who had been doing any pelagic sealing recently.

The CHAIRMAN. Now go on and describe the duties of the Service.

Mr. TAYLOR. You said you had not found any Japanese engaged in pelagic sealing, but you did do so some years ago, did you not?

Lieutenant REINBURG. When we were enforcing the Bering Sea awards, you know, we had a great number of ships up there, and we found Japanese crews there.

The CHAIRMAN. I do not mean Japanese crews, but vessels fitted out under the Japanese flag and manned by Americans and Canadians?

Captain Ross. I do not recall that we found any such.

The CHAIRMAN. A Japanese vessel is not restricted to the 60-mile zone. A Japanese vessel can come within 3 miles of the shore?

Captain Ross. I think so, but she can not take seals within the 3-mile limit. The only arrangement that we have in regard to pelagic sealing is with the English Government.

The duties of the Service embrace the protection of the customs revenue, the enforcement of marine laws, and rendering assistance to vessels in distress. The latter is an important part of our duty. Under the law the President designates a certain number of public vessels, which are revenue cutters, for the purpose of patrolling the seaboard to assist vessels and mariners in distress. This work includes giving them provisions when in need, towing dismasted and helpless vessels into port, rescuing crews, and doing whatever is possible in the interest of commerce; reporting the displacement of buoys, blowing up or otherwise removing derelicts and wrecks in the paths of commerce, and various work of that kind.

Another part of our duty is the enforcement of the laws pertaining to marine quarantine. Last year during the yellow-fever epidemic—which you know considerable about, I suppose, Mr. Taylor—we had a number of vessels which patrolled the region from the mouth of the Mississippi River to the eastward as far as Pensacola, for the purpose of preventing the spread of the infection to any of the seaport towns or places by the water routes. I would like to tell you of the work we did on that occasion alone. On that duty, which lasted from the beginning of August until the end of the yellow-fever epidemic, we employed 25 commissioned officers, 12 warrant officers, and 153 enlisted men. The fleet of vessels consisted of the revenue cutters *Winona*, *Seminole*, *Hamilton*, *Forward*, *Alert*, and *Penrose*, and a number of launches and boats (six in all) chartered by the Public Health and Marine-Hospital Service. The chartered vessels were all in charge of our officers, and the whole fleet patrolled the entire coast there, and during the time they were engaged boarded and examined or spoke 1,923 vessels of all classes. That work was done last summer, and it was considered to be the most effective marine quarantine patrol up to that time.

Another duty of ours is the enforcement of the neutrality laws.

Matters pertaining to the navigation and other laws governing merchant vessels are now under the Department of Commerce and Labor, but we are called upon by that Department to enforce all these laws, which we constantly do; and in this connection we also enforce the anchorage laws at the ports of New York and Chicago, the St. Marys River, the Kennebec River, and so forth. We do a great deal of work for the Department of Commerce and Labor, because previous to its establishment those duties were in the Treasury Department, to which we belong.

We protect merchant vessels from piratical attacks and suppress piracy. Of course there is not much of that going on in these days.

The CHAIRMAN. Is there any of it going on?

Captain Ross. During the past year we received a communication from a railroad company in New York saying that their barges were being tampered with by people from the shore, and that their property was being stolen. They called it piracy, and wanted us to look after it.

The CHAIRMAN. Did you?

Captain Ross. We told them we were ready to enforce the laws as soon as the district attorney looked into it and made out a case.

The CHAIRMAN. That would be the policing of the harbor of New York?

Captain Ross. Yes; but that being a crime, it had first to go through the Department of Justice.

Then we have the protection of the fur-seal fisheries around the Seal Islands and on the hunting grounds of Alaska. We send vessels up there each year to patrol in the vicinity of the Pribilof Islands and to aid in various ways the seal industry.

The CHAIRMAN. Can you give the committee an approximate estimate of the cost of maintaining these revenue cutters in connection with the seal fisheries of the Pribilof Islands?

Captain Ross. I can give you an approximate estimate of the cost of running our vessels up there—their maintenance. That is really

about the only expense we have. Suppose, for example, that we have three vessels on that duty——

Lieutenant REINBURG. Make it four.

Captain Ross. Well, make it four. It would cost us in the neighborhood of \$20,000 a month to run those four vessels, including our officers and enlisted forces, provisioning them, outfitting and coaling the vessels, etc. I have simply said \$5,000 a month for each vessel. As a matter of fact, the cost, of course, varies, and for some vessels the estimate would be less, while for others it might be more.

The CHAIRMAN. Are they engaged in that service the year round?

Captain Ross. Oh, no; only during the time when the sealers are at work. They generally start from the south along in May, and they will work their way up to Bering Sea and stay there until probably the middle of September, because at that time the weather begins to get bad, and it is not safe for them to remain much longer.

Lieutenant REINBURG. Not the revenue cutters, but the sealers.

The CHAIRMAN. The sealing commences in June around the Pribilof Islands?

Captain Ross. Yes, sir. Then we send one vessel annually up to the Arctic Ocean in the interest of various things in that region. The Department of the Interior has a number of mission schools in Alaska, and we aid in carrying supplies and taking the agents and inspectors of that Department up there and bringing them back. Then our vessels cruise north in order to have supervision over the whaling industry, to see that the laws are not violated, and to assist in various other ways in connection with the development of that country. In fact, the development of Alaska was begun by our revenue cutters going up there on various expeditions soon after its purchase. The vessel that makes the Arctic cruise is the last one to come out of Bering Sea in the fall. She stays there until the last sealer is out of the sea, so there can be no trouble afterwards.

Another duty of our Service is to protect wrecked property. It is our duty to protect it for the owners, and it is our business, if we come across a sunken wreck, as we do sometimes, and as we did a while ago off Cape Hatteras, to pull the spars out and save them if we can. In the case at Cape Hatteras the spars were quite valuable, and we towed them into port and subsequently turned them over to the owner.

Then we have the protection of the timber reserves of the United States against depredations. That is usually on the coast of Florida.

We suppress the illegal traffic in liquor, firearms, and ammunition in Alaska. In this particular we assist the Department of Justice by taking the United States attorney or his agents to points in Alaska for the purpose of enforcing the laws.

For the suppression of the slave trade, which used to be one of our functions a long while ago, we are not now called upon.

It is our duty to suppress mutinies on board merchant vessels. We are called upon by masters and owners to suppress mutinies that occur on coasting and other vessels.

We have 14 commissioned officers in our Service who are assigned to duty in connection with the Life-Saving Service. The duties of those officers are to drill and discipline the crews of the life-saving stations. They are inspectors and assistant inspectors, and it is their business to drill the life-saving crews, see that discipline is

maintained, that the surf and lifeboats are properly managed, that the stations are sufficiently equipped with life-saving apparatus, etc. They also superintend the construction of the stations and recommend various supplies. This is an important feature of our service. We have been connected with the Life-Saving Service ever since its organization.

Lieutenant REINBURG. It was part of the Revenue-Cutter Service up to 1878.

Captain Ross. Yes.

We also assist the Commissioner of Fish and Fisheries, when called upon to do so. Under the law, if it is desired to have one of our officers command a vessel of that branch of the service, we detail him for that purpose. We have not had much of that to do.

Now we also have charge of the enforcement of the provisions of the anchorage laws of some of our home ports. The port of New York is one. We supervise the entire anchorage system of that port, which includes the East River and the North River and down to the Narrows and elsewhere.

Then we hold ourselves in readiness to cooperate at all times with the Navy. There are some who think that means only in war; but we must cooperate, under the law, with the Navy at any time that the President directs, either in peace or in war. We have cooperated with the Navy in connection with the suppression of filibustering matters in southern waters. We have cooperated with the Navy, also, in the Bering Sea patrol. Under Admiral Evans there was quite a fleet up there some time ago, and our ships were with that fleet. Our crews are trained in accordance with naval drills and are kept in readiness to respond at any time to calls for active military service.

During the Spanish war all the vessels on this side that we could assign to that duty became a part of the North Atlantic Squadron. Eight of those were around Cuba during the entire Spanish war. Some very good work under fire was done by our vessels down there; and other vessels, not deputed to go to the West Indies, were assigned to duty in various harbors of the United States for the purpose of looking after mines, etc., and in that regard they cooperated with the Army. One revenue cutter, the *McCulloch*, was at the battle of Manila Bay.

There is another important business that our Service attends to, and that is the destruction of derelicts and obstructions to navigation at sea. We have been frequently called out this past winter, on the request of steamship lines running to New York, to search for derelicts and sunken wrecks, and we have destroyed some and towed others out of the paths of commerce. We have no vessel, however, specially adapted for this purpose.

The Revenue-Cutter Service is employed under the law to enforce the regulations governing rowing, sailing, and motor boat regattas to insure the safety of participants and spectators.

In connection with this whole subject I would like to say this: Our Service, as a matter of fact, is a general-utility service of the sea. It is always under military discipline. We have in past years assisted the Post-Office Department in carrying the mails. We assist and have assisted the Interior Department on various occasions. We aid the Department of Justice when called upon. We

have frequently assisted the Navy Department, and have been requested to do so. We assist in enforcing the laws of the Department of Commerce and Labor continually, this being right in line with our duties. We cooperate with the War Department, and we also do a great deal of work under the Treasury Department. We aid the Smithsonian Institution in obtaining anthropological specimens in Alaska. In fact, we are always ready to perform service for any of the Executive Departments of the Government.

SCHOOL OF INSTRUCTION AT ARUNDEL COVE, MARYLAND.

The CHAIRMAN. Let me ask you, Have you a school of instruction in connection with your Service at the present time?

Captain Ross. Yes, sir. I was the first officer that was graduated from that school, about twenty-seven years ago. The school was established in 1877, under act of Congress providing for the appointment of cadets.

The CHAIRMAN. Where is it located?

Captain Ross. It is now located at Arundel Cove, Maryland. That is about 8 miles from Baltimore. Last year Congress appropriated \$30,000 for the purchase of a site for the Revenue-Cutter Service for a depot, and our school is located there. The site consists of about 65 acres, I think, and we have our practice ship at that place, which is the old *Chase*, on which the cadets live; we have a few inexpensive buildings put up on this site, one or two in the interest of the school. The others are in the interest of the depot, for the purpose of helping along ordinary repairs and doing other work to our vessels. We berth at the depot vessels of the Coast Survey and sometimes make minor repairs for that Bureau.

The CHAIRMAN. Is it proposed to enlarge those buildings at that point and construct new ones?

Captain Ross. We have some frame buildings there. Under the law we are authorized to improve leased property. Up to last year that property was leased. Now it has been purchased outright. In the estimate we have made we have put down \$10,000 for the purpose of adding to some of the buildings, repairing wharves, and improving the property generally, and building an addition to the boiler house, and doing various other things. I have the list here, if you would like to see it.

The CHAIRMAN. Is it contemplated ultimately to make this a second naval academy?

Captain Ross. No, sir. This is a school that has been in our Service since the time I mentioned, and we simply educate sufficient officers for our own needs. The cadets have a tour of instruction at the school of three years. They are divided into three classes. It is a very small school, composed of only 25 cadets. It is open to any young man in the United States. The question of his admission is not a matter of political influence. When we want to form a new class we invite every young man in the country between the years of 18 and 25, which are the ages prescribed by law, to compete for these places, and the Civil Service Commission holds examinations all over the United States of applicants. The Commission has held one recently, and it certifies those qualified for positions as cadets.

## TRANSFER AND REPAIR OF THE BANCROFT.

The CHAIRMAN. It is proposed to transfer the *Bancroft* from the Navy to the Revenue-Cutter Service for this purpose?

Captain Ross. That is a proposition we have made.

The CHAIRMAN. Then is the Revenue-Cutter Service to pay the Navy for the *Bancroft*? Is it intended that the Revenue-Cutter Service shall purchase the *Bancroft*?

Captain Ross. No, sir. We have never purchased any vessels from the Navy Department. This vessel, the *Bancroft*, to which you refer is a vessel about the size of our vessels. Her displacement is about 800 tons, and she is a vessel that the Navy Department could not or did not care to use in the future, and so we applied to have her loaned to our Service with a view to utilizing her in place of the *Chase*. The *Chase* was built in 1878. She is a wooden vessel, without steam power. She is very old, not sound, and can not be run much longer. As a matter of fact she has commenced to go to pieces. That is about the size of it.

The CHAIRMAN. You intend to use the *Bancroft*, then, as a training ship?

Captain Ross. Yes, sir; instead of the *Chase*.

The CHAIRMAN. The *Chase* is used as a training ship?

Captain Ross. Yes, sir; she will probably cruise along the coast this summer, but she has as a rule to keep near the coast, so that if anything happens to her she can get in. We have used her since 1878. We thought it was a good plan to get the *Bancroft* from the Navy, a vessel that cost \$250,000 to build. If we could get enough money to repair her we would have a good vessel at a small cost. Our present practice vessel is a sailing craft and we can not give to the cadets the proper training on her on account of the lack of steam power. The *Bancroft* could be fitted up for that purpose to good advantage, and could be utilized in other directions, if necessary.

The CHAIRMAN. What do you estimate the cost of fitting her up to be?

Captain Ross. The cost of fitting her up would be nearly \$100,000.

The CHAIRMAN. Is that in your estimate?

Captain Ross. Yes, sir; it is all in detail there. I had two boards organized to go into that matter very carefully and make a thorough examination of that vessel, and every item put down is necessary in order to put her in proper condition. We have gotten it up with a great deal of care. I do not think you will find any extravagance in that estimate. We thought it would be a good deal better to utilize the *Bancroft* than to ask for a new vessel of the same type that would cost three times as much as the cost of repairs.

Mr. SMITH. Why did the Navy want to give up the *Bancroft*?

Captain Ross. The Navy originally built the vessel for a training ship and she made a number of cruises; the only reason I see why they gave her up was probably because she was a small vessel and unadapted to their needs. They have so many small vessels now that they want to get rid of some of them.

Mr. SMITH. How old is she?

Captain Ross. About 14 years old.

Mr. SMITH. Aside from machinery and the like, is she in a state of decay or not?

Captain Ross. If she is kept the way she is now, of course she will deteriorate all the time.

Mr. SMITH. I am asking you in what condition she is now. Is she in a state of decay now?

Captain Ross. I have been all over her and through her machinery department. I will explain her condition. That vessel in the Navy would carry 140 men and 10 or 12 officers. In our service she would carry 50 or 60 men and 5 or 6 officers. The consequence is that in the Navy on such a vessel they have to crowd everything into a very small space. The machinery is installed in such small space that it was not possible, I think, for the people in charge of the machinery to properly look after it. Many of the parts they had to reach were so far out of the way that they could not readily get near them, and therefore the machinery has corroded and rusted, and it is now of little value. I examined the engine, and it surprised me to see the condition it was in. Lieutenant Reinburg was with me when the vessel was turned over to us at Norfolk.

Mr. TAYLOR. When was it turned over to you?

Lieutenant REINBURG. Last January. I brought her up from Norfolk to Baltimore myself.

Captain Ross. Her machinery is in such condition that she has to be thoroughly overhauled and repaired, or else there will be no use in doing anything with her.

Mr. SMITH. What do you say she would be actually worth after this \$100,000 is spent on her?

Captain Ross. I should say she would be worth probably in the neighborhood of \$300,000.

Mr. SMITH. She only cost \$250,000 in the first place?

Captain Ross. Yes, sir; fourteen years ago.

Mr. SMITH. Would she be practically as good as new?

Captain Ross. Yes, sir; I think she would.

Mr. SMITH. Is her hull in good condition?

Captain Ross. Yes, sir. It is her interior parts that have corroded and are in poor condition.

Mr. SMITH. You are asking for several thousand dollars to repair her hull?

Captain Ross. Yes, sir; but if you will notice, that has reference to many inferior matters, frames, decks, and various compartments, etc., of the vessel.

Mr. SMITH. You do not mean that those compartment estimates are included in the hull estimate?

Captain Ross. We have to change the arrangement of some of those compartments in order to adapt them to our Service.

Mr. SMITH. But you have several thousand dollars estimated here for repairs to the hull itself, have you not?

Captain Ross. Yes, sir; that is right.

Mr. SMITH. You have \$13,500 estimated for repairs to the hull itself. That is wholly distinct from these repairs to the compartments.

Captain Ross. That has reference to the interior. You will find it here. The beams, etc., have to be scaled and painted, and some of them renewed, and stringers and some of the outside plating replaced, and various things have to be removed, refitted, and altered.

Here are the hatches, mooring bitts, towing bitts, capstan, decks, etc. These are in bad condition and have to be attended to.

Mr. SMITH. What I want to get at is, is the outside of this vessel in a state of decay?

Captain Ross. The outside appears to be all right, above the water line. We are told by the naval officers that she is all right below the water line. She has sponsons, two on each side, for the training of guns. We propose to take those sponsons off. That is a matter of \$5,200.

Mr. TAYLOR. The removal of what—sponsons?

Captain Ross. Yes; sponsons. They are on the outside of the vessel, you know, so that you can fire the guns fore and aft. Our purpose in making out this estimate is practically to get a new vessel for the money. That is the plan. It would be obviously wrong to make a few minor repairs when the vessel ought to be repaired thoroughly throughout.

Mr. SMITH. This vessel is really larger than you need?

Captain Ross. No, sir; she is just about the size we need. Her length is 187 feet and 6 inches. The vessel we have at New York is 202 feet long, a larger vessel than this. The *Bancroft* is a vessel 32 feet beam. Her mean draft is 12 feet and 2 inches. Her displacement is 839 tons. Her speed per hour on trial was 14.37 knots. Her indicated horsepower on trial was 1,191. Her bunker capacity is about 141 tons. Her steaming radius at 10 knots per hour is perhaps 2,500 knots. She has an armament of 4 rapid-fire 4-inch guns, that we have asked to be transferred to us, and 8 3-pounder rapid-fire guns, 1 1-pounder rapid-fire, and 1 colt machine gun. Her complement is 10 officers and 138 men. Her contract price was \$250,000, and she was first commissioned March 3, 1893.

#### ENGINEER IN CHIEF.

Mr. SMITH. Now, go back to the general item of the Revenue-Cutter Service. I was absent when you commenced. Did you say why you wanted the words "engineer in chief?"

Captain Ross. I will tell you about that. The "captain of engineers" should be omitted. Since this estimate was made out Congress has passed a law abolishing the grade of captain of engineers and providing for a regular engineer in chief, so that will make the appropriation about \$2,500 less.

Lieutenant REINBURG. We always had an engineer in chief, but he was simply detailed. He had no commission as an engineer in chief.

Mr. SMITH. You had one captain of engineers before?

Captain Ross. Yes; and an engineer in chief. There have been a number of laws made by Congress on the subject, so that we got into the condition of having a captain of engineers and an engineer in chief, for which there was no good reason. So when the officer who held the position of captain of engineers—Captain Collins—died Congress passed a law abolishing the grade of captain of engineers and making the grade of engineer in chief, which is a Presidential appointment for four years; so that the expression there, "captain of engineers," should be omitted from the estimate.

Mr. TAYLOR. When was that act passed?

Captain Ross. About two months ago, I think.

Mr. SMITH. That was on the urgent deficiency act. When you made your estimates, did you include under this item this captain of engineers?

Captain Ross. Yes; because that officer was then living; and under the law we then had both officers.

Mr SMITH. How much ought that to be cut?

Captain Ross. The engineer in chief gets the same pay as a captain of engineers, so that it will only make a difference of a chief engineer. What is the pay of a chief engineer?

Lieutenant REINBURG. Twenty-five hundred and twenty dollars.

Captain Ross. It will make that difference—\$2,520.

#### SURGEONS.

Mr. SMITH. I notice you substitute the word "surgeon" for "surgeons," in this.

Captain Ross. We have there a "surgeon," and then we have "surgeons" right after. Do you see that?

Mr. SMITH. Yes.

Captain Ross. I will tell you how that came about. Congress passed a law some years ago giving us one surgeon. This man had made a trip to the Arctic for the relief of the whalers, and a bill was passed in Congress which made him a surgeon, with the rank of first lieutenant. He is in the Service to-day as a commissioned officer. As soon as he dies the office lapses.

Mr. TAYLOR. You mean to say that the act made the surgeon by name?

Captain Ross. Yes, sir; that is right—

Lieutenant REINBURG. For heroic services in Alaska.

Captain Ross. Now, the other surgeons are those that we have to employ once in a while.

Mr. SMITH. Would not this be more intelligible if it said "commissioned surgeon and contract surgeons?"

Captain Ross. That might be done to advantage.

Mr. SMITH. You would not approve of the style of a bill reading "surgeon and surgeons?"

Captain Ross. You could put that down "one commissioned surgeon" and the others as "contract surgeons." That would be clear.

#### INSTRUCTORS FOR CADETS.

(See also p. 90.)

Mr. SMITH. You are adding here "instructors for cadets?"

Captain Ross. The situation is this: In our school of instruction every one of the instructors is an officer in our Service, and we are very short of officers. We have not enough to man our ships properly, and we wish to obtain a couple of instructors, so that we may use the officers elsewhere. There is another disadvantage in connection with this matter. We usually permit an officer to stay on a station about three years. If you detail a man to teach mathematics, it is a pretty hard matter, when his time is up, in a small service like ours, to get another officer to take his place who is well

enough up in mathematics to instruct cadets. What we want is to utilize the officers on our ships and have a couple of permanent instructors.

Mr. SMITH. If this language is carried, you can employ just as many instructors as you want to.

Captain Ross. You will find later on the words, "Two instructors."

Mr. SMITH. Are they civilian instructors?

Captain Ross. Yes; that is the idea.

Mr. SMITH. If the committee should decide to give you this, there would be no objection to putting it in as "Two civilian instructors?"

Captain Ross. Precisely so; two civilian instructors.

Mr. TAYLOR. What about contract surgeons? Do you want that left in that shape?

Captain Ross. Yes, sir; we don't employ many contract surgeons. We have to do so once in a while. Surgeons of the Public Health and Marine-Hospital Service are detailed to a number of our vessels.

#### WARRANT AND PETTY OFFICERS.

Mr. SMITH. The language used to read "For pay of petty officers." It now reads "For pay of warrant and petty officers."

Captain Ross. Yes, sir; that means nothing at all, excepting in this respect: We have chief petty officers to whom we give what we call warrants. For instance, the boatswain, the gunner, the carpenter, and the chief oiler, when they have served the probationary term, are given appointments or warrants by the Secretary of the Treasury. They are practically chief petty officers, but we would like to call them warrant officers. They prefer to have that title, also.

Mr. SMITH. This means no increase in the personnel whatever?

Captain Ross. None whatever.

#### WATER TENDERS.

Mr. SMITH. I notice you include "water tenders?"

Captain Ross. Yes, sir; that makes no difference. That is simply a rate. We have had them for years on our ships. They are simply men employed in the engine department; that is all. It makes no difference in the appropriation whatever.

Mr. SMITH. Are they assigned to any duty excepting as water tenders?

Captain Ross. Those men are enlisted for service in the fire room. Each is a sort of a quartermaster in his department, if you can understand that expression, a man who has a general lookout and is a watchman, to see that everything goes right. When the vessel is running he keeps supervision of the water in the boiler—an important matter.

Mr. SMITH. Is "water tender" a proper name for them?

Lieutenant REINBURG. That is a technical name. The law permits us to employ such enlisted men as are necessary, and this is one of the ratings in our Service.

Captain Ross. We have been for years employing these men, and I think it would be advisable to put their rating down here so there will be no question about it.

Mr. SMITH. Do you draw that money in bulk and disburse it yourself?

Captain Ross. For the payment of the crews?

Mr. SMITH. Yes, sir.

Captain Ross. Our crews are paid by the collector of customs in the ports, and we transmit money from the Treasury Department for the payment of the crews of our vessels.

Mr. SMITH. And you have those accounts audited thereafter?

Captain Ross. Yes, sir; by the Auditor of the Treasury Department.

Mr. SMITH. Have these men been reported as water tenders heretofore?

Lieutenant REINBURG. They have been put on the pay roll as water tenders. You understand that the law says, "Chief petty officers and enlisted men." This is one of the grades of petty officers, so it does not evade the law at all. The captain thought it would look better to have everything in the estimate.

#### MAINTENANCE OF VESSELS.

Mr. SMITH. Now, the next new language you have are the words "For maintenance of vesesls in the." in the provision for the protection of the seal fisheries in the Bering Sea and the other waters of Alaska.

Captain Ross. I will tell you why that was changed. The old law read as follows: "For protection of the seal fisheries in Bering Sea and other waters of Alaska, and the interest of the Government on the sea islands and the sea-otter hunting grounds, and the enforcement of the provisions of law in Alaska."

Some time ago the Department of Commerce and Labor wanted to build some houses on the islands, and the matter came up in regard to taking the money out of our appropriation for that purpose. This was something, of course, that our Service had nothing to do with. Afterwards that plan was abandoned, because all we do up there is to maintain our own vessels. That is the reason we put it in specifically for the maintenance of our vessels in the waters of Alaska.

Mr. TAYLOR. So it could not be used for any other purpose?

Captain Ross. Yes, sir.

Mr. SMITH. Is that the same reason why you inserted the language with reference to the ports of New York and Chicago?

Captain Ross. Well, that is about the same. Of course we don't want to do anything else in the anchorage service except to detail vessels to enforce those laws.

Mr. SMITH. Have you any further explanation to give of this proposed omission: "And the interests of the Government on the seal islands and the sea-otter hunting grounds?" That is in this same connection.

Captain Ross. The appropriation should be for the maintenance of our vessels in the protection of the seal fisheries in Bering Sea and the other waters of Alaska and the enforcement of the provisions of the law in Alaska. That is about all we do up there. All the interests of the Government on the seal islands are under the control of the Department of Commerce and Labor.

Mr. TAYLOR. That is not the way it reads in the present bill. It reads: "And the interest of the Government on the seal islands and the sea-otter hunting grounds," and you want that stricken out.

Lieutenant REINBURG. In the last bill you had that language, and it is now stricken out.

Captain ROSS. We have nothing to do with any expense on the islands. We simply detail our vessels to patrol the sea. We want to avoid any question as to how our appropriation can be used. I think the wording is perfectly clear as we have now made it.

IMPROVEMENT OF DEPOT, ARUNDEL COVE, MARYLAND.

Mr. SMITH. I notice that you insert this:

For the improvement of the depot for the service at Arundel Cove, Maryland, purchased under authority of the act of March 3, 1905.

How much did you expect to expend in your estimates there?

Captain ROSS. Ten thousand dollars.

Mr. SMITH. You would have no objection, of course, to this being a separate item in the bill?

Captain ROSS. No, sir; for \$10,000. That would be perfectly satisfactory.

Mr. SMITH. If this language should come to be carried in this appropriation, would you have—I don't say you would—the power to build extensively without anybody knowing it?

Captain ROSS. So far as I am concerned I would rather have the matter itemized. That would be perfectly proper.

CONTINGENT EXPENSES.

Mr. SMITH. "Contingent expenses, including funeral expenses for the decent interment of officers and enlisted men." What have you to say as to that item?

Captain ROSS. That is something that has been in previous appropriation bills. I think during the past year we buried two men under that provision.

Mr. SMITH. Isn't it a fact that it was never in the law, but only in your estimates before?

Captain ROSS. It is in the previous appropriation. I am quite sure of that.

Mr. SMITH. I don't think you got the money. Is it not in the estimate, but not in the appropriation? I don't think you ever got an appropriation for this service before.

Captain ROSS. Yes; it is in the appropriation for last year.

Mr. SMITH. No; it was not in last year.

Lieutenant REINBURG. I think the Captain is mistaken. This must have been in his estimates.

Captain ROSS. Well, it may be that I am mistaken. I thought that that had been passed, which accounts for the language being in the estimates now. I will tell you the situation in regard to that matter, bringing up one case to show you how the thing works. In the past year I think we expended under \$50 for that purpose. There were two men that were going off to one of our vessels at Baltimore during the night; the boat capsized and both were drowned. When the

bodies were found there was apparently only the potter's field, but we thought it was not the place to bury two men from the Government service, and so they were interred in a suitable cemetery in Baltimore.

Mr. SMITH. What is the necessity of having it in this bill, if you are paying it right along without its being in?

Captain Ross. As I said, I thought it had been enacted into law. Of course that is really a contingent expense, anyhow. We have to bury our men.

Mr. SMITH. But now, if the Comptroller holds that this is covered by miscellaneous expenses at the end of the term, what is the necessity of putting this in?

Captain Ross. There is no necessity, only we would like to have these things distinctly stated. That is the point.

#### INCREASES IN THE ESTIMATES.

Mr. TAYLOR. I see that that increase is \$80,000, and I would like to know what makes this increase in the estimates for 1907 of that amount. Please explain the increase.

Captain Ross. I will explain every increase. We have, first, an increase of \$6,109 for the pay of officers for the reason that this year we will have more retired officers. That is simply to pay the salary of those retired officers. It is a small item.

Mr. SMITH. Have you a table of increases?

Captain Ross. Yes, sir.

Mr. SMITH. Please have it inserted in the hearings, so it may be printed.

Captain Ross. I will read it to you; it will only take a minute. The pay of the crews is increased \$37,516. That is on account of the commissioning of two new vessels we are building, which will be commissioned probably in the next year. Congress has also passed a bill for another vessel on the Pacific coast, a life-saving tug, last week, and of course we will have to man that vessel.

As to the rations of crews, there is an estimate of \$20,020 less than last year. The item was overestimated then, and we have now put it down at \$89,980.

"For pay of pilots, etc." That includes the amount put in for two instructors.

"For commuted rations of petty officers and others." Last year the estimate was \$3,300, an amount entirely too small. We have made it \$39,500 because of the mistake in the previous estimate. These figures are about our real needs in this respect.

Mr. SMITH. What are you putting in there for the pay of instructors?

Captain Ross. Two thousand dollars a year each.

I will show you about this matter of commuted rations. Our actual expenses for 1905 for commuted rations was \$34,980.77. I can not say just how much they will be this year, but for next year (1907) the expense of this item will fall not far short of \$40,000.

For commutation of quarters; that has been increased \$2,000 because the other amount was not deemed sufficient. The fuel has been increased \$10,000 on account of two ships that we expect to put in commission and also on account of the fact that it costs us more for fuel now than formerly.

The repairs have been increased \$10,000 because we haven't now money enough to carry out our general repairs.

The ship chandlery and engineers' stores have been increased \$55,000 because there was a mistake in the estimate for 1906. The ship chandlery and engineers' stores in 1905 cost us \$131,105.60. Those are the actual figures.

Mr. SMITH. What was your old estimate?

Captain Ross. Our old estimate was \$80,000. The \$10,000 for depot at Arundel Cove is for necessary facilities and improvements.

Mr. SMITH. Please hand that statement in and we will have it printed.

	1906.	1907.	Increase.	Decrease.
Pay of officers, active, retired, etc.	\$589,068	\$595,172	\$6,109	
Pay of crews	487,652	525,168	37,516	
Rations of crews	110,000	89,980		\$20,020
Pay of pilots, etc.	15,000	16,600	1,600	
Commuted rations of petty officers and others.	3,300	39,500	36,200	
Commutation of quarters.	10,000	12,000	2,000	
Fuel and water.	135,000	145,000	10,000	
Repairs	150,000	160,000	10,000	
Ship chandlery and engineer stores.	80,000	135,000	55,000	
Traveling expenses.	18,000	18,000		
Contingent expenses.	20,000	20,000		
Depot, Arundel Cove, Md.		10,000	10,000	
Total	1,618,015	1,766,420	168,425	20,020
Total increase			148,405	

#### SHIP'S WRITERS.

Mr. SMITH. I notice here an estimate for ship's writers, a new insertion. What are they?

Captain Ross. We simply take an enlisted man and make him a ship's writer, just the same as we enlist men and make them quartermasters or coxswains. We put it in that way to make it clear. We only have one in the Service.

Mr. SMITH. You do not intend to increase the force?

Captain Ross. No; we don't intend to increase the force. We have just one in the Service.

Mr. SMITH. We will pass now to page 27.

#### INSTRUCTORS FOR CADETS.

Captain Ross. I would like to suggest one thing here in regard to the two civilian instructors. We put them down for \$2,000 each. I think, after further consideration, that we could estimate the item as \$1,500 and \$1,800, so that instead of \$2,000 each it would be \$1,500 for one and \$1,800 for the other. Of course \$2,000 isn't a large annual salary. They will have to pay their board out of that and various expenses incident to the position, but I would be willing to call it \$1,500 and \$1,800.

#### REVENUE CUTTER FOR ALBEMARLE AND PAMLICO SOUNDS.

Mr. SMITH. Now, passing to the steam revenue cutter of the first class for the waters of Albemarle and Pamlico sounds, when you sent in your estimates you had this provision cut out, and you now send in a supplemental estimate.

Captain Ross. No; you are mistaken. First there was the \$100,000 to enable us to commence the work. Now, that vessel is being constructed, and we ask for \$75,000 to finish it.

Mr. SMITH. I beg pardon, but you did not send with your original estimate the estimate for \$75,000, but you sent in a supplemental estimate, did you not?

Captain Ross. Yes; but the amount authorized was \$175,000, and there was \$100,000 appropriated at first.

Mr. SMITH. I understand that perfectly, but—

Captain Ross. Then we put in this supplementary estimate.

Mr. SMITH. Why didn't you put it in in the fall with the regular estimates, as required by law?

Captain Ross. That is something about which I am not sure. I have been chief of the division of Revenue-Cutter Service for a year only, and when I came here \$100,000 had been appropriated and we were \$75,000 short.

Mr. SMITH. I don't think you were anything short. That was on account of the progress of the work. How soon will this vessel be done?

Captain Ross. It will be done next March, if the contractors live up to their agreement.

Mr. SMITH. Can you give us any reason at all why you did not send this in in the regular annual estimates as required by law? Do you not know that these estimates are required by law to be in here in the fall?

Captain Ross. Yes; I know that these estimates are, certainly—we got this in all right.

Mr. SMITH. I am asking you why you did not put this in with the regular estimates, instead of sending it in later.

Captain Ross. That is a matter that may have been overlooked, because, as I say, I have only been here a year, and when I came there was \$100,000 appropriated for that vessel and we were working on plans under that appropriation. My attention was called to the fact afterwards that \$75,000 ought to be appropriated for the completion of this vessel, and I then had the estimate made out. I think if there is any mistake I probably made it in that way. There was no other reason for doing it.

Mr. SMITH. The only point is, Captain, that it is very hard to follow these supplemental estimates, and of course the committee wants the law complied with so far as matters are within the knowledge of the estimating officer at the time he makes his original estimates.

Captain Ross. There is no person more willing to comply with the law than I am, but that is the reason why that thing happened. My attention was called to it and this estimate was made up. I was not familiar with the procedure when I came in.

Mr. SMITH. Will all of this balance be needed before the end of next year?

Captain Ross. It will all be needed. The cost of building the vessel will be \$167,500—that is, the contractor has bid that amount.

Mr. SMITH. I am not asking you about the amount; I am asking if all of it will be needed during the next fiscal year.

Captain Ross. Yes, sir; all will be needed during the next fiscal year.

## REPAIRS OF VESSELS.

(See also pp. 107, 108.)

Mr. SMITH. Now, the next item is at the bottom of page 27, and under this item you ask for \$312,869 for the repair of revenue cutters. Have you been having any repair appropriations heretofore of a general character?

Captain ROSS. Ordinary and minor repairs have been made under the general appropriation. I want to say in regard to that that this is the first time in six years that our Service has been run on the regular appropriation. Heretofore when an annual appropriation has been made for our Service we have been told that if the amount was not sufficient we would receive a deficiency appropriation, and in the past six years we have always gotten a special or a deficiency appropriation to help us out. This year the law was such that we had to confine ourselves to the regular appropriation, and this has been done, but the Service has been run in consequence under great disadvantages. We have not been able to make suitable repairs; in fact, suitable repairs have not been made in the past, so that we are now confronted with the necessity of making a lot of repairs if our vessels are to be kept in efficient condition. For this reason the special estimate was put in.

Mr. SMITH. You have no engineer corps?

Captain ROSS. Oh, yes; we have an engineer corps.

Mr. SMITH. Are they graduates of this school at Arundel Cove?

Captain ROSS. No, sir; we take the engineers directly from civil life. A good many of them come from technical colleges, and others from engineering works or steamship companies.

Mr. SMITH. This corresponds with the construction corps of the Navy, does it not?

Captain ROSS. The engineering department has reference only to steam engineering of our service—the machinery and boilers. We have a construction department also, which looks after the hulls of vessels, but that is apart from the steam machinery.

Mr. SMITH. The construction corps of the Navy conducts the whole of both of those lines of duty, does it not?

Captain ROSS. No, sir; they are separated. They have a construction department for the hulls and another department for the machinery.

Mr. SMITH. But they are all in one corps, called the construction corps, are they not?

Lieutenant REINBURG. You have reference perhaps to this merging of the line with the Engineer Corps that was made in 1899 in the Navy. They have abolished their engineering corps and merged it into the line, so that the line officers have to be engineers, but they still have to have the Bureau of Steam Engineering. The Bureau is separate entirely.

Mr. SMITH. So, in this respect, you may be said to follow the lines of the Navy.

Lieutenant REINBURG. On the same plan.

Mr. SMITH. Are these estimates with reference to the *Bancroft*, and the repairs to revenue cutters made by these two boards in your Service?

Captain ROSS. Yes, sir. Take the *Bancroft*, for instance; we appointed two boards, one of which had the examination and inspection of and made the estimates for the steam machinery, and the other

board, of the construction department, went through the vessel and made up the estimates for the hull, etc. But you will find that these estimates are under estimates rather than over, because, as you know, it is a very difficult thing to reach an exact statement as to the necessary repairs to a ship. You can not tell, until you actually commence on her, what you are going to find, because there are so many parts that are inaccessible upon first examination. Our experience is that it generally costs more than we estimate.

Mr. SMITH. How old are these vessels that you want three hundred and odd thousand dollars for?

Captain Ross. I will give you the age of every one of them.

Mr. TAYLOR. Before you do that you should strike out one vessel here, the *Hamilton*, which has been sold.

Captain Ross. Yes, sir.

Mr. TAYLOR. For what price?

Captain Ross. We got \$2,100, and the estimate for repairs to hull and machinery was \$28,125. That, however, proved to be a superficial estimate. We had the *Hamilton* again inspected, under more favorable conditions, by a board from the engineering and construction departments. They brought back word that it would cost nearer \$40,000 to repair the vessel, and she would then be old and more or less unreliable. The consequence was that we did not think her worth repairing.

Mr. TAYLOR. You think that you made money in the sale of the vessel for \$2,100?

Captain Ross. That \$2,100 goes into the purchase and building fund, and we have, perhaps, in that fund now twelve or fourteen thousand dollars which we are allowed to use for the purpose of purchasing or building vessels; but not for repairs.

Mr. SMITH. How many more worthless vessels like that have you on hand, in this list of vessels that have not been sold?

Captain Ross. There is none other worthless which we have recommended for repairs.

Mr. SMITH. That was practically worthless.

Captain Ross. Yes; the *Hamilton* was found to be so for our use; you might say that the bottom dropped out of her. We have a vessel called the *Woodbury*, that is on the coast of Maine, and she does some very good work for us. She was built in 1864. She cost originally \$92,000. From that time up to 1897 there had been spent \$88,295 on her for repairs.

Mr. SMITH. How much did you have in this estimate for her repairs?

Captain Ross. In this estimate we had, for the *Woodbury*, \$801.25 for the hull. You will find that her machinery and boilers are in bad condition, and in that respect she breaks down often. The *Woodbury* is a good wooden vessel, and she can be used for some time, if you give us the money to repair her.

Mr. SMITH. How much would she be worth when she was finished?

Captain Ross. How much would she be worth to the Government or the merchant service?

Mr. SMITH. How much would she be worth in the market?

Captain Ross. That is a pretty hard question to answer. She might not, after she was finished, bring \$20,000, because she might not be a vessel adapted to the merchant service. You see, the Gov-

ernment vessel and the merchant vessel are entirely different propositions; and when we sell a Government vessel it is difficult, as a rule, to get anything like a good price for her.

Mr. SMITH. Do you say that she is of any value?

Captain Ross. She is of good value. She cruises on the Maine coast, breaks out ice in the winter, and renders effective assistance to distressed vessels.

Mr. TAYLOR. What would you estimate her worth to be to the Government?

Captain Ross. I suppose she would be worth to us \$50,000 or \$60,000, at least. That would be her money value. Her value as a revenue cutter is something else.

Mr. SMITH. What would be her life from now on, in your judgment?

Captain Ross. She would run without difficulty, I imagine, for perhaps eight years. I say that offhand. Of course a vessel is always liable to have accidents. She has a great deal of difficult work to perform in breaking ice in harbors and channels on the Maine coast. When you shove a vessel into the ice you are liable to have trouble at times.

Lieutenant REINBURG. She is a wooden vessel, and a wooden vessel is better adapted for breaking the ice than an iron or a steel vessel.

Mr. SMITH. How many wooden vessels have you in this list?

Captain Ross. The *Woodbury*, *Bear*, *Dallas*, *Dexter*, *Rush*, *Hartley*, and *Arcata*—seven in all. The *McCulloch* and *Manning* are composite vessels. Their hulls are wood, but the other parts—the framework, etc.—are steel. Some of our launches are wood.

Mr. SMITH. Are you building any wooden vessels now?

Captain Ross. Yes, sir; we are building one.

Mr. SMITH. Is that for ice breaking?

Captain Ross. She is for ice breaking; yes; off the coast of Maine, in connection with her other duties.

Mr. SMITH. How many of these vessels of this line are actually out of commission, if any?

Captain Ross. Well, we have two vessels now out of commission, the *Bear* and the *Forward*.

Mr. SMITH. Why are they out of commission?

Captain Ross. The *Forward* is out of commission because we haven't money to repair her.

Lieutenant REINBURG. The *Bear*, too.

Captain Ross. Now, to show you regarding the repairs to the *Forward*. We have here for the hull of the *Forward* \$3,406.25. I did not feel satisfied in regard to that matter, and so I had detailed a regular board to examine her. That board consisted of our superintendent of construction and constructor, two very capable officers, who made a thorough examination and stated that it would cost \$14,825 to put her hull in shape. They found rotten timber and other defects that had not been reported before. So that goes to show the difference between estimates. The last board, of course, had better facilities for inspecting her.

Mr. SMITH. Out of what appropriation have you paid repairs in the past year?

Captain Ross. Out of the general appropriation.

Mr. SMITH. There seems to be none until last year.

Captain Ross. I can tell you exactly how much repairs we have done this year.

Mr. SMITH. Please answer my question. You didn't have any appropriation until last year?

Captain Ross. No special appropriation; perhaps not.

Mr. SMITH. What were you paying it out of?

Captain Ross. We are working it out of this appropriation—the general appropriation.

Mr. SMITH. Out of this large appropriation?

Captain Ross. Yes; out of the large appropriation.

Mr. SMITH. Under what language in that provision are the repairs paid for?

Captain Ross. It simply says "Repairs" in this present appropriation bill; formerly "Repairs and outfits." We omitted the "outfits," as they are included under another head.

Mr. SMITH. Isn't it a fact that almost always your repairs have been included in this big item?

Captain Ross. What repairs we have made, with the exception of those which have been specially appropriated for, are included in that item.

Mr. SMITH. How long since is it that you have had a special appropriation?

Captain Ross. Last year; I will read that to you. In the fiscal year 1905 our repair bill was \$106,765.61. There was in that year a special appropriation for extraordinary repairs to the *Bear*, *Manning*, *Woodbury*, and *Thetis* of \$61,288.97, which, taken from the first item, shows that we expended only a little over \$45,000 for general repairs that year.

Mr. SMITH. You say that was a separate appropriation?

Captain Ross. A separate appropriation; that was a deficiency appropriation.

Mr. SMITH. Notwithstanding you spent so much for the *Bear* and the *Woodbury*, they still need general overhauling?

Captain Ross. They still need general overhauling. The *Bear* has to have her engines and machinery completely overhauled. There is no question about that at all. She has been up in the Arctic year after year, has done a great deal of important work there, and we now have to lay her up. She was just able to get back to San Francisco last year.

Mr. SMITH. How much did you spend on the *Bear* and the *Woodbury* within two years?

Captain Ross. Well, I haven't got that, but I have the repairs to the *Bear*, the *Manning*, and the *Woodbury*, which amounted to \$31,288.97.

Lieutenant REINBURG. About \$23,000 of that was for the *Manning*, because of accident. She ran ashore off the coast of California in a fog, got on the rocks, and it cost over \$20,000 to repair her.

Mr. SMITH. About what is the average cost of these steel vessels that you use?

Captain Ross. The cost of our steel vessels varies considerably. I have a list of their original cost here and I will give it to you. This will show you how the cost varies. In 1895 the *Gresham* cost \$174,711.20. A vessel of practically the same size in 1900 cost \$241,995.52.

Mr. TAYLOR. What vessel is that?

Captain Ross. The *Mohawk*.

Mr. TAYLOR. The same class of vessel?

Captain Ross. Yes, sir.

Mr. TAYLOR. And about the same size?

Captain Ross. About the same size; the hulls are precisely the same. The *Tuscarora*, which is a smaller vessel, cost \$173,341.38. It required more than \$8,000 over and above the original appropriation to complete her.

Mr. TAYLOR. What year?

Captain Ross. That was in 1900. The vessel we are now building for the coast of Maine will cost \$200,000 or over. The contract for the hull and machinery is \$189,797. She is a wooden vessel, however, and it costs less money to build a wooden vessel than a steel one. The hull contractors are having a lot of trouble with this vessel. We have a penalty clause of \$20 a day for time over that specified in the contract, and that vessel was to be done last October. She will not be launched until next June.

Now, here is the *Onandaga*, which is the same class of vessel as the *Gresham* and the *Mohawk* and which was built for \$199,996.37—in round numbers, \$200,000.

Mr. TAYLOR. In what year?

Captain Ross. In 1897. She was built on the Great Lakes.

Lieutenant REINBURG. She was built cheaper because they built two of them alike, using the same patterns, which made the price less.

Captain Ross. Take the vessel for the Pamlico and Albemarle sounds. The lowest bid on that was \$167,500, the appropriation being \$175,000.

Mr. TAYLOR. Where is that vessel being built—the new revenue cutter for the Albemarle and Pamlico sounds?

Captain Ross. Wilmington, Del., by the Pusey & Jones Company.

Mr. TAYLOR. What vessel was that that you built on the Pacific coast a few years back?

Captain Ross. We sent the *Manning* out on the Pacific coast. The *Mohawk* was really built for that coast, but as soon as we sent the *Manning* out there we retained the *Mohawk* on this side.

Mr. TAYLOR. Where was the *Mohawk* built?

Captain Ross. At Richmond, Va., by the Triggs Company, which failed during the process of her building. We had a great deal of trouble with that vessel.

Mr. SMITH. Will you kindly hand in the list of vessels that you are building, together with the cost attached, to be published in the hearings?

Captain Ross. Yes, sir. These are modern vessels.

#### REVENUE CUTTERS BUILDING.

No. 14. Revenue steamer for coast of Maine:		
Amount authorized by Congress	-----	\$200,000
Contract price	-----	189,797
No. 15. Revenue steamer for Albemarle and Pamlico sounds:		
Amount authorized by Congress	-----	175,000
Contract price	-----	167,750

In addition to the contract price for these vessels, it is necessary to expend from the respective appropriations sums required for advertising for proposals and the preparation of plans and specifications for the vessels, etc.

Mr. SMITH. What is the total cost, if you know, of all the vessels now in commission—the original cost, as distinguished from the repairs?

Captain Ross. Well, I can give you the original cost. I can not give you the total offhand.

Mr. SMITH. I suggest that you furnish that total. We don't want too many details in this hearing, so you can furnish the total.

Captain Ross. The total of the original cost of all our vessels. We can do that without any trouble.

Total original cost of vessels in Revenue-Cutter Service. (built at various times from 1864 to 1903), \$3,119,645.24.

Mr. SMITH. Have you got in the documents here an itemized estimate of the cost of these repairs?

Captain Ross. Yes, sir; an itemized estimate of all repairs—everything we want done at this time.

#### INSTALLING WIRELESS TELEGRAPH SYSTEM.

Mr. SMITH. The next item is for installing in 12 vessels of the Revenue-Cutter Service the wireless telegraph system, \$35,000.

Captain Ross. In relation to that matter I will say that merchant steamers nowadays, nearly all of them, and all naval vessels, have wireless telegraphy. When you consider that our vessels go outside to search for derelicts and remove obstructions from the paths of commerce and assist vessels in distress it is of the utmost importance that they should be provided with wireless telegraphy. A revenue cutter will go out for a derelict and may not be able to find it, and a steamer coming in will have seen that derelict some place, and by the system of wireless telegraphy we can communicate with that vessel and locate and remove the obstruction. In these times we ought to be up to date in all of those things.

Mr. SMITH. Is it as practical to use wireless telegraphy on small boats as it is on large ones?

Captain Ross. Oh, yes; they use it on tugboats.

Mr. SMITH. What is the method of getting in communication?

Captain Ross. I am not an expert in wireless telegraphy. There are a number of methods, and an international congress will be held in June in Berlin for the purpose of systematizing communication between the various methods.

Mr. SMITH. Is it not a fact, however, that usually on land it is by the erection of high towers?

Captain Ross. Yes, sir; high poles or towers.

Mr. SMITH. How is it done on board ship in that respect?

Captain Ross. They spread their apparatus between the masts.

Mr. SMITH. For that reason, is it as feasible on small boats as on large ones?

Captain Ross. I think so, because on many tugs they have it. They have been using it for years on tugs.

Mr. SMITH. Your masts are nearly as high as on the big vessels?

Captain Ross. Yes, sir. They have the system on tugs which ply up and down the coast.

Mr. SMITH. How are they able to have a tower high enough?

Captain Ross. They stretch the apparatus, as I have said, between the masts. The seagoing tugs have, generally, two masts.

Mr. SMITH. Is not the success of the wireless telegraph due in part to the height of these masts?

Captain Ross. I think so.

Lieutenant REINBURG. The heights they use in the Navy are regulated by the height they can carry under the Brooklyn Bridge, which is about 120 feet. Of course, they have limits, but with certain exceptions the higher the tower the further they can send the waves in space, but it is not entirely regulated by that. The distance you can project those waves varies as the square of the height of the tower; in other words, if you have a tower of the height of one, we will say, it will project a wave 1 mile, and if you make that tower two, or double the height of the first one, will will say, it will project that wave 4 miles, or, I will say, that a tower twice as high will project a wave four times as far. That is the law in relation to the matter. The naval ships have communicated as far as 2,000 miles with a height of 120 feet.

Mr. SMITH. How high would it be feasible upon the 12 vessels that you have in contemplation?

Lieutenant REINBURG. About 60 or 75 feet from the deck, which would be ample for all communication that we would want. Our communication would hardly extend over 100 miles—200 miles at the outside—in time of peace.

Mr. SMITH. And you say that the height of your mast is ample for the area you would have any use for?

Lieutenant REINBURG. Oh, yes. With a mast 30 feet high we could send the waves 100 miles.

Captain Ross. We notice the need of this wireless system all the time.

Mr. SMITH. I would like to ask you where you get an estimate of \$35,000, which you think will give you sufficient money to equip 12 of these vessels?

Captain Ross. Of course there are a number of systems. The cost varies from \$2,000 to \$3,000 for the installation of a system. We have about 12 vessels—I mean first-class vessels—and \$35,000 would be about the right amount. The installation will cost between \$2,000 and \$3,000 for each vessel; the best being, say, \$3,000. That makes \$35,000, as near as you can get at it, for 12 vessels.

#### REPAIRS TO VESSELS (AGAIN).

Mr. TAYLOR. I want to know if you have your repairs and building of vessels done by contract?

Captain Ross. Yes, sir. If we have a vessel to repair, we usually get out plans and specifications, and we ask the shipbuilding firms to bid.

Mr. TAYLOR. You say "usually;" do you ever do it any other way?

Captain Ross. Once in a while we take a vessel that needs minor repairs to our depot at Arundel Cove, Md. We can make some repairs there with our own people. There have been occasions when we have sent vessels to navy-yards, but we find it always costs us more to get repairs done there than on the outside, and so we rarely go to navy-yards.

Mr. TAYLOR. Do you give opportunity to everybody in the country to bid?

Captain Ross. Yes, sir; to those in all parts of the country.

## COMPENSATION OF OPERATORS FOR WIRELESS TELEGRAPH SYSTEMS.

Mr. SMITH. The next item is for compensation of 12 operators.

Captain Ross. We calculated that at \$800 a year for each operator. That is about what we pay our warrant officers. The operators should be men who are up in electricity, and of course they must be so, as they would have other electrical appliances on board ship under their supervision.

Mr. SMITH. How long does it take to install this service?

Captain Ross. I suppose it could be put on one vessel in two weeks.

Mr. SMITH. So that if this appropriation is allowed you would be able to get these 12 installations made so as to have them practically in the year?

Captain Ross. We would have them in in a shorter time. We would have the system installed on one vessel, and then on another, as circumstances permitted, and finally equip all vessels of the first class.

Mr. SMITH. Would you need the entire year's pay for these men, assuming that \$800 is the proper salary? Would you need all of that?

Captain Ross. I don't think we would need all of that for the full year. Of course, it is better for us to have it. If we started right in, for instance, the money under this appropriation would be available on the 1st of July. Of course, we could not install the wireless apparatus on every vessel at the same time, because we can not withdraw all vessels from their duties at once, but we would have to take one or two vessels and have it installed upon them, and then bring in others for that purpose. The \$800 per year would not all be expended unless we enlisted all of the operators in the beginning, but I think it would be better to put the whole of that item in. It is a very important matter, and we ought to have that money and be able to enlist desirable men at the start to be present when the installations are made. It would be a great advantage to them and to the service.

## REPAIRS OF VESSELS (AGAIN).

I hope that I have gone into the matter of repairs in proper detail, because it is a very important thing to us. We dislike to send a vessel out and fear every moment that she is going to break down. Some time ago we had to send the *Rush* out from Sitka, Alaska, to search for a merchant steamer called the *Dora*. The boilers of the *Rush* were in bad condition and had to be looked after just before she sailed. It keeps us on pins and needles when we know that vessels are out at sea in a condition of that kind.

Mr. TAYLOR. Have you stated anywhere in your estimate and report what vessels you would prefer to have left off?

Captain Ross. I have a list here, if there is to be any cutting down.

Mr. TAYLOR. If there is to be any cutting down, have you a list to show where you wish it cut down?

Captain Ross. Of course, I should prefer not to see any cutting of the estimates, but if a cut is necessary, I have a memorandum here.

Mr. SMITH. I suggest that you put a list in of these vessels in the order of their importance. Isn't it entirely feasible for you to give a list of the vessels in the order of their importance?

Captain Ross. Yes; I think that may be feasible.

Mr. SMITH. I will be glad to have you furnish that.

Captain Ross. On many of our vessels there are repairs which are absolutely necessary and we can not get along without them; but there are some items, I suppose, which could be struck off and temporarily deferred. I presume if we are permitted to have any money for repairs it will be in bulk, will it not?

Mr. SMITH. Probably so.

Captain Ross. Of course if that is the case—but I will get up a memorandum for you so you can see what the situation is. I want to say that I don't know of a service that is run with greater care in regard to the expenditure of money than the Revenue-Cutter Service. The total amount of money that we have asked for for repairs to hulls and machinery for all our vessels is not more, I venture to say, than the cost of repairs often put upon one naval cruiser.

*Summary of special estimate for repairs.*

REPAIRS TO HULLS.

	Original estimates.	Might be deferred until next year.
Arcata <sup>a</sup> .....	\$300.00	\$300.00
Algonquino .....	881.25	
Apache <sup>a</sup> .....	5,375.00	
Bear .....	58,750.00	20,000.00
Calumet <sup>a</sup> .....	187.50	187.50

	165,674.00	39,700.00
	39,700.00	
	125,974.00	

<sup>a</sup> Modern vessels.<sup>b</sup> This not now necessary; *Hamilton* has been sold.

## RECAPITULATION.

Total of original estimates for hull and machinery.....	\$312,869.00
Total of deductions.....	80,737.50
Total.....	232,131.50

Mr. SMITH. In the general item of expense of your service how much of that item is for repairs in your estimate?

Captain Ross. The amount is \$160,000, but in the last year or two we have not expended much over \$50,000 a year from the regular appropriation for repairs. As I told you, this year we are running the service on the original appropriation without any deficiency, and we have but a little money to use for that purpose. We simply are struggling along to make both ends meet.

Mr. SMITH. In making up your estimates for this year, if we give you what you ask for you would have \$160,000 estimated in that big item for repairs as well as this \$300,000 asked for for repairs.

Lieutenant REINBURG. These repairs that occur during the year?

Captain Ross. Yes, sir; \$160,000 is for the repairs that come up from day to day during the year. The special estimate is for those repairs immediately necessary.

Mr. SMITH. I understand.

Captain Ross. As I say we haven't asked for more than it takes ordinarily to repair a cruiser or a battle ship. One of our first-class vessels costs from four to five thousand dollars a month to operate, according to the duty she is on, and a battle ship costs perhaps \$600,000 a year to maintain, so I do not think we are asking for too much.

THURSDAY, *April 19, 1906.*

## BUREAU OF ENGRAVING AND PRINTING.

(See also p. 120 and H. Doc. No. 728.)

### LABOR AND EXPENSES OF ENGRAVING AND PRINTING.

#### STATEMENT OF THOMAS J. SULLIVAN, ASSISTANT DIRECTOR, BUREAU OF ENGRAVING AND PRINTING, WASHINGTON, D. C.

The CHAIRMAN. What is your position in the Bureau of Engraving and Printing?

Mr. SULLIVAN. Assistant Director of the Bureau of Engraving and Printing. I have been requested by the Director to represent him before the committee this morning.

The CHAIRMAN. Who prepared these estimates?

Mr. SULLIVAN. The accountant of the Bureau, under my direction.

The CHAIRMAN. What did he use as a basis for estimating the amount necessary for this service during the coming fiscal year, the present appropriation, the existing expenditure, or what?

Mr. SULLIVAN. He used, first, the estimates of the Treasurer of the United States for the quantity of notes and certificates that he would need during the fiscal year; of the Comptroller of the Currency for the quantity of national-bank notes that he would need during the fiscal year; of the Commissioner of Internal Revenue as to the number of revenue stamps that he would need during the fiscal year, and the estimate of miscellaneous officers as to miscellaneous work, such as checks, drafts, and work of that kind. Upon that basis and adding to the amounts expended from the appropriations for the last year, the percentage of increase indicated by the estimates of the amount of work required, we reached the amounts which will be needed for the items of compensation of employees and materials and miscellaneous expenses. The amount needed for the item, wages of plate printers, is based on the piece rates paid to printers.

### LABOR AND EXPENSES.

The CHAIRMAN. The first item is for labor and expenses of engraving and printing, for which you estimate for the coming fiscal year \$1,188,664, an increase over the current appropriation. Will you state the cause of this increased estimate?

Mr. SULLIVAN. The cause of that increased estimate is the fact that the quantity of work to be produced during the fiscal year that we have under consideration is 196,958,610 impressions as against 178,352,337 impressions for the last fiscal year. That is a little over 10 per cent increase, the increase being 18,606,273 impressions, which at the rate of cost per thousand impressions for 1905 will produce the amount that is asked for in excess of the last appropriation.

The CHAIRMAN. Then the estimate of the Secretary of the Treasury and the Comptroller of the Currency, the Commissioner of Internal Revenue, and the miscellaneous officers as to checks, drafts, etc., shows that there will be this increased number of impressions, which

will involve a corresponding increased cost of labor and other expenses?

Mr. SULLIVAN. Yes, sir.

The CHAIRMAN. In order to do the work?

Mr. SULLIVAN. Yes. Just at this point I want to call your attention to the fact that that was the basis on which the estimates were submitted to Congress. Since then the Treasurer of the United States has represented to the Secretary of the Treasury that it is impossible for him to transact the business of his office without an increase in the number of silver certificates, particularly ones and twos. He has not been able to supply the demand for one and two dollar notes, and the Secretary has therefore ordered us to give him 8,000 impressions a day additional. We have started on this increased delivery, and have written a letter, that is now before the committee, showing what will be necessary in the way of a deficiency appropriation for this year. That increase of expenditure must of course enter also into the next year's appropriation.

The CHAIRMAN. Is that not due entirely to the fact that the demand for these notes is so great that the Treasurer is obliged to ship them out almost as soon as they come from the Bureau of Engraving and Printing, and that they do not have time to mature?

Mr. SULLIVAN. There is something in that, probably to a slight extent, but I do not think that is the whole cause of it.

The CHAIRMAN. How long ought a note, a bank note, to be retained in the Treasury, or elsewhere, before being placed in circulation in order that that it may not be destroyed?

Mr. SULLIVAN. The longer you leave it, say sixty to ninety days, the better, making it a better seasoned note in every way; but the notes that we are delivering now are pretty well seasoned. We hold them for nearly sixty days going through the different processes, but the demands upon the Treasurer have been so great that he has had to issue them almost as soon as he gets them. Of course we ought to have a sufficient amount of money to lay up a good stock; still I think the demand is the result of the business conditions of the country. The business conditions are such as to require this amount of money; that is indicated by the fact that we never had such a demand as we are having now for internal-revenue stamps. In all my experience I never saw anything equal to the demand for internal-revenue stamps at the present time. We have furnished stamps beyond the estimates of the Commissioner, and with the bank notes it is the same way; we have delivered beyond the estimates of the Comptroller. So that those things indicate that the demand for the one and two dollar bills is a natural and legitimate demand of the business of the country.

The CHAIRMAN. Can you explain to us why you have recommended omitted, in this first paragraph, the words "provided that no portion of this sum shall be expended for printing United States notes or Treasury notes of larger denomination than those that may be canceled or retired," and so forth?

Mr. SULLIVAN. That is a matter affecting the policy of the Department, and of course it is a matter about which I have no knowledge.

The CHAIRMAN. You have no knowledge as to the reasons why they want this language omitted?

Mr. SULLIVAN. No, sir. My province is in connection with the

mechanical part of producing these notes and certificates. As to the policy of the Department I do not know; I am not informed.

Just at this point, Mr. Chairman, I would like to say to you that we want, for the additional amount of notes that I have spoken to you about, an increase in that item.

The CHAIRMAN. How much do you recommend that it shall be increased?

Mr. SULLIVAN. We want to increase it \$13,900.15. Then, of course, there comes off \$157,415 which you transferred to the legislative bill. That will make that item \$1,044,548 for the compensation of employees, the actual amount of the estimate after adding the amount for the additional work and deducting \$157,415 from the total.

Mr. SMITH. There is a matter that is not clear to me about this item. You have been printing postage stamps down there?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. The Post-Office appropriation bill carries the money to pay for that work?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. I wish you would explain to the committee how it is that in some cases this work is covered by appropriations to the Department for which the work is to be done, while in other cases the appropriation is made to you in place of the Department.

Mr. SULLIVAN. The explanation is this: For all work which appertains to the Treasury Department proper, such as silver and gold certificates and United States notes, national bank notes and internal-revenue stamps, checks, drafts, etc., the appropriation is made by Congress directly to the Bureau. For postage stamps, the principal item, and for items that appertain to the Insular Affairs of the War Department the appropriation or the necessary money comes from other sources. We render bills for the actual amount of work delivered, at specified rates, and that amount of money is transferred on the books of the Treasury Department to the credit of the appropriations for the Bureau.

Mr. SMITH. So that you have for this purpose of labor and expense of engraving and printing in your estimate a very considerable sum, usually in excess of the amount appropriated?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. About how much, for instance, under this item?

Mr. SULLIVAN. Under this item we have \$257,221.84.

Mr. SMITH. That is for the last fiscal year?

Mr. SULLIVAN. No, sir; that is estimated for the fiscal year that we are now considering.

Mr. SMITH. That is, you make that estimate to the Post-Office Department.

Mr. SULLIVAN. We estimate that we will do that amount of work, and will be repaid for it, so that in a way our appropriation answers as a sort of capital and we do the work, make the expenditure, and then we are repaid for the expenditure.

Mr. SMITH. But you practically use both this money and the other money by the end of the fiscal year?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. Does that same situation of affairs apply to most of these other items?

Mr. SULLIVAN. To all three items, because the accounts that are rendered for the work done must be divided between the three appropriations for compensation of employees, for plate printing, and for the materials which are used in the execution of this other work.

Mr. SMITH. In that connection then I think it might be well if you would give us the aggregate amount that you estimate that you will receive in the Bureau of Engraving and Printing from all Departments and from all other sources than your own appropriation.

Mr. SULLIVAN. I will have to put down the three items and aggregate them.

Mr. SMITH. You might give us the other two items and we can aggregate it at our leisure.

Mr. SULLIVAN. For plate printing under the item for wages of plate printers the repayments are estimated at \$79,625.68.

The CHAIRMAN. Estimated for the year 1907?

Mr. SULLIVAN. Yes, sir. For materials and miscellaneous expenses the repayments are estimated at \$144,891.98.

The CHAIRMAN. Do these Departments that reimburse for work done pay the amount of that work out of appropriations made specifically for that purpose?

Mr. SULLIVAN. Yes, sir; made specifically for that purpose. For instance, the postage stamps are paid for from the appropriation for the manufacture of adhesive stamps.

The CHAIRMAN. Does that appropriation expressly provide that it should be paid to the Bureau of Engraving and Printing?

Mr. SULLIVAN. No, sir; the appropriation is the ordinary appropriation.

Mr. SMITH. As a matter of fact, this heading "Engraving and Printing" means engraving and printing for the Treasury Department.

Mr. SULLIVAN. For the Treasury Department, mainly; but is hardly confined to that, because there are some miscellaneous items that are done for other Departments which we include in our estimate of work to be done that are not repaid for. The main item now that is repaid for is the postage-stamp item.

Mr. SMITH. Give us an illustration of those that are not paid for and that are not for the Treasury Department.

Mr. SULLIVAN. We include in our estimates certificates for the Pension Office, post-office warrants, post-office transfer drafts, transportation requests, passports, army officers' commissions, naval officers' commissions, commissions for attorneys and marshals, Presidential commissions, letter heads and book labels for Library of Congress, letter heads for Senate and House office buildings, cards of admission to Senate and House galleries, and portraits of deceased Members of Congress. All these items are put in this estimate to be provided for out of this appropriation, and are not repaid for.

Mr. SMITH. I thought it was the custom where a Member of Congress died for us to specifically appropriate the money.

Mr. SULLIVAN. That has been abandoned, and it has been included in our estimates.

The CHAIRMAN. Do you also do engraving work for the Departments, individual members of the Departments, and bureaus?

Mr. SULLIVAN. No, sir; we do no work of that kind.

The CHAIRMAN. Have any of these Departments engravers that do work of that kind?

Mr. SULLIVAN. I do not know.

The CHAIRMAN. Is there any engraving done outside of your Bureau?

Mr. SULLIVAN. I think there is engraving done in the Coast and Geodetic Survey, and the Geological Survey.

The CHAIRMAN. Yes; there is in the Geological Survey, but that is in connection with that service?

Mr. SULLIVAN. And the Patent Office.

The CHAIRMAN. And in the Hydrographic Office of the Navy Department?

Mr. SULLIVAN. Yes.

Mr. TAYLOR. The Patent Office has something, you say?

Mr. SULLIVAN. I think they have something, but just what it is I do not know.

Mr. TAYLOR. You do not do anything for the Patent Office, do you?

Mr. SULLIVAN. We engrave the blank forms of letters patent.

Mr. SMITH. Then you do engraving work for the inaugural ball?

Mr. SULLIVAN. Yes; that we are repaid for.

Mr. SMITH. Who pays you?

Mr. SULLIVAN. The inaugural committee.

Mr. SMITH. You do, then, some private work?

Mr. SULLIVAN. We do not consider that private work.

Mr. SMITH. The inaugural committee has no legal status, has it?

Mr. SULLIVAN. No; but by long-established custom it is recognized as a semiofficial organization, and we have always done work for it as a matter of accommodation.

Mr. SMITH. You also usually make engravings of Cabinet officers, do you not?

Mr. SULLIVAN. Yes; that is a matter of historic interest. We have a complete series of Secretaries of the Treasury, and we have a complete series of Cabinet officers going back, I think, as far as the Hayes Administration; and that has been done as a matter of historic interest.

The CHAIRMAN. Is it limited to Cabinet officers?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. Upon whose direction was it originally done?

Mr. SULLIVAN. By direction of the Secretary of the Treasury.

Mr. SMITH. So it was under a Treasury Department order and a Treasury Department expense?

Mr. SULLIVAN. Absolutely. We could not make a line of engraving without orders of the Secretary of the Treasury.

#### WAGES OF PLATE PRINTERS.

The CHAIRMAN. I want to get the amount of this second item. I notice that you estimate for the coming fiscal year under the second item, for wages of plate printers at piece rates to be fixed by the Secretary of the Treasury, and so forth, an increase of the current appropriation. The current appropriation is \$1,250,000, and you recommend \$1,363,616.

Mr. SULLIVAN. That is a matter of simple computation. The estimates of these officers that I have named multiplied by the rates which we pay the plate printers. For instance the item of United States note and certificate backs. We compute at \$7 a thousand impressions.

The CHAIRMAN. And this increase results from the increased work,

which from the estimates furnished you by the different bureaus of the Treasury Department will have to be done during the next fiscal year?

Mr. SULLIVAN. Yes, sir. You see that it is an absolute index of that increase because it is the number of impressions we have estimated for multiplied by the price which we have to pay the men, and the necessary additions for assistance and other items, bringing the actual total.

The increased work which I have spoken of will also involve an increase in this item, ascertained in exactly the same way, of \$18,401.53.

Mr. SMITH. That is on the second item.

Mr. SULLIVAN. Yes, sir; wages of plate printers. That will bring the item up to \$1,382,017.

Mr. SMITH. This is the piecework item?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. I want to ask you if your estimates include any increase of rates per piece.

Mr. SULLIVAN. No, sir.

Mr. SMITH. How long has the rate per piece remained stationary in this branch?

Mr. SULLIVAN. For about twelve years; then the change was a reduction in the rates.

Mr. SMITH. What do you say now as to whether these piecework rates as now established conforms to this requirement of the law that it shall not exceed the usual pay for work of a similar character outside of the Bureau of Engraving and Printing?

Mr. SULLIVAN. I think they fairly conform to that requirement.

Mr. SMITH. Neither above or below the outside price?

Mr. SULLIVAN. They are as close as we can approximate them.

#### MATERIALS, AND MISCELLANEOUS EXPENSES.

Mr. SMITH. You ask for engravers' and printing material, except "distinctive paper."

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. Why is distinctive paper excluded from this item?

Mr. SULLIVAN. For the reason that the purchase and the custody of distinctive paper is in the hands of the Secretary of the Treasury as a check upon the Bureau of Engraving and Printing. If we were permitted to have absolute control of that item the theory is that we might do as we pleased about printing these issues. But this check prevents us from getting a sheet of that distinctive paper without requisition on the Secretary of the Treasury and a direct charge to us of the number of sheets that are issued.

Mr. SMITH. In view of the fact that this excludes all of the more valuable paper, I wish you to state what the principal items contained in this estimate for material are.

Mr. SULLIVAN. It includes dry colors—blacks and greens and blues—various colors from which the inks are made, amounting to \$236,582.57; textiles—that is, the blanket used by the printers on their presses, a very fine blanket—amounting to \$9,2287.16.

Mr. SMITH. How many other important items.

Mr. SULLIVAN. Then, we have fuel \$23,000, and engravers' supplies of various kinds, amounting to \$25,000, oils with which the ink is made,

amounting to \$46,000, and various other items. Those are about the main items.

Mr. SMITH. You proposed a reduction this year in this estimate. Is that altered by the same causes that have altered the other two? The appropriation for 1906 is \$510,000.

Mr. SULLIVAN. That decrease is based upon the decrease of expenditures in 1905; that is the last full fiscal year for which we have results. We took the expenditures for 1905 and increased them by the percentage of increase on the amount of work to be delivered, which makes the amount that we ask for. That shows then that there was a decrease in 1905.

Mr. SMITH. Is any increase above your estimate made necessary under this item of the character you have indicated as to the other two items?

Mr. SULLIVAN. There is an increase; yes, sir; but as it is based upon decreased expenditure for 1905, of course it makes a decreased expenditure for 1907 instead of an increase.

Mr. SMITH. I understand; but you do not seem to understand me. You make estimates for these three items, and you now ask as to the first two items that we give you more, claiming the recent order has made an increase necessary. Is that true of this item, or will it be sufficient?

Mr. SULLIVAN. It will be sufficient if you give us the amount estimated for, but that is because of the increase in the basis of computation.

Mr. SMITH. Why do you want to strike out the language of this section that is in brackets?

Mr. SULLIVAN. That is in regard to the policy—

Mr. SMITH. This is an item directly involving your own office, on page 30 of the draft of bill.

Mr. SULLIVAN. On page 30. We did not suggest that amendment. We want that language in there. I was not aware that that was marked for omission.

Mr. SMITH. Perhaps the Treasury Department means to recommend that these bureaus be deprived of their carriages.

Mr. SULLIVAN. That is absolutely necessary to be inserted. Of course, that part relative to a carriage for the Director is a matter which is submitted to the discretion of the committee. The Director has had a horse and carriage for some forty years—ever since the organization of the Bureau—and last year the committee put that in in the way that it is printed here, but even if that were omitted we would have to have this language here authorizing us to purchase and maintain the horses and vehicles.

The CHAIRMAN. Do you know how many horses and vehicles you have in connection with the work of the Bureau?

Mr. SULLIVAN. I could not state that accurately, but there are some seven or eight horses; and we have a large steel-lined truck for the delivery of securities to the Treasury Department, a large delivery wagon for the delivery of postage stamps to the Post-Office, and light wagons for the delivery of other materials, checks, and so forth, to the different Departments.

The CHAIRMAN. Do you occasionally or frequently use your horses and wagons for the purpose of taking particular employees in the Bureau home?

Mr. SULLIVAN. Yes; we have one light wagon to take the sick employees to their homes.

The CHAIRMAN. Have you frequent occasion to use that?

Mr. SULLIVAN. Very frequent. There is not a day, I suppose—we have 3,000 people in the building, and there is not a day that one or two of them are not taken sick, and so seriously as to need to be conveyed home.

The CHAIRMAN. Is that because of the character of the service or because of the age of the employees?

Mr. SULLIVAN. No, sir; it is simply the result of ordinary conditions of health. We had one very serious case there yesterday or the day before. A man came in to get his pay, and while he was sitting there the captain of the watch looked at him—he was a colored man—he thought he had gone to sleep—and he told the watchman to wake him up. When the watchman got to him the man was almost gone; but we have a physician there, who revived him in a little while, and he was sent home. Girls will come there in the morning and they may be well for a little while, and in an hour or so they may be in such a condition that they will have to be sent home. We have a woman doctor there who looks after them.

Mr. SMITH. Is she in there officially as a physician?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. What appropriation is she paid out of?

Mr. SULLIVAN. Compensation of employees.

Mr. SMITH. Is that the practice of any other bureau in Washington to maintain a physician for the bureau?

Mr. SULLIVAN. I don't know about that, but it is absolutely necessary there. Her compensation is not very high. She is among the operative force.

Mr. SMITH. She does not do anything else but practice medicine?

Mr. SULLIVAN. She looks after the condition of the employees there and the health of the women.

The CHAIRMAN. Are a large proportion of your employees females?

Mr. SULLIVAN. Yes; the greater number. I can not state the number now, but I think the proportion is something like 1,400 men to 1,600 women.

The CHAIRMAN. Does the character of service performed by these women differ materially from the service performed by female clerks in other departments?

Mr. SULLIVAN. Very materially.

The CHAIRMAN. Is it more taxing on the employees?

Mr. SULLIVAN. Very much more. We have in the neighborhood of 700 of these women, printers' assistants. They stand at the press and help the printer all day long. They are on their feet from 8 o'clock in the morning until 4 o'clock in the afternoon, with very little relief during that time.

The CHAIRMAN. Why is it that the Bureau does not avail itself of the services of men when it has the opportunity of doing so?

Mr. SULLIVAN. We could not get men to do that class of work.

The CHAIRMAN. You could not?

Mr. SULLIVAN. No, sir.

The CHAIRMAN. Why is that, because of the compensation, or because of the character of the service?

Mr. SULLIVAN. Because of the character of the service. It means

that we must have the benefit of the deft fingers of a woman, and the men are engaged in other lines of employment, so that there would not be enough men unemployed to do that.

The CHAIRMAN. If the men were as efficient, could you not fill vacancies, taking men from the eligible list of the Civil Service Commission?

Mr. SULLIVAN. Well, they would not work at the compensation we give the women. We only pay them \$1.50 a day, and men would not work for that. But independent of that, I think that there would be a great deal of difficulty in getting men to do the work. And then throughout the various divisions of the Bureau the character of the work performed by women needs deft fingers for counting, operating light machinery, and various other lines of work.

Before you leave the third item I want to again ask that that be increased, on account of the extra work, to the extent of \$6,288.50.

Mr. SMITH. I asked you repeatedly whether you wanted that increase in this same item, and you said no.

Mr. SULLIVAN. I misunderstood you. That increase will be necessary, and will make that item \$499,372.

Mr. TAYLOR. Considerably below last year.

The CHAIRMAN. Can you give us the actual expenditure under this item for the fiscal year 1905, now?

Mr. SULLIVAN. \$504,280.17.

The CHAIRMAN. So there was a balance of about \$20,000 turned back in the Treasury.

Mr. SULLIVAN. There was a balance of \$20,719.83 turned back into the Treasury.

#### RENT OF OFFICE FOR DISTRIBUTION OF POSTAGE STAMPS.

The CHAIRMAN. What do you know about the next item, on page 31, for rent of office now occupied by agent of the Post-Office Department?

Mr. SULLIVAN. I know this, that by the provisions of the agreement between the Post-Office Department and the Treasury Department for the manufacture of adhesive stamps the Bureau must provide suitable quarters for the agent. When the work was transferred to the Bureau we did not have suitable rooms there, and the agent went out and rented rooms. The matter was submitted to Congress, and every year since then it has made this provision for the payment of the rent.

The CHAIRMAN. If the legislative bill passes and becomes a law the office of the agent will be abolished?

Mr. SULLIVAN. That is my understanding.

The CHAIRMAN. And there will be no longer any necessity for carrying this?

Mr. SULLIVAN. No longer any necessity.

Mr. SMITH. Would there be any other occasion if the item should cease to exist? You are not a bidder under the present Post-Office bill. Any private bidder outside of you would have to furnish this office.

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. So your bid ought to include this office if it is to be maintained?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. So there is no necessity for this in any event if the Post-Office bill passes?

Mr. SULLIVAN. No, only as the practice has been to provide for it in this way. I suppose if we get the contract again it would go on.

Mr. SMITH. But you are to get the full pay, you are to bid on it, and you ought to furnish the room like anybody else if you bid on it. So in any event whether the man stays in the Post-Office Department or not, you would have to pay it out of your bid.

Mr. SULLIVAN. That is right.

Mr. SMITH. Do you do this Smithsonian engraving work; is that your work [handing paper to Mr. Sullivan]?

Mr. SULLIVAN. Yes, sir.

Mr. SMITH. Where do you get your pay for that?

Mr. SULLIVAN. I don't think we have done any of that kind of work for a long time, but it ought to be among the items included in the estimate.

Mr. SMITH. Why shouldn't the Smithsonian Institution pay for that?

Mr. SULLIVAN. I do not find it here, and I do not think we have done any of that for some time. I do not think they have asked us to do any of it, and we have not estimated for it.

Mr. SMITH. Are you not able to recognize your own work?

Mr. SULLIVAN. Oh, yes. To the best of my recollection that is my work, but I think it must have been done some time ago, because I do not see it in the estimate. I do not think they have asked us to do that, but if they did ask us it would be included, because we would ask them how much work of that kind they would want during the year, and we would include it in our estimates, and Congress in that way would provide for the work. I have always felt that all of this work should be provided for directly by Congress for the Bureau, including the work on the postage stamps, but the Post-Office Department is desirous of controlling appropriations for its own Department, so we have recognized that condition and submitted our estimates accordingly.

---

TUESDAY, *May 1, 1906.*

#### ENGRAVING AND PRINTING—Continued.

#### **ADDITIONAL STATEMENT OF MR. THOMAS J. SULLIVAN, ASSISTANT DIRECTOR OF THE BUREAU OF ENGRAVING AND PRINTING.**

##### LABOR AND EXPENSES.

The CHAIRMAN. Mr. Sullivan, we have your supplemental estimate for the additional amount necessary to pay for the labor cost of doing the work in the Bureau of Engraving and Printing incident to the increase in the amount of issues of various notes. How do you arrive at that result? I observe that in your estimates you stated that you desired to make a personal explanation of it orally.

Mr. SULLIVAN. We got a statement from the Treasurer of the United States stating that he would want to increase his estimated

number of sheets required from 43,120,000 sheets to 51,120,000 sheets, an increase of 8,000,000 sheets.

Now, every one of those sheets is of the class of notes known as gold notes or gold certificates; and I want to call attention to that just here, because later on I want to make a statement to the committee which may materially reduce these figures of the amount of money which we will want.

The Comptroller has estimated that he will need 2,000,000 additional, increasing his original estimate, upon which our estimate was based, from 6,500,000 to 8,500,000 sheets. Now, we have submitted the additional amount of money which we will need upon exactly the same basis as the original estimates were made on, taking exactly the same number of printings, the same amount of finishing work, and everything precisely as the notes were finished last year, and as our original estimates were submitted; and that will cause us to ask for an increased appropriation of \$568,565.

The CHAIRMAN. Take the bill lying before you and turn to page 29, in order that we may get your statement in the order of the items as they appear here in the bill.

Mr. SULLIVAN. Yes. If you will permit me to make one or two statements just before I get to that, then I think we can go on better later.

The CHAIRMAN. Go ahead.

Mr. SULLIVAN. The Treasurer's estimate for the increase wanted is in the class of notes known as gold certificates, and we have here a sheet of gold certificates [producing same], showing the yellow printing on the face of the note. That note requires four printings to finish it. This sheet of silver certificates [producing same] requires but three printings to finish it—green, black, and red. This sheet of silver certificates [exhibiting same] requires only the same number to finish it. The sheet of ordinary bank notes requires the same number.

The CHAIRMAN. Three?

Mr. SULLIVAN. Yes; two plate printings, and what we call a surface printing, printed on ordinary power presses.

Now, in the increase they have in the estimate of cost of this appropriation there is included for the whole 8,000,000 three plate printings and one surface printing.

The CHAIRMAN. On the \$20 gold certificates?

Mr. SULLIVAN. On the gold certificates; and the Treasurer's request is for all gold certificates in that 8,000,000 additional. Now, if we were to eliminate that yellow-plate printing on the face of that, we can reduce the cost there by \$160,000, or, more exactly, \$159,899.64; and the Department has asked me to submit that to the committee.

Mr. Keep says that if the committee are willing to furnish the money he is willing to do the printing, but if the committee think it is perfectly proper to omit that printing, and will reduce the estimate to that amount, he will go on and make the gold certificates the same as the silver certificates.

Mr. TAYLOR. That is, the face?

Mr. SULLIVAN. Yes.

The CHAIRMAN. How much increase does the Treasury Department estimate will be required on account of reducing the denominations of the gold certificates?

Mr. SULLIVAN. \$159,899.64. That is the aggregate. I lumped the whole 10,000,000 in here. I have not separated it from the gold certificates.

The CHAIRMAN. That \$159,899.64 is the increased cost of printing the gold certificates which you estimate of all classes and denominations?

Mr. SULLIVAN. Yes; I have not the amount that is increased by reason of the 8,000,000 gold certificates.

The CHAIRMAN. The estimate of gold certificates of the denomination of \$5 is for 7,000,000 sheets?

Mr. SULLIVAN. That is right.

The CHAIRMAN. What does that cost per sheet or per thousand?

Mr. SULLIVAN. I think they cost in the neighborhood of \$60 a thousand sheets, sir, with all three printings on them, just as they are here now.

The CHAIRMAN. And the tens would be the same, would they?

Mr. SULLIVAN. Yes; the tens would be the same.

The CHAIRMAN. I see he estimates 8,000,000.

Mr. SULLIVAN. Yes; the whole estimate of increased number of sheets required is on the gold certificates. His estimate for silver certificates and United States notes is exactly the same as he submitted it last August, and this increase of 8,000,000 sheets is entirely for gold certificates.

The CHAIRMAN. So that if we should conclude to give the appropriation for this 8,000,000 of gold certificates, we would have to increase your appropriation under the item "for labor and expenses of engraving and printing," and salaries, etc., on page 28, how much?

Mr. SULLIVAN. About \$480,000.

The CHAIRMAN. When you were before us the other day it was said a reduction of about \$40,000 could be made on account of the transfer to the legislative bill. In making this supplemental estimate do you take any account of the amount that has been transferred to the legislative bill under this item?

Mr. SULLIVAN. Yes, sir.

The CHAIRMAN. And you estimate that the \$1,140,000 would have to be increased to the extent of how many thousand dollars—how much is the first item? We want to segregate them here.

Mr. SULLIVAN. In order to segregate them I will have to make some figures on that.

The CHAIRMAN. You have them aggregated here. The increase of \$400,000 and over is distributed in your supplemental estimate here under three headings. Under compensation of employees you estimate it would be necessary to have \$1,237,081; wages of plate printers, \$1,627,154; material and miscellaneous expenses, \$592,098; total, \$3,456,333.

Mr. SULLIVAN. Yes; that includes both the two million additional and national-bank notes, which the Comptroller says he will need, and the eight million gold certificates additional which the Treasurer says he will need. You were asking me along the line of the cost of the gold certificates alone, so that if we wanted to reduce this estimate which the Director has submitted here by the amount of the cost of the gold certificates alone, leaving in the amount for the national-bank notes, I would have to make the necessary computations to get at those figures.

The CHAIRMAN. I wish you would make those computations, Mr. Sullivan, and send them to us. Make the estimates on the amount of increase necessary in consequence of the increase of two million national-bank notes alone, so that if we should omit the other increase we would know how much this increase should be.

Mr. SULLIVAN. You can give us the increase, then, to provide for the 2,000,000 national-bank notes which the Comptroller wants, and if you do not want to give us the money to print the gold certificates in any form you can omit it altogether.

The CHAIRMAN. One thing more I want to ask you. You spoke of the Assistant Secretary of the Treasury saying that if the money was not allowed for printing and making these four impressions—printing this yellow on the face of the \$20 gold certificates—he would print them without that color?

Mr. SULLIVAN. Yes, sir.

The CHAIRMAN. That color is not required by law, is it?

Mr. SULLIVAN. No. These notes may be made in any design approved by the Secretary of the Treasury, and I have brought along with me models which are submitted to the Secretary of the Treasury for his approval [submitting specimens].

The CHAIRMAN. Would these gold certificates have this white space on them?

Mr. SULLIVAN. Yes; and these letters would all be in white, and this border would be in white instead of this yellow tint in the border, and the yellow in here [indicating].

The CHAIRMAN. Send us that estimate on the basis of 2,000,000 national-bank notes. We have the other estimates. We want the two million estimate separately.

Mr. SULLIVAN. What I have given you is approximate, and I would rather give it all to you accurately.

The CHAIRMAN. Very well.

BUREAU OF ENGRAVING AND PRINTING,  
May 2, 1906.

HON. CHARLES A. TAWNEY,  
*Chairman Subcommittee Sundry Civil Appropriation Bill,  
Committee on Appropriations, House of Representatives.*

SIR: In compliance with your request made to Mr. Thomas J. Sullivan, the Assistant Director of this Bureau, when he was before the subcommittee yesterday in the matter of the additional appropriations for this Bureau, I have the honor to submit the following as a part of his statement relative to this matter:

The cost of the 2,000,000 additional sheets of national currency notes which the Comptroller of the Currency states will be needed in the business of his office, as such notes are now printed and finished, is as follows:

Compensation of employees.....	\$29, 450
Wages of plate printers .....	40, 898
Materials and miscellaneous expenses .....	13, 280
Total .....	83, 628

To provide for these 2,000,000 additional sheets of national-bank notes will require that the appropriation "For labor and expenses of engraving and printing," pages 268 and 269, Estimates of Appropriations, 1907, shall be made in the following amounts in lieu of the amounts stated in the original estimates:

Compensation of employees.....	\$1, 060, 699
Wages of plate printers.....	1, 404, 514
Materials and miscellaneous expenses .....	506, 383
Total.....	2, 971, 596

The items transferred to the legislative, executive, and judicial appropriation bill for 1907, amounting to \$157,415, have been deducted from these amounts.

The cost of the 8,000,000 additional sheets of gold certificates which the Treasurer of the United States states will be needed in the business of his office, as such certificates are now printed and finished, is as follows:

Compensation of employees.....	\$176, 382
Wages of plate printers.....	222, 640
Materials and miscellaneous expenses.....	85, 715
<b>Total.....</b>	<b>484, 737</b>

To provide for these 8,000,000 additional sheets of gold certificates and the 2,000,000 additional sheets of national-bank notes, as such certificates and notes are now printed and finished, will require that the appropriation "For labor and expenses of engraving and printing," pages 268 and 269, Estimates of Appropriations, 1907, shall be made in the following amounts in lieu of the amounts stated in the original estimates:

Compensation of employees.....	\$1, 237, 081
Wages of plate printers.....	1, 627, 154
Materials and miscellaneous expenses.....	592, 098
<b>Total.....</b>	<b>3, 456, 333</b>

The items transferred to the legislative, executive, and judicial appropriation bill for 1907, amounting to \$157,415, have been deducted from these amounts.

The cost of the 8,000,000 additional sheets of gold certificates, if printed without the additional yellow plate printing on the face of the note, known as a "tint," is as follows:

Compensation of employees.....	\$117, 195
Wages of plate printers.....	148, 617
Material and miscellaneous expenses.....	59, 024
<b>Total.....</b>	<b>324, 836</b>

To provide for the 2,000,000 additional sheets of national-bank notes, as such notes are now printed and finished, and the 8,000,000 additional sheets of gold certificates with one plate printing omitted from such certificates (the yellow tint on the face of the certificate) will require that the appropriation "For labor and expenses of engraving and printing," pages 268 and 269, Estimates of Appropriations, 1907, shall be made in the following amounts in lieu of the amounts stated in the original estimates:

Compensation of employees.....	\$1, 177, 894
Wages of plate printers.....	1, 553, 131
Materials and miscellaneous expenses.....	565, 408
<b>Total.....</b>	<b>3, 296, 433</b>

In these statements the odd cents have been eliminated.

The items transferred to the legislative, executive, and judicial appropriation bill for 1907, amounting to \$157,415, have been deducted from these amounts.

It is believed that the discontinuance of the plate printing on the face of the certificate known as the "tint," would improve the appearance of the certificate, as well as make the rest of the work clear and more distinct to the general public, while at the same time save a considerable amount of money in the preparation of the certificates.

Respectfully,

WM. M. MEREDITH, *Director.*

THURSDAY, *April 19, 1906.*

SMITHSONIAN INSTITUTION.

**STATEMENTS OF MR. RICHARD RATHBUN, ACTING SECRETARY, AND MR. CYRUS ADLER, ASSISTANT SECRETARY, OF THE SMITHSONIAN INSTITUTION, ACCOMPANIED BY MR. W. DE C. RAVENEL, ADMINISTRATIVE ASSISTANT, NATIONAL MUSEUM; MR. W. H. HOLMES, CHIEF OF THE BUREAU OF ETHNOLOGY, AND MR. C. G. ABBOT, IN CHARGE OF THE ASTROPHYSICAL OBSERVATORY.**

The CHAIRMAN. You are in charge of the National Museum and the Smithsonian Institution?

Mr. RATHBUN. Mr. Chairman, in the vacancy caused by the death of the late Secretary Langley, I am acting as Secretary of the institution. My actual position is that of Assistant Secretary of the Smithsonian Institution, specifically in charge of the National Museum.

The CHAIRMAN. Were these estimates for the Smithsonian Institution and the National Museum for the coming fiscal year prepared by yourself, so that you are sufficiently familiar to give the details and basis upon which the estimates are made?

Mr. RATHBUN. Yes, sir; but Mr. Chairman, I have brought with me the persons who are directly in charge of each of the branches, so that in any matters of detail with which I am not familiar you can obtain information from them.

The CHAIRMAN. Will you state to the committee the basis upon which your conclusion as to the amount required under the several heads by which appropriations are made for the next fiscal year is reached. How do you arrive at these amounts is what we want to know. Whether you simply took appropriations for the present fiscal year, or whether you went into the matter in detail for the purpose of ascertaining whether or not a lesser amount than the amount appropriated would be sufficient to meet the requirements of the service during the coming fiscal year.

Mr. RATHBUN. I will say in regard to that, that the matter has been considered from all points of view. Of course, the current fiscal year has served as a basis to a large extent, for the reason that, while in a large number of items the amounts are altogether too low for present needs, only the current sums have been estimated for, pending the completion of the new building now under construction for the National Museum when certain increases will be necessary. The present estimates are based upon what is considered absolutely necessary to maintain things under present conditions.

INTERNATIONAL EXCHANGES.

The CHAIRMAN. Now, as to the first item, International Exchanges; your original estimate did not contemplate any increase for the coming fiscal year over the amount which you now have for the current year.

Mr. RATHBUN. No.

The CHAIRMAN. And there has been submitted a supplemental estimate.

Mr. RATHBUN. Do you mean the International Catalogue of Scientific Literature?

The CHAIRMAN. On page 32, International Exchanges is the first item.

Mr. RATHBUN. The item for International Exchanges is at the top of the page, and that for American Ethnology begins at the bottom of the page. They follow the present order of the estimates.

The CHAIRMAN. But as to this particular item you don't estimate any increase for the coming fiscal year?

Mr. RATHBUN. No, sir.

The CHAIRMAN. Will you explain to the committee what this particular service is under this item?

Mr. RATHBUN. Mr. Adler is in charge of this special branch, and he will explain it to you.

Mr. ADLER. Mr. Chairman, the International Exchange Service is intended for exchanging publications between the United States and foreign countries; primarily, publications of the United States Government, and secondarily, other publications which are given as gifts or exchanges to foreign countries or institutions in foreign countries and for which returns are received from those countries for the Government or public institutions in the United States.

The CHAIRMAN. How long have you been in charge of this branch of the service?

Mr. ADLER. I was appointed in March, 1905, but I only assumed charge on the 1st of July, 1905, as I had other duties that prevented me taking it up at once.

The CHAIRMAN. I observed from a statement submitted to the committee by the Acting Secretary that in 1896 you had 26 employees engaged in this service, receiving a compensation of \$14,519.76.

Mr. ADLER. Yes, sir.

The CHAIRMAN. In 1901, five years later, you had 22 employees, receiving a compensation of \$16,020.30; and in the year 1905, 18 employees, receiving a compensation of \$16,044.64. Can you explain why the number of employees in this branch of the service has been decreased from 26 in 1896 to 18 in 1905 at practically the same compensation, the 18 receiving practically the same compensation that the 26 received?

Mr. ADLER. I am inclined to think, Mr. Chairman, that that is due to several causes: First and foremost, that there was a practice of placing upon the roll persons who were only temporarily employed; sometimes a clerk would be needed for a month or something of that sort; or work which is now probably done by contract was done by simply placing people on the roll. I don't think that there were so many annual employees.

The CHAIRMAN. I notice that there were temporary employees.

Mr. ADLER. Another thing is that there are employees who are engaged in this service that are not paid from the appropriation, but are paid from funds that come to the Smithsonian Institution.

The CHAIRMAN. There are employees in this branch of the service not paid from the appropriation, but from other funds?

Mr. ADLER. Yes, sir; not many, but it brings up the number of employees.

The CHAIRMAN. What funds do you refer to; do you refer to Smithsonian funds?

Mr. ADLER. No, sir; I don't refer to any income from the Smithsonian fund, but to funds received for carrying exchanges. A good many years ago it was found that the demands upon this service were very great, and the regents of the institution fixed a charge to bureaus of the Government and State institutions at the rate of 5 cents a pound, so that a return is made to the institution from that, and this money is again used for carrying on the work, so that there is a fund that varies, but sometimes amounts to as much as \$4,000 a year. That comes in in this miscellaneous way, and then is again expended.

The CHAIRMAN. Some \$4,000 that you received from these miscellaneous sources in addition to the amount appropriated?

Mr. ADLER. Yes, sir.

The CHAIRMAN. And it is expended for service rendered in this particular branch of the service?

Mr. ADLER. Yes, sir; on freight and what not.

The CHAIRMAN. By what authority is this expended; where do you get the authority to pay this money out again after it is received in this way?

Mr. ADLER. That authority comes to the Secretary of the Institution from the Board of Regents. There is a resolution passed each year which authorizes him to use the funds of the Institution in conference with the executive committee of the Board of Regents, and with comparative freedom as to items. That relates I know to income of the Institution. It does not specify this particular sum, but I take it that the Secretary of the Institution has expended the general funds under the authority of the Board of Regents. Am I not correct, Mr. Rathbun?

Mr. RATHBUN. Yes. Some few years ago the matter was referred to the present Comptroller of the Treasury as to whether these repayments should come to the Institution for disbursing, or whether they should go into the Treasury Department and be reappropriated. His decision, in writing, was to the effect that the Bureau of Exchanges is, in respect to these repayments, a Smithsonian affair, and the amounts should come to the Smithsonian and be expended from there; of course, these expenditures are always made in the line of the exchange service.

The CHAIRMAN. And under the authority of the Board of Regents?

Mr. RATHBUN. Under the authority of the Board of Regents, but the Comptroller passed upon the matter from the standpoint of the Government.

#### INTERNATIONAL CATALOGUE OF SCIENTIFIC LITERATURE.

Mr. SMITH. Now, take up the item set forth in House Document No. 623, concerning the International Catalogue of Scientific Literature. It is not in the bill. An appropriation is recommended there for \$5,000.

Mr. RATHBUN. This matter is under the charge of Doctor Adler, and he has had a great deal to do with it, even before the establishment of the service. He can give you the details, of course, better than I.

Mr. SMITH. Have you ever paid anything on it?

Mr. ADLER. The Government has made a single appropriation in connection with this subject. In 1898, in connection with the deficiency

bill, \$500 was appropriated at the request of the Secretary of State, to have this Government represented at a convention to be held in London, looking to the establishment of an international catalogue. That is the only appropriation that the Government has made thus far.

At that time Mr. Langley and I went abroad, and I attended this conference. I made a report to the Secretary of State, and that report was transmitted by him to Congress. He urged an appropriation at the time, I think, of \$7,500, but no appropriation was made. The catalogue was to start in 1900, and it appeared from all the available information we had from men in England and Germany and France, that if the United States did not take part in this enterprise it would fail; since this country was so important a contributor to scientific literature it was thought that the project would not be a success if we did not adhere to it. The Secretary of the Institution temporarily authorized an allotment from the funds of the Institution to carry on this work, and we have carried it on four years to the limited extent of our means.

The Board of Regents this year felt that the Institution had carried this matter on out of its own funds, through the experimental stage, and that we might now appeal to the Government to actually carry on the work.

It rests upon an international understanding. Almost all of the governments in the world are taking part—some twenty-five or twenty-six governments. Some of the smaller governments are appropriating a larger sum than we have asked for, and there is no way in which this work can be done except through international cooperation.

This is not a new work. It has been attempted before. Professor Henry started it about 1854 or 1855. He proposed to the English societies—the Royal Society and the British Association for the Advancement of Science—that they should take up the work of cataloguing scientific literature in cooperation with the Smithsonian Institution. The Royal Society took it up and carried it on for about forty years, however, and then these learned societies came before the world and confessed that they had failed. They invited the United States to join in the matter, and the Secretary of State, as I say, took action at the time.

The work is now going on. Seventeen volumes a year are published, some larger and some smaller than this [indicating a volume], which represents the contributions to science of men all over the world in every department. That catalogue, I venture to say, is prepared in such a way that—as in the case of chemistry, for instance, for 1903—anybody, any man of intelligence, in five minutes' examination of that catalogue can find out what has been done in a given subject in the year.

MR. SMITH. That is, in the way of new works?

MR. ADLER. Yes, everything. The Russian scientists send their quota, and the French send their quota, etc. This work is done through contributions made by individual countries. In the United States, for instance, every important library or university has subscribed for a set of that catalogue, and the publication is made as a result of those contributions.

But what we are asked to do in this country is to furnish the information as to what our men are doing in science. That since 1900 has been done by the Smithsonian Institution, but it is too great a

burden upon the funds of the Institution. They are very limited. A slice of \$5,000 a year from its funds means the cutting down of other things that we ought to do, and this catalogue is work that is being done for the whole nation.

Mr. TAYLOR. What is the income in gross of the Smithsonian Institution proper?

Mr. ADLER. Fifty-eight thousand dollars or \$60,000. It is slightly variable, because there are some little funds and rents, and so on.

The CHAIRMAN. You say all the different countries contribute together and send to London the work of their respective scientists each year, and they are all catalogued?

Mr. ADLER. Yes; they are catalogued by the respective countries. We catalogue and classify our own scientific literature. We are supposed to go through the scientific literature of the United States and to arrange that. Sometimes we have to write five or six cards to duplicate them, because they come under different headings. For example, such sciences as mathematics and physics and mechanics cross each other. By a system of numbers we indicate where that belongs. This is all sent to London from every source, and a committee of experts in London edits it and arranges it.

The cost of printing the catalogue is borne by the subscriptions of these individual bodies, universities, colleges, and learned institutions throughout the world, but there is no way of doing the work without the nations standing for it, because the expense of getting up such a volume is infinitely greater than the price which you could charge a scientific man for it. It is double or treble. There are seventeen volumes like that [indicating specimen] published annually, and the price charged per set is \$85. The institutions of learning in the United States have contributed in the neighborhood of \$30,000 as an advance subscription for getting this up. I think I have a list somewhere here showing the interest that is taken, and I think every big university in the country has subscribed.

Mr. SMITH. When you speak of subscribing, what do you mean? They do not donate the money, but they have agreed to pay this money for a copy of the edition of the work?

Mr. ADLER. Yes; that makes it possible for the work to be printed in London.

Mr. SMITH. It is published by the Royal Society?

Mr. ADLER. No, sir; by the International Catalogue. That is a separate bureau. The Royal Society is the sponsor, as it were, and the Royal Society has advanced money. It grew out of the society.

Mr. SMITH. I call your attention to the title page here, which says that it is published for the International Council by the Royal Society of London.

Mr. ADLER. In that sense it is published, it is true.

Mr. SMITH. It is published by the Royal Society?

Mr. ADLER. I presume so, for the International Council. I now recall why it is put that way. This International Council is not a body that has legal standing in England. It was necessary that there should be somebody that could sue and be sued.

Mr. SMITH. It has no existence?

Mr. ADLER. It has an existence by an informal international understanding.

Mr. SMITH. That is hardly a partnership. It has hardly any national existence at all. It is practically a nonentity, is it not?

Mr. TAYLOR. It is a legal nonentity if not a practical one.

Mr. ADLER. That is a question for lawyers to settle.

The CHAIRMAN. Has it a regular organization—a president and other officers?

Mr. ADLER. It has a regular organization. The scheme is this: There is an international conference, which meets every five years, and to which all the nations which participate are invited. This conference simply elects temporary officers. These temporary officers appoint an executive committee and an international council. These two small bodies act in the interim, but every five years there is a new convention, just like a party convention in this country. I assume that the party organization has no legal existence, but it has nevertheless machinery by which it holds a national convention every four years; and in that sense we have the machinery by which we meet every five years.

Mr. SMITH. What is the understanding as to the language used?

Mr. ADLER. The English language is used as a basis, but it is also printed in German, French, and Italian.

Mr. SMITH. Do you say there is a governmental appropriation in all these countries for this money?

Mr. ADLER. I would not say in all of them. I have no absolute information on that point. They did not publish that; but I should say out of 24 or 25 countries nearly every one has a government appropriation.

Mr. SMITH. What is the basis for that statement?

Mr. ADLER. Simply what the men themselves told me at the conference and my correspondence and meeting with them. The other day one of the librarians of the Royal Library of Berlin was here, and I asked him what his Government was doing to support the International Catalogue. He told me they were appropriating \$7,500 a year, and they had established a special bureau for it. I am a member of the executive committee of this International Catalogue, although I never attend the meetings, which take place every three months in London, but I get their reports, and they indicate it. There was an informal understanding that this work would not be started unless the great nations subscribed for 45 sets of the catalogue. Of course we had no way as a nation of subscribing, but we went to work and invited our colleges and universities to subscribe. We subscribed to more than 45 sets, but in Russia the Government subscribed for 45 sets, and it distributes them among its institutions of learning.

Mr. SMITH. That does not cover any of the work of preparation?

Mr. ADLER. No, sir; but in Germany they have a government appropriation, and in France an extra appropriation has been made to the Museum of Natural History, in Paris, and Doctor Deniker, a distinguished naturalist, is in charge of this.

Mr. SMITH. We are not talking about the Government appropriating money to buy a set of the catalogue, but for the preparation of the material.

Mr. ADLER. So far as I know, there are one or two governments that have not made such appropriations; but in the main they have. I could indicate, if there was any point about it, the countries that I know have made appropriations, or those that I know have not.

Mr. SMITH. Indicate as far as you have absolute knowledge.

Mr. ADLER. Austria has made a Government appropriation, and so has Belgium. Canada has not. The Canadian work is being done informally at McGill University, but within the last three months I have received a letter from there to the effect that they have found it too much of a burden, and that they propose to apply to their Government, and the writer asked me what steps we had taken to obtain the money from our Government. I replied that we had not succeeded in getting any money, but that I had hopes.

Mr. SMITH. Your idea is that this is to be a perpetual appropriation from now on, probably rising?

Mr. ADLER. This catalogue goes on for five years at a time. This contract among the nations is for periods of five years. There was a conference held in London last June, and it was then decided to continue the catalogue for five years. That would be, say, to 1910, because it is already provided for from 1900 to 1905. The work might be stopped, but I am inclined to think that as it goes on it will be found to be more and more useful, and become a permanent thing.

Mr. SMITH. And with the increase in the production of scientific works there will be an increase of the appropriation from time to time?

Mr. ADLER. I suppose "sufficient unto the day is the evil thereof."

Mr. SMITH. No, we want to know what we are going into before we give you an appropriation.

Mr. ADLER. It was urged very strongly upon Mr. Rathbun that when he sent that estimate to the Treasury he should name a sum of \$7,500. We could not see how it could be less. But he is a firm economist, and he cut it down to \$5,000. As this country grows more and more to be a greater country, it will do more scientific work. That is one of the great tests of a country's usefulness, the amount of scientific work that it does. I do not think its cataloguing will be a serious matter to this Government.

Mr. SMITH. How much has the Smithsonian been giving to it?

Mr. ADLER. Four thousand dollars. We need one other clerk. The amount is very small. We ought to have a much larger sum than we have asked for, and we are not worthily or fully representing this country by that amount, but we are getting a great deal of volunteer work in the sense of getting advice and outside assistance. We could not possibly do this work with the four or five people in the office if we did not have all these gentlemen here in the scientific service to whom we can go for advice, and who, of course, charge us nothing for advice.

#### INCOME OF THE SMITHSONIAN INSTITUTION.

Mr. SMITH. I think the question was not answered, though, what the total receipts of the Smithsonian were, outside of the appropriations of Congress, from other sources.

Mr. ADLER. The total receipts are the income from \$937,000 in the Treasury—

Mr. RATHBUN. Mr. Chairman, if I may say, this information was sent to the committee by letter about a week or so ago. The sum deposited in the Treasury is \$937,000, and in bonds kept at the Institution, \$42,000, making a total principal of \$979,000. The interest on this amount is \$57,900.

Mr. SMITH. Have you no other sources of income?

Mr. RATHBUN. There is a small income from the sale of publications. Those are not Government publications, but Smithsonian publications.

Nr. SMITH. I think you could give us the aggregate to put in the hearings here.

The CHAIRMAN. It is here [indicating].

#### INCOME FROM INTERNATIONAL EXCHANGES.

Mr. SMITH. You have not got the statement here as to the \$4,000 which the Doctor said was received from international exchanges?

Mr. RATHBUN. That is not money derived from the regular income.

Mr. ADLER. We advance the money and then get it back. For instance, we carry exchanges; we get a large consignment and carry it, and send a bill for the cost, or less than the cost, because we can not carry exchanges for 5 cents a pound, and then the money is returned to the Institution. It is an actual advance returned. It is not a part of the income. It can not be expended for Smithsonian purposes, but simply for exchange purposes.

#### MISCELLANEOUS RECEIPTS OF THE SMITHSONIAN INSTITUTION.

Mr. SMITH. Can you tell me what the miscellaneous receipts amount to in a year.

Mr. RATHBUN. They are small, and come from the sale of the publications of the Smithsonian Institution. Of course, if a record is desired it can be had, because the books show it.

Mr. ADLER. It is about \$300 a year from that source.

Mr. SMITH. You think it is only about \$300 or \$400 a year, your whole miscellaneous receipts?

Mr. RATHBUN. About \$300, sir.

Mr. ADLER. If you include the Avery bequest.

Mr. SMITH. That is included in the principal but not in the interest?

Mr. ADLER. It consists of some little houses, and it costs almost all to keep them up.

Mr. RATHBUN. Forty-two thousand dollars of the fund happened to be in a very good investment in the beginning, and was therefore held at the Institution. It is in railroad bonds. The amount in the Treasury is \$937,000. They both bear interest to the total amount of \$57,900. Besides that there are \$300 or \$400 obtained from the sale of publications and a little money from the rent of three houses on Capitol Hill, which pay little more than the cost of repairs.

Mr. SMITH. That is all I wanted to ask.

#### AMERICAN ETHNOLOGY.

The CHAIRMAN. Now, we will pass to the second item, American ethnology.

Mr. RATHBUN. This branch of the Institution, which was organized in 1879 by Major Powell, is now in charge of Mr. William H. Holmes, who is the Chief of the Bureau, and I will ask you to let him answer the questions.

**STATEMENT OF MR. WILLIAM H. HOLMES, CHIEF OF THE BUREAU OF AMERICAN ETHNOLOGY.**

The CHAIRMAN. I observe, Mr. Holmes, that your estimates for this branch of the service for the coming fiscal year show an increase of \$10,000 over your current appropriation. Please explain to the committee the reason for that proposed increase.

Mr. HOLMES. The usual appropriation for the work of the Bureau is \$40,000. The first item is for \$5,000 additional for use in preparing an archaeological map and catalogue of antiquities throughout the country.

**ANTIQUITIES IN THE SOUTHWEST.**

I may say in regard to that, that the archaeological work of the Bureau has been carried on for a good many years in the East, and to some extent in the West. The work in the region of the Mississippi Valley, the work on the mounds and antiquities of the East in general, has been pretty well done, so that we do not regard it proper that the Government should spend much more money on researches in that field in the East. But it is quite different in the Southwest, where there are large numbers of ruins, important ruins, pueblos, cliff dwellings, and so forth, which are being rapidly destroyed by relic hunters and collectors of all kinds. There is at present in the country a very strong movement in the direction of preserving these antiquities. People have come to realize that they are of importance to the country and to history and science, and they have organized a movement to protect these antiquities.

**ARCHÆOLOGICAL SURVEY.**

There is a bill now before both Houses of Congress providing for their protection by means of various regulations and fines for meddling. Our work has extended over only small parts of this great area. It covers southern Colorado and southern Utah and all of New Mexico and Arizona. Tens of thousands of interesting remains are found there.

Our work is so scattering that the Departments of the Government having charge of public lands—and it is of the public domain of which I am speaking—found when they undertook to police that country they had not the necessary knowledge to do it as it should be done. They have very kindly undertaken that work and instructed their field men to look out for the antiquities in the various reservations, but it is found that over a large part of that area they have not sufficient knowledge of the antiquities to take care of them properly. The necessity, therefore, has come to have an additional man to put on the force who can take up that work. We have now in that country one ethnologist who has gone out with the Interior Department survey to determine the location of the ruins along the border of southern Colorado. The question of parks has come up, and I have sent him out to help the Interior Department decide what part of these cliff dwellings and pueblos lie in a particular reservation. These reservations are in charge of the Indian Office, the Forestry Bureau, the Land Office, and the War Department, so that this request

for \$5,000 additional is to employ a skilled man to complete for the use of the Department an outline archæological survey of that country.

The CHAIRMAN. The increase asked for, however, is \$10,000.

Mr. HOLMES. The second \$5,000 is asked for for the purpose—

Mr. TAYLOR. First, tell us what the first \$5,000 is for.

The CHAIRMAN. For this man.

Mr. HOLMES. For the survey of the antiquities of the country. I do not know the wording of the bill, but that is the significance of it.

The CHAIRMAN. It is not specifically provided for at all, but you intend to spend the money for that purpose if Congress sees fit to allow it, to employ an additional man?

Mr. HOLMES. To employ an additional man, the same in the field now with the party.

Mr. RATHBUN. And his expenses, of course.

Mr. HOLMES. Yes; salary and field expenses, which would be about \$5,000 to have it attended to properly.

The CHAIRMAN. Are you now paying him out of the \$40,000 appropriated for the current fiscal year?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. What compensation does he receive?

#### EXAMINATIONS OF HAWAII AND TUTUILA.

Mr. HOLMES. One hundred dollars a month. The other item is for \$5,000 for an examination of the peoples of the Sandwich Islands and Samoa, or Tutuila, which is the island in the Samoan group belonging to the United States. There are in those islands a people of which we know very little; perhaps 40,000 in the Sandwich Islands and 5,000 or 10,000 in Samoa. The idea is that the Government should have some accurate scientific knowledge of these primitive peoples of which it has the care, and it is proposed to send a man for that purpose. It could be done well for \$5,000. It could be done much better, however, if we had \$10,000 to send a man and assistant into those islands and collect data and report upon the peoples and their condition for the use of the Government as well as for science.

The CHAIRMAN. Has your Ethnology Bureau ever sent a man to Alaska for the purpose of making the same or similar investigations into the people of that district?

Mr. HOLMES. We have one man assigned to Alaska. He is now, however, in the city here, not in the field. We can only spare one man for a large district. We classify the tribes under large family groups, and select a type or representative tribe in different parts of the country, and the idea is to send men who have experience and who spend their lives in the work. They make a complete study of a particular tribe, so that the information given with respect to that tribe may be applied to all the tribes in that particular area.

#### HANDBOOK ON THE INDIANS.

A very good test in that has come out in the preparation of our handbook on the Indians, which has been going on for some time, and is now in the press. That work shows clearly what we have done, and it shows even more clearly what has not been done, and what should be done. In fact I have, out of the eight scientific men in the Bureau,

five here now on that work taking stock, so to speak, of our knowledge of the Indian tribes, of which there are many hundred in the country. This work will come out very soon, and I think it will be the most important work on the Indian tribes and native peoples that has ever been prepared. In fact, it is the most important contribution to the history of primitive people that the world has ever had. I feel proud of the work of the Bureau in the last twenty years, and I hope it will be continued until it is well rounded out.

The CHAIRMAN. Have you any one engaged in this work at the present time in Hawaii or our other island possessions?

Mr. HOLMES. No, sir. We are not permitted under the terms of the law to go beyond the study of the American Indians. The passage of this measure would apply to new territory. We hope to go to Hawaii, Samoa, and the Philippines, because there we have three or four varieties of primitive people about which we know little, and about which I should say the Government ought to systematically collect information. It seems a pity that it can not be done, but our force is small, and we are confined at present to the work in this country.

The CHAIRMAN. When do you estimate that the work will be completed?

Mr. HOLMES. It is impossible to say. Such work always takes longer than we anticipate. This handbook of the Indians was supposed to be nearly ready some years ago, and the reports stated it would be printed very soon, but when we came to printing, we found that our information was not satisfactory, and of the thousands of articles upon the tribes and their habits and conditions very many had to be rewritten and brought up to date. We can never quite tell how much time it will take to accomplish the work in a given field. It is bigger than you can imagine, I am sure, from what I say.

Mr. SMITH. You succeeded Doctor Powell at the head of this Bureau?

Mr. RATHBUN. Major Powell died four years ago.

Mr. SMITH. I say you succeeded him?

Mr. HOLMES. Yes; about three and one-half years ago.

Mr. SMITH. How long have you been connected with it?

Mr. HOLMES. I was born with it; before the beginning of it I was in the work.

Mr. SMITH. If you have completed your publication on the American Indians, how nearly are you through with available material, in your judgment, for the study of aborigines here at home?

Mr. HOLMES. We shall hope to obtain enough information to satisfy all the demands of the country; a great deal more will remain to be done.

Mr. SMITH. How much more knowledge would it be possible for you to obtain, in your judgment? Is the work drawing to a close—the study of the aborigines here at home?

Mr. HOLMES. As I say, we study types. We do not pretend to study all the tribes. There are 56 linguistic stocks and 500 languages. We have a dozen of those tribes and languages under study, and others incidentally, but we shall complete these types presently. We do not expect ever to complete the study of all the tribes.

Mr. SMITH. Is the study of it to be pursued forever? That is what I am trying to get at.

Mr. HOLMES. I do not think it should be; certainly not.

Mr. SMITH. Has not the time arrived, then, to transfer a part of your force from this side to the peoples like those of Samoa and the Hawaiian Islands?

Mr. HOLMES. The trouble is that our people are specialists in certain lines. We can not learn a language and study a people in a few years. I can not transfer a man from the study of the Sioux Indians to Samoa or Hawaii. I must have new men to go into the new fields.

Mr. SMITH. Is it necessary to keep your old force up on the Indians?

Mr. HOLMES. It is very small; six or seven men.

Mr. SMITH. Is it not as large now as when you had the heaviest work?

Mr. HOLMES. The force is smaller by a few.

Mr. SMITH. You had \$50,000 for five years, I think.

Mr. RATHBUN. And before that; there was an appropriation of \$50,000 in 1892. Then it fell to \$40,000. In 1899 it was increased to \$50,000 again, and stayed there for five years. Then in 1904 it was reduced to the current sum.

Now, one thing in connection with the questions which you asked was this: Why could not the work of the Bureau be carried to the Hawaiian Islands, Samoa, or the Philippines? It can not because the present law restricts the work to this country.

Mr. SMITH. You misunderstand me; that is the trouble. What I am trying to get at is, is it not possible, owing to the progress you have made in your study of the American aborigines, to reduce your force engaged upon inquiries on that subject sufficiently to cover the slight force necessary for the Hawaiian and Samoan Islands? Is not your work at home in such a state of progress that the time has come to reduce your force?

Mr. HOLMES. I would say that our force is so small that it would be better not to go beyond this country if we can not increase the force to do it. The force is not enough to carry on the work and keep up the office. I should rather prefer to see the force stay at home and remain upon our present work.

Mr. SMITH. Now, you have carried as high as 27 employees in 1901 under this appropriation?

Mr. RATHBUN. No, sir.

Mr. SMITH. You have 27 employes under this item, not the amount of money. What number of employes have been carried in the last fiscal year?

Mr. HOLMES. We have 11 of the miscellaneous or nonscientific force, and 8 of the scientific force. That makes 20, I believe; that is correct.

Mr. SMITH. That makes 19.

Mr. HOLMES. Excuse me; I am not good at figures. [Laughter.]

Mr. RATHBUN. The trouble arises from the fact that the pay rolls now under consideration are the ones given in the annual reports to Congress, which contain a number of people who are brought in for short periods, and from these pay rolls it is difficult to figure out the actual permanent pay roll.

Mr. SMITH. You have now got your book on the Indians in print, as you say, and your work is drawing to a close in the study of the aborigines here at home. Why should you need forever this work?

Mr. RATHBUN. This work is not a final one, but summarizes the results up to date. It is a work in two volumes, in which Mr. Holmes is going to put into convenient shape the information that has been

accumulated up to this time, and from which conclusions can be reached as to what we have done and what we may still need to do.

Mr. SMITH. Is it not a fact that this work, so far as it is of utility to scientific men, is drawing to a close here at home?

Mr. RATHBUN. I am not an ethnologist, and therefore I can not answer as well as Mr. Holmes. I think that for the benefit not alone of science, but of practical utility as well, it should be continued some years longer.

Mr. SMITH. I am not speaking of continuing it, but I am speaking of a comparison of this great force when this work is off your hands with what it was before.

Mr. RATHBUN. The work (handbook) is not off our hands. This is simply a step—the conclusions up to a certain time.

Mr. HOLMES. We have taken stock in this work, and, as I said before, we have learned how little we know in many directions. Our work is not done because we have that in print. Far from it. We have much serious work—more than we had before— if we put that work in proper shape.

Mr. SMITH. I understood you to say there were 500 languages, and it was not worth studying them.

Mr. HOLMES. We have about twelve men at work now under Doctor Boas, of New York, upon as many languages of the Indians. That is to form a handbook, distinct from this, upon the languages. That will be a very important contribution to science—one of the most important ever made to the science of languages. That will also give a very accurate notion of the languages of the Indians of this country. That will be a final work when it is finished. Besides that there will be other handbooks of other subjects. The present handbook is only a sketch of the general subject.

Mr. SMITH. What I am trying to get at is, are your means of getting new information as to the American aborigines so unlimited that this work will go on in the same volume forever, or are you going to exhaust so much of it as is practically important?

Mr. HOLMES. Forever is a long time. A few years it will certainly take. It is impossible to give you a limit of time: it is quite out of the question.

Mr. SMITH. Before you leave it, even diminish it?

Mr. HOLMES. We can not carry on the work with a less force.

Mr. SMITH. Before it will even diminish?

Mr. HOLMES. I can not answer that question. To say it will take five years or ten years or twenty years would be to commit myself and perhaps express an opinion unadvisedly. I can not tell until time develops it.

Mr. RATHBUN. It seems scarcely the time to reduce it now; perhaps not for several years.

About reducing the work within the limits of this country and as to the importance of carrying the work to the Pacific Ocean countries which are in our possession, it might be well to alter the language of the act, even if the amount of the appropriation be not increased, because under the language of the act the work is now confined to America. The Hawaiian Islands are not in America.

Mr. SMITH. The language of the bill provides for carrying it to Hawaii and Samoa.

Mr. RATHBUN. That is an amendment to the wording of the bill.

Mr. SMITH. That is the language of the amendment.

Mr. TAYLOR. He suggests that it might be well to keep that language in, even though you did not give the increase asked for.

Mr. RATHBUN. The natives of Hawaii and Tutuila are not in America, of course.

Mr. SMITH. They are in the bill.

#### ARCHÆOLOGICAL SURVEY.

Mr. ADLER. If I had been asked the question that Mr. Holmes was asked, as to the continuation of this work, I would have rested my answer upon a recurrence to the question of the map. I do not see how anybody knows how much archæological and ethnological work there is to be done in this country until he gets that map. I have been at him for years to try to get men to get that map out. When we do get that map and know how many remains there are, we will know how much exploration must be done, and the results of exploration in giving us knowledge are simply colossal. Take the investigations that have gone on in recent years in Assyria and Babylon, and in Syria generally. They have found kinds of things that people never dreamed of.

#### ASTROPHYSICAL OBSERVATORY.

The CHAIRMAN. Now, the next item is the Astrophysical Observatory. Will you kindly explain to the committee about that, or will the man in charge of the observatory explain to the committee the work of the observatory and its importance?

Mr. RATHBUN. Mr. Chairman, I am not an astronomer, though I have a good deal of appreciation of the work in this branch and have seen much of it. Mr. Langley was the director of the Astrophysical Observatory, but for most of the time he has had assistants in direct charge of the work, the last one being Mr. Abbot. The latter has been in charge of the observatory now for some years, but, if you will permit me, I will make a few remarks myself before turning the matter over to him.

The CHAIRMAN. Go ahead.

Mr. RATHBUN. Mr. Chairman, the country owes the Weather Bureau to the Smithsonian Institution, which began extensive meteorological observations in the early part of Professor Henry's administration. The Weather Bureau is one of his many utilitarian contributions to his countrymen. These observations, however, were then and still are limited to the study of phenomena within our own atmosphere. Now, in consequence of experiments by Mr. Langley, begun by him at Allegheny and pushed by him here after he became Secretary of the Smithsonian Institution, in 1887, it begins to appear—and even more strongly than we care to speak at the present time—as if observations outside of our atmosphere would soon permit of predictions for much longer periods than at present regarding at least temperature and moisture.

You have in Washington the Naval Observatory, large and well equipped, which has been doing splendid work ever since its foundation. Now, astronomy is divided into two general branches, the older, represented by the Naval Observatory, having to do with the positions and movements of the celestial bodies. It is mathematical, and

furnishes that important information which enables the mariner to determine his position at sea. That was the astronomy which was first studied, beginning many centuries ago.

About the middle of the last century a branch of astronomy was begun which has to do with the constitution of the celestial bodies, not their positions or movements. Mr. Langley was one of the earliest workers in this field, not here, but at the Allegheny Observatory in Pennsylvania. Astrophysical studies may relate to any of the celestial bodies; but Mr. Langley's work has been mainly directed toward the sun, which is, of course, the ruler of the earth and the source of its heat and light.

Mr. Langley began at Allegheny City as early as 1867, and his success was not due alone to his scientific ability, but equally to his mechanical genius. The spectrum of the sun, the solar spectrum, is known to people generally only in the beautifully colored part. Now, it has been discovered that beyond the red end of the colored spectrum heat manifestations continue for a distance ten times as great as the visible part. It has been to this portion of the spectrum, which has reference to the heat received from the sun, that Mr. Langley has given most attention, and the possibilities of studies in this direction have been due entirely to instruments which he devised. The principal of these instruments, the so-called bolometer, is, in fact, a thermometer of such extreme refinement as to record heat changes within the one one-millionth part of a degree.

When Mr. Langley came to Washington the Smithsonian Institution and a few friends furnished the means for putting up the first building, which is still the main building—a little frame structure on the Mall, back of the Smithsonian Institution; and they also supplied the first instrumental equipment.

That was in 1889, and until 1892 the Government paid nothing for the experiments. In 1892 Congress made the first appropriation. While Mr. Langley has passed from us, the work is in such shape that it can still go on as he would want it to; and without intending any word of flattery I may say that Mr. Abbot is fully competent to carry on the observations. He has had charge of them for eleven years, so that the fact that Mr. Langley is no longer here to advise and guide will not prevent the rounding out of his great work, for which he never received a penny from the Government in the way of compensation.

There are comparatively few observatories of this character in the world. There are only two of any moment in this country, and they are not interfering with the work done here. While the Smithsonian work has been directed in a thoroughly scientific manner, it has always had in view the determining of the effect of changes in the sun upon the earth's heat for the benefits that might be derived therefrom.

I will leave to Mr. Abbot the answering of any questions.

MR. ABBOT. Gentlemen, I do not suppose that you care to hear much at this late hour as to the nature of the astrophysical subject in general, but rather upon the workings of the Astrophysical Observatory during the present year.

The sun which shines so brightly has been shining some thousands of years, but nobody has known up to this time whether the amount of light which it sent out was uniform or variable. Of course we know it is variable when it gets to the surface of the earth, because

the clouds in our atmosphere make a variation in the dark day and the bright day. But so far as the radiation that comes from the sun itself is concerned, nobody knows to this time whether or not the amount of it was uniform or variable.

Now we are in the act, as we think, of determining not only that it is variable, but that it is variable to the extent of 10 per cent or 15 per cent, and that those variations occur several times in the course of a year; so, in consequence thereof, they are of a nature to profoundly influence the climate of the earth.

Mr. TAYLOR. How long is it since you made that discovery of variability?

Mr. ABBOT. We are just making it now; that is to say, in the last three or four years the observations have been taking this turn in studying the amount of radiation of the sun and determining that amount through a considerable time—long intervals of years. The observations of last summer, made by invitation of the Carnegie Observatory on Mount Wilson, by an expedition from this observatory were excellent in that line. They seemed to show quite conclusively a tendency to vary, which amounted to 8 or 9 per cent.

Mr. SMITH. Was that an irregular variance or a variance in continuous periods?

Mr. ABBOT. That is one of the things which we have not got far enough along yet to know. But measurements which have been made heretofore in Washington were made at irregular intervals or as the clouds would permit. But up to this time we have not made a sufficiently regular series of observations to determine the matter. The observations which I made on Mount Wilson last summer were practically daily in their character, so that we were able to get a continuous series, and showed that the influence did not fall off, but continued on uniformly thereafter.

Mr. SMITH. Does your discovery that you have so far made show that this does go up and then down in a continuous period, or an approximately continuous period, or is it as variable as the storms that blow upon the earth?

Mr. ABBOT. I don't think the exact period between the variations is yet possible to state.

Mr. SMITH. What I am trying to get at is whether there is any period between them, any definite period; not what you have ascertained, but whether you have discovered enough to lead you to believe that there are fixed movements in your record.

Mr. ABBOT. I am not a prophet, and I can not tell what will be the result of the observations.

Mr. SMITH. I was not asking you for prophecy. I am asking if your discoveries lead you to believe that these changes are continuous periods or variable, as the winds that blow upon the earth.

Mr. ABBOT. It is my belief, sir, that we have not had time enough yet to determine whether the period is uniform or whether it is a variable period. But I am quite fixed in my belief that there is a substantial variability which up to this time has not been ascertained. But whether that variability takes place, let us say, once in six months is what we are asking. I am not prepared to say what the period is. I think further observation would show us that, and it is for the sake of enabling us to perhaps tell you that very thing next year that we are asking this appropriation.

Mr. SMITH. Well, of course you have had about fourteen years to find out these things since the appropriation commenced, and I was in hopes that we had at least found out whether they were regular periods or not.

Mr. ABBOT. The fourteen years have but slowly developed this investigation. In the first ten years of the existence of the Astrophysical Observatory its investigations were developing another question, the investigation of the rays of the sun which the eye can not see and can only be observed by the electrical thermometers invented by Mr. Langley; and that investigation was of a very difficult character, long continued, but practically ceased in 1899. The results were published in 1900, and since that time our attention has been devoted to this newer question: Does the radiation of the sun vary substantially and in a way sufficient to affect the climate of the earth, or does it not? Heretofore it has been supposed that the radiation of the sun did not vary to any substantial extent, but it now seems to appear more and more clearly from the observations made that the variation is a good and substantial one and capable of affecting the climate of the earth.

Mr. SMITH. I may be in error, but I was under the impression that it was thought by many in my school days that the spots upon the sun affected the amount of radiation. Was not that taught probably thirty years ago?

Mr. ABBOT. Yes, sir; as many as thirty years ago. Mr. Langley, at that time at the Allegheny Observatory, published an account in which he tried to determine the direct effect of sun spots. Of course, where there is a spot there is a blackness on the sun's surface, and necessarily a reduction of the amount of radiation proportional to the size of that black spot, and also the total area of those black spots and the amount of radiation which comes out of a black spot, as compared with that which comes out of the general surface around them. And, as a result of those investigations, he concluded that the effect of the spots would diminish the radiation of the sun not more than one-tenth of 1 per cent: so that a variation of that kind would be regarded as probably negligible in its effect upon the temperature of the world. But the effects which we are now measuring are effects of 10 or 15 per cent in magnitude. It is natural to inquire the cause which might bring about such great changes, and that cause would be very naturally found, I think, in supposing that the sun is surrounded by a gaseous envelope, just as the earth is; and, just as the envelope of the earth, from time to time it becomes less transparent, as, for instance, the haze in the air in August, during which time the air is less transparent; or from the clouds in the atmosphere, which more or less diminishes the radiation which comes to the surface of the earth. Just as in our atmosphere, it is natural to suppose that there might become greater haziness around the immediate vicinity of the sun which would cut off the radiation at one time more than another.

Mr. RATHBUN. You find that in eclipses.

Mr. ABBOT. There is a variation of the appendages around the sun in eclipses; but we are making at Washington a continuous record, as fast as the sky and conditions will permit, of observations of the envelope of the sun to determine its transparency. We seem to find that it is variable in its transparency, so that the variations which we believe we have found in the amount of radiation reaching the earth is thereby

naturally explained, namely, that there becomes a greater amount of matter intervening between us and the sun to cut off the radiation, and that diminishes the amount which gets through, so that we get a diminished effect on the earth in the way of temperature.

Mr. SMITH. Is Washington a suitable place to carry on the observations?

Mr. ABBOT. Washington is as good a place as any other to carry on observations requiring observation of the solar envelope. It is not a good place to determine the amount of radiation of the sun which reaches the earth, because the cloudiness from time to time prevents us getting a continuous series of observations. It is for that reason that there is asked in this appropriation authority to continue investigations at stations of higher altitude.

Mr. SMITH. Does the amount of wind deceive you in the results attained by your instruments as to how much heat from the sun reaches the earth?

Mr. ABBOT. If the amount of wind were to effect the transparency of the sky we would be deceived.

Mr. SMITH. Would the ratio of cloud area to heat area through which the sun's rays had to go be a factor?

Mr. ABBOT. No; not unless the area was different in transparency. Our observations do not depend upon temperature, but only upon transparency of the area between us and the sun.

Mr. SULLIVAN. Are similar observations being made elsewhere in this country?

Mr. ABBOT. No, sir; nowhere else. It was shown as many as twenty-five years ago that it was necessary to examine all kinds of radiation—that is to say, the light of all colors—and yet nobody in the world has had the means or facilities to develop and obtain facilities for doing the work excepting that which was done under Mr. Langley's direction and supervision while he lived, and this is the only place where the work is now being done.

Mr. SMITH. If it is regarded by scientific men outside of the Government service as a valuable piece of work why are these investigations at the Carnegie Observatory and at the Lick Observatory and at other great observatories of the country not being made?

Mr. ABBOT. The Lick, the Yerkes, and the Harvard observatories have their hands full of measurements almost solely connected with stellar investigations. The Carnegie Observatory on Mount Wilson was established for that exact purpose—the making of stellar investigations. That is a very new institution, only about two years old. They recognized that Mr. Langley and the Astrophysical Observatory was and are the pioneers in this line. We have the facilities, we have gone into it with all of the care possible in mapping out the method and are entirely able to carry on the work. So that that observatory instead of rushing in and providing themselves with the means of doing this simply invited the Secretary last year to send an expedition to Mount Wilson to make these investigations with the means and facilities which he and they had at command.

Mr. SMITH. Do you think that the discoveries which have been made in this line have been made at the Carnegie Observatory?

Mr. ABBOT. No, sir; we were leading, I believe, in the work before we went to the Carnegie Institution. It was the work that was done in Washington in 1903 which gave us the first substantial evi-

dence of the variability of the sun; and the work has been continued ever since that time at the Observatory here in Washington.

Mr. SMITH. Is it essential to the success of this work that you compare the results indicated by your instrument with the physical appearance of the sun at the time?

Mr. ABBOT. It is not essential to our work, but it is highly desirable that that should be done; for it might readily appear that after a long course of such comparison by simply examining the physical appearance of the sun, either with the spectroscope or the telescope, or by some other means, we might at length be able to predict from such an examination that there was to be a variation in the radiation of the sun.

Mr. SMITH. Would the fact that your telescope here was of inferior quality have any effect in at least prolonging these investigations, if not defeating them?

Mr. ABBOT. Our telescope here is not of inferior quality.

Mr. SMITH. Inferior in size compared with many, is it not?

Mr. ABBOT. No, sir; on the contrary, it is the largest one which is now in use. We have a telescope at the Astrophysical Observatory of 140 feet focal length, which forms an image of the sun that is as big as an ordinary wastebasket. There is no other telescope in existence of the same focal length or equal aperture.

Mr. SMITH. I had the impression that the telescope here was inferior in quality.

Mr. ABBOT. No, sir; it is excellent for the purpose.

Mr. TAYLOR. Where is the telescope that you speak of?

Mr. ABBOT. It is located at the Smithsonian Institution.

Mr. SMITH. Back of it?

Mr. ABBOT. Yes, sir.

Mr. TAYLOR. What position do you occupy, Mr. Abbot?

Mr. ABBOT. My official title is aid, acting in charge of the Astrophysical Observatory.

Mr. TAYLOR. How long have you had charge of it?

Mr. ABBOT. Since the 1st of January, 1896.

## NATIONAL MUSEUM.

### FURNITURE AND FIXTURES.

The CHAIRMAN. We now come to the item of the National Museum. For cases, furniture, fixtures, and appliances required for the exhibition and safe-keeping of the collections of the National Museum, including salaries or compensation of all necessary employees.

Mr. KATHBUN. Mr. Chairman, I do not know how deeply you wish to go into the history and the particulars of the Museum. It is a very long story and a very interesting one.

The Museum began about 1840, when appropriations were made for maintaining the collections of the Government then housed in the Patent Office. When the Smithsonian Institution was founded, in 1846, it was provided that its building should have room to take the collections of the Government. The building was long in construction, and the collections remained at the Patent Office in the meantime. In 1849 Professor Baird received a little grant of a few hundred dollars to make collections to be studied under the Smithsonian Institution. The next year he was made the Assistant Secretary of the

Institution, in charge of the National Museum. But the building was not finished, there was no room for extensive collections, and so far as the Museum was concerned—for he had other duties—his time was partly taken up in making field investigations. The specimens were brought to Washington, where they were worked up and stored. When the building was finished, in 1855 or 1856, it was found that for the Smithsonian Institution to take and maintain the even then large collection of the Government would entail a greater expenditure than the Institution could afford. The difficulty was represented to Congress, and it was finally decided to give the Institution what had been given to the Patent Office, \$4,000 a year. The one room provided for the collections had to be fitted up, and Congress appropriated \$15,000 for that purpose for the fiscal year 1858.

Congress created the Smithsonian Institution as an establishment. The law provided for a library, a museum, a gallery of art, and certain activities. At that time there were not many large foundations in this country, which was of course not as rich as it is to-day. And while they did not say so, it looked very much as though Congress expected the Smithsonian Institution to attend to all the science and library matters under the Government, which was of course an impossibility. After the law was passed providing for the specific things above mentioned the regents organized and adopted a programme of operations, which was drawn up by Professor Henry, the first Secretary. This programme was dated December 13, 1847, and it was only under the conditions which it embodied that Professor Henry would accept the post of Secretary.

The library grew and the museum grew; but there was so little money that finally, in 1866, the custody of the library was turned over to the Library of Congress—the custody, not the ownership, of the books.

The CHAIRMAN. The custody of the Smithsonian library?

Mr. RATHBUN. Yes. The Smithsonian library is now in the Library of Congress as a deposit, so called; and it is provided for there, although its ownership still rests in the Institution.

Now, under the general heading of National Museum you have a number of titles, different appropriations; and I should say that they are not arranged altogether in the best sequence. It is somewhat difficult to speak of them in the present order; for instance, the preservation of collections, being the main appropriation, should precede. But I am afraid that if I am allowed to go, in my own way, I shall take up a good deal of the time of the committee.

The CHAIRMAN. We would prefer to have you consider them in the order in which they are in the bill. When we come to consider these items we will have your testimony in respect to each item in its order.

Mr. RATHBUN. They have been arranged for consideration in the order in which they are given in the estimate. What I mean is that this first item is really dependent on others which follow it.

Mr. TAYLOR. You might change the order next time in making the estimate. It is with you to make the order.

The CHAIRMAN. The first item is for cases, furniture, fixtures, appliances, etc. You do not ask for any increase for the coming fiscal year over the appropriation for the current year, but in an itemized statement furnished to the committee by you of the expenditure

of this appropriation for the fiscal year 1905 I observe that \$12,789.29 of the \$22,500 appropriated for furniture and fixtures is expended for salaries, compensation, and special service, which leaves a balance of only about \$9,000 for the purchase of furniture or for material of which the furniture is to be manufactured. Most of this appropriation seems to be for salaries.

Mr. RATHBUN. The permanent roll amounts to \$11,559. I will have Mr. Ravenel explain some of those matters in detail.

Mr. RAVENEL. The salaries there are, with the exception of the superintendent of construction and labor, and a clerk who is employed to assist him to keep the record of the furniture, etc., all for men actively employed in the construction and care of furniture. We have found it impossible to purchase the exposition furniture for exhibiting specimens, in the open market excepting certain classes, as, for example, unit drawers, which are made by contract. But the majority of the exhibition cases and the large majority of the exhibition furniture and storage furniture is made by the employees who are carried on that salary roll.

The CHAIRMAN. It occurred to me in looking the items over that the proportion which is paid out of this appropriation for salaries and compensation is rather large for the amount expended for material, or the amount expended for furniture and fixtures.

Mr. RAVENEL. I think that would depend, Mr. Chairman, to a large extent on the kind of furniture that we are making. For example, most of the storage cases are moth proof and dust proof and must be carefully made, and the labor consequently costs infinitely more than the material put into the cases. For example, take the case of a number of insect drawers just made.

The CHAIRMAN. I see that you have purchased exhibition cases to the amount of \$220.

Mr. RAVENEL. Yes, sir.

The CHAIRMAN. And you have purchased storage cases to the amount of \$2,747.

Mr. RAVENEL. Are you referring to 1906?

The CHAIRMAN. No; 1905. Those were purchase items.

Mr. RAVENEL. The exhibition cases are purchased outright. The storage cases were probably what we call "unit drawers," which are a standard drawer that we can have made outside very satisfactorily.

The CHAIRMAN. The item was \$2,747.

Mr. RAVENEL. All material purchased was used in the construction or repairs of either storage or exhibition cases; and the amount charged for salaries, except for services, the superintendent of construction and his clerk, was expended for labor of mechanics employed in the construction, remodeling, and repair of the cases.

The CHAIRMAN. But these exhibition and storage cases were purchased complete, were they not?

Mr. RAVENEL. Some storage drawers are purchased complete, excepting the painting.

The CHAIRMAN. You have another item of drawers and tray boxes?

Mr. RAVENEL. Yes, sir.

The CHAIRMAN. Are those storage?

Mr. RAVENEL. Every one of those are for storage. The trays are used in the drawers.

The CHAIRMAN. What I was getting at is, if these other cases mentioned—storage cases and exhibition cases—were purchased complete, the aggregate amount (almost \$3,000) would still bring your expenditure for material or other purposes down to about \$6,000?

Mr. RAVENEL. Yes, sir.

The CHAIRMAN. From which you paid out for salaries and special services \$12,789 in putting that material costing \$6,000 together in the form of furniture and fixtures.

Mr. RAVENEL. We have found it impracticable, excepting for office furniture—a certain class of storage cases—to buy under contract. In many instances we get a bid from the outside before we built with our force. The men carried on this roll are skilled mechanics employed in the construction of exhibition and storage cases, and care, repair, and remodeling of same, except the superintendent of construction and his clerk.

The CHAIRMAN. The storage cases?

Mr. RAVENEL. Yes. The superintendent is paid one-half of the year, and the clerk, the whole year from this appropriation, amounting to \$2,300 of the \$12,000 which is expended on labor.

The CHAIRMAN. All employed in connection with this appropriation?

Mr. RAVENEL. The clerk is employed for the whole year and the superintendent of construction and labor is paid half a year from this appropriation and half a year from another.

The CHAIRMAN. What other appropriation is he paid from?

Mr. RAVENEL. Building repairs.

The CHAIRMAN. Would that reduce the salaries chargeable to this appropriation?

Mr. RAVENEL. Yes; that brings down the salary roll of that appropriation to \$10,000 for the mechanics and others employed in the construction and care of these cases.

The CHAIRMAN. You have an item of \$448 for tools. Do you have to keep renewing your tools every year?

Mr. RAVENEL. We have a shop where we construct and repair furniture, and we have various pieces of machinery there for working up the lumber. I think our purchases from that are probably a larger item than is usual.

Mr. RATHBUN. May I ask the figure you gave there?

The CHAIRMAN. Four hundred and forty-eight dollars for tools.

Mr. RAVENEL. We have expended very little on tools this year.

Mr. RATHBUN. I think, Mr. Chairman, that this division is a very fair one, because most of the cases are especially difficult to make, rendering necessary more labor than material. The amount of material is very little. For instance, on account of the crowded condition of the building there have not been so many exhibition cases made, and cases have been constructed of cheaper material, and in that way our supplies have cost a relatively smaller amount. It is to be remembered that the sum which you named, \$12,460, as the amount of the pay roll might be very much less this year, but it has been necessary in the Museum to get some good men, carpenters and other kinds of skilled laborers, who might be changed for a part of the year to building repairs. Of course, when a man is changed from one roll to another, which is perfectly permissible under the civil-service law, he is paid from the roll on which he works, so that there is a certain variation due to that. The furniture and fixture

roll might be larger one year and smaller the next, while the other roll would vary correspondingly.

The CHAIRMAN. What I am trying to get at is the fact that the percentage of labor cost as compared with the percentage of cost of material on which the labor was expended, the manufacturing, the furniture and fixtures, seems to me from a practical standpoint to be out of proportion. You deduct here the storage cases and the exhibition cases that were purchased and on which there was, too, a labor expenditure from this appropriation, and then take out the estimate of \$448 for tools on which there was no labor expenditure, and hardware of \$496.03, on which very little labor would be expended in placing the hardware on the furniture or fixtures. You have expended for material on which this labor has been applied less than \$5,000, while your labor roll is about \$10,000.

Mr. RATHBUN. The simple fact is this: As I said before, the lumber which is being used to-day is of a kind which is very much cheaper. If we were fitting up a new building, then the condition would be changed. We are using pine—

The CHAIRMAN. That is the idea. I don't understand why your labor cost is so great. The largest item is \$464, which is lumber.

Mr. RATHBUN. And that lumber is cheap lumber, but it has to be worked as carefully. The question is not entirely the making of cases. For instance, we are directed to send a collection to the St. Louis exposition, say, and we have to send the cases, which when they come back have to be gone over again, and perhaps we have to spend half as much again on the cases as the original cost in order to put them in shape to go back into the halls.

The CHAIRMAN. Then some of this labor is utilized in the repairs and refinishing?

Mr. RAVENEL. Yes; many of our cases are very old and have been remodeled and made dust proof.

The CHAIRMAN. You have another account.

Mr. RAVENEL. Yes, but it does not show, as it is almost entirely services. A large amount is annually expended in repairs and remodeling cases.

The CHAIRMAN. Paid out of this appropriation?

Mr. RAVENEL. Yes, sir; furniture and fixtures. We have thousands of mahogany and other cases. Those cases should be refinished at least once in every five years, and other cases oftener. We have three painters on that roll, and they are kept busy from one year's end to the other, not only in taking care of them, but also in the finishing of new cases and the remodeling of old ones. Comparing the cost of material and labor in making cases, I would say that recently we had occasion to build 500 mahogany drawers to take care of a collection of insects (worth \$40,000 or \$50,000) presented to the National Museum. They were constructed poorly by contract and finished by our force at a cost of about \$1,700. I think I am perfectly safe in saying that the cost of labor was more than four-fifths of the cost of the entire job, though the trays were made outside under contract and competitive bids secured.

The CHAIRMAN. When was this done?

Mr. RAVENEL. This year.

Mr. TAYLOR. That was required because you had to have special cases for special purposes?

Mr. RAVENEL. Almost every case is a special case.

I wish to correct a statement I made with reference to the purchase of tools. I find I had a wrong statement in my hand. We have spent this year \$171 on tools.

HEATING, LIGHTING, ELECTRICAL, TELEGRAPH, AND TELEPHONE SERVICE.

The CHAIRMAN. The next item is for the expense of heating, lighting, electrical, telegraphic, and telephonic service for the National Museum, \$18,000.

Mr. RATHBUN. This is a very specific item, and one easily explained. It is too low, too small, and yet no increase is asked. It furnishes the heating supplies and light, the coal and wood, the gas, the electricity, the telephone and electrical supplies, the rental call boxes, and telegrams, with a pay roll such as you have before you.

The CHAIRMAN. I notice that out of the appropriation of \$18,000 which you expended last year about \$8,325 was for salaries and \$4,886 for fuel; that is, expended in 1905. That expenditure, however, included 1 engineer, 1 assistant engineer, and 3 firemen.

Mr. RATHBUN. The pay roll is as follows: One engineer, who receives a salary of \$1,500; at the beginning of this fiscal year his salary was increased to \$1,500 a year. One blacksmith, at \$50 a month, \$720. One fireman, 1 skilled laborer, 1 telephone operator, 1 skilled laborer for six months, 1 steam fitter, plumber's assistant, and 2 laborers. The salaries of these amount to \$8,160 a year. That includes an increase in the salaries of three persons at the rate of \$5 a month over last year.

The CHAIRMAN. Do you pay your telephone operator?

Mr. RATHBUN. The telephone operator is paid \$70 a month, \$840 a year.

The CHAIRMAN. Is she a telephone switchboard operator?

Mr. RATHBUN. Yes, sir.

The CHAIRMAN. Have you in addition to the operator a telephone clerk?

Mr. RATHBUN. No, sir.

The CHAIRMAN. You had during the last fiscal year.

Mr. RATHBUN. At night, of course, a watchman has to act as telephone operator. We have two night watches.

Mr. RAVENEL. We have never had a regular assistant to the telephone operator, except when she is absent, when we hire somebody in her place, although we frequently fill her place with a watchman.

The CHAIRMAN. How many boilers have you?

Mr. RATHBUN. We have two. The arrangement has been changed within a very few years. The Smithsonian building had the original boilers. The present so-called Museum building was finished in 1881. There were two boilers in it, but about four years ago two new high-pressure boilers were installed, and are now heating everything.

The CHAIRMAN. And that is where this labor force is employed?

Mr. RATHBUN. Partly in connection with that, but the electrical installation is, of course, separate.

The CHAIRMAN. Do you need three firemen permanently with two boilers?

Mr. RATHBUN. We ought to have more, and this appropriation should be larger, because we are running steam for only sixteen hours a day. In the winter we should run it for twenty-four. We have to have double watches.

The CHAIRMAN. Two boilers—it is not much of a job for one fireman to attend to two boilers, is it?

Mr. RAVENEL. We only have one fireman on duty. We have two firemen, and run sixteen hours a day.

The CHAIRMAN. In 1905 you had three.

Mr. RAVENEL. Three regularly employed. We have never had but two firemen since I have been there.

Mr. RATHBUN. We had two sets of boilers in 1896, and each building was heated separately. The Museum had its set of boilers and the Smithsonian its set. The stable had its furnace, and the little buildings were provided with stoves.

The CHAIRMAN. You have only one engineer?

Mr. RATHBUN. One engineer in general charge.

The CHAIRMAN. You do not employ an assistant engineer, do you?

Mr. RAVENEL. No, sir.

The CHAIRMAN. Your engineer has no machinery to look after; that is, he has no engines there of any size, has he?

Mr. RAVENEL. He looks out for the plumbing and the heating of the Museum and Smithsonian Institution buildings and shops, and has under him only two firemen.

The CHAIRMAN. You only have one fireman?

Mr. RAVENEL. We have a blacksmith and fireman. We carry him as a blacksmith because in the summer we use him to do blacksmithing work in connection with the repairs of machinery. We have a steam fitter and a plumber's assistant and two laborers who assist the firemen.

Mr. SMITH. You still call the stone building the Smithsonian building?

Mr. RATHBUN. Oh, yes.

Mr. SMITH. Do I understand it is heated along with the National Museum?

Mr. RATHBUN. Yes.

Mr. SMITH. To what extent does the Government in these appropriations for the National Museum in fact pay the expenses of the Smithsonian building?

Mr. RATHBUN. The Museum by 1875 had taken entire possession of the Smithsonian building, except for the offices in one section—the east end, as we call it. The building is, in fact, a museum building, which, of course, has to be maintained by the Government, except for the east end. The connections run from one building to the other.

#### COLLECTIONS OF SMITHSONIAN AND NATIONAL MUSEUM.

Mr. SMITH. Isn't the collection in the Smithsonian Institution practically a natural-history collection, or largely so?

Mr. RATHBUN. No; the upper hall is archæology.

Mr. SMITH. So I heard the other day. What I am getting at is this: Is there any collection now that belongs to the Smithsonian Institution?

Mr. RATHBUN. The Smithsonian has a considerable number of collections which have been donated to it from time to time, but they are turned right over to the National Museum and deposited there.

Mr. SMITH. So that as a matter of fact the Government is paying practically all the expenses of both buildings?

Mr. RATHBUN. It does not pay the expenses of the east end.

Mr. SMITH. But for the cases, for instance, for the collections of the Smithsonian that are loaned, so to speak, to the National Museum—who pays for them?

Mr. RATHBUN. They are not loaned; they are deposited; they are to remain there.

Mr. SMITH. Are they no longer the property of the Smithsonian Institution?

Mr. RATHBUN. Only in this way: We have an extensive line of collections of many kinds which are deposited—we always make it the provision that the collection shall remain there a certain number of years. We may house that collection; we may have to build cases for it, but those cases are still the property of the Museum and are still usable. But the collections which belong to the Smithsonian Institution will never leave.

Mr. SMITH. We had a National Museum in the Patent Office, did we not?

Mr. RATHBUN. They had a janitor looking after things; they had begun a collection.

Mr. SMITH. And that was put in charge of the Smithsonian Institution?

Mr. RATHBUN. Yes, sir.

Mr. SMITH. Now your institution has collections given to it from time to time——

Mr. RATHBUN. The Patent Office collection was not given to it.

Mr. SMITH. No; they were put in your charge; but you had an independent collection belonging to the Smithsonian Institution.

Mr. RATHBUN. We have had from time to time donations come to the Smithsonian which did not in fact come to the Museum in name. Within a year we have had one or two pretty large collections, such as the Capt. John Donnell Smith collection of plants, and we occasionally have others in that way.

Mr. SMITH. You understand that the Smithsonian Institution is distinct from the Government of the United States?

Mr. RATHBUN. Yes, sir; it is a question only of degree that I am looking at.

Mr. SMITH. The Government of the United States created the Smithsonian Institution to take hold and handle the fund derived from Smithsonian, did it not?

Mr. RATHBUN. The Congress received and invested the money.

Mr. SMITH. Created the distinct institution to carry out the work.

Mr. RATHBUN. Yes, sir.

Mr. SMITH. Now, that distinct institution has had from time to time through its history a large amount of valuable material, derived from various sources. Do you say that they have ever given it to the United States in any way so that the title to it is in the United States?

Mr. RATHBUN. That may be a question for a lawyer to determine.

Mr. SMITH. Perhaps, but you criticised my suggestion that you loaned these collections to the National Museum, and I should say that that was a legal question as to whether you loaned them or gave them. I did not raise the legal question with you by the suggestion that I

was wrong in saying that you were wrong in having loaned the collection to the Government.

Mr. ADLER. There is another point of view about that. It is a question which I think two Chief Justices of the United States have considered at different times. Why not take this point of view: Is not the Smithsonian Institution an arm of the United States for this particular business?

Mr. SMITH. It is an arm of the United States as trustee and not in its own right. There is a great difference between myself as trustee and myself as an individual; as much as there is between yourself and myself. The United States holds the Smithsonian fund as trustee, while it holds the other property in its own right.

Mr. ADLER. But what I mean is this: When the Smithsonian fund came to the United States and they created this trust, they at the same time made a law under which they proposed to do certain general things. One of those was to collect objects which formed a museum. Now the United States, as United States, gave to the United States as trustee the custodianship of the things collected.

Mr. SMITH. It gave to the Smithsonian Institution the custody of its trust funds in one sense, and it also gave it the custody of its collections.

Mr. TAYLOR. And this committee built a building on the Smithsonian grounds where it is now, calling it the National Museum.

Mr. ADLER. The grounds were dedicated by Congress for the use of the Smithsonian Institution.

Mr. SMITH. What I am trying to get at is, that in place of the Smithsonian Institution out of its trust fund paying for the care of its own collections, gradually every portion of that care has been imposed upon the Treasury of the United States, has it not?

Mr. ADLER. The care of the collections? Unquestionably, the United States has assumed from the very beginning, not gradually, but from the beginning, the payment of all charges connected with the exhibition of specimens that pass into the hands of the Smithsonian Institution.

Mr. SMITH. There never was an act of Congress assuming it. Whenever Congress appropriated money for the National Museum immediately you have by transferring the Smithsonian collections to the custody of the National Museum paid for it out of the Treasury.

Mr. ADLER. But this is somewhat different. When this \$515,000 was received from England, Congress passed the act in 1846 establishing the Smithsonian Institution. That sum looked so large that they thought everything could be done with it, because the income was greater than that of Harvard, and it was supposed everything could be done with it. But it was found very soon that very little could be done with it, and so from the beginning the very first time the collections were put in the hands of the Smithsonian Institution, whether from the Patent Office or any other sources, the Government paid for the cases and the maintenance, and the only collection that the Smithsonian Institution actually cared for out of its funds was the cabinet curiosities that came from James Smithson—the minerals.

Mr. SMITH. Has not that been wholly done by paying the money out of the Federal funds, and what act of Congress ever authorized the paying for the care of this collection?

Mr. ADLER. Of course I am not so clear that there is a definite division of property between the Smithsonian Institution and the Government in any collection, but I am inclined to think that there is only one institution and one right of property, and that all collections are placed in the custody of the Regents of the Smithsonian Institution by Congress.

Mr. SMITH. It is doubtful whether we could take away anything that belonged to the Smithsonian Institution. What I claim is that there was no act of Congress providing for paying the expenses of the care for the Smithsonian collection, but that has been done wholly by the Regents of the Smithsonian Institution, simply allowing this collection to be deposited in the National Museum, and payment out of the appropriation for the National Museum has been allowed for the care of the Smithsonian property.

Mr. ADLER. The Regents had not much choice, because they were required to take care of the collections.

Mr. SMITH. Things that are given to the Smithsonian Institution are not given to the National Museum.

Mr. ADLER. There has not been this line of demarcation which you are making. There have been things purchased by the Smithsonian fund. This library which went up to the Library of Congress, and, indeed, the collection of prints, were actually purchased out of the money of the Smithsonian Institution, but when it seemed to the best interests of all concerned they were deposited in the Library of Congress.

Mr. SMITH. I am not criticising that, but I believe that the whole expense of running the Smithsonian collections was transferred to items for the care of National Museum exhibits, and is so paid.

Mr. ADLER. I suppose these things have come up from year to year since 1857.

#### FUNDS OF THE SMITHSONIAN INSTITUTION.

Mr. SULLIVAN. Let me ask a question about the \$515,000. How long was it allowed to accumulate without any expenditure being made?

Mr. ADLER. The fund actually came in possession of the United States in 1838, and the expenditures, except for legal expenses which were authorized by Congress, did not begin until 1846.

Mr. SULLIVAN. Then there were accumulations for eleven years before any expenditures were made?

Mr. ADLER. And the accumulated fund was added to the original fund.

Mr. SULLIVAN. Have the expenditures from the fund been constant ever since?

Mr. ADLER. Oh, yes; excepting that there were savings which went into the brown stone building which was built out of the income.

Mr. SULLIVAN. I am speaking of the whole fund, principal and income. Has any part of the principal been spent for collections?

Mr. ADLER. No, sir.

Mr. RATHBUN. No part of the principal can be spent.

Mr. ADLER. The United States has pledged its faith in accepting the trust.

Mr. SULLIVAN. Is the principal of that fund an actual existing entity to-day, that \$515,000?

Mr. ADLER. It ought to be in the United States Treasury.

Mr. SULLIVAN. Is it there?

Mr. TAYLOR. It is practically there.

Mr. RATHBUN. The question was asked by the chairman of the committee, and I will say that I have been unable to get a statement from the Treasury Department as to the actual amount of money they have collected from State bonds in that connection.

The CHAIRMAN. Have they declined to give it?

Mr. RATHBUN. They would be willing, but their bookkeeper has not been able to work it out. They were occupied on it for three days and said it would be a very hard task to finish. I therefore deferred pressing the request until I had conferred with this committee.

Mr. SMITH. The Smithsonian Institution owns the stone building and the Government heats it. Does it repair it?

Mr. RATHBUN. The Government repairs it; yes, sir.

Mr. SMITH. It heats it all. You do not keep any separate heating account of the part occupied by the Smithsonian Institution?

Mr. ADLER. The Institution does not pay for heat, but does for light and all that sort of thing.

Mr. SMITH. On the portion of the building occupied by it now?

Mr. ADLER. Yes, sir.

Mr. SMITH. The Government pays no rent for the building?

Mr. ADLER. None at all.

Mr. SMITH. What are the annual expenses of the Smithsonian Institution; do they come up to its revenues?

Mr. ADLER. There have been certain large provisions for publications which did not materialize, and \$25,000 in savings in income was recently added to the capital. That is an increase of capital from the savings about three years ago. There have been certain increases by gift.

Mr. SMITH. Are you usually consuming your entire annual income?

Mr. ADLER. We are doing it now, yes.

Mr. SMITH. What are the annual expenses of the Smithsonian? Do they come up to us revised? Do you increase its capital, or is it stationary?

Mr. ADLER. We did increase its capital some years ago. Certain large projects for publication did not materialize, and \$25,000 was added to the capital from savings of income. That is the only increase of capital from savings made recently. There have been certain increases by gifts.

Mr. SMITH. What I am getting at is are you usually consuming your annual income?

Mr. ADLER. We are doing it now. We just keep it up so that we do not get a deficit in the bank.

Mr. RATHBUN. In 1903 there was a saving in deposits.

Mr. SMITH. I want to know if the Smithsonian is devoting its whole revenues to subjects of research, practically?

Mr. RATHBUN. Research and publications, according to the intent of its founder, for the increase and diffusion of knowledge.

Mr. SMITH. To what extent, if any, does Congress pay for that printing?

Mr. RATHBUN. It prints the annual report. It does not print the results of investigations.

Mr. SMITH. There is no contribution from the Federal Treasury to the Smithsonian Institution? Expenses are not paid out of your interest or rents, except the printing of the annual report?

Mr. RATHBUN. Except the printing of the annual report. The annual report is partly administrative and partly consists of an appendix, begun in very early days, in which current matters of progress in knowledge have been put in a form which is semipopular in style, but written by well-accredited persons. To that extent it helps the Institution, but the Institution gets nothing else.

Mr. SMITH. Aside from the astrophysical studies, are any studies conducted there paid out of the National Museum fund as distinct from those paid out of your own fund?

Mr. RATHBUN. It is this way: The Smithsonian Institution carries on its operations and researches wholly apart from the Astrophysical Observatory and the National Museum. It has not much money itself; therefore its expenditures can not be as great as they should be. I am speaking about the Institution itself. But the National Museum never pays one cent for any of the Smithsonian work, neither does the Astrophysical Observatory. The National Museum conducts for itself the research work called for by law—that is, for the classification of its collections. It reports on these investigations to Congress in the annual reports, and in the two series provided for in the same bill that you have before you.

Mr. SMITH. The study of ethnology would be a proper study for the Smithsonian proper?

Mr. ADLER. Any study is a suitable study for the Smithsonian.

Mr. RATHBUN. Excuse me; I thought you meant the title of the Institution.

Mr. TAYLOR. That is what I thought.

Mr. SMITH. We will assume that the Smithsonian Institution is devoting its whole annual revenues practically to research and has eliminated from that research the ethnology and the astrophysical studies. Are there any other branches now under its management that are imposed upon the Federal Treasury?

Mr. ADLER. It has not eliminated these studies. The sum granted to the Bureau of Ethnology, for instance, by no means covers all the ethnology that is done. The Smithsonian in the last year and a half has expended about \$5,000 on ethnological researches. It has sent out two expeditions for ethnological study. There is no subject, neither ethnology nor biology, nor astrophysics, or any other subject of science or knowledge that is foreign to the Smithsonian, and it helps them all. Although the National Museum is devoted to biological work to a considerable extent, yet the Smithsonian Institution does certain things in biological work that the Museum could not do by law. It maintains a place at Naples, where American scholars can go to pursue their biological studies. That is one way in which we engage in research. Quite a good deal of the apparatus in the Astrophysical Observatory was paid for out of the Smithsonian fund.

Mr. RATHBUN. The original outfit was entirely paid for from it.

Mr. SMITH. The National Zoological Park is paid for outside of your Smithsonian funds?

Mr. ADLER. Yes, sir; quite. The mere fact that there is a Bureau of Ethnology does not shut out from the Smithsonian all the work of

ethnology. There is plenty else to do, and so there is in biology and every other science.

Mr. SMITH. I think I have got all the information I can get as to what you pay out of your own fund and what you pay out of Government funds in this sort of double-headed institution down there.

Mr. ADLER. By the very nature of things, the Smithsonian Institution does a good deal for the Government establishments under us. It makes no difference to the people who are paid out of the Smithsonian appropriation. They just as readily pitch in and work for any other Department or bureau, if they can, as though they were directly on the roll of that other Department or bureau. There are a great many expenses of administration that would exist in case each of these was an independent bureau that are saved by their being all together. There is a proper coordination which, I think, is extremely helpful; not only helpful scientifically, but economically.

Mr. RATHBUN. If I can make a remark in this connection, looking at it from a financial standpoint, the bureaus which are under the Smithsonian do nothing for the Smithsonian; but, on the other hand, the Smithsonian does an immense amount for the bureaus. Doctor Adler has spoken of some of those facts. I have before me a statement, which was not drawn up for this purpose, but for another purpose, of the amounts of money paid by the Smithsonian Institution for the National Museum. Up to 1877 they amounted to \$113,000.

The CHAIRMAN. Give that statement to the stenographer and let him print it in connection with your remarks. How much of a statement is that?

Mr. RATHBUN. It contains salaries—the salaries of Assistant Secretary Baird, assistants and labor, expenses of collection, explorations, etc.

The CHAIRMAN. How many pages does it cover?

Mr. RATHBUN. It is on one sheet.

The CHAIRMAN. If you can give it to the stenographer and let him treat it in connection with your remarks we would be glad.

Mr. RATHBUN. Yes, sir. This is what the Smithsonian did then. It has done more since. When it is claimed that the Smithsonian Institution may be using the Museum to take care of its collections, the fact is that the Museum or the Government should be only too glad to do it, because the Museum is something which is benefiting the public, and we are using those collections for the benefit of the public. They are not stored away, as they would have to be under the Smithsonian, and I assure you, sir, that unless we have a greater convulsion than has just happened on the West coast, those collections will stay there always as one collection, and should stay there.

Mr. SMITH. I am not criticising you, but I wanted to know what you are paying out of the Smithsonian and what out of the Government. I do not know but that the Government has the best of it. But we wanted to know the facts.

Mr. TAYLOR. I am glad to see that you gentlemen of the Museum have a high regard for the Smithsonian Institution. It was my impression that you regarded the Smithsonian Institution as an antiquated attachment to the National Museum. My own inclination was to regard the Smithsonian as the progenitor, the worthy progenitor of the Museum, and as an institution bound to live forever, and always to be recognized as at the head of the National Museum.

Mr. RATHBUN. We have, and are bound always to have, that good opinion of it.

*Smithsonian moneys expended for the Museum, 1849-1877.*

Year (calendar).	Assistant Secretary Baird.	Assistants and labor.	Expenses of collections.	Explorations.	Transportation.	Miscellaneous.	Total.
1849.			\$184.50				\$184.50
1850.	\$750.00		543.00	\$150.00	\$108.00	\$20.00	1,566.00

FRIDAY, April 20, 1906.

SMITHSONIAN INSTITUTION—Continued.

**STATEMENTS OF MR. RICHARD RATHBUN AND MR. CYRUS ADLER, ASSISTANT SECRETARIES OF THE SMITHSONIAN INSTITUTION, ACCOMPANIED BY MR. W. DE C. RAVENEL, ADMINISTRATIVE ASSISTANT, NATIONAL MUSEUM, AND MR. FRANK BAKER, SUPERINTENDENT, NATIONAL ZOOLOGICAL PARK.**

**PRESERVATION, EXHIBITION, AND INCREASE OF COLLECTIONS.**

The CHAIRMAN. Now, Mr. Rathbun, in the next item, page 35 of the bill, "for continuing the preservation, exhibition, and increase of the collections from the surveying and exploring expeditions of the Government, and from other sources," etc., your estimate for the coming fiscal year is \$30,000 in excess of the current appropriation.

Mr. RATHBUN. Yes, an increase of \$30,000—from \$180,000 to \$210,000. This item is really the principal one of the Museum, and if I may make some explanation in regard to matters in general, I would like to show why the needs of the Museum are increasing.

First of all, the exhibition space in the two buildings amounts to 129,000 square feet, or three acres. The work rooms and shops, laboratories, storerooms, and the places for the heating apparatus, etc., amount to 109,000 square feet, or 2½ acres; that is to say, we are

taking care of 5½ acres of space in the building. I will say, for the information of the committee, that the new building will add about 10 acres of floor space.

Mr. TAYLOR. You mean that building alone will have 10 acres?

Mr. RATHBUN. Just a little under 10 acres. That is not ground space, but floor space. The Museum, of course, has to do with specimens. It has a collection of material—

The CHAIRMAN. Do you contemplate increasing this space that you are now occupying during the coming fiscal year?

Mr. RATHBUN. We will not increase the space for two or three years. I am not counting on anything now in regard to the new building. That does not come up at present at all, but the collections themselves are increasing. According to law the National Museum is the depository of collections obtained by the Government surveys. These, of course, amount to a great deal and come mainly through the Geological Survey, the Fish Commission, many bureaus of the Department of Agriculture, and the Bureau of American Ethnology, which was described yesterday.

The material from the Government surveys has been coming in for more than sixty years. During that period we have also had private donations amounting to over 50,000. These donations may range in extent from a few specimens to over 100,000 specimens, and, of course, the size of specimens vary from small ones up to big ones. During the past year and a half we have had two private donations out of the ordinary. One of them is the private collection in botany of John Donald Smith, of Baltimore, containing over 100,000 specimens of plants, one of the finest collections of its kind in the world. We also received a collection of 50,000 insects, made by Mr. William Shaus, which he had in London for study in connection with the British Museum. The estimated value placed by these gentlemen on their collections was \$100,000.

The CHAIRMAN. Including both collections?

Mr. RATHBUN. Yes, sir. That would be 75 cents apiece for the specimens. But if the British Museum, for instance, had wanted them (referring to the collection of insects), they would very likely have been willing to pay more for them. These men gave the specimens outright to this country.

Mr. TAYLOR. Why did not the British Museum want them? Were they duplicates?

Mr. RATHBUN. I am sure that Mr. Shaus would not have sold them. He is a man of means.

Mr. TAYLOR. I mean if the British Museum had wanted them they would have offered a big price?

Mr. RATHBUN. They were not offered for sale.

The CHAIRMAN. Has the British Museum a collection corresponding to this?

Mr. RATHBUN. Oh, yes. The British Museum and the National Museum at Paris both have large collections, but of course one is richest in one line, the other in another, and so on.

I have spoken of the Government surveys as a source of collections, then of donations; now I will mention exchanges. The duplicate specimens are used, under the law, for exchanges, by which we get many of our best things; but the bulk of our duplicate specimens are made up into sets for educational establishments throughout the

country. Of these we are sending out hundreds every year—every request coming with the indorsement of a Member of Congress.

The CHAIRMAN. The bulk of the duplicate specimens?

Mr. RATHBUN. Yes, sir. They are used for two purposes. One for exchange in enlarging our collections, the other in making up collections to send to colleges, high schools, and other high grade establishments for educational purposes.

The CHAIRMAN. Do you send these out on the application of Members of Congress?

Mr. RATHBUN. It has been the rule from the beginning that an indorsement should be received from a Member of Congress, simply as a guaranty of the standing of the school.

Mr. SMITH. What particular publication was this?

The CHAIRMAN. This is his duplicate specimens.

Mr. RATHBUN. We give until the material is exhausted, and then when we are out we have to refuse.

Mr. SMITH. They have sent specimens to a number of our high schools in Iowa.

The CHAIRMAN. I see you estimate this amount for the last four years.

Mr. RATHBUN. Yes, sir; this is the sixth year that we have had \$180,000, and during that period we have received specimens, added to the collection, averaging in number 270,000 a year. That is, during the past six years we have received 1,350,000 specimens.

Now, on June 30 last the total number of specimens in the Museum had increased to over 6,000,000. To that number should be added 30 carloads obtained from the Louisiana Purchase Exposition, which were not opened at that date, and which can not be opened yet because we have no means of taking care of them except in storage.

The CHAIRMAN. You have not the space to accommodate them, have you?

Mr. RATHBUN. No, sir; not at present. Of course these collections will wait for the new building.

The CHAIRMAN. You do not need any additional force for this purpose?

Mr. RATHBUN. We are not asking for any additional force for that purpose. It does mean some additional persons, but that is a minor matter. This Museum ranks with the museums of London and Paris, except in the matter of buildings and conveniences. So far as collections in natural history, geology, ethnology, and archaeology are concerned, we are well up. The other branch which has been retarded, simply for lack of space, is that of the industrial arts. That is the industrial side of the Museum which caused the erection of the present Museum building, in which it is intended to install at once—with the material obtained from the Philadelphia Centennial as a basis—a fine exhibition illustrative of the progress of the industries of the country, for the benefit of practical men—the producer and the workman. As soon as the new building is finished we will have room in the old one to carry out this important purpose. That matter was brought out before the subcommittee on Appropriations when the plans for the new building were under consideration.

Now, Mr. Chairman, it seems impossible to say what is the value of the Museum collection as a whole, but it is certainly several million dollars. Some single parts or sections of the collection are each worth

intrinsically up to fifty, seventy-five, and one hundred thousand dollars. The General Grant collection alone, which was valued at something like \$75,000 or \$100,000 when it was given to the Government, is now of course worth very much more. When Mrs. Grant died she gave the collection presented to her during the trip around the world, and that alone was valued at \$40,000.

The CHAIRMAN. Now, let me ask you, can you employ in the space you are now occupying any more people to perform the service in taking care of and classifying these exhibits than are now employed?

Mr. RATHBUN. Yes, sir.

The CHAIRMAN. Is it necessary to employ any more?

Mr. RATHBUN. For the preservation of the collections; yes, sir.

The CHAIRMAN. How much of a balance have you left over from this appropriation for the current year?

Mr. RATHBUN. The balance on April 1 was \$50,000. Shall I stop my general explanation?

The CHAIRMAN. It is not so much the value of the exhibits that we are concerned about here as the necessity of increasing this appropriation. I observe that out of this \$180,000 you have paid \$160,422.34 for salaries during the fiscal year 1905, ended June 30 last.

Mr. RATHBUN. Here is the present pay roll, showing also the increases in salaries desired [submitting same].

(The paper in question is with the files of the committee.)

The CHAIRMAN. This increase of \$30,000 asked for is intended to meet the demands for increased salaries?

Mr. RATHBUN. No, sir; not that alone. It is for three purposes. It is for increases in salaries, for the addition of 13 persons, and for the additional money needed to run the Museum.

The CHAIRMAN. What is the increased estimate of salaries?

Mr. RATHBUN. The total increase for salaries of the present staff is \$10,203, as shown in the foregoing statement. The increase requested for adding to the staff amounts to \$11,520. Besides these it is asked that \$8,277 be added for increase in the general maintenance.

The CHAIRMAN. Does this cover freight?

Mr. RATHBUN. This covers all the freight, except the material from St. Louis, for which Congress made a special appropriation.

Mr. SMITH. If you buy drawers or cases, as you spoke about yesterday, they would be paid for out of fixtures; but outside of that everything would be paid out of this appropriation?

Mr. RATHBUN. Yes, sir.

Mr. RAVENEL. Last year we paid \$2,154.14 for freight and cartage.

The CHAIRMAN. When will this new building be completed? When is it to be completed?

Mr. RATHBUN. We hope it will be roofed over in two years. We sincerely hope so. We are working for it.

Mr. SMITH. Do you pay out of this appropriation for chemicals and the like used in the preservation of the collections?

Mr. RATHBUN. Yes, sir.

We have other items, as for building repairs, furniture and fixtures, heating and lighting, books, postage, etc., but this is the main item—the preservation of collections. For instance, all the general supplies. There is the alcohol—

The CHAIRMAN. What is the balance of this appropriation for 1906?

Mr. RATHBUN. The balance of this appropriation on April 1 was

\$50,000. From that will be paid, of course, the salary roll for the rest of the year, and there are orders out for supplies, etc., amounting to \$8,300.

#### RUNNING EXPENSES.

The CHAIRMAN. Do you apportion these appropriations by monthly or quarterly allotments, or otherwise, at the beginning of the fiscal year?

Mr. RATHBUN. First of all, at the beginning of each year, with this and all main appropriations, a small percentage is put aside that can not be touched until toward the end of the year. That is one safeguard. A schedule is made out which you may say is practically a monthly schedule, and it holds good in nearly all cases, but when you come to heating and lighting we have to have our coal in the winter. In the matter of building repairs, the main repairs to-day are on the roofs. We have to make those repairs in pleasant weather; that is, in the summer, the early fall, and the spring, so that in the middle of winter not so much work is going on. Everything is carefully planned beforehand, and I will say, Mr. Chairman, that the Smithsonian Institution has never created a deficiency and it never will.

#### PURCHASE OF SPECIMENS.

The CHAIRMAN. The next item is for the purchase of specimens to supply deficiencies in the collections of the National Museum.

Mr. RATHBUN. That is an item, sir, which is easily explained. The collections, as I said before, come from the Government surveys, from private donors, and through exchanges. Now, there are many gaps in the collections, as Mr. Langley used to explain to the committee. Important collections are offered for sale, and specimens are needed to complete series, which we are not able to obtain.

The CHAIRMAN. How do deficiencies arise?

Mr. RATHBUN. I say we are practically dependent upon material given to us. We have not the collecting or choice of things. The private donors send us what they have to send, but the contributions are lacking in important ways. In the American Museum of Natural History in New York from \$50,000 to \$100,000 or more are expended annually just for the purchase of specimens.

The CHAIRMAN. This is for the purchase of specimens to supply deficiencies in the collections?

Mr. RATHBUN. Yes.

The CHAIRMAN. How do these deficiencies in your collection arise?

Mr. RATHBUN. Simply because we do not obtain all the specimens we need from the customary sources.

The CHAIRMAN. This language would imply that you have a specimen, and that there is a deficiency in that specimen.

Mr. TAYLOR. There is a deficiency in the collection.

Mr. RATHBUN. I think I have explained what it is. It is simply to fill gaps in the collections.

The CHAIRMAN. This language would not imply that it was intended to duplicate it, but it does imply that for some cause a deficiency has occurred in the collections you now have.

Mr. RATHBUN. It means that certain necessary specimens can only be obtained by purchase.

Mr. TAYLOR. It means that you get collections that are not complete in themselves, and you have to supply what is incomplete in the collections, and you call that a deficiency?

Mr. RATHBUN. That is precisely it.

The CHAIRMAN. Why could you not supply these gaps from the appropriation just preceding?

Mr. RATHBUN. We are permitted so to do, Mr. Chairman, by the language of that item, but the size of the appropriation prevents more than a few purchases.

The CHAIRMAN. But you put that in as a means of getting more money?

Mr. RATHBUN. Yes. But this thing is put squarely before the committee. If the committee appropriates on that item, of course the Treasury Department would not pay for the purchase of specimens from the other. It is submitted virtually with the intention of getting more money.

#### PURCHASE OF BOOKS, PAMPHLETS, AND PERIODICALS.

The CHAIRMAN. The next item is for the purchase of books, pamphlets, and articles for reference, and so forth.

Mr. RATHBUN. It is necessary to buy books, and so forth, and there is an appropriation of \$2,000, which has remained the same from the beginning. The explanation which accompanies the estimate is, I think, a very fair explanation of why the increase should be granted.

The CHAIRMAN. Let me ask you right there, how much of a balance did you have at the end of the fiscal year 1905 of this appropriation?

Mr. RATHBUN. \$70.49 on the 1st of April. That is for 1905.

#### REPAIRS TO BUILDINGS, SHOPS, AND SHEDS.

The CHAIRMAN. For repairs to buildings, shops, and sheds, \$15,000. Your estimate for the coming fiscal year is the same amount as that carried by the current appropriation?

Mr. RATHBUN. Yes, sir.

The CHAIRMAN. What is the character of these repairs on the National Museum? They continue every year at \$15,000. How do you manage to spend that sum in that way?

Mr. RATHBUN. When the Museum building was put up it was constructed for \$250,000. I think they put the roof on for something like \$20,000. The result is that the roof is no good. It has buckled under the weight of snow. It leaks like a sieve, with the result of destroying walls, specimens, and so forth. That has been the cause of a large part of the expenditure.

The CHAIRMAN. In the last six years you have had \$90,000 appropriated for that purpose, which is almost 50 per cent of the cost of the building.

Mr. RATHBUN. Yes, sir; and it will continue so until it is put in proper shape.

The CHAIRMAN. What repairs do you contemplate making out of this appropriation in the event it is granted?

Mr. RATHBUN. There are two main things to do. The appropriation does look large; there is no question about it, but it is necessary. We have been experimenting extensively with the roof. We have put

on outside material, and have, by keeping a force at work, prevented as much as possible danger to the specimens and other contents of the building. But even with the last experiment, concluded a year ago, we have not been able to make that extensive roof secure. We have recently obtained advice from experts at the Treasury Department, and find that we can actually begin to replace the roof, even with the specimens inside the building. We can do it section by section, not waiting for the completion of the new building, and it is our intention, with the continuation of this appropriation, to begin upon the main or north section of the roof this spring or in the early part of the summer and proceed with the entire roof just as fast as we can.

There is another matter that has come up. We wish that you would come to the Museum to see about it so that we could explain it better. The Museum building is virtually one large room, an immense room, covering over 2 acres of land. It is separated into sections by partitions, with great openings at short intervals, reaching far toward the roof. The building is fireproof. It is of brick and iron and glass almost exclusively. The specimens, however, are in large part not fireproof, but inflammable if once set on fire. We are taking the greatest precautions against fire, and have begun to fill in the large openings with fireproof material. We have millions of dollars' worth of material closely assembled that may go up in flames in half an hour.

The CHAIRMAN. Have you during the past or current fiscal year expended any of this appropriation in replacing the roof?

Mr. RATHBUN. Not in actually replacing the roof, except a little section. There is a balance this spring that we have been saving for the roof work.

The CHAIRMAN. What balance have you of the appropriation for 1905, and what balance have you in the current appropriation?

Mr. RATHBUN. For 1905 there was a balance on April 1, 1906, of \$307. Of the current appropriation there is a balance on April 1 of \$7,500.

The CHAIRMAN. You propose to spend that this year on the roof?

Mr. RATHBUN. Yes; on the roof. The risk is too great. The Museum is too valuable a property of the Government to take further risk. In the new building there would be no such appropriation needed for repairs. This item includes the workshops, too, besides the building proper.

The CHAIRMAN. I do not suppose you have a separate account this past year of the money spent on the buildings and the money expended on the shops and sheds, have you?

Mr. RAVENEL. Yes; in 1905, \$420 was expended on repairs to workshops; on the Museum building roof, \$3,962; for the principal interior repairs, including painting of walls, etc., \$2,009; in cleaning out and rendering sanitary the trenches under the Museum building, and other improvements, \$1,572. On the part of the Smithsonian building occupied by the National Museum \$363.73 was expended for interior repairs and \$242 for repairs to the roof, gutters, windows, etc. Owing to the condition of the roof of the National Museum, it has always been necessary to keep a force of men available throughout the year, especially during the winter months. During the year 1905 this force consisted of 9 regular men, 2 carpenters, and skilled laborers, including a tinner. In 1906 the force was reduced to 6 men,

with a view to saving sufficient funds to put permanent metal roofs on the Museum building.

#### RENT OF WORKSHOPS AND TEMPORARY STORAGE QUARTERS.

**Mr. RATHBUN.** The rent of workshops and storage quarters is a necessary item, and the amount is absurdly low, because, except for the workshops which are ample in their way, the collections stored, which are ample in quantity to again fill the National Museum building, are contained in one building and one group of buildings filling them, from the floor to the roof, with only narrow passageways.

The **CHAIRMAN.** You rent the buildings, do you?

**Mr. RATHBUN.** We rent three buildings, and one good-sized group of buildings. You have the amount there—\$4,580. We are taking a very great risk, not in the workshops, but in the storage buildings. The appropriation ought to be increased, but we have not asked it. We should be able to scatter these collections more, because if a fire occurred to-day (we have there the entire collection from St. Louis, which is, however, not the tenth part of what is in storage) they would all go up in flames. They are all cheap frame and brick buildings.

The **CHAIRMAN.** Have you anything there in connection with your workshop that would be liable to set fire to the buildings? Are the workshops close to the storage buildings? There is nothing loose in the buildings where you have this material stored except the material itself?

**Mr. RATHBUN.** In greater part nothing. With one exception the storage buildings are at some distance from the workshops, and the former are, therefore, devoted almost exclusively to storage. Every precaution is being taken, and the collections are practically inaccessible because of the crowded condition of the buildings.

The **CHAIRMAN.** It is in charge of watchmen?

**Mr. RATHBUN.** Yes; watchmen day and night, and every precaution is taken.

The **CHAIRMAN.** These various articles are being stored in this storage room that you speak of for the purpose of retaining them until you are able to occupy the new National Museum building?

**Mr. RATHBUN.** Yes. Of course, duplicates will be found among them eventually, because we have not been able to go through them yet.

**Mr. SULLIVAN.** Will you need space for storage after the new building is occupied?

**Mr. RATHBUN.** After the new building is occupied all the outside buildings for storage can be dispensed with.

#### EXPENSES OF SUNDAY AND NIGHT OPENING.

The **CHAIRMAN.** The next item on page 37 is new—"for the necessary expenses of keeping the National Museum building open to the public on Sundays," etc.

**Mr. RATHBUN.** I have nothing to say in regard to that item except the following: It is something that is done in all the big museums of the world. It is done at the Library of Congress, and it is something that would place the building at the disposal of two or three times as many people as are able to visit it to-day. It is simply that.

The **CHAIRMAN.** Would you not be able to accommodate the greater part of the people who desire to visit the National Museum and are

unable to do so by keeping it open, say, two hours longer, or say until 6 o'clock in the evening? Do you not imagine a good many people would go there in the evening if it were kept open nights?

Mr. RATHBUN. Yes. But 6 o'clock is an inconvenient hour for people to go, generally. It is usually their dinner time.

The CHAIRMAN. I understand. But people who visit Washington—and they are the principal ones who visit the Museum—usually spend the day up until 6 o'clock in sight-seeing, and if they could remain there until 6 o'clock that would accommodate them.

Mr. RATHBUN. During the summer there would be no need of extra lighting up to that hour. In winter there would be need of electric lighting. We have the installation. The watchmen would have to work ten hours, which of course is contrary to law. We can not employ anybody over eight hours. We would also have to start another steam watch. That is to say, it would cost practically as much to keep the building open until 6 o'clock as it would to keep it open until 10 o'clock.

Mr. RAVENEL. Except a small amount of electricity—

Mr. RATHBUN. On Sundays it could be kept open with just the additional help needed and the amount of coal burned.

The CHAIRMAN. What additional help would be required?

Mr. RATHBUN. For extra cleaning and watchmen. The building has to be cleaned throughout every day. It is a sight at the close of day after the many visitors have departed.

#### RECORD OF VISITORS.

Mr. TAYLOR. Have you an estimate of the visitors there?

Mr. RATHBUN. It is not an estimate. It is an actual record.

Mr. TAYLOR. What is the average? Is it increasing or decreasing?

Mr. RATHBUN. Beginning with 1881 we have here the annual number of visitors (submitting statement).

The CHAIRMAN. I see in 1881 your average attendance for the year was 150,000 persons in the National Museum building, and in 1904, 220,778.

Mr. RAVENEL. We also had 125,000 in the Smithsonian part.

The CHAIRMAN. Yes, in the Smithsonian you had 100,000 in 1881, and 214,000 in 1904.

Mr. TAYLOR. Those are chiefly the same people, are they not?

Mr. RAVENEL. In the case of the largest attendance, Mr. Taylor, it is not that way. At inauguration a great many people get to one building that never get to the other at all.

Mr. TAYLOR. I do not see the report for 1904. Where did you get that?

Mr. RAVENEL. That is the 1903 report. We are averaging about 2,000 a day now.

Mr. RATHBUN. Since the Library of Congress was opened it has been a great attraction to the people, and it has lessened our average somewhat.

Mr. TAYLOR. Is not your attendance increasing this year?

Mr. RATHBUN. It is up and down. In years when inauguration occurs there are always very many more, naturally, or in years when conventions are held here.

The CHAIRMAN. How does the number of visitors in the winter months compare with the number in the summer months?

Mr. RATHBUN. The spring is the best time. I have prepared tables which fully bring out the facts in regard to this matter.

The CHAIRMAN. What time in the spring does the attendance commence to increase?

Mr. RATHBUN. About now, or just a little before.

The CHAIRMAN. About the 1st of April?

Mr. RATHBUN. Yes—

Mr. SULLIVAN. When the railways make a rebate to tourists.

Mr. TAYLOR. That is due now to the Daughters of the American Revolution in this city at the present time.

Mr. ADLER. The month of August, I have noticed, is always a very heavy month. When school-teachers end up their vacations North and South and stop here they come down in large parties, when ordinarily it would be considered a dead month.

Mr. RATHBUN. I could give you the exact figures. The watchman at the door has a little instrument by which he registers the visitors as they come in.

The CHAIRMAN. I simply wanted it approximately.

Mr. RATHBUN. We have worked it out month by month since 1881.

Now, Mr. Chairman, with regard to the new building, Mr. Green, of course, is understood to present the facts.

## NATIONAL ZOOLOGICAL PARK.

The CHAIRMAN. You have the Zoological Park under you?

Mr. RATHBUN. Yes, sir. Doctor Baker, who is superintendent of the Zoological Park, is here. The question there is the increased number of animals, the increased amount of work to be done.

The CHAIRMAN. Have you a written statement there, Mr. Rathbun?

Mr. RATHBUN. I have simply the headings. I would put it something like this: The appropriation to-day is \$95,000. It has been that for three years.

The CHAIRMAN. Was there a balance left over for the fiscal year 1905?

Mr. RATHBUN. There was, of course, some balance. On April 7 there was a balance on the appropriation for the last fiscal year of \$151.34.

The CHAIRMAN. To meet any outstanding obligations incurred during that fiscal year?

Mr. RATHBUN. Yes; but of course it is back in the Treasury Department now.

The CHAIRMAN. It is there for the purpose of meeting any obligation that has not been settled?

Mr. RATHBUN. Yes; for two years from the date of the appropriation. Now, in the ordinary maintenance of the park under the \$5,000 appropriation we are estimating for the food of animals, \$18,000, about as much as is being paid this year. The permanent pay roll amounts to \$37,110 at present, the same as last year.

## SALARIES OF EMPLOYEES.

The CHAIRMAN. Who fixes the salaries of the employees of the park?

Mr. RATHBUN. The Secretary of the Smithsonian Institution.

The CHAIRMAN. I observe that you have increased the salaries of the clerical force of the Zoological Park.

Mr. RATHBUN. There were some increases at the beginning of this year, but they were small. There was an increase in the salary of the principal clerk from \$100 to \$125 a month, and in that of the assistant superintendent from \$1,800 to \$2,000.

#### SALARY OF SUPERINTENDENT.

The CHAIRMAN. When was the salary of the superintendent increased to \$3,300? It was originally \$2,500?

Mr. RATHBUN. That increase was made about three years ago.

The CHAIRMAN. It was, in 1896, \$2,499?

Mr. RATHBUN. Yes, sir. The duties of superintendent are difficult ones, and there is every reason why the salary should be at the amount it is now. His responsibilities are great.

The CHAIRMAN. What are his responsibilities, excepting the superintendence and care of the animals and grounds?

Mr. BAKER. I would like to explain, Mr. Chairman, that the responsibilities are considerably more than that. Of course, there is the supervision of all the supplies and the conduct of the entire matter.

The CHAIRMAN. You supervise the purchase of supplies, do you?

Mr. BAKER. Entirely.

The CHAIRMAN. Do you supervise the work on the park and the walks, and the care of the animals, and so on?

Mr. BAKER. Yes; and the construction of all buildings and everything of that kind is under my charge.

The CHAIRMAN. You are not constructing new buildings out there every year?

Mr. BAKER. Yes, sir; every year. There has not been a year yet when we have not constructed new ones.

The CHAIRMAN. Have you been building to any considerable extent lately?

#### BUILDING FOR SMALL MAMMALS.

Mr. BAKER. Yes; we have been erecting one building.

The CHAIRMAN. What is the character of the building?

Mr. BAKER. It is a building for small mammals, which will cost about \$40,000.

Mr. RATHBUN. It has taken about three years to build, a part having been constructed during each of these years, and the increase asked for is in order that building operations in general may be expedited.

Allow me to state, first, Mr. Chairman, however, that the salary of superintendent of the Bronx Zoological Park in New York is at least \$5,000.

Mr. TAYLOR. How does that compare with our park inside, as to the number of animals, and so forth?

Mr. BAKER. That was established in 1898. It is larger in area, but has not very many more animals than we have. We have 1,500 animals; they have 1,800. It is larger in area and their buildings are more expensive. Their expenses are larger than ours because they spend money more freely and have more money to spend.

#### SALARY OF SUPERINTENDENT AND OF ASSISTANT SUPERINTENDENT.

The CHAIRMAN. I observe that the salary of superintendent in 1896, ten years ago, was \$2,499.96, and in 1901 it was increased to \$2,700.

and now it is \$3,300. Since 1901 you have added an assistant superintendent at a compensation of \$1,999.

Mr. RATHBUN. That person began as property clerk, though he is an experienced naturalist. He has been at the park ever since its inception—

Mr. BAKER. In 1891.

Mr. RATHBUN. His usefulness became so great that he had several promotions, which he deserved, and that was the occasion for the increase in his pay and the change in his designation. It is not a new person.

The CHAIRMAN. How do you arrive at that exact compensation—\$1,999?

Mr. RATHBUN. That is a matter resting with the disbursing clerk.

Mr. BAKER. His compensation was \$2,000, Mr. Chairman, and that is simply derived by adding up fractions of the month, giving one or two cents one way or the other.

Mr. RATHBUN. The salary is \$2,000 and the disbursing officer happened to drop a few cents. It makes a fraction when he divides it into 12 equal parts.

#### CLERICAL FORCE.

The CHAIRMAN. I see in 1901, five years ago, you had one clerk six months at \$90 and six months at \$110, making a total of \$1,200. Why was it necessary for you to increase the clerical force by two and allow each one of them \$1,500 apiece? At the present time you have two clerks receiving \$125 a month.

#### DISBURSING OFFICE ARRANGEMENTS.

Mr. RATHBUN. The clerk in the superintendent's office is the principal clerk of the park. Another clerk is a clerk in the disbursing office. He receives \$1,500; and I will explain that all of the appropriations are expended under the Smithsonian Institution. There is need, of course, of a disbursing office. Instead of having a separate disbursing office for each branch the disbursing office is made one affair for all.

The CHAIRMAN. Is not the disbursing office of the State Department the one that disburses your funds?

Mr. RATHBUN. No, sir; he is the auditor. Now, we employ three, one disbursing agent and two clerks, and we divide the expense of those men pro rata among the several appropriations.

The CHAIRMAN. The National Museum and Zoological Park?

Mr. RATHBUN. Yes, sir; we apportion it according to the amount of the appropriations for everything under the Smithsonian Institution—the Bureau of Ethnology, the National Museum, the Astrophysical Observatory, the Zoological Park, and the International Exchanges—they all come into that disbursing office. We have three persons, and we charge each of those branches with their proportionate share under the appropriations.

The CHAIRMAN. Do you mean to say, in addition to these two clerks paid out of the appropriation for the National Zoological Park, you pay part of the salary of the disbursing officer for the National Museum and Smithsonian Institution?

Mr. RATHBUN. No, sir; the proportion which the park should pay.

The CHAIRMAN. A part of the compensation of the disbursing officer is paid out of this appropriation for the Zoological Park?

Mr. RATHBUN. Yes, sir; this is one of the clerks in the disbursing office.

The CHAIRMAN. Where is he employed? Where is the disbursing office?

Mr. RATHBUN. In the Smithsonian building.

The CHAIRMAN. That is where the disbursements are made for the National Zoological Park?

Mr. RATHBUN. Yes, sir.

The CHAIRMAN. They are not made up in the office of the superintendent?

Mr. RATHBUN. The Zoological Park office makes up the vouchers and transmits them to the disbursing officer.

The CHAIRMAN. In the Smithsonian Institution?

Mr. RATHBUN. Yes, sir; and there the checks are drawn.

The CHAIRMAN. Where are these two clerks employed?

Mr. RATHBUN. The first is employed in the office of the superintendent at the Zoo. The second one is at the disbursing office at the Smithsonian Institution.

The CHAIRMAN. Both of them are paid \$1,500 a year?

Mr. RATHBUN. Yes, sir.

The CHAIRMAN. Does this \$1,500 clerk that is paid out of the appropriation for the National Zoological Park do work in connection with the disbursements of the appropriations of the National Museum and Smithsonian Institution?

Mr. RATHBUN. No, sir; not with the Smithsonian Institution. That has nothing to do with it whatsoever. He gives most of the time to the park. This one mentioned gives most of his time to the park, but suppose he is away on leave. Then one of the other clerks takes up his duties. These three men are in the disbursing office, appointed under the civil-service regulations.

The CHAIRMAN. Are there any other clerks in the disbursing office paid, besides this one, out of the Zoological appropriation and the disbursing officer? How many are employed?

Mr. RATHBUN. Three; the disbursing officer and two clerks.

The CHAIRMAN. From which appropriation is the other clerk paid?

Mr. RATHBUN. The disbursing agent himself gets \$1,500. Another clerk gets \$1,500. The Museum pays the salary of the disbursing agent and half that of the other clerk. The latter is paid for the remaining six months of his time by the International Exchanges and the Astrophysical Observatory.

The CHAIRMAN. Here you have, in addition to that, the property clerk.

Mr. RATHBUN. There are only two men. The one at the park is paid \$1,500. The other's time is counted half to the National Museum and half to the Astrophysical Observatory, the International Exchanges, and the Bureau of Ethnology.

The CHAIRMAN. He is not charged to the Zoological Park?

Mr. RATHBUN. This man is not.

The CHAIRMAN. Is any part of his compensation charged to the Zoological Park?

Mr. RATHBUN. No, sir.

## CLERICAL FORCE.

The CHAIRMAN. Where is the stenographer employed? In the superintendent's office?

Mr. RATHBUN. He is in the office of the Secretary. You see the Secretary attends to a large part of the correspondence, the finances, etc., for all the bureaus.

The CHAIRMAN. Who did that work five years ago? You did not have a stenographer then.

Mr. RATHBUN. Simply because he went under another title. There has been no change since the park was organized.

The CHAIRMAN. The stenographer is employed in the office of the Secretary of the Smithsonian Institution?

Mr. RATHBUN. Yes, sir.

The CHAIRMAN. Where are these three messenger boys employed?

Mr. RATHBUN. There are really only two.

The CHAIRMAN. I see you employed one for a month.

Mr. RATHBUN. One is employed at night and the other in the day. Their duties are in the office of the superintendent in the park. The superintendent's office is in the park.

The CHAIRMAN. What is the necessity of a messenger boy at night?

Mr. BAKER. He has to be there to answer the telephone, and any calls that have to be made in case any of the animals get injured. He sleeps at the office.

The CHAIRMAN. What occasion have you for a photographer out in the Zoological Park?

Mr. RATHBUN. That was a temporary service. He is not there now.

The CHAIRMAN. Did you state the balance on hand at the close of the fiscal year 1905 of this appropriation?

Mr. RATHBUN. For 1905?

Mr. SMITH. It is stated here as being \$11,057.

Mr. RATHBUN. Of the appropriation for the fiscal year ended June 30, 1905, the balance on April 1 was \$151.

If you will allow me to put this briefly in this way, in regard to the National Zoological National Park. We have under the appropriation of \$95,000 food for animals, permanent pay roll, per diem pay roll, extra men to run the heating apparatus, the care and repair of buildings and grounds, fuel, and the miscellaneous expenses.

The CHAIRMAN. Just give that to the stenographer.

## NATIONAL ZOOLOGICAL PARK.

*Approximate allotments for 1907 should the appropriation be increased to \$118,000.*

Food for animals (\$1,500 per month) .....	\$18, 000
Permanent pay roll (same as at present) .....	37, 110
Labor for care and repair and for minor improvements in buildings, inclosures, and grounds, and for general work .....	15, 000
Extra men to run heating apparatus during cold weather .....	700
Materials for minor improvements and for care and repair of buildings, inclosures, and grounds, miscellaneous supplies, and all supplies for animals other than food .....	6, 000
Fuel .....	2, 500
Replacing worn-out fences of animal inclosures .....	1, 500
Outside cages and concrete walks at new animal house .....	3, 000
Extending heating conduits and piping .....	1, 000
Planting shade trees, etc. ....	500
Purchase and transportation of animals .....	4, 590

Building for hospital, quarantine, and laboratory, with equipment.....	\$8,000
Building for machine and carpenter shop and for central heating plant.....	12,000
Inclosures with pools for seals and sea lions .....	4,000
Additional bear yards .....	1,000
Constructing sidewalks, gutters, and drains for new entrance from Quarry road and Irving avenue.....	1,000
Increases in salary .....	2,100
Total .....	118,000

Mr. RATHBUN. I can give you the whole statement to put in. The current appropriation of \$95,000 permits of only limited improvements. As Doctor Baker explained, we have built in three years the substantial building now nearly completed. There is nothing fancy about it. It was accomplished by special economies and savings from year to year.

#### ADDITIONAL BUILDINGS NEEDED.

The present situation is simply this: For the mechanical department at the park we need a brick building which will cost about \$12,000. We need some additional pools for seals and sealions. A building is urgently needed for a hospital for the animals. We can not now isolate an animal when it is taken sick, and we need a place for carrying on any laboratory work that there may be to do; and we need something additional for the purchase and transportation of animals.

The size of the collection depends upon the amount of money available for that purpose. The reason why \$23,000 additional is asked is that these several matters may receive attention next year. Of course we can begin a building out of the current amount appropriated, but other special and important things must be neglected.

The CHAIRMAN. How much of the \$95,000 was expended during the fiscal year 1905 on this building?

Mr. BAKER. Thirteen thousand dollars.

The CHAIRMAN. And you are spending this year how much?

Mr. BAKER. Eleven thousand dollars.

#### COMPARISON OF SALARIES.

Mr. RATHBUN. Mr. Chairman, the one item which appeals most to me relates to the salaries which are being paid to the lower grades of employees.

The CHAIRMAN. I think perhaps that is true, and the salaries paid to the others are high, if you will allow me to suggest.

Mr. RATHBUN. The park at New York pays \$7,000 to the superintendent, and the salary attached to the position corresponding with mine at the Museum of Natural History in New York is \$10,000.

The CHAIRMAN. I am talking about clerks in the park. One thousand five hundred dollars for a clerk in the Zoological Park is a high salary.

Mr. RATHBUN. It is understood that the Government is paying more for such services than outside establishments pay.

The CHAIRMAN. That is so in the city of Washington even, as well as outside; it is so in the municipal government of the District of Columbia. The city pays lower salaries than are paid in any branch of the United States Government in Washington. The private secre-

taries to the Commissioners of the District of Columbia, who are employed constantly, get \$1,400 and \$1,500.

Mr. RATHBUN. Yes, sir. My own secretary, who does all the work of my office—

The CHAIRMAN. He is not included in the park?

Mr. RATHBUN. No, sir. She gets \$1,020, but at the Treasury or other Executive Departments she would undoubtedly receive several hundred more.

The CHAIRMAN. How, then, do you justify the appointment of a clerk in the office of the superintendent of the Zoological Park at \$1,500?

Mr. RATHBUN. We have higher clerks under the Museum, as shown in the list before you.

Mr. SMITH. The question is why the two clerks in the Zoo should get \$1,500 apiece?

Mr. RATHBUN. They are not both at the Zoo.

#### DISBURSING OFFICE ARRANGEMENT.

The CHAIRMAN. When you were out, Mr. Smith, he stated that one is employed in the office of the disbursing clerk and the other is employed in the office of the superintendent of the Zoological Park.

Mr. RATHBUN. If Mr. Smith will permit me, I can explain it in a few words: The disbursing office is one affair, with three clerks; that is, two clerks besides the disbursing agent. Instead of having a disbursing office for each of the bureaus under the Smithsonian Institution, each with a bonded officer and his clerks, we have one disbursing officer for all the bureaus under the Smithsonian Institution.

The CHAIRMAN. What is the total disbursement approximately?

Mr. RATHBUN. It is \$421,000, not including printing, the appropriation for which is disbursed by the Printing Office. Instead of having a disbursing officer for each bureau, these offices are brought together in one, with three men, and their salaries are prorated according to the amount appropriated to each bureau. In that way the disbursing office is run much more cheaply.

Mr. SMITH. You mean you do not charge \$1,500 against the Zoo?

Mr. RATHBUN. Yes; that is the percentage of its appropriation. The Museum pays more.

Mr. SMITH. You are charging one of three clerks to the Zoo, and it has much less than a third of the appropriation; much less than a third.

Mr. RATHBUN. The Museum pays \$2,250. Then the rest is charged, \$750 to the Bureau of Ethnology, International Exchanges, and the Astrophysical Observatory.

Mr. SMITH. Are these other disbursing officers paid more than \$1,500?

Mr. RATHBUN. There are no others.

Mr. SMITH. I mean other than this one you are charging to the Zoo.

Mr. RATHBUN. Not for the Government.

Mr. SMITH. You say you employ three men. I am trying to get at whether the disbursing officer is the fourth man, or one of the three.

Mr. RATHBUN. No; there are only three, the disbursing officer and two clerks.

Mr. SMITH. How much do the three get?

Mr. RATHBUN. Four thousand five hundred dollars.

Mr. SMITH. And when you disburse \$400,000 and \$90,000 you charge the Zoo for a third instead of a fifth. Is that right?

Mr. ADLER. There is another matter connected with the disbursing office which does not appear under the Government appropriation. The disbursing officer is also the accountant for the Smithsonian Institution, and he acts as disbursing officer for that. The amount thus disbursed is about \$60,000. The Smithsonian Institution pays him a salary for that service, so that the disbursing officer, who is bonded to the Government for \$30,000 and to the Smithsonian for \$20,000, gets more salary than either of the two clerks. The clerks get \$1,500 each. In the last few months I have taken up this question and taken the percentages and tried to see if we could not strike an even balance. It is not always easy to do that. But we are willing to make an absolutely even percentage for the payment of the cost of the disbursing officers among the Government bureaus. The Smithsonian Institution of course pays a relatively larger amount than its disbursements amount to, but, as I explained, the Smithsonian Institution usually gets the worst end of a transaction of that kind.

Mr. SMITH. But the Zoological Park pays \$1,500 for both clerks.

Mr. ADLER. I think I found that there was a little inequality in the matter; that the allotments were not quite even; and we are at present engaged in an endeavor to readjust that. There may be a couple of hundred dollars more one way than the other. It seems to me I pointed out that the park is likely paying a little more, and the Bureau of Ethnology a little less, than its full share.

Mr. BROWNLOW. What bonds do these \$1,500 clerks give?

Mr. ADLER. They give no bonds. The disbursing agent himself is responsible for the money. But in regard to the clerks, I think it has always been felt that the clerks in the disbursing office usually receive a little more money than clerks who do not handle money. Mr. Dorsey, who handles this appropriation, pays the people at the park. He goes out there twice a month.

The CHAIRMAN. He does that as an accommodation to the disbursing agent, does he?

Mr. ADLER. He does it as an accommodation, if you will.

The CHAIRMAN. That is his duty, is it not?

Mr. ADLER. It is the disbursing agent's duty to pay off, but inasmuch as we have three bureaus at the building, the Bureau of Ethnology in a rented building up on F street, and the park farther out—and, you know, Mr. Chairman, people are anxious for their money when it is due—it is hard to pay them all at once.

The CHAIRMAN. Where have you a building rented on F street?

Mr. ADLER. It is a floor in the Adams Building, across the way from the Hooe Building. It is occupied by the Bureau of Ethnology.

Mr. SULLIVAN. It is in the building where the Bureau of Statistics is?

Mr. ADLER. Yes, sir. It has been there ever since the Bureau has been in existence.

Mr. RATHBUN. We are desirous, Mr. Chairman, that the requests we make are understood. I can fix these papers up and leave them.

Now, as to preservation of collections under the National Museum, I have the pay roll here.

#### INCREASE OF SALARIES.

That is the most important item under the National Museum, and the men whose salaries we request to have increased are all most deserving

of it. We are losing men all the time. We are losing good men. There are college men working in this service receiving \$600 and \$720 a year. Now, the pressure for increase is very great, and, of course, many people who are not qualified to receive more make their claims like the others; but in the second column of the statement of salaries here presented are shown the increases which are deserved. I do not mean deserved in the ordinary sense of the word, but I do mean that the persons represented far more than earn their present salaries, and if they were to go away they would get more pay. We have lost two persons of the higher grades in the last two years. One of them was selected as the head of the Museum of the Brooklyn Institute, where he gets twice what he did here, and another had his salary doubled by accepting a call to a professorship in Yale University.

The CHAIRMAN. I observe in looking over this statement of the pay roll that you only contemplate increasing the salaries of four \$600 men out of a total of how many—243?

Mr. RATHBUN. Here are the scientific men [indicating]. They are valuable men. We have done our best to get the best results with the money given us, but we are thoroughly ashamed to-day of that pay roll.

The CHAIRMAN. I see you have four curators who are receiving \$2,400 a year each.

Mr. RATHBUN. Yes; that is the regular salary of curators.

The CHAIRMAN. And you have three who receive \$3,500 each.

Mr. RATHBUN. Those are the heads of the three departments into which the Museum is divided. They have the supervision of those departments, and they have work to do besides the supervision. Then the assistant curators; the highest are receiving \$1,800. This man [indicating] has been there since 1881.

The CHAIRMAN. He is doing about the same work that he did when he came there?

Mr. RATHBUN. He is doing far better work. There is another thing which is very important to explain in this connection, and that is that much of the time of the scientific staff and the clerical staff is taken up with preparing and sending out duplicate sets of specimens and a vast amount of information at the request of Members of Congress, for their constituents.

The CHAIRMAN. Let me ask you if the duties of curator are anything more than their name implies? Do they do anything but take care of the collections?

Mr. RATHBUN. Under the law the curator classifies also. Of course his first duty is to see that the specimens are taken care of and then to classify and arrange them. He must be a student—a specialist. He must have training in science and in the special branch to which he is devoted.

#### COMPARISON OF SALARIES.

The CHAIRMAN. Men of that class are not getting any more compensation in educational institutions, are they?

Mr. RATHBUN. Oh, yes; pardon me, they are. The salaries in good colleges range higher. I think perhaps Doctor Adler would have a good idea of their range.

Mr. ADLER. There has been a slow but pretty steady increase in the salaries of scientific men in colleges and universities. It depends con-

siderably upon the section of the country. When Johns Hopkins University was founded it rather set a new pace for professors. They paid their principal professors \$6,000 a year. At Cambridge they increased their salaries to \$4,000 for full professors. At Columbia College some professors get as high as \$7,500, and that is, I believe, the usual salary for a head professor at the University of Chicago.

The CHAIRMAN. These men are at the head of the institutions, are they not?

Mr. ADLER. Oh, no, sir.

The CHAIRMAN. I do not mean the presidents, but the members of the faculty.

Mr. ADLER. Any curator, a head curator in the National Museum, is from the point of view of attainment and estimation outside equal to college professors, men like Doctor Stejneger, or Doctor Ridgway, or Doctor True, are the equals of any naturalists in this country or Europe.

Mr. TAYLOR. Is Doctor True simply a curator?

Mr. ADLER. He is a head curator.

#### INCURRENCE OF DEFICIENCIES.

Mr. TAYLOR. Mr. Rathbun, you stated a little while ago in your statement that the Museum, as I understood you, never had a deficiency and never would have. I was gratified to hear you say it and was gratified to hear you prophesy that you would not incur a deficiency; but the record shows, I regret to say, that you had one.

Mr. RATHBUN. There was a case where there was an anticipated deficiency after the appropriations were made, but in no case has there been a deficiency incurred in advance of an appropriation.

Mr. TAYLOR. There was a deficiency in 1893. If that can be explained, I would like to have it explained.

Mr. RATHBUN. Of course I could tell exactly what it was by looking it up.

The CHAIRMAN. That was a deficiency for fuel.

Mr. RATHBUN. Yes, Mr. Chairman, that was a deficiency for fuel, which passed Congress at the close of the winter.

Mr. TAYLOR. Was it a coal strike, or something of that kind, or an extra period of cold weather?

Mr. RATHBUN. We had estimated \$3,000 more under heating and lighting than was allowed by Congress.

Mr. SMITH. I see you have three deficiencies here—

Mr. RATHBUN. Yes, but these amounts would not have been expended if Congress had not given them to us before the liabilities were incurred.

Mr. TAYLOR. Congress gave it to you in anticipation of a deficiency? But not to cover an actual deficiency that had been created?

Mr. RATHBUN. No, sir; they had not been created in any sense.

FRIDAY, *April 20, 1906.*

INTERSTATE COMMERCE COMMISSION.

STATEMENT OF MR. MARTIN A. KNAPP, CHAIRMAN, ACCOMPANIED BY MR. EDWARD A. MOSELEY, SECRETARY.

The CHAIRMAN. Mr. Knapp, you are chairman of the Interstate Commerce Commission?

Mr. KNAPP. I am.

The CHAIRMAN. Are you familiar with the estimates submitted for the expenses of the Commission during the coming fiscal year?

Mr. KNAPP. In a general way I am, but not so much in detail as our secretary.

The CHAIRMAN. You did not make up the estimates?

Mr. KNAPP. They were submitted to me before they were transmitted to the Treasury Department.

The CHAIRMAN. And approved by you?

Mr. KNAPP. Yes, sir.

The CHAIRMAN. I observe in the first item for salaries there is no change, and no change in the next, covering the salary of the secretary. In the next item, "For all other necessary expenditures," you ask for an increase of \$10,000 over the current appropriation.

Mr. KNAPP. Will you permit me to say, Mr. Chairman, that I have taken the liberty of coming here, at the request of our secretary, to share the responsibility which he should perhaps not wholly assume, and make one or two suggestions as to the form and amount of our appropriation.

So far as the general work of the Commission is concerned little is to be said. In the nature of the case, as you know, our work increases in volume year by year rather more rapidly than would be expected, and the increase for the coming year over the appropriation for the current year is a very moderate one, and certainly not out of proportion to the probable increase of the work and the expense to be incurred in carrying it on.

INQUIRY AS TO RAILROADS IN CONNECTION WITH COAL AND OIL.

The matter of uncertainty is the expenses which must be incurred in attempting to perform the duty cast upon us by this joint resolution recently adopted by the Congress.

The CHAIRMAN. You have submitted for that expenditure, however, a separate estimate?

Mr. KNAPP. We have made a separate estimate for that expenditure.

The CHAIRMAN. The increase I am now speaking of is the increase in your annual appropriation for carrying on the ordinary work of the Commission, and you say that is made necessary by the constantly increasing duties you have to perform in connection with the enforcement of the interstate commerce act.

Mr. KNAPP. Yes, sir. As the railway mileage increases the questions multiply, the statistical work enlarges, the number of tariffs is augmented, and the necessity arises for the employment of a larger clerical force.

About this joint resolution inquiry, Mr. Chairman—

The CHAIRMAN. Before you go on with that, Mr. Knapp, can you tell us whether there is any balance left over of your appropriation for the fiscal year 1905?

Mr. KNAPP. We always have had a balance. It is, approximately, \$10,000.

The CHAIRMAN. Mr. Moseley, will you just give us the balance for the year 1905?

Mr. MOSELEY. The balance at this time is \$10,702.45. That may be reduced somewhat by contracts for legal services which have not been fully completed.

The CHAIRMAN. That has been turned into the Treasury and is available for any obligations that the Commission has incurred during that fiscal year?

Mr. MOSELEY. Yes. The next year, 1904, the balance is \$10,392.02, and of the year 1903 it was \$3,000, and the year 1902 \$488, and the year 1901, \$1,588.34. We generally have something left over. The settled policy of the Commission is to save in every way we can.

Mr. SULLIVAN. That is the settled policy of all commissions, I take it.

Mr. MOSELEY. I do not know. We invite the closest scrutiny of our expenditures.

#### AMOUNT FOR EMPLOYMENT OF COUNSEL.

The CHAIRMAN. I observe, Mr. Knapp, that you want to increase the amount that may be expended in the employment of counsel from \$25,000 to \$30,000. Why has that been found to be necessary?

Mr. KNAPP. We ask now to greatly increase that limitation and for the reason—and that is one of the matters that I wish to bring to your attention—that it seemed to us that instead of having a separate appropriation for the expense of conducting this inquiry under the joint resolution, it is desirable and in the interest of economy simply to increase our general appropriation, putting some limitation upon the amount which may be expended for that purpose, so as not to require a separation of accounts. Where there is simply an added branch of work put upon the Commission it is practically impossible to have an actual separation of the expenses incurred in that work from the expenses incurred in other work.

Of course, as far as counsel are concerned, and experts, that would take care of itself; but to what extent we would find it necessary to increase our ordinary clerical force, which would be employed in part upon this work and in part on our general work, it is impossible to say. I am only suggesting, Mr. Chairman and gentlemen, that instead of making a separate appropriation for that purpose you should simply increase our general appropriation, and specify that only so much of the aggregate sum shall be used for legal services.

The CHAIRMAN. What would be the difference between a specific sum for that purpose and a limitation confining you to the expenditure of so much of the appropriation for that purpose?

Mr. SMITH. He means to add to the general appropriation and increase the amount to be allowed for the employment of counsel from \$25,000 to \$30,000.

Mr. KNAPP. We are asking for something under \$300,000 for our general purposes. Just increase that by whatever amount you will

allow us to expend for the purposes of this joint resolution, putting it all in one sum——

The CHAIRMAN. And then limiting the amount to be expended for the investigation?

Mr. KNAPP. Yes. A considerable sum will have to be paid to counsel in that investigation.

The CHAIRMAN. Do I understand you to say that you would be willing to have a certain amount of the general appropriation limited for this purpose?

Mr. KNAPP. Yes; only so much for counsel, only so much for library, only so much for printing outside the Government Printing Office.

Mr. SMITH. I understand your idea is that your present force might do some of the clerical work upon this new inquiry?

Mr. KNAPP. Yes; it would to a certain extent. For instance, there is a clerk on our pay roll to-day engaged on our regular work. To-morrow we may ask him to do something connected with this joint resolution.

Mr. TAYLOR. If the two items were not separated, would it not continuously require you to employ a different set of clerks?

Mr. KNAPP. Yes; there would also come up questions of light and furniture and stationery and everything of that sort in addition.

The CHAIRMAN. We have already given you in an urgent deficiency appropriation bill an appropriation of \$45,000, intended to be expended in the carrying on of this investigation during the current fiscal year. Is the manner in which that appropriation is made satisfactory to the Commission?

Mr. KNAPP. Entirely so. As I understand it, that is simply so much added to our appropriation for the current year. Of course we would not spend more than that.

The CHAIRMAN. The language used by the committee in framing that appropriation makes available so much money appropriated as may be necessary for clerical work and rent, etc., to be paid out of this appropriation, although it may be that some of the clerical force may be employed in the general work of the Commission.

Mr. KNAPP. I have not seen the language in which that appropriation is made.

The CHAIRMAN. The appropriation reads as follows:

To enable the Interstate Commerce Commission to give effect to the provisions of the act to regulate commerce and all acts and amendments supplementary thereto, including the joint resolution "instructing the Interstate Commerce Commission to make examinations into the subject of railroad discriminations and monopolies in coal and oil, and report on the same from time to time," approved March seventh, nineteen hundred and six, the sum of forty-five thousand dollars is hereby transferred to said Commission, and made available for the remainder of the fiscal year nineteen hundred and six, from the balance of the appropriation of five hundred thousand dollars for the enforcement of "An act to regulate commerce" and all acts amendatory thereof or supplemental thereto, and other acts mentioned in said appropriation, made in the legislative, executive, and judicial appropriation act for the fiscal year nineteen hundred and four, and reappropriated for the fiscal year nineteen hundred and six by the sundry civil appropriation act, under the Department of Justice: *Provided*, That the total amount that may be expended in the employment of counsel by the Interstate Commerce Commission shall not exceed the sum of forty-five thousand dollars during the fiscal year nineteen hundred and six, etc.

Now, we transfer from the fund appropriated in 1904 for the inquiry into the question of the violation of the antitrust law \$45,000, to be

available for the purpose, including the pay of clerical force; but it is to be expended in that way.

Mr. KNAPP. Yes; I understand it is to be an addition to our appropriations for the year, and while there is a limitation to the amount to be paid for counsel fees, there is not a limitation, as I understand it, of the amount we can spend for the purposes of this joint resolution inquiry, although we should regard ourselves as under obligation not to use out of the aggregate appropriation more than \$45,000 for that purpose, whether that is in the language of the bill or not.

Mr. SMITH. Do you mean, Mr. Chairman, that they would be willing that another appropriation be taken out of that \$500,000 fund?

The CHAIRMAN. I want to find out whether the language appropriating the \$45,000 in the urgent deficiency bill is satisfactory, so far as the money for this investigation is concerned. Suppose we carry this item just as we have here, \$300,000 or \$290,000, or whatever the committee may agree on, and then put in a separate item, using the same language as was used in the urgent deficiency bill, or \$100,000 additional.

Mr. KNAPP. There is no difference about that, Mr. Chairman.

The CHAIRMAN. That will enable Congress to keep some tab or some track of the amount which this investigation is costing, and when the investigation is ended we can go on with your regular appropriation.

Mr. KNAPP. Of course, it is no consequence to us where the money comes from, whether it is taken from the Department of Justice or some other source, the only point is to make it available for us. My suggestion is that by some appropriate language the addition for this purpose be in substance an addition to the appropriation for the next fiscal year, with a limitation upon the amount which may be used for that purpose, so that it will involve no separation of accounts, except as we should separate them to an extent and as far as practicable for the information of Congress later on.

In this connection let me bring up another point. At the present time we get one appropriation for our general purposes and another appropriation for the administration of the safety-appliance laws. Really that is simply one branch of our work, and not capable of complete separation from the other branches. The inspectors, of course, are separate and additional employees, but so far as the clerical work in the office is concerned, the keeping of accounts, as well as many other matters, it is all intermingled in a way that makes actual separation impracticable.

The CHAIRMAN. That argument would apply to almost any appropriation made for the other Departments, and if it were followed literally it would be impossible for Congress to keep in touch with the growth of any particular branch of your service. This is a separate service created by an act of Congress, and in order that Congress may be informed from year to year as to the growth there is no other way of appropriating for this service which has been specially provided for by law.

Mr. KNAPP. If you will pardon me, my suggestion would be this, that you add the safety-appliance appropriation to the other appropriation, and then further along in the section say "and not more than so much may be expended for safety-appliance purposes." Then we will make a report to you at the end of the year and show exactly how much we have used for that purpose. It is a matter of no great

importance. It would simplify the accounting and somewhat simplify the work of the accounting officers of the Treasury Department.

The CHAIRMAN. We will take that matter under consideration when we come to make up the bill.

How much do you estimate will be necessary or you will be required to spend in the next fiscal year in the investigation authorized by the so-called Tillman-Gillespie resolution?

Mr. KNAPP. We can only make the vaguest approximation. We have started in as promptly and as energetically as we know how and are organizing the work as well as we are able to do. We have employed counsel, who will be paid at the rate of about \$1,000 a month, which is certainly as small a sum as you could expect to secure competent men for. We are employing some expert engineers to examine these coal properties. A good deal of that work has been done. We have other employees working at the matter in other ways. I should say that our expenses are running now pretty well up to \$10,000 a month for that purpose. How long that will continue I have not any idea. It might considerably increase. It is likely to be considerably less during the summer months. I think a member of this committee is just about as competent to forecast the future requirements of that investigation as a member of the Commission.

The CHAIRMAN. Well, roughly estimating it, you think \$160,000 will enable the Commission to carry on the investigation during the coming fiscal year?

Mr. KNAPP. I think that is ample. I do not believe we shall use—I hope not—within a good many thousand dollars of that amount.

The CHAIRMAN. The reason I want to know is that if the committee later takes the view of the matter I do, I think that money ought to be taken out of the fund in the Department of Justice that has already been appropriated for similar investigations.

Mr. SMITH. If you should get the \$160,000 and a limitation is put on as to the amount to be expended for everything else, how much of that \$160,000 would be for attorneys' fees?

Mr. KNAPP. I should make the entire limitation \$50,000; that is, if the \$160,000 is given.

Mr. SMITH. Suppose the \$160,000 is given separately, how much of that would you want for attorneys' fees?

Mr. KNAPP. About \$30,000 or \$40,000.

Mr. MOSELEY. About \$40,000.

Mr. SMITH. Then your statement that if you do it together you can get along with \$50,000 and your asking for \$30,000 under the existing appropriation would hardly "notch?"

Mr. KNAPP. It would seem not, but this is the explanation, that while we have been allowed to expend up to \$25,000 or \$30,000 out of the general appropriation for counsel fees we have in point of fact expended very much less than that. I felt that \$50,000 would be all that we would need to pay for counsel fees for every purpose during the next fiscal year.

The CHAIRMAN. Including this investigation?

Mr. KNAPP. Yes, sir. We might save in one way and use a little more in another. I think it would be a little more suitable and work out better results if we did not try to separate the counsel fees, because we might have the same lawyer assisting in some feature of this resolution inquiry and he might be employed to argue some case

in the Supreme Court or elsewhere arising out of the general administration of the law. You could not make any useful separation, and we would keep our accounts so that when we come to make the next report to Congress it would show just how we charged it up to every purpose as we always have.

If I may venture another word, I am quite aware that Congress has from the beginning shown great confidence in the Commission by giving it an appropriation in a lump sum. I think the records will show that that confidence has never been abused, and I may be permitted to say, without meaning to reflect upon any other branch of the Government, that there has been less extravagance in the Interstate Commerce Commission than in almost any other bureau or department of the Government service. We have felt under a great moral obligation, because we were intrusted with this money to use as we saw fit, to scrutinize all our expenditures and neither in salaries nor any other way pay out a dollar which would not be approved by every member of this committee.

The CHAIRMAN. The next item is at the bottom of page 40 of the bill:

The unexpended balance of the sum of \$10,000 appropriated for the fiscal year 1899 by the "Act concerning carriers engaged in interstate commerce and their employes," approved June 1, 1898, which was reappropriated by the act of March 3, 1905, is hereby reappropriated and made available for expenses that may be incurred under such act during the fiscal year 1907.

Mr. MOSELEY. That is the arbitration law.

The CHAIRMAN. And this new language simply continues that appropriation available?

Mr. MOSELEY. Yes, sir; it reappropriates that money.

Mr. SMITH. Has that money ever been spent?

Mr. MOSELEY. No, sir; not a dollar.

Mr. SMITH. There has been no arbitration?

Mr. MOSELEY. No, sir; the fact that we have the arbitration law is, I think, one reason we do not have to use the money. There has never been a strike on the railroads since this law was enacted which has seriously interrupted business. In fact, I can not now recall any strike since its passage.

Mr. SMITH. That act was passed in 1898?

Mr. MOSELEY. Yes, sir.

Mr. SMITH. And there has been no strike since then?

Mr. MOSELEY. No, sir; no strike which has caused the public a moment's uneasiness or that gave occasion for the Government to intervene.

Mr. SMITH. Did not the strike of the machinists on the Union Pacific seriously interfere with commerce?

Mr. MOSELEY. No, sir; not in the train operation that the law applies to. This law applies to train operation. A man engaged in a shop is different.

Mr. SMITH. He is not covered by this law?

Mr. MOSELEY. No, sir. This is confined to the men engaged in the operation of the trains, the movement of trains, telegraphers, trainmen, conductors, engineers, and firemen.

Mr. KNAPP. Mr. Chairman, in order to make my suggestion definite I ventured to draft a provision which, with your permission, I will read:

Salaries of Commissioners, as provided by the "Act to regulate commerce," \$37,500; salary of secretary, as provided by the "Act to regulate commerce," \$3,500.

That must be in that form, as I understand.

All other necessary expenditures to enable the Commission to properly carry out the objects of the "act to regulate commerce" and all acts and amendments supplementary thereto, of which not exceeding \$50,000 may be expended in the employment of counsel, not exceeding \$1,500 may be expended for the purchase of books and periodicals, not exceeding \$1,500 may be expended for printing other than that done at the Government Printing Office, not exceeding \$85,000 may be expended to enable the Commission to keep informed regarding compliance with the "act to promote the safety of employees and travelers upon railroads," approved March 2, 1893, including the employment of inspectors to execute and enforce the requirements of said act,

Following the language of the present appropriation bill, you will observe—

and not exceeding \$160,000 may be expended in carrying out the objects of the joint resolution "instructing the Interstate Commerce Commission to make examinations into the subject of railroad discriminations and monopolies in coal and oil," approved March 7, 1906, \$504,000, making a total of \$545,000.

That does not provide for the transfer of any part of that money from any other fund, but it would accomplish just the purpose which I take the liberty to suggest.

The CHAIRMAN. Have you or the Secretary considered the item of printing? I see the language "printing other than that done at the Government Printing Office." Is that under this joint resolution which has been adopted?

Mr. MOSELEY. The fact is in regard to printing other than that done at the Government Printing Office, the Interstate Commerce Commission only needs at times to get the work done outside—for instance, they may have to get it done away from Washington, or when it has to be done over night and the Government Printing Office find they can not do it. But it is rarely that we have to do this. The amount we really expend is comparatively small. This is to provide for emergencies.

Mr. KNAPP. It is not new; we have always had that language in the law.

The CHAIRMAN. I understand, but what I am getting at is, the printing you have had done heretofore at the Government Printing Office has been charged to the Congressional appropriation for printing?

Mr. MOSELEY. Yes, sir; I understand.

The CHAIRMAN. And we addressed a letter to you on that subject?

Mr. MOSELEY. The fact is we could only tell what printing we have paid the Government Printing Office for. This information we had ready within an hour of the time that you sent the letter. But when we tried to find out how much Congress had paid for our reports, etc., the Printing Office informed us that they could not let us have that data, because if we got it then we would be ahead of somebody else in answering your inquiry, and that therefore they would hold it back and give it to everybody at the same time, so that no one should get the advantage of the other in showing promptness.

The CHAIRMAN. The Treasury Department has already submitted its reply to my letter.

Mr. MOSELEY. They told us that they would not let us have it then; that they would not allow any one Department to have it sooner than another Department.

Mr. TAYLOR. And then they proceed to handicap you by sending in their information first?

Mr. MOSELEY. We did not know that.

There is one other matter, and that is this: You understand there was \$500,000 appropriated for the enforcement of the antitrust law, the act to regulate commerce, etc., and its expenditure was placed in the hands of the Attorney-General. Out of that sum there has been a small expenditure, and you appropriated \$45,000 to enable this Commission to carry through the additional work which was placed upon it. That is added to our appropriation, as I understand it, to be available only after our entire appropriation is exhausted, or, in other words, we have got to spend every cent before we dip into that fund. That is the understanding I had when you were considering this matter in connection with the urgent deficiency bill, that the expenditure of the \$45,000 would necessarily only be made or the amount transferred to our appropriation until the entire appropriation for the Commission was exhausted.

The CHAIRMAN. Yes, sir.

Mr. MOSELEY. Now, coming to the proposed appropriation of \$160,000, as I understand it, if we do not expend \$45,000 there is no money covered into the Treasury. We have not drawn it out and it still remains to the credit of the \$500,000 appropriation. So if you appropriate \$160,000 and we only expend \$80,000 it results in drawing only \$80,000 from that appropriation, but does not take from that original appropriation of \$500,000, \$160,000 and segregate it. In other words, you are not taking out of this fund any more money than is absolutely necessary for the purposes of the Commission.

The CHAIRMAN. That is all.

Mr. MOSELEY. That is the only thing; you get my idea?

The CHAIRMAN. Yes, sir. That was the intention of the committee in doing it, because this \$500,000 had already been appropriated for almost the specific purpose for which the expenditures under this resolution must be made by the Commission, the only difference being that it was placed to the credit of the Department of Justice. If you are authorized by Congress to make an investigation independent of the investigation that the Department of Justice is authorized to make, there is no reason why that appropriation, in view of the large balance that there is on hand, should not bear the expense of the entire investigation incident to the question of whether or not the antitrust law in this particular has been violated. That was the reason we made the former appropriation available, and if you gentlemen do not expend the whole \$160,000 the remainder will simply remain to the credit of the fund and not go back into the Treasury.

Mr. KNAPP. That all goes to the financial policy of the Government, and is a matter for the judgment of this committee, with which we are not concerned.

There is only one point I wish to emphasize, and that is this: That whether it be safety appliance or the investigation under the joint resolution, or any other matter, they are all simply branches of the general work carried on by the same Commission, with the same organization, the same executive force, and the same clerical force; and

therefore segregation, such as would be contemplated and required by separate appropriations, is not only practically impossible, but tends to more or less confusion and want of economy; and therefore I came here to propose to the committee, if you could see your way to do so, that we should be glad to have the entire appropriation made in a lump sum, with limitations upon the amount to be expended for each purpose. Really, there is no more reason for separation between our safety-appliance work and our general work than there is between our statistical division and our general work, which is equally a separate branch, a very important one and one which is doing very excellent service.

The CHAIRMAN. I think I get your idea.

Mr. KNAPP. If you keep these limitations on the amounts that may be expended for each branch of the service, you seem to me to attain the same thing, you do not increase the expenditures of the Government a dollar, and you give the Commission a little more discretion, perhaps, and then what the Commission charges up to a certain branch of the service will be classified so that the accounting officers of the Treasury can pass upon it and no question can arise about it. Then, our report to you next year will show exactly what we have done.

Mr. TAYLOR. Do you anticipate any reduction in expenses by this suggestion of yours?

Mr. KNAPP. I do not claim that it would materially reduce the expenses.

Mr. SMITH. But it would save expenses?

Mr. KNAPP. Yes, sir; to an extent.

Mr. MOSELEY. As I understand, the Commissioners spend a certain amount of time in regard to one thing or another. The secretary's time is partly taken up with safety-appliance matters and partly with the other work of the Commission. How are you going to divide his salary of \$3,500?

The CHAIRMAN. The question in my mind is whether it would not be better to provide, as we do in other Departments, for the administrative work, or the executive force, so many clerks and so many employees, with, of course, an appropriation, with the understanding that they are employed in doing all the work of the administrative department as distinguished from your field force.

Mr. KNAPP. I make this observation, that so far as the members of the Commission are concerned there would be no sort of objection to that course. It would relieve us of considerable responsibility and of a great deal of annoyance. I am very confident, however, that it would not be a measure of economy. It is a small department, it is compact, and it is well organized. The work is all done right under the eyes of the Commissioners. There is not the need, therefore, to safeguard the Government by having a detailed appropriation which would arise in a great Department like the Treasury Department or some other large Department, and I am very certain, from my fifteen years' experience and some knowledge of what goes on elsewhere, that the appropriation to the Commission in a lump sum has been a very large saving to the Government and is every year.

Mr. MOSELEY. In that connection I want to say this: The employees of the Interstate Commerce Commission are employed by the month. They hold no positions. They are simply employees of the Interstate Commerce Commission. In any other Department if a man goes out,

dies, or resigns, there is a vacancy to be filled, and which means increase in pay in all grades below. The Interstate Commerce Commission have no such system of vacancies. In any of the Departments, as a matter of practice, the next person has the right to promotion; and if he is getting \$1,600 and a man goes out who is getting \$1,800, they promote him, but in the Interstate Commerce Commission we do not do it. We do it in an entirely different manner. We take up the merits of the employees once a year and deal with the question of pay. There are no positions, and therefore it is not urged that "Mr. So-and-so has gone out and therefore Mr. Jones should have his place." The Commission deal with it just as a mere matter of bargaining with the employee, and I can confidently assert to the committee that the salaries paid by the Interstate Commerce Commission are less than those paid in any other Department of the Government.

Mr. SULLIVAN. How many employees have you?

Mr. MOSELEY. Between 150 and 160 employees.

The CHAIRMAN. Does that include the field force?

Mr. MOSELEY. Yes, sir.

Mr. KNAPP. What the secretary says comes to this, where provision is made in the larger Departments for so many clerks at such a salary and so many at another salary, and so on, you create a position so that if there is a death or removal a legal vacancy exists. We have always avoided that. We have no legal positions; there are no statutory places, except those fixed in the act for the Commissioners and the secretary. Therefore no legal vacancies arise.

Mr. TAYLOR. You are subject to the civil service?

Mr. KNAPP. Yes, sir; absolutely and completely.

Mr. MOSELEY. And glad of it?

Mr. KNAPP. Yes, sir.

Mr. SULLIVAN. You conduct hearings in different parts of the country throughout the year?

Mr. KNAPP. Yes, sir.

Mr. SULLIVAN. Do all the Commissioners attend those hearings?

Mr. KNAPP. It is seldom now that more than a majority of the Commissioners attend the outside hearings. The work has so increased that it is impracticable for the whole Commission to go. Frequently not more than one Commissioner goes.

Mr. SULLIVAN. At times are all five Commissioners in attendance at hearings?

Mr. KNAPP. Yes, sir; usually when they take place in Washington.

Mr. SULLIVAN. Do the Commissioners conduct hearings at different places at the same time?

Mr. KNAPP. Yes, sir.

Mr. SULLIVAN. And sometimes the entire five Commissioners sit in Washington?

Mr. KNAPP. When a hearing takes place in Washington, usually all the Commissioners in town attend.

Mr. SULLIVAN. They are all lawyers?

Mr. KNAPP. All the present members of the Commission are lawyers. There are but four members of the Commission now, because there is a vacancy.

Mr. SULLIVAN. I did not know that. The Commissioners are kept pretty busy, I presume, throughout the year. Is the work of the Commission up, as a matter of fact?

Mr. KNAPP. I think I can answer that question with a very confident affirmative. It is true that there are a few contested cases of very large importance with very voluminous records which the great burden of other work put upon us this last year has prevented us from bringing to final disposition, but so far as everything else is concerned our work is kept right up to date.

Mr. SULLIVAN. The great bulk of cases where you have hearings are decided within a short time?

Mr. KNAPP. Often within thirty days.

Mr. SULLIVAN. And only in cases of extraordinary importance are the decisions deferred?

Mr. KNAPP. Yes, sir.

Mr. SULLIVAN. Usually all the Commissioners have been busy attending to their official duties as Commissioners?

Mr. KNAPP. I think to an extent that is unusual in the Government service.

Mr. SULLIVAN. Do any of the Commissioners practice law apart from their duties as Commissioners?

Mr. KNAPP. I have not known of such a thing.

Mr. MOSELEY. That would be contrary to law.

Mr. SULLIVAN. That is in the law?

Mr. KNAPP. Yes, sir. I do not ask any employee of the Commission to work more hours or with greater diligence than I try to myself. I am usually at my desk shortly after 9 o'clock and generally stay there until nearly 6 o'clock.

The CHAIRMAN. What was the date of the passage of the so-called Tillman-Gillespie resolution?

Mr. KNAPP. It was approved on the 7th of March.

The CHAIRMAN. You received the appropriation to enable you to go on with the investigation authorized by the resolution only a week or ten days ago?

Mr. KNAPP. I do not know when we got the appropriation. We went right on just the same.

The CHAIRMAN. The urgent deficiency bill has become a law quite recently; but you went on in anticipation of the appropriation immediately and organized for the investigation?

Mr. KNAPP. Yes, sir.

The CHAIRMAN. And you are conducting it now just as rapidly as possible?

Mr. KNAPP. We began within forty-eight hours. We have already had six days of public hearings and are to begin again on Monday.

The CHAIRMAN. The Commission began promptly to make the investigation upon the passage of the resolution?

Mr. KNAPP. I think I may say that we began with extraordinary promptness.

#### SAFETY OF RAILROAD EMPLOYEES.

The CHAIRMAN. I observe you ask for an increase of \$10,000 "to enable the Interstate Commerce Commission to keep informed regarding compliance with the 'act to promote the safety of employees and travelers upon railroads,' approved March 2, 1893, including the employment of inspectors to execute and enforce the requirements of the said act." You estimate for \$85,000 for the next fiscal year as against \$75,000 appropriated for this year, and you have this year asked for a deficiency of \$8,000?

Mr. MOSELEY. Yes, sir.

The CHAIRMAN. You have practically for this fiscal year the amount which you ask for the next fiscal year?

Mr. MOSELEY. Yes, sir.

Mr. KNAPP. In other words, the amount asked for the next fiscal year does not contemplate an increase in the inspectors' force. I would like to take your time for just one moment to say that supplementing the safety appliance law Congress passed a law requiring railroads to make reports of accidents, and they are all doing so, making monthly reports. There is no value to those reports to anybody unless they are analyzed, compiled, and tabulated to show the characteristic accidents, and thus indicate what may be done for their prevention. It is the statistical work done upon those reports which makes the law of any usefulness. Yet you have never given us a dollar for that purpose, and we have carried that work along out of our general appropriation. We have not asked it, but that accounts in part for the expansion of the Commission's general activity and expenses.

Mr. MOSELEY. You know, Mr. Chairman, that I came up here and asked you for money in addition to the \$75,000—that is, the unexpended balance which we had left over from the former year—but I told you that I did not know whether we were going to spend it. I think we may be able to save it. Mr. Mann, of Illinois, on the floor some time ago said that this bureau ought to be largely increased. The difficulty is, sir, that this properly must be a matter of slow growth. We want to get the best men we can and we want to feel our way. We do not want to build up a great establishment like the Life-Saving Bureau, spending from \$2,000,000 to \$3,000,000 a year. We do not want to build up anything of that sort. We had the same amount of money last year, with the reappropriation given us, which we are asking this year.

Mr. KNAPP. I want to indorse that statement with a word of comment. Of course the secretary has taken a peculiar interest in this matter of the safety of railway employees, and, as everybody knows, his interest and activity had very much to do with the passage of the law, as it has to-day with its administration, but I think it would be very unwise for the Government to appropriate \$500,000 or a million dollars for this purpose on the theory that if a little of this is a good thing a great deal of it would be better.

It is a matter of growth, a matter of development, of education, and there are no more difficult men to get for the varied requirements of this service than the men which we feel warranted in employing as inspectors of safety appliances. They must be men of sufficient intelligence and address to go to a junction point and present their credentials to the chief railroad official, be able to meet men of that class on a footing of equality, and ask to have a man assigned to assist them; and at the same time they must be willing to put on overalls and go under a car. They must be men of discretion and judgment. Our direction to the employees is to allay friction rather than to increase it. I believe they are doing very valuable work and it is one which will gradually increase, but I am not in favor of undertaking to increase it rapidly.

The CHAIRMAN. If you were given \$100,000 this year it would be impossible, under the plan of development of this service, to expend it?

Mr. KNAPP. We could put on a few more inspectors.

The CHAIRMAN. But it would not be actually necessary?

Mr. KNAPP. We are not asking it.

Mr. MOSELEY. We are not asking it, Mr. Chairman. I want to tell you one thing about it. This is not strictly under the civil service, and there is a tremendous amount of pressure all the time to have the Commission nominate men for examination for the position of safety-appliance inspector.

Mr. TAYLOR. How many inspectors have you?

Mr. MOSELEY. Twenty inspectors. Now, if you increase the appropriation there will at once come a large force from all quarters saying, "We must have our men put on." I am telling you just as it is. We do not want that. We are getting along. If you should increase that force to 150, you know from what quarters that influence would come. What is the use. We are getting along now.

The CHAIRMAN. You would not then have as good a force as under the present conditions?

Mr. MOSELEY. No; to the extent which it is now when everyone employed is personally looked into at his home to find out what his standing is in his community, what manner of man he is.

Mr. KNAPP. In the first place we have regulations of eligibility and then every candidate is examined. He is inquired into and he is taken before the Civil Service Commission and everything is done with their approval.

## PAPER FOR INTERNAL-REVENUE STAMPS.

### STATEMENT OF MR. J. C. WHEELER, DEPUTY COMMISSIONER OF INTERNAL REVENUE.

The CHAIRMAN. On page 41 of the bill, under "miscellaneous objects, Treasury Department," in the paragraph "paper and stamps," you do not ask for any increase in the appropriation for the coming fiscal year over the current appropriation, but you propose to insert new language in the paragraph, which is as follows: "and salaries of superintendent, counters, messengers, and watchmen." What is the idea of including that language?

Mr. WHEELER. I must say, Mr. Chairman, that I do not know the reason for the insertion of that language. I have never seen this bill before. It has probably been put in through conference with the Commissioner. He is absent from the city now. I have never been consulted in regard to it. I will furnish that information to the committee.

Mr. SMITH. I notice that this paragraph reads "paper and stamps" in place of "paper for stamps?"

Mr. WHEELER. It is for paper for internal-revenue stamps.

Mr. SMITH. Is it for paper and stamps?

Mr. WHEELER. No; it is simply paper for stamps—the paper for printing the internal-revenue stamps. That is the only thing that comes under that head.

The CHAIRMAN. Out of this appropriation you have heretofore paid the salaries of the superintendent, counters, messengers, and watchmen?

Mr. WHEELER. No, sir; I do not think we have. The only thing we have paid is the paper, and sometimes the express charges on special lots where delivery has been made in a hurry.

The CHAIRMAN. From what appropriation have the salaries of the superintendent, counters, messengers, and watchmen been paid that are now proposed to be paid out of this appropriation?

Mr. WHEELER. I think they must have been paid from some other appropriation.

The CHAIRMAN. If that is so, the other appropriation could be reduced by the amount that you propose to pay out of this appropriation?

Mr. WHEELER. If that is true. I will look that up and see.

The CHAIRMAN. Have you a statement of the balance of the appropriation for the fiscal year 1905?

Mr. WHEELER. Yes, sir. I hurriedly drew off a statement for 1904 and 1905 and up to the present time of 1906.

The CHAIRMAN. What is that statement?

Mr. WHEELER. In 1904 the original appropriation was \$65,000, and we had a deficiency appropriation of \$10,533.27.

The CHAIRMAN. That was 1903-4?

Mr. WHEELER. Yes, sir; the year ending June 30, 1904.

The next year, 1905, we had an appropriation of \$70,000, and our expenditures were \$58,926.79, leaving an unexpended balance of \$11,073.21. For the present year the appropriation is \$65,000, and for the nine months the expenditures were \$48,720.20, which would, at the same rate, make the expenditures for the year \$65,060.24, which would show a deficit of \$60.24, provided the expenditures kept up.

The CHAIRMAN. What are the items of expenditure?

Mr. WHEELER. I did not draw them up. They are principally the pay for the paper.

The CHAIRMAN. Do you know whether any salaries are paid out of the appropriation?

Mr. WHEELER. I do not think there are. That is the way it strikes me.

TREASURY DEPARTMENT,  
OFFICE OF COMMISSIONER OF INTERNAL REVENUE,  
Washington, April 21, 1906.

HON. JAMES A. TAWNEY,

*Chairman Committee on Appropriations, House of Representatives.*

SIR: Referring to the sundry civil appropriation for 1907, in which is incorporated the estimate for paper for internal-revenue stamps, concerning which a representative from this Office appeared before your committee yesterday, I have the honor to advise you that the title of the appropriation for paper for internal-revenue stamps, 1907, should read: "For paper for internal-revenue stamps, including freight."

It appears upon investigation that the title was inadvertently made to include the words "and salaries for superintendent, counters, messengers, and watchmen."

These items have been omitted from this appropriation for several years past, for the reason that such expenses are no longer borne by the Government.

Paper for internal-revenue stamps is delivered at the Treasury Department by the contractor without expense to the Government for freight or other charges.

However, sometimes emergencies arise when a shipment is ordered by express, in which case the difference between the cost by express and that by freight is paid from this appropriation.

Respectfully,

ROBT. WILLIAMS, Jr.,  
*Acting Commissioner.*

## PUNISHMENT FOR VIOLATIONS OF THE INTERNAL-REVENUE LAWS.

The CHAIRMAN. The next item is on page 42 of the bill, "Punishment for violations of the internal-revenue laws." What balance did you have at the close of the fiscal year June 30, 1905?

Mr. WHEELER. We had an unexpended balance for the year 1905 of \$18,006.94. The previous year, the appropriation being the same, \$100,000, the expenditures were a little less, and the balance turned in that year was \$26,580.41. That is for 1904. For the present year I have the reports up to and including eight months of the present fiscal year, and, figuring from that, for the twelve months at the same rate we would have a balance unexpended of \$6,699.92. I wrote this down, thinking perhaps that I might leave it here to show the reasons of this unexpended balance to a certain extent.

In order to meet emergencies that are likely to arise in the service requiring prompt and decisive action in the discovery and punishment of frauds, the fund available has been carefully hoarded, and where no extraordinary occurrence has called for unusual expenditures a balance of the appropriation has been saved and covered into the Treasury.

The benefit to the internal revenue of the fund for the discovery and punishment of fraud is very considerable, and if the amount to be appropriated were half as much again, or \$150,000 instead of \$100,000, it would prove an excellent investment. The persons employed from this fund render important services to the force of revenue agents in the field, making the work of the agents doubly effective. Of course, we are not asking for an increase.

The CHAIRMAN. But you are merely illustrating the benefit of an increased appropriation?

Mr. WHEELER. Yes, sir; it would be well to do that.

## BOOKS OF REFERENCE—CHEMICAL LABORATORY.

The CHAIRMAN. Can you tell me whether the \$500 which is specifically appropriated out of this fund for books of reference and periodicals for the chemical laboratory has been expended?

Mr. WHEELER. In the regular appropriation bill I do not think that expenditure was specifically provided for and that was the reason it was put in this bill.

The CHAIRMAN. There is a law which prohibits the Department from buying books for any purpose unless they are specifically appropriated for. That is the reason it is in this bill. I want to ascertain whether or not the Internal Revenue Department is purchasing law books, books of reference, and periodicals for the chemical laboratory?

Mr. WHEELER. They are. They have been purchasing large numbers of them, and I have no doubt that appropriation of \$500 has been practically used up. The work of the laboratory has increased very materially. We have had to put on an extra force.

TREASURY DEPARTMENT,  
OFFICE COMMISSIONER OF INTERNAL REVENUE,  
Washington, April 24, 1906.

HON. JAMES A. TAWNEY,  
*Chairman Committee on Appropriations, House of Representatives.*

SIR: In reply to the inquiry of your committee I have the honor to call attention to the proviso in the appropriation bill "For detecting and bringing to trial and punishment persons guilty of violating the internal-revenue laws or conniving at the same," for the current fiscal year, as follows:

"*Provided*, That necessary books of reference and periodicals for the chemical laboratory and law library, at a cost not to exceed five hundred dollars, may be purchased out of the appropriation made for the fiscal year 1906 for salaries and expenses of agents and surveyors, fees and expenses of gaugers, salaries of storekeepers, and for miscellaneous expenses."

No authority for this expense is conferred in any other appropriation bill. The absolute necessity for the purchase of books and periodicals for use of the office has been demonstrated, and should authority for incurring the expense be omitted it would seriously interfere with the current work of the Bureau.

I would, therefore, recommend that the above proviso be reenacted in the pending bill for the fiscal year 1907.

Respectfully,

ROBT. WILLIAMS, Jr.,  
*Acting Commissioner.*

FRIDAY, April 20, 1906.

### TRANSPORTATION OF SILVER COIN.

**STATEMENT OF HON. L. M. SHAW, SECRETARY OF THE TREASURY, ACCOMPANIED BY MR. CHARLES A. TREAT, TREASURER UNITED STATES; MR. JOSEPH NOBLE; MR. JAMES I. GERRY, CHIEF CUSTOMS DIVISION.**

The CHAIRMAN. On page 43 there is the item "Transportation of silver coin," and the estimate for the coming fiscal year is \$120,000. You have an appropriation of \$120,000 for the current fiscal year, which has not been sufficient to meet the requirements of that service?

Mr. SHAW. We have been using about \$40,000 to send the fractional currency out. That, I am of the opinion, ought to be continued.

The CHAIRMAN. That is continued under the last urgent deficiency appropriation bill?

Mr. SHAW. Yes, sir. We have been using about \$40,000. If it is not \$50,000, it ought to be \$50,000. I do not see the occasion for the Government to pay the transportation of silver any more. The reasons that existed for that previously do not exist now.

The CHAIRMAN. Have you the reasons?

Mr. SHAW. The policy then was to send out all the silver we could. We were buying large quantities of silver and coining it; that is, we were sending out all the silver that the country would absorb, and we did everything we could to get it into circulation; but we have quit buying silver and quit coining it, and most of the silver is out that is not covered by silver certificates, and there is no reason why we should ship silver free that does not apply to the shipping of any other kind of money.

The CHAIRMAN. If the appropriation is made for the transportation of fractional currency, will you continue your present contract with the United States Express Company for that purpose?

Mr. SHAW. I know of no reason why we should not. I do not know how long the contract runs. Of course, without looking it up, if the

contract expires, we will then advertise and get the best contract we can; but I think the contract was made for some length of time.

Mr. TAYLOR. Is there any difference in the contracts made for the carrying of silver dollars and fractional silver?

Mr. SHAW. I have not looked it up, but I would say no. I think it is the same for sending money of every character.

The CHAIRMAN. I think the contract is only for one year.

Mr. SHAW. Subject to renewal?

The CHAIRMAN. Subject to renewal; but the investigation which was given the subject in the preparation of the last urgent deficiency appropriation bill revealed some practices on the part of the express company and some abuses that I think could be corrected in the contract and ought to be looked into with some care before a new contract is made. For example, in the first urgent deficiency bill hearings it was brought to the attention of the committee—it did not appear, however, in the hearings, but the information was entirely reliable—that a bank at Yonkers, 20 miles from the city hall in New York City, ordered some silver from the subtreasury, and it was shipped from New York up to some place in the State, 250 miles from the city, and then transferred to another express company. The first shipment was by the United States Express Company, then it was transferred to another express company to a place known as Tarrytown, I think it is, 250 miles, and then transferred to a third express company and shipped about 50 miles to Yonkers. The entire distance which that silver was shipped to reach the point of destination was something like 500 miles, and under the terms of the contract we could see how it was possible to do that. I am simply calling your attention to it.

Mr. SHAW. I never looked up the contract at all. I knew there was a contract that existed, and that is all. I do not remember what it is.

The CHAIRMAN. The Committee on Banking and Currency has given perhaps more consideration to the subject than this committee has, and when the urgent deficiency bill was under consideration in the House, Mr. Smith, a member of that committee, and Mr. Hill, of Connecticut, formerly a member of that committee, both participated in the debate, and some things were brought out showing that there was an opportunity under your existing contract for abuses such as that referred to.

Mr. TAYLOR. I asked if there was any difference in the charge for silver dollars and fractional silver coin. Under this item, as the language appears to me, it would be discretionary with you whether you sent out silver dollars or silver coin.

Mr. SHAW. The old form was "The Secretary of the Treasury is authorized and directed to transport from the Treasury or subtreasuries free of charge silver coin when requested to do so."

Mr. TAYLOR. That would not really be discretionary?

Mr. SHAW. No, sir; it is one of those bills that uses a few more lines than are necessary.

The CHAIRMAN. How much silver coin can you ship by registered mail at one shipment?

Mr. SHAW. We can not ship coin to amount to anything. That is impracticable.

Mr. SMITH. I would like to know why it is impracticable. Registered mail goes in packages for Congressmen weighing hundreds of pounds.

Mr. SHAW. I have heard so.

Mr. SMITH. And there is a registered mail office in every place in the United States where there is an express office. I would like to know just the reason why it is impossible for the Government to take this money out of one pocket and put it into another rather than to pay the express company, and that applies both to the last item and this item, for the United States Express Company gets practically all the money under both items.

Mr. SHAW. I do not know as to that. The heavy mail is not registered.

Mr. SMITH. It may be, and is in some instances.

The CHAIRMAN. I think the law limits the weight of a registered package to something like 14 or 16 pounds.

Mr. SMITH. Mr. Roberts, a Congressman from Massachusetts, told me that he always registered his boxes that are annually provided to his home. I know nothing about such regulations as you speak of.

Mr. SHAW. There is a regulation about the weight of mail. It was criticised some time ago. Some newspaper had a very long article on that point.

Mr. SMITH. That was a criticism of the abuse of the franking privilege—not of the weight of the packages.

Mr. SHAW. In talking with the Postmaster-General and asking for a report on that subject we found that there was a regulation against it. I do not remember just the details.

Mr. SMITH. That is a minor detail which could be corrected. What are the objections to carrying the United States securities in this item and in the last item by registered mail, and instead of paying it to the express company pay it to ourselves?

Mr. SHAW. I think you would find that you paid something for it, because it would go into the cost of the mail, but there might be a saving in it. I never investigated that matter.

Mr. SMITH. I am trying to get at why it is deemed impracticable. This law has always read "by registered mail or otherwise," and yet as far as I know the Department has not made any effort. Why is it impracticable?

Mr. SHAW. I am glad you raised that question. If I should come over again ten days from now I would be able to give you better information. It is the first suggestion I have had. It struck me at the first blush that it would be impracticable to send big packages by registered mail, money in very large packages. What has attracted just a little attention is the importation of gold. The recent order has resulted in starting 35 tons of gold to the United States. Well, that sounds larger than it does to say \$17,000,000. When they order silver it is a pretty heavy package. Of course, it could be done up in small packages.

Mr. TAYLOR. Is it put up in thousand-dollar packages, or can you make the packages any size?

Mr. SHAW. Any size.

Mr. SMITH. As to the last item we passed, of \$240,000, last year you only spent \$210,000, and \$175,000 of that amount went to the United States Express Company, and substantially that relation is true of this item. It is scarcely to be conceived that this would increase the weight of the United States mail so as to materially enlarge the annual railroad compensation. I want to ask another question: Do you

know whether or not there are companies in existence which insure registered mail?

Mr. SHAW. I do not know. There are, probably. If there is any demand for it, there is; and if there should be any demand, there will be. You know these casualty companies insure everything in the world, and if there was a demand they would figure that out.

Mr. SMITH. You do not know what the rates are for the insurance of registered mail?

Mr. SHAW. No, sir.

Mr. SMITH. Would it be feasible to inform the committee within a short time what objections exist to making shipments under both the last items and this item by registered mail in place of by express and what would be the cost of insuring all this matter in transit so as to cover everything that is gained by shipping it by express?

Mr. SHAW. I will certainly do that. I am going to be away for a week, but I can have that information prepared in my absence.

The CHAIRMAN. There are reasons why the Government should encourage the shipment of fractional currency to banks that do not apply to the silver dollar?

Mr. SHAW. Yes, sir; there are reasons, you might say, why the Government should pay the express charges on all money, but there are no reasons why it should pay the express charges on silver and not on silver certificates. There are more reasons why the Government should pay the charges on paper money to encourage its redemption and reissue in better form, because in some localities where it is out a good ways, they use the paper money until it is pretty badly worn. I get a good many letters. I got one from the president of the State board of health of Pennsylvania urging that the Department in some way encourage or secure legislation to encourage the prompt redemption of "filthy and disease-breeding money," as they call it. In answering, I called his attention to the fact that we had a hundred people doing nothing else than separating it and we have had no symptoms of disease from it yet.

The CHAIRMAN. The fractional currency of course is necessary in the transaction of business in making change whereas silver dollars are not absolutely necessary, for the reason that we have silver certificates.

Mr. SHAW. They are quite distinct. The banks pay the express charges on other money to supply the need and no community is suffering for money if it exists anywhere. The country is suffering for one and two dollar bills, but it is not because the banks hesitate to pay for their transportation. It is because we do not have them. It is not so with the fractional money. We have a large amount of fractional money on hand in the vaults and many localities are scarce of fractional money. At the same time I do not see any reason for transporting that.

The CHAIRMAN. Can you give the committee information as to the extent to which this \$120,000 is paid out in express charges to country banks, smaller banks in the smaller places?

Mr. SHAW. No; it is not tabulated in that form.

Mr. SMITH. If a country bank wanted silver does it not order it through the big bank so that the big bank has the transaction with the treasury?

Mr. SHAW. If a bank at Logan wanted some silver money it could be sent from the subtreasury free to Logan. It could not be sent from the Council Bluffs bank to Logan free.

Mr. SMITH. You do not understand. Suppose the Logan bank wanted some silver money, to take your own illustration, they would have to deposit paper money or some other equivalent in one of the subtreasuries in order to have the money shipped?

Mr. SHAW. Yes, sir.

Mr. SMITH. And would not the Logan bank write to its Chicago or New York correspondent to have that money forwarded from the subtreasury, and would it not go on the books as being done at the instance of the New York or Chicago correspondent rather than at the instance of the Logan bank?

Mr. SHAW. That may be true. Our transaction might be with the First National Bank of Chicago and they might order a thousand silver dollars sent to Logan. You can not depend upon who orders it; you would have to depend upon the destination in order to determine that.

Mr. TAYLOR. Have you any data by which you could state what sections of the country ask for silver?

Mr. SHAW. No; except that I know this, that in practice we scarcely see a silver dollar in circulation east of Chicago except in the South. The West and the South are the only places where silver is actually used.

Mr. TAYLOR. That is, the silver dollar?

Mr. SHAW. Yes, sir; and the farther you get into the interior the more likely you are to find silver in actual circulation.

Mr. TAYLOR. Is there any particular reason for that in the West?

Mr. SHAW. No; there is no reason except, you might say, sentiment. Why, the Pacific coast never used paper money during the civil war. They kept gold in actual circulation. It is the sentiment of the community more than anything else.

Mr. TAYLOR. Do you know any reason why that obtains in the South?

Mr. SHAW. No; I do not. I have heard it stated that the negroes preferred silver.

Mr. TAYLOR. Did you ever hear any other reason than that?

Mr. SHAW. No, sir.

The CHAIRMAN. Have you had your attention called or do you know whether business houses, other than banks, have called on the subtreasuries for the free transportation of silver dollars and coin?

Mr. SHAW. They have frequently called for silver coin and I doubt not they have asked for its shipment. I know of a few concerns—department stores and the like—that make a boast and advertise that they pay out nothing but new money. There is one concern in Boston. Their representative came down here and he told me that they were putting the silver dollar through an acid process of cleaning so that it appeared to be entirely new and they wanted new bills, and they sent their agent down here to see if there was any way to get them. So I have no doubt that private concerns have ordered money of this kind, but if they do, they order it because it is new. Otherwise they go to the banks for it naturally. Then, some banks have a ladies' department, where they say: "We give out no money that is not fresh and new and free from germs," and sterilized for all I know.

## TRANSPORTATION OF MINOR COIN.

The CHAIRMAN. The next item is on page 44, "Transportation of minor coin." When you are requested to do so you have no discretion as to whether or not you will ship minor coin at the expense of the Government?

Mr. SHAW. Oh, no.

Mr. SMITH. But the language of this proviso reads: "That an equal amount in coin or currency shall have been deposited." What do you interpret the word "coin" to mean? Does that include fractional coin?

Mr. SHAW. Yes, sir.

Mr. SMITH. Ought not this to provide for legal tenders?

Mr. SHAW. No, I think not, for really if it is going to be carried at all it ought to be to get the poor, worn fractional currency back. That would be the only coin sent out, the fractional silver that is worn, and that is desirable. We have very nice coins in circulation. They are in fine condition. The law of a few years ago against mutilating has cleaned out all the bad coin, and you scarcely find a dime now that is worn to any extent. In a swing of years, if this is not permitted to be returned, you would find the country filled with worn dimes.

## RECOINAGE OF GOLD COINS.

The CHAIRMAN. The next item is on page 45 of the bill, "Recoinage of gold coins." That is under a statute requiring that to be done. You estimate the amount which will be needed for the next fiscal year at \$7,000, against \$6,000, the current appropriation?

Mr. SHAW. We have had a deficiency there.

The CHAIRMAN. In 1905 there was a deficiency of \$10,000. You have had no deficiency, however, this year. There is none estimated for thus far, as far as I know.

Mr. SHAW. I do not know. There is much more in circulation.

The CHAIRMAN. That is merely a matter of bookkeeping?

Mr. SHAW. Yes, sir; and this extra \$1,000 does not affect it very much one way or the other.

The CHAIRMAN. When a gold coin is reduced by abrasion or otherwise you are obliged under that statute to recoin it?

Mr. SHAW. Yes, sir; and it ought to be recoined.

The CHAIRMAN. And this simply makes up the difference between what it actually is and what it should be and the expense of recoinage?

Mr. SHAW. Yes, sir.

## DISTINCTIVE PAPER FOR UNITED STATES SECURITIES.

(See also H. Doc. No. 715.)

The CHAIRMAN. The next item is "Distinctive paper for United States securities." The committee think that language should be changed. As it reads now the appropriation is available for the purchase of any other paper which you want, whereas it should be confined to distinctive paper for United States securities. Is there any objection to that change?

Mr. SHAW. None.

The CHAIRMAN. The appropriation has heretofore been expended for no other paper?

Mr. SHAW. No, sir. It is an unnecessary change, but there is no objection to it.

The CHAIRMAN. The necessity for the change is to make it express what is intended?

Mr. SHAW. Yes, sir.

The CHAIRMAN. I do not suppose you made up the estimate for this item?

Mr. SHAW. No, sir; I did not.

The CHAIRMAN. What officer of the Treasury Department would be enabled to enlighten the committee as to the necessity for the increase of \$10,770.28 in the appropriation?

Mr. SHAW. I think Mr. Noble could answer that question.

The CHAIRMAN. Please state to the committee the necessity for this increase.

Mr. NOBLE. The increase of how much?

The CHAIRMAN. You estimate \$260,770.28, while the current appropriation is \$250,000.

Mr. NOBLE. We make up our estimates from the estimates of the Treasurer of the United States, what he will need during the coming year, and we figure the amount of notes which he says he will issue and we figure the spoilage and that will make up the number of sheets which are supposed to be wanted for that year.

Mr. SHAW. In making up this estimate I might say that we will have to have more small bills printed, and that will of course take more paper.

Mr. SMITH. You do not understand that this covers that?

Mr. SHAW. This is the distinctive paper for the silver certificates, the United States notes, and the national-bank notes. It is the same kind of paper.

Mr. SMITH. You characterize the currency as the securities?

Mr. SHAW. Certainly; the United States securities. It is true of gold and silver certificates. It may not be true as to greenbacks and national-bank notes. Of course those are not national securities.

The CHAIRMAN. You have another appropriation for distinctive paper for national currency?

Mr. NOBLE. Yes, sir.

The CHAIRMAN. What do you include under that head—what kind of currency?

Mr. NOBLE. National bank notes.

Mr. SMITH. Is the paper any different in quality?

Mr. NOBLE. No, sir.

Mr. SHAW. But bought under different appropriations.

The CHAIRMAN. Have you been able to supply all the paper which has been required or will be required during this fiscal year?

Mr. NOBLE. We are running short of paper now. The Department intends to keep a six month's supply of paper on hand in order to get it well seasoned, and we require under the present issue of the Treasurer of the United States about six months' supply—that is, about 24,000,000 or 25,000,000 sheets.

The CHAIRMAN. It is also proposed to retain these notes when they are completed for from three to six months, in order that they may be seasoned before sending out?

Mr. SHAW. That ought to be done, but we are not able to do it.

Mr. TREAT. We have had to send out some which were only three days seasoned.

The CHAIRMAN. Will you have a deficiency in this appropriation of \$250,000?

Mr. NOBLE. No, sir; we asked last year for \$260,00, and you gave us \$250,000.

The CHAIRMAN. Yes, sir. Last year you asked for the same amount and you have gotten along with \$250,000.

Mr. NOBLE. But the reserve of six months is being encroached upon.

Mr. SHAW. There is a bill pending to authorize gold certificates in the denomination of \$5 to accommodate the public, and of course more small money with the same volume will require more paper. I do not think that you can cut that appropriation.

Mr. TREAT. For the increase for the coming year, following the suggestion of the Secretary, we shall need an extra amount over the present requisition of 7,800,000 sheets. That is to take the place of the additional quantities of ones, twos, and fives, including the gold certificates which the Secretary alludes to, will require 26,000 sheets daily, and three hundred working days 7,800,000 extra sheets. The present requisition from the Bureau is 43,120,000, and adding the 7,800,000 would make the requirement for the year 50,920,000 sheets.

Mr. NOBLE. Instead of the amount we estimated for in October.

## SPECIAL WITNESS OF DESTRUCTION OF UNITED STATES SECURITIES.

The CHAIRMAN. The next item is "Special witness of destruction of United States securities."

Mr. SHAW. We destroy those that are redeemed, and it takes a certain amount of help, and we employ those people and pay them.

Mr. SMITH. A person outside the Department is employed for this purpose?

Mr. SHAW. Yes, sir; a person from the outside and two people from the inside; so you have a pretty good check on them.

Mr. NOBLE. The special witness for the United States securities is a gentleman appointed by the Secretary to represent the people, and the other members of the committee are the representatives from the Register's office and the Treasurer's office.

Mr. SHAW. What is destroyed?

Mr. NOBLE. All United States notes, silver certificates, and everything of that character except the national bank notes.

Mr. TREAT. In order to meet the requirements, in addition to what was estimated for in October, we shall need three extra presses and four extra separators. The cost of the presses represents \$1,500 each, or \$4,500, and the cost of the separators will be \$350 each, or \$1,400. That will be \$5,900 which we shall need for extra machinery.

The CHAIRMAN. Have you submitted a special estimate?

Mr. TREAT. Yes, sir.

The CHAIRMAN. It must be submitted through the Secretary of the Treasury, so that we may have it in the form of a printed document.

## SEALING AND SEPARATING UNITED STATES SECURITIES.

Mr. TREAT. There is one item of \$1,750 for sealing and separating United States securities. Last year you gave us \$1,500, but we will require \$2,000 for the extra amount of work that must be done.

Mr. SHAW. You do not think \$1,750 will be sufficient?

Mr. TREAT. No, sir. We are going to print 7,800,000 additional sheets, and therefore we ask for \$250 more than the estimate which was made in October.

## CUSTOMS SERVICE SPECIAL AGENTS.

The CHAIRMAN. There were some matters that you wished to bring to the attention of the committee, Mr. Secretary?

Mr. SHAW. Yes, sir. The appropriation under the law authorizes a certain number of special agents.

The CHAIRMAN. In the customs division?

Mr. SHAW. Yes, sir. Do you remember, Mr. Gerry, how many there are?

Mr. GERRY. There are 18 at \$8 a day, 9 at \$6 a day, and 1 at \$10.

Mr. SHAW. Making 28. I have asked that that number be increased to 30, and that the pay of one of them be increased from \$8 to \$10 a day. That is the agent at New York. It is pretty expensive to live in New York, and he has to pay his own expenses when at home. Heretofore and perhaps for twenty years they have stationed the man at Albany and then detailed him to New York so as to allow him his expenses when away from home, which, of course, was a deception, and I did not want that. I put the man down at New York. He goes over to Hoboken to examine the docks and he pays for his own luncheon and his own dinner and expenses of that kind, and he ought to have \$10 a day. There is no man in the Department who is so able to save us money. To give you one illustration: Through one of his men he got after the duty on lemons, which is 1 cent a pound, is it not?

Mr. GERRY. Yes, sir.

Mr. SHAW. They were not being weighed enough and he employed a man to watch them. He works fifteen hours a day some days. We saved last year in the duty on lemons, taking the average weight of the boxes, \$160,000 from that man's work, watching the weight of lemons. Then a short time ago there was an undervaluation in artichokes. We do not bring in very many, seemingly. He got hold of some double invoices, one they failed to pay the duty on and the other that they paid the duty on. He has already paid into the Treasury on those frauds that he has discovered \$35,000, which was paid in as a compromise to settle. I could give you those instances right along where the good work done in New York saves the Government \$25,000,000 a year. He is working at \$8 a day and paying his own board. Some importers wanted to see him the other day and they did not want him to come to their office or go to his office, and so they invited him out to dinner. Of course he could not very well refuse to go, but he said that he was not going out to dinner unless it cost him as much as it cost them; that he was not going to be under obligations to them.

Then there is the smuggling of tobacco. A man can bring in a package of tobacco that amounts to \$10. A seaman will bring in a package of tobacco and hide it in the coal, and when they go over to the barge to reload with coal and the scoop goes up and carries a load of coal they throw in the package of tobacco, and it is carried over to the scow and then it is carried out. There is quite a number of expenses, he told me the other day, averaging him about a dollar a day for things that he can not charge in his accounts. I think his salary ought to be \$10 a day, and I am asking an addition of two men.

The CHAIRMAN. In what part of the bill is that item?

Mr. SHAW. That is paid from the customs appropriation?

Mr. GERRY. I think so. I think it is paid out of the permanent appropriation for customs.

Mr. SHAW. There is a statute which fixes the number and fixes their pay, but they are not, in fact, paid out of this ordinary customs appropriation. It is section 2649 of the Revised Statutes. I have prepared an amendment, but whether or not you can put it in the bill I do not know. I am anxious for the result, but I do not know how you can accomplish it.

There is an appropriation of \$150,000 for the detection of frauds on the revenue. That is in the nature of a permanent appropriation. It was increased from \$100,000 to \$150,000.

Mr. SMITH. That is the secret service?

Mr. SHAW. No, sir. It is what you might call a secret service confined entirely to the customs. For instance, I appoint a man as I please. I bring a man over from Europe. I want a witness, and I get a high-grade, competent witness that understands a certain line of goods and pay him to come over here. He has been a party to a fraud over there, and is willing to furnish the evidence if we pay him for coming. That appropriation is used as I please. That is a very desirable appropriation.

The CHAIRMAN. We will take that up in connection with your statement. Of course it will not be strictly in order under the rules of the House to incorporate any change of existing law into this appropriation bill. If the committee deems it necessary or wise to enact the legislation, we may possibly try.

Mr. SHAW. It certainly ought to be done. It is a great injustice to the man down there. He has eight or ten men under him.

The CHAIRMAN. How long have you had these 28 inspectors?

Mr. SHAW. For twenty years, I presume.

Mr. GERRY. We used to have in the division 50 agents and they cut them down to 20 and the work is done by these 20 whereas formerly they had 50 or 52.

Mr. SHAW. I knew the number had not been increased for a long time. I would ask that this appropriation be increased very materially if it were not for the fact that you have increased the other appropriation from \$100,000 to \$150,000. I get just as good work from the special employees, and I can get rid of them. When a special agent loses his scent a little as he gets old, he loses his enthusiasm. One reason is the fault of the Department. He goes and looks up something with a good deal of energy and brings it up, and they say there is nothing to it, or he looks it up and takes it over to the Department of Justice, thinking he has something that is real good. The assistant district attorney, with his feet on the desk, looks it over and says:

"There is nothing in that." When a man has done that kind of work for five or six years and gets turned down without any encouragement he finds it much more agreeable to report that everything is all right. Then he does not get turned down. So I get just as good work from the special employees as from the special agents. It is a great injustice to keep a man in New York at \$8 a day.

### CUSTOMS SERVICE SOLICITOR.

The CHAIRMAN. You spoke about some other matter.

Mr. SHAW. There is another subject of greater importance still, and this, I think, can be done without any amendment to the law by simply putting in the necessary appropriation. I have had the bill drawn as though we were amending the law; but I think the authority is there if the appropriation was sufficient to cover it. It ought to be specific. "The Attorney-General shall, at the request of the Secretary of the Treasury, appoint a customs solicitor and such assistants as the Secretary of the Treasury may deem necessary to protect the interests of the Treasury Department in all cases and matters before the Board of General Appraisers."

Now, for instance, we have a case—and they come up continually—of alleged wrong classification. There are hundreds of them pending. They come first to the collector and he makes a guess upon the classification and enters it as dutiable under a certain section. The importer is not satisfied and he takes an appeal, and it goes then to the Board of General Appraisers. The evidence is looked up and it is tried there. It is a law question. They decide the case. There ought to be a good man to look that up. It then goes to the circuit court, and now when it gets to the circuit court our solicitor before the Board of General Appraisers has no authority in the circuit court. He goes over and presents that case to the United States district attorney and is told that there is nothing in the case. If he goes ahead and tries it he does not know anything about it; he has not looked it up; he knows nothing about the customs law. This man ought to have a good salary and be able to conduct those cases, because it is a branch of the law by itself. They meet experts. They meet the very best talent there is in the legal profession, trained in that particular branch of the law, and those cases are tried and we lose them.

I will give you one illustration of a case we lost. The shaving from steel has a sharp edge. Some one conceived the idea that if you could make the shaving fine enough it would be good for polishing. So with a certain kind of steel wire treated in a certain way by a certain process they produced steel wool, which is better than sandpaper. The people went to making it and put in their factory for the sole purpose of making steel wool. This was coming in at a very low rate of duty. The manufacturers said: "This is not right. This steel wool ought to be imported as a manufacture of steel unenumerated." We entered it accordingly.

Mr. SULLIVAN. At 45 per cent?

Mr. SHAW. Yes, sir. Immediately, of course, they took their appeal, and the circuit court held that the product of that factory, built for no other purpose than to produce this article of commerce—that the article was steel in shapes and forms and dutiable at 30 per cent. When you put up a factory they say that is not a manufacture, it is just sim-

ply steel in shapes and forms. Oh, you can have no conception of the situation until you have been through a number of those cases, and they are important. They are important to our local manufacturers and to our importers as well, and I want a man or a corps of men, three or four, who will take that class of cases and try them. If a man is not satisfied at New York, he may make his case at New Orleans, and there you will find a United States district attorney who never heard of a customs case before in his life, and he will run up against a man from New York who has done nothing else and who is making \$25,000 a year. I want authority to employ some men in this work who can go anywhere and try any of these cases, so that I will have some expert customs lawyers. I think you will see the propriety of that.

Mr. SULLIVAN. The district attorney at New York gets \$6,000?

Secretary SHAW. The district attorney there, yes, sir; but he appoints—he has a deputy, and I did not like to say that.

Mr. SULLIVAN. He is likely, on account of the small salary, to compromise cases against the interests of the Government, and frequently against the advices of the Solicitor of the Treasury.

Secretary SHAW. Mr. De Vries, a member of the Board of General Appraisers, was appointed by the circuit court a commissioner to take evidence, and he told about being out at San Francisco, where he went into the United States district attorney's office and said, "Is the district attorney in," and the fellow who was there and sat reading the morning paper said, "No." He then gave the fellow his card, and he didn't seem to know then who a member of the Board of General Appraisers was, but sat there with his feet up. Mr. De Vries asked him when the district attorney would be in and the man answered, "I don't know." Mr. De Vries then said, "I have come over to take testimony in these cases," to which the fellow replied that he thought probably the district attorney would be around that afternoon. De Vries then said, "I will report these facts in thirty minutes if you don't get a move on," and that fellow hustled around, and did get a move on. That is what we are up against. It is a line of work that we don't know anything about. You take the rupee case—

Mr. SULLIVAN. Yes; and the hat trimmings refund cases. They were cases where the Government, in my judgment, was mulcted out of a million dollars against the advice of the Solicitor of the Treasury, who is now a member of this House—Mr. Hepburn. If that case had been allowed to be prosecuted by the Solicitor's Department, in my judgment the Government would have saved a million dollars. Instead of that the local district attorney compromised the case.

Secretary SHAW. Yes; you take the rupee case. The rupee is worth in metallic value, I will say, 19 cents, and in commercial value 30 cents. They desired to enter the goods upon the metal value of the rupee—19 cents—and Mr. Gage put the value up to the commercial value—30 cents. The case went to the appraisers and the board decided against the Government; the circuit court decided against the Government; the circuit court of appeals decided against the Government, and the Supreme Court. When I came here I said: "You have the case prepared wrong; make a new case." The newspapers of a certain city jumped on to me and abused me as if I was a pickpocket because I would not stand by the court's decision. The district attorney who prepared the case did not see the kernel of the case. It went again to the court and all of the lower courts went against us again, but the

Supreme Court of the United States decided in our favor, after eight or nine trials. There was about \$1,000,000 that turned on that decision and a half million dollars a year. So I just speak of the importance of that class of cases, which are being tried by assistant district attorneys scattered all over the country, and in the very nature of the case they have no appreciation of their importance.

Mr. SMITH. Is there a solicitor of internal revenue?

Secretary SHAW. Yes; Mr. Hayes.

Mr. SMITH. Do you know how it came about that the solicitor of internal revenue was provided for and not a solicitor of customs?

Secretary SHAW. No. You can not understand why it is that the customs department is absolutely under the Secretary of the Treasury, while the Commissioner of Internal Revenue is almost separate and distinct. I have the initiative in the customs matters, and I can only approve the work of the Commissioner of Internal Revenue. Of course that ought to be under the Department, too, and Mr. Yerkes agrees with me. It was built wrong. It was built in that way, and has hung on.

Mr. SMITH. What I wanted to get at is whether in this division it was supposed that the solicitor of internal revenue was solicitor for his branch, and the Solicitor of the Treasury was practically solicitor of customs.

Secretary SHAW. No; I think not, because the Solicitor of the Treasury has work entirely distinct from us.

Mr. TAYLOR. Have you no customs lawyer in the customs service?

Secretary SHAW. I have a solicitor for the Board of General Appraisers—a good man—and he has two assistants; but they can not go into the district court at all. They have no authority. I want them to have authority, so when they go to Chicago they can say to the district attorney there, "I will try this case."

Mr. SMITH. Why would it not be feasible to provide by law that they should represent the Government in the prosecution of cases?

Secretary SHAW. That is exactly what I am figuring on—anticipating the use of that man that I have recommended there, and let him take those cases up through the courts in good shape. As it is now he goes over and talks with the United States district attorney, who says: "Who are you; you are before the Board of General Appraisers." And he looks upon him as a clerk and not an assistant.

The CHAIRMAN. What is your suggestion, Mr. Secretary, in respect to the language that ought to be incorporated, or which you think necessary to be incorporated, in order to give you the authority to appoint these men.

Secretary SHAW. I put him in the Department of Justice—that the Attorney-General shall appoint at the request of the Secretary of the Treasury a customs solicitor and such assistants as I think necessary.

Mr. SMITH. You do not confer any special authority on him to take the cases out of the hands of the district attorney?

Secretary SHAW. I say—

The CHAIRMAN. Is that language necessary? If the Attorney-General appoints them, they would have power to practice in the circuit courts and the United States district courts?

Secretary SHAW. I am of the opinion that if you provide a salary for him—and I put the salary at \$5,000, and the assistant \$3,000—

The CHAIRMAN. Can you get a competent man for \$5,000?

Secretary SHAW. He ought to get more; he ought to get \$10,000; but this man is better than any one you can get anywhere else, and he is getting \$3,000.

Mr. SULLIVAN. Under the former system the district attorney at New York had the power to recommend the settlement of cases and cases were settled. The result of the settlements was that he got, according to a statement of the Secretary of the Treasury, a former Secretary—I am not sure whether it was in your time or not—but he got over \$250,000 as fees outside of his salary in the settlement of these customs cases. If he had been compelled, or if there was some power somewhere to compel him, and I think there was—I think the Secretary of the Treasury could have compelled him, but did not—if he had been compelled to try these cases in court perhaps the Treasury Department would have won out. My point is that it was for the interest of the particular officers to settle those cases at that time.

The CHAIRMAN. That was in the days when the district attorneys were receiving fees and not salaries?

Mr. SULLIVAN. Yes.

The CHAIRMAN. Mr. Secretary, what amount of appropriation do you estimate will be necessary?

Secretary SHAW. Eleven thousand dollars. Give \$5,000 to the solicitor and \$3,000 for two assistants; and that will be on a par with our small Government salaries. They ought to be better paid.

The CHAIRMAN. Under what provision of law or appropriation would the clerical assistance of these men come?

Secretary SHAW. Their headquarters would be at the public stores, as now; but there is the difficulty of that. I think I can furnish their clerical force all right, because under this general appropriation I can appoint any clerks I please.

The CHAIRMAN. This authority for the appointment is for the purpose of giving these men a status in the courts in the trial of these cases.

Secretary SHAW. Now he is appointed by the Attorney-General and paid out of the customs appropriation.

Mr. BROWNLOW. Suppose you should want to use him in another section of the country than where he is located, how would you provide the expenses?

Secretary SHAW. We can pay that. We could not run the customs division if everything was fixed solid.

Mr. SMITH. As you will not always remain at the head of the Treasury Department, under your proposition this solicitor could be moved right down to Washington.

Secretary SHAW. Of course the majority of the cases are at New York, although we have cases of importance elsewhere.

Mr. SMITH. Just as soon as this is done there is nothing to prevent the appointment of similar counsel in New York in charge of the cases before the appraisers, just as you are appointing them now, is there?

Secretary SHAW. No.

Mr. SMITH. So that the entire new force could be brought down here and given headquarters in the Treasury Department somewhere.

Secretary SHAW. Well, you can abuse almost any authority; but if he was moved here there would be nothing for him to do.

Mr. SMITH. Where is the solicitor of internal revenue?

Secretary SHAW. He is here.

Mr. SMITH. Would not this solicitor soon want to be installed in the Treasury Department?

Secretary SHAW. You can put him there if you want with headquarters in New York; I have no objection to that. But at the same time I want to say that I do not like too much specific legislation. The greater the elasticity that can be allowed the better I like it. In matters of this kind it would be better to have a good deal of discretion.

Mr. SMITH. Discretion wisely exercised is always a blessing. If it is not wisely exercised it becomes a curse.

Secretary SHAW. That is true, but I believe you would get very much better results than if you undertook to fix it with a hard and fast law.

SATURDAY, *April 21, 1906.*

### CONTINGENT EXPENSES, INDEPENDENT TREASURY.

#### STATEMENT OF MR. E. B. DASKAM, CHIEF DIVISION OF PUBLIC MONEYS.

The CHAIRMAN. We interrogated the Secretary yesterday concerning the item "Contingent expenses, Independent Treasury." Can you give us the items of expenditure?

Mr. DASKAM. They are in the Book of Estimates. We submit them every year.

The CHAIRMAN. The items contained in the Book of Estimates are supplemented by an additional amount of \$20,000, which the Book of Estimates does not show.

Mr. DASKAM. I made up the statement and sent it with the letter, but taking in all the expenses up to the time when the Book of Estimates went to press there was \$210,000 spent, and after that we spent twenty thousand and some odd dollars, leaving a balance of \$18,000, and that balance is still unexpended. There are little bills which come in, and we can not tell when they are all through.

The CHAIRMAN. The principal item of expenditure is for transportation?

Mr. DASKAM. Yes, sir. The others are all small items to supply subtreasury offices with such things as stationery and typewriters.

The CHAIRMAN. And your transportation consists of the payment of express charges?

Mr. DASKAM. Yes, sir; the bulk of it; nine-tenths of it, and more, too. Most of those bills were in when the Book of Estimates went to press, but they had not been audited by the accounting officers and could not be settled until passed.

The CHAIRMAN. What rates do you pay the express companies?

Mr. DASKAM. There are certain rates for silver and for gold and for notes. The rate is 20 cents a thousand for notes, a dollar a thousand for silver—

Mr. TAYLOR. A thousand dollars?

Mr. DASKAM. Yes, sir.

Mr. TAYLOR. What is the weight of a thousand dollars in silver?

Mr. DASKAM. About 59 pounds and a fraction; about 60 pounds. A million dollars of silver weighs 30 tons. The rate for gold is 40 cents.

The CHAIRMAN. Do you know what it would cost to ship the silver by registered mail?

Mr. DASKAM. It would cost 8 cents a package. The law limits registered mail to 4 pounds.

The CHAIRMAN. That is, the first-class mail?

Mr. DASKAM. Yes, sir.

The CHAIRMAN. There is no limit, however, on the amount which the Government can send?

Mr. DASKAM. Yes, sir. They will not take more than 4 pounds in one package.

The CHAIRMAN. Mr. Madden, the Third Assistant Postmaster-General, informed me over the telephone that there is no limit on matter that emanates from a Department.

Mr. DASKAM. We have tried it several times—tried to get the Post-Office Department to let us ship a larger amount than that—and they never would permit it.

The CHAIRMAN. What would it cost by mail if you had the privilege of shipping by registered mail?

Mr. DASKAM. That would be just the cost of a registration stamp for each \$50; that is, 8 cents; 16 cents for \$100, and \$1.60 a thousand.

The CHAIRMAN. So it would cost more by registered mail than by express?

Mr. DASKAM. Yes, sir; to a great many places. A dollar a thousand and is the minimum price.

Mr. TAYLOR. What is the maximum?

Mr. DASKAM. After a certain number of miles it is four-tenths of a cent per mile. It could go about 250 miles for \$1. No distance now is over a dollar, that is over the lines of the United States Express Company. If it goes over more than one express company, then each company gets a dollar. If the United States Express Company can take it all the way then the rate is \$1.

The CHAIRMAN. Then, do you pay the United States Express Company \$3 if it transferred over three express companies?

Mr. DASKAM. Each company would get a price. The United States Express Company would get whatever the rate was, and they have to make the terms.

The CHAIRMAN. What would be the rate to the United States Express Company?

Mr. DASKAM. It would be four-tenths of a cent per mile for every thousand dollars.

The CHAIRMAN. Suppose you were to ship a thousand dollars in silver 600 miles, and in making that shipment it had to be shipped through the agency of three different express companies; under your present contract what would the Government pay?

Mr. DASKAM. We would just pay the rate—four-tenths of a cent per mile for a thousand dollars.

Mr. TAYLOR. You would pay that to this one company?

Mr. DASKAM. Yes, sir.

Mr. TAYLOR. And it does not make any difference whether there is one or more companies?

Mr. DASKAM. No, sir.

The CHAIRMAN. What would it cost in the aggregate to ship a thousand dollars of silver 600 miles?

Mr. DASKAM. \$2.40 for 600 miles.

The CHAIRMAN. And if you were to ship it by registered mail it would be \$1.60?

Mr. DASKAM. Yes, sir. We would send that in 4-pound packages, and it would take 15 packages.

The CHAIRMAN. Eliminate the 4-pound proposition.

Mr. DASKAM. All it would cost would be to buy the registration stamp, 8 cents. They limit the packages to 4 pounds, and consequently we can not send over \$50 in one package.

The CHAIRMAN. Suppose you could ship it all by registered mail in one package, then can you estimate how much it would cost?

Mr. DASKAM. It would cost 8 cents if the Post-Office would agree to that.

The CHAIRMAN. If the law required it I suppose the Post-Office Department would agree to it.

Mr. DASKAM. I understand that they say that is the law.

Mr. TAYLOR. How much did you say a thousand dollars in silver weighed?

Mr. DASKAM. Fifty-nine pounds and a fraction, practically 60 pounds. It would take 15 packages, and with 8 cents for a stamp it would cost \$1.60.

The CHAIRMAN. But if you could ship it in one package it would only cost 8 cents?

Mr. DASKAM. Yes, sir.

The CHAIRMAN. You do not know what rate the Post-Office Department would have to pay the railroad companies for transportation?

Mr. DASKAM. No, sir; I know we have tried two or three times to get the Post-Office Department to accept larger packages and they have held to the ruling of 4 pounds.

The CHAIRMAN. Do you think if you were permitted to ship, say, \$1,000 in one package, or \$2,000 in one package, it could be shipped as safely?

Mr. DASKAM. That would save a lot of money.

The CHAIRMAN. But do you think it could be shipped as safely by registered mail as by express?

Mr. DASKAM. By registered mail we would have no security for it. The express company guarantees it. If it is shipped by registered mail and the mail is lost or stolen, that is so much gone. The Post-Office Department does not insure it.

The CHAIRMAN. A great many banks are now shipping money by registered mail.

Mr. DASKAM. To little towns they send small lots.

The CHAIRMAN. I know of banks in towns with 25,000 inhabitants who receive as high as \$15,000 and \$20,000 by registered mail.

Mr. DASKAM. You mean of currency?

The CHAIRMAN. Yes, sir. Then they insure it. That is cheaper than express. Do you know what the insurance companies charge for insuring registered mail?

Mr. DASKAM. No, sir; I never had occasion to look it up. Undoubtedly the banks can get special rates.

The CHAIRMAN. The banks are doing that and doing it because they can ship their money cheaper?

Mr. DASKAM. Yes, sir.

The CHAIRMAN. Including the insurance?

Mr. DASKAM. Yes, sir. They do that for currency. I do not sup-

pose they would do that for the "hard stuff." It would cost too much. Under the old method we shipped both standard silver dollars and fractional silver.

Mr. TAYLOR. You do not ship any silver under "Contingent expenses?"

Mr. DASKAM. No, sir; that is between the offices. Our estimate for 1907 is just the same for the transportation of silver coin, but in the conference they finally put in \$10,000 for fractional and nothing for subsidiary coin.

Mr. TAYLOR. Who pays the cost of the transportation of gold to the mint?

Mr. DASKAM. We pay the transfer between the subtreasuries.

Mr. TAYLOR. That is the Government's money?

Mr. DASKAM. Yes, sir.

Mr. TAYLOR. Who pays the expense of delivering the producer's bullion?

Mr. DASKAM. There is not any expense. They buy the bullion, and they coin it and give the bullion depositor either gold coin or a check equivalent to the gold. Most of them prefer to take the check. They do not wait to coin it.

Mr. TAYLOR. Who pays the expense of getting it to the mint?

Mr. DASKAM. The depositor delivers it to the mint.

Mr. TAYLOR. Then it belongs to the Government?

Mr. DASKAM. Yes, sir.

Mr. TAYLOR. After that the Government only distributes it as its own money?

Mr. DASKAM. Yes, sir. It can coin it, but it remains as bullion in bars for a long while.

Mr. TAYLOR. There is no outlay on the part of the Government for the distribution of gold, and there never has been?

Mr. DASKAM. No, sir.

The CHAIRMAN. Suppose a man deposits at the assay office in Seattle \$100,000 of gold bullion and the gold is coined there—

Mr. DASKAM. It is not coined there because they do not coin there. It is transferred from there to the mint at San Francisco.

The CHAIRMAN. Who pays the freight from the assay office to the mint in San Francisco?

Mr. DASKAM. I am not sure whether the mint has not an appropriation under "Freight on bullion coin." That is a matter with which I have nothing to do.

Mr. TAYLOR. I do not see any different result. The Government pays the transportation to the mint.

Mr. DASKAM. From Seattle to the mint?

Mr. TAYLOR. Or any other point to the mint. We have now only two mints—one at San Francisco and one at Philadelphia. That is only one payment by the Government, and there is no other one, and it is not continued from year to year?

Mr. DASKAM. I think they have an appropriation each year for "Freight on bullion coin."

TREASURY DEPARTMENT, OFFICE OF THE SECRETARY,  
Washington, April 7, 1906.

Hon. J. A. TAWNEY,

*Chairman Committee on Appropriations, House of Representatives.*

Sir: In reply to your request for itemized statement of expenditures for the fiscal year ended June 30, 1905, from the appropriation "Contingent expenses, Independent Treasury, 1905," Mr. Assistant Secretary Keep telephoned yesterday to Mr. Courts,

clerk to your committee, calling attention to the statement published in the Book of Estimates for 1907, page 555.

This statement is made up each year to agree with the payments made as shown on the appropriation ledgers of the division of bookkeeping and warrants at the time the Book of Estimates goes to press. The expenditures for 1905 amounted to \$210,885. Since then payments have been made amounting to \$20,624.19, itemized as follows:

United States Express Company, transportation of public moneys.....	\$19,006.54
Wells, Fargo & Co., transportation of public moneys.....	303.40
Southern Express Company, transportation of public moneys .....	187.72
Northern Express Company, transportation of public moneys .....	16.78
E. Baker, transportation of public moneys .....	33.50
J. C. Cline, transportation of public moneys .....	80.80
W. L. Robb, transportation of public moneys .....	10.25
P. Fabacher, transportation of public moneys .....	.90
J. J. Greenwold, transportation of public moneys .....	7.00
Pennsylvania Railroad Company, transportation of public property.....	4.48
Atchison, Topeka and Santa Fe Railroad Company, transportation of public property .....	30.92
New York, New Haven and Hartford Railroad Company, transportation of public property.....	1.75
New Orleans and Northeastern Railroad Company, transportation of public property .....	29.97
Cleveland, Cincinnati, Chicago and St. Louis Railroad Company, transportation of public property .....	1.81
Chesapeake and Ohio Railroad Company, transportation of public property .....	.82
Illinois Central Railroad Company, transportation of public property...	1.85
Southern Pacific Railroad Company, transportation of public property..	1.05
Star Union Line, transportation of public property .....	3.98
New York clearing house, expenses.....	390.00
Treasury Department, stationery for subtreasury offices.....	394.42
Chicago Telephone Company, rent of telephone .....	8.75
C. F. Haas, coin trays .....	107.50

Total .....	20,624.19
Amount appropriated.....	250,000.00
Amount expended.....	231,509.19

Unexpended balance to date .....

18,490.81

Respectfully,

L. M. SHAW, *Secretary.*

SATURDAY, April 21, 1906.

## CUSTODY OF DIES, ROLLS, AND PLATES.

### STATEMENT OF MR. JOSEPH E. RALPH, CUSTODIAN OF DIES, ROLLS, AND PLATES, BUREAU OF ENGRAVING AND PRINTING.

The CHAIRMAN. Does the item "custody of dies, rolls, and plates" include the custody of all dies and plates?

Mr. RALPH. Yes, sir.

The CHAIRMAN. Gotten up for the Government?

Mr. RALPH. Yes, sir; all dies, rolls, and plates used to print every form of security issued by the Government, checks, bonds, legal-tender notes, postage stamps, internal-revenue stamps, and miscellaneous plates of all kinds, including the portraits of deceased Members of Congress. That would be the only class I could recall which is not a distinctive security representing money value.

The CHAIRMAN. Does that also include the plates of Cabinet officers?

Mr. RALPH. Yes, sir.

The CHAIRMAN. What is the roll?

Mr. RALPH. The roll is the positive of the negative used to make the plates that we print from. To give you an idea of the volume of work, the \$1 silver certificate, the present series of 1899, we have used in printing that series of notes up to date at least 7,000 plates. I have in my custody all the original dies and the rolls. I have, perhaps, 53,000 or 54,000 pieces of engraved work in my custody at the present time. The plates constantly wear out and become obsolete, and once a year there is a committee appointed by the Secretary of the Treasury whose duty it is to check up my vaults and ascertain if I have in my custody all the engraved work made by the Bureau of Engraving and Printing, and they receipt to me for all obsolete material, which is taken to the navy-yard and melted in a blast furnace. The duties of my office are to safeguard all those engravings.

Mr. TAYLOR. At a rough estimate, what are the dies worth?

Mr. RALPH. It would be a very difficult matter to estimate the value of those dies.

Mr. TAYLOR. Therefore I asked for a rough estimate?

Mr. RALPH. A die of the portrait of a Cabinet officer in all probability would be worth \$2,000, and perhaps that would be the highest cost of producing any one die.

Mr. SMITH. When you get a special appropriation you only get \$500.

Mr. RALPH. Yes, sir; that is a portrait plate which we can engrave for from \$400 to \$600. We do not give the same attention to the engraving of a portrait used for a deceased Member of Congress as published in the eulogies because it is not necessary to take from that engraved plate the roll, and hence we do not give the same attention to detail in the execution of the lines.

Mr. TAYLOR. What is that die worth?

Mr. RALPH. We only charge the actual cost of producing those plates.

Mr. TAYLOR. Anywhere from \$400 to \$600?

Mr. RALPH. Yes, sir.

Mr. TAYLOR. How many dies or plates have you?

Mr. RALPH. I have in my custody some 53,000.

Mr. TAYLOR. Would they be worth as much as \$200 apiece?

Mr. RALPH. Yes, sir.

Mr. TAYLOR. That is the average?

Mr. RALPH. You mean the cost of producing?

Mr. TAYLOR. Yes, sir.

Mr. RALPH. For a plate for making a national bank note we charge \$75, and I think the Government would make, perhaps, 40 per cent on that.

Mr. TAYLOR. My object is to ascertain the value of the property you are taking care of in order to see what we are paying for the care of that property and whether the cost of the care and custody is overpaid.

Mr. RALPH. I could not estimate that in figures, because I think that would be an impossibility.

The CHAIRMAN. How many men have you in your division?

Mr. RALPH. Six, including myself.

The CHAIRMAN. Who fixes their compensation?

Mr. RALPH. This committee. When I took charge of that office in 1896 I found things in a very chaotic state and there were employees detailed there who were not on the rolls of the custodian. The committee provided for those men by making an appropriation to take care of them in the office of the custodian. In 1900, I think, perhaps in 1901, in lieu of compensation for the unusually long hours of the employees of the office the salaries were increased by this committee.

The CHAIRMAN. How many hours do the employees work?

Mr. RALPH. We average at the present time from ten to eleven hours a day; not less than ten hours. The employees of the custodian's office are in the office at 7 o'clock in the morning, not later than 7.15, and they work until 5 o'clock. Last month they were employed until 6 o'clock. Any increase of work in the Bureau of Engraving and Printing necessarily affects our office, and if the Treasurer of the United States should exact 5,000 sheets of additional notes from the Bureau of Engraving and Printing, that, in all probability, would necessitate additional hours of labor.

The CHAIRMAN. You are an officer of the Treasurer's office?

Mr. RALPH. Yes, sir. I am distinctly separate from the Bureau.

The CHAIRMAN. And your force is recognized as a part of the Treasury Department?

Mr. RALPH. Yes, sir; we are the representatives of the Secretary of the Treasury.

The CHAIRMAN. Your office is over at the Bureau of Engraving and Printing?

Mr. RALPH. Yes, sir. We have, perhaps, the finest vaults in the United States in which we take care of this engraving work.

The CHAIRMAN. How do you check up these sheets that are required: how do you keep track of them?

Mr. RALPH. Every plate necessary for the use of the Bureau in printing any security or any check, bond, draft, or anything of that kind is drawn upon a requisition, giving the title of the plate. We issue that plate on the requisition. All the plates are numbered in sequence, and we charge to that particular plate the number, and at the close of the work that day that plate is returned to our office and checked on the requisition by the number to identify it, and no employee can leave the building until all the plates, dies, and rolls are returned to the custodian and safely locked in the vaults. I think our system is about as perfect as it could be.

Mr. TAYLOR. No employee whatever in the building can leave the building until then?

Mr. RALPH. No, sir.

The CHAIRMAN. You mean no employee in your office?

Mr. RALPH. No employee in the divisions using the plates.

Mr. TAYLOR. You mean simply in your division?

Mr. RALPH. The employees of the Bureau.

Mr. TAYLOR. Those who have charge of the plates during the day when taken from your division?

Mr. RALPH. Yes, sir.

The CHAIRMAN. Do you keep track of the number of sheets that are printed from the plates?

Mr. RALPH. Yes, sir; the custodian of dies, rolls, and plates has this relation to the Bureau: He receives a duplicate of all orders received by the Bureau for printing, and on the completion of an order the plate is withdrawn from the printing division, and if they were to ask for that plate it would be refused them until they had received an additional order from the Secretary of the Treasury for printing that security. The custodian's duty is not only to safeguard the plates but to see that they are not used by the Bureau without the proper authority of the Treasury Department in the printing of any securities.

Mr. SMITH. Please take this \$10 note and tell me how much of it is printed after it leaves the Bureau [handing Mr. Ralph a \$10 note].

Mr. RALPH. This seal [indicating] and this "X" [indicating].

Mr. SMITH. How about the number?

Mr. RALPH. The number is printed in the Bureau.

Mr. SMITH. All the printing in red ink except the number is printed after it leaves the Bureau?

Mr. RALPH. Yes, sir; but I am the custodian of the seal. I deliver the seal to the Treasurer's office and check him up on it, and he returns it to me when it becomes obsolete and I consign it to destruction, which takes place once a year. It usually takes the committee three months to check me up.

The CHAIRMAN. What are the duties of the three distributors of stock?

Mr. RALPH. Their duties are very similar to those of a clerk in a library. When the custodian's office is called upon by any of the various divisions for any form of engraving, the first thing is to ascertain from myself or the assistant if it is permissible to use the plate. That is determined by reference to the system of records to see if we have an order to print that, and after determining that fact one of the distributors of stock would go to the rack where the plates are kept and bring the plate down.

The CHAIRMAN. The word "stock" refers to the plates in stock?

Mr. RALPH. Yes, sir. The distributor of stock is the man who has charge of the racks and takes the plates down and puts them back at night when the assistant or custodian checks them on the requisition to ascertain if all the engraving work in use that day has been returned.

The CHAIRMAN. It has no reference to paper?

Mr. RALPH. No, sir.

The CHAIRMAN. This refers entirely to the plates?

Mr. RALPH. Yes, sir.

The CHAIRMAN. You say they work as much as ten hours a day?

Mr. RALPH. Yes, sir; at the present time, and some days more. To-day two men in my office, one being myself, will work until 11.30 o'clock to-night.

Mr. TAYLOR. Are they paid extra for those services?

Mr. RALPH. No, sir. There can be no compensation for additional hours, because the salaries are fixed by the committee.

THURSDAY, *April 12, 1906.*

**TREASURY, BUTLER, AND WINDER BUILDINGS REPAIRS.**

**STATEMENT OF MR. WALTER W. LUDLOW, CHIEF CLERK TREASURY DEPARTMENT.**

The CHAIRMAN. Now, we will begin at the bottom of page 12 at the last item there. You have under your supervision, Mr. Ludlow, a number of appropriations connected with the service of the Treasury Department, and we desire to interrogate you concerning your estimates thereon.

First, is the Treasury building, etc., \$18,000. I observe that the appropriations for this purpose, running back a series of years, have varied very much, except in the last four years. In your judgment, is it necessary to appropriate \$18,000 for the repairs of that building for the coming fiscal year?

Mr. LUDLOW. It is, Mr. Chairman.

The CHAIRMAN. Is your estimate based upon any investigation, or merely upon the fact that you have had \$18,000 during the current fiscal year?

Mr. LUDLOW. It is based upon past experience and also upon some matters that we would like to attend to about the building this year. They are necessary. For instance, we would like to expend \$2,000 or \$3,000 on tiling in the south wing of the Treasury building, which is now covered by black tiling in front of the Secretary's Office, while all the rest of the building is tiled in black and white. This black tiling is badly worn in places now, and should be replaced. Also we have discovered that the exterior of the building needs pointing up badly. It will cost approximately \$15,000 to do that, but we think we can expend \$2,000 or \$3,000 very advantageously this year on this object if we had that appropriation. Also the stone posts of the balustrades on the outside of the building are all loose and falling out, and we want to repair that.

The CHAIRMAN. How much of the amount appropriated for the fiscal year 1905, \$21,100, if anything, remained unexpended?

Mr. LUDLOW. I can not tell that, Mr. Chairman, without referring to the books; but I can let the committee know later.

The CHAIRMAN. I wish you would; and I wish you would give us the balance, if any, turned in under that head, and also the appropriation for the Treasury building fire alarm.

Mr. LUDLOW. That is a standing contract.

Mr. SMITH. You want that on all items covered by this estimate?

The CHAIRMAN. Yes; on all items covered by your estimate—the amounts turned in for the fiscal year ended June 30, 1905. What other repairs, in addition to these you have mentioned, are contemplated?

Mr. LUDLOW. General repairs of the Treasury building and the Winder and Butler buildings. In the Winder Building we find that the basement floor, which is of wood, is badly rotted near the ground in some places and must be replaced. The interior of the Butler Building needs painting.

The CHAIRMAN. The Butler Building is occupied by the Marine-Hospital Service?

Mr. LUDLOW. Yes, sir.

Mr. SMITH. Mr. Ludlow, has the sand blasting of the Treasury building been completed—the exterior?

Mr. LUDLOW. The cleaning was not done by the sand-blast process, Mr. Smith.

Mr. SMITH. It was so started, was it not?

Mr. LUDLOW. Only on the east front, on the colonnade.

Mr. SMITH. How was it completed?

Mr. LUDLOW. It was completed by a patent process of a gentleman named Bruce. Nobody knows what it is.

Mr. SMITH. I noticed that the columns on the east are greatly discolored. Are they of the same material?

Mr. LUDLOW. No, sir; they are sandstone, and the rest of the building is granite. They could be painted, but it would necessitate painting about every year.

The CHAIRMAN. What would it cost to remove them and replace them with granite?

Mr. LUDLOW. Three hundred and fifty thousand dollars.

Mr. SULLIVAN. Is Mr. Bruce an employee of the Government?

Mr. LUDLOW. No, sir. I had an estimate made, Mr. Chairman, for that purpose, but the Secretary declined to submit it this year. It was for \$350,000 for monoliths and \$300,000 for sectional columns. Some day the colonnade will have to be replaced, because it is disintegrating. The balustrade now on it is of wood. We replaced it three or four years ago, because the stone was disintegrating and falling in some places.

Mr. TAYLOR. Does the Winder Building belong to the Government?

Mr. LUDLOW. Yes, sir.

Mr. TAYLOR. How long has it belonged to the Government?

Mr. SMITH. Since before the civil war, I think.

Mr. LUDLOW. I think it was purchased after the civil war. It was confiscated by the Government, and afterwards payment was made.

### FIRE-ALARM SYSTEM, TREASURY.

The CHAIRMAN. The next item is "fire-alarm system, Treasury Department: For maintenance of the automatic fire-alarm system now in the Treasury and Winder buildings, \$2,625." I see that has been a uniform appropriation since 1899. That is under contract?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. With whom do you contract for that service?

Mr. LUDLOW. The National Automatic Fire Alarm Company.

The CHAIRMAN. Here in the District?

Mr. LUDLOW. Yes, sir; it was put in before my time, but I think it was based upon a proposal at that time that they would maintain it year after year at this price.

The CHAIRMAN. How old is this contract?

Mr. LUDLOW. It is renewed every year.

The CHAIRMAN. It is an annual contract?

Mr. LUDLOW. Yes, sir.

Mr. SMITH. Is there any other similar item for any other public building?

Mr. LUDLOW. Fire-alarm system?

Mr. SMITH. Yes, sir.

Mr. LUDLOW. I do not know.

Mr. SMITH. Do you know whether the Government has such a contract in connection with the State, War, and Navy building?

Mr. LUDLOW. I can not inform you as to that. They wired the Treasury building and put in their annunciators under an arrangement then made that we were to pay this price each year, provided, of course, Congress made the appropriation.

Mr. SMITH. What I am unable to grasp is why this system exists in the Treasury Department and does not exist in the other great buildings, like the Post-Office and State, War, and Navy buildings?

Mr. LUDLOW. I have not looked into that.

Mr. SMITH. You do not know what they pay for the service and you do not know whether they have it?

Mr. LUDLOW. No, sir. I can ascertain and let the committee know. (See p. 226.)

Mr. SMITH. It seems to me a little peculiar that this item should be carried for this building and not for other buildings. The State, War, and Navy building is a much larger building.

Mr. LUDLOW. There is a difference between the Treasury and the other public buildings on account of the peculiar character of the building and its contents.

Mr. SMITH. Your money and combustibles are all in fireproof vaults?

Mr. LUDLOW. Yes, sir; but the automatic fire-alarm system is on the files on every floor, particularly on the fourth floor. It is automatic, and the least suggestion of overheat would turn in an alarm, not only at the office of the captain of the watch in the Treasury Department, but also in the office of the company and at the fire stations.

Mr. SMITH. But if it should turn out that this outfit was furnished for a less amount to the State, War, and Navy building it would be a revelation to all of us.

Mr. LUDLOW. I will supply that information for the committee. This contract was entered into some time before I took charge of the office.

#### ASSISTANT CUSTODIANS AND JANITORS, PUBLIC BUILDINGS.

The CHAIRMAN. The next item is on page 48 of the bill, "Pay of assistant custodians and janitors." I observe that you estimate for the next fiscal year about \$130,000 in excess of the amount of the current appropriation. Will you please explain the reasons?

Mr. LUDLOW. That is based on the number of new buildings that have been built and occupied and will be built and occupied during the fiscal year 1907.

The CHAIRMAN. For the fiscal year 1905 \$1,225,000 was appropriated for this purpose?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. What was the deficiency?

Mr. LUDLOW. Congress cut down the estimate about \$51,000, and there is a deficiency of \$45,000.

The CHAIRMAN. Is there a deficiency in the appropriation of 1906 for this service?

Mr. LUDLOW. I meant for 1906.

The CHAIRMAN. Did you have a deficiency in 1905?

Mr. LUDLOW. I am not informed as to that point; I do not think so.

The CHAIRMAN. Your estimate for this service during the fiscal year 1907 includes the new buildings that will go into commission during that year?

Mr. LUDLOW. They are included as far as we know. Last year the Supervising Architect added 23 new buildings.

The CHAIRMAN. And that was the reason given for the deficiency in the current appropriation. How many new buildings do you estimate will go into commission this year?

Mr. LUDLOW. I think 30.

The CHAIRMAN. Have you made inquiry of the Supervising Architect to ascertain whether that includes all the new buildings which will be occupied during this year?

Mr. LUDLOW. Yes, sir. I have the list here, but the Supervising Architect told me this morning that there is one building—the Burlington, Vt., extension—that he can not tell whether or not it will be completed.

The CHAIRMAN. There is only one building he is in doubt about?

Mr. LUDLOW. At the present time; but last year he added 23 buildings that he had not expected himself. That was due to the more rapid completion of the buildings by the contractors.

The CHAIRMAN. My understanding was that it was due to the fact that he did not submit any very careful estimate.

Mr. LUDLOW. The Supervising Architect?

The CHAIRMAN. Yes, sir; that he did not exercise sufficient care in making his investigations.

Mr. LUDLOW. That is under another office.

The CHAIRMAN. It is your judgment that it will require \$1,462,646 to provide for this service in public buildings outside the city of Washington during the fiscal year 1907?

Mr. LUDLOW. Yes, sir; I will furnish the committee with a detailed estimate for each building. (See p. 226.) I would like to say to the committee that some of the buildings are considerably undermanned. There was a postmaster from West Virginia in my office yesterday who wanted an increase of his force, which we could not give him. He said that he paid \$150 out of his own pocket last year to keep his building in order.

The CHAIRMAN. How many men do you have in that service?

Mr. LUDLOW. Two thousand three hundred and seven employees this year, and we expect to add 107 if Congress makes the appropriation for the new buildings.

The CHAIRMAN. Does this include any additional men in the buildings now in service?

Mr. LUDLOW. Yes, sir; in Chicago and San Francisco and Indianapolis.

The CHAIRMAN. Why is that?

Mr. LUDLOW. Because the buildings are undermanned. The Chicago building was taken over entirely only last October, and we have had a great many complaints, and I know the conditions myself.

The CHAIRMAN. When was the San Francisco building taken over?

Mr. LUDLOW. About August.

The CHAIRMAN. Of last year?

Mr. LUDLOW. Yes, sir. There is a great deal of marble in those three buildings.

The CHAIRMAN. There is not very much marble in the Chicago building?

Mr. LUDLOW. Oh, yes; the rotunda is almost entirely marble, and we need skilled help and marble cleaners and other skilled workmen. We have not been able to supply them in those buildings.

The CHAIRMAN. This item does not include engineers and firemen?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. I find that the average compensation is only \$624.

Mr. LUDLOW. There are 715 laborers, at an average salary of \$557.97; 178 watchmen, at an average salary of \$562.14; 375 firemen, at an average salary of \$714.22; 265 janitors, at an average salary of \$684.21; 4 foremen of laborers, at an average salary of \$810; 15 electricians, at an average salary of \$958.66; 10 wiremen and lampists, at an average salary of \$922; 132 elevator conductors, at an average salary of \$631.96; 112 engineers, at an average salary of \$1,108.06; 2 oilers, at an average salary of \$900; 423 charwomen, at an average salary of \$314.25; 32 cleaners, at an average salary of \$311.25; 18 dynamo tenders, at an average salary of \$732.22; 24 assistant custodians, at an average salary of \$1,573.75; and 2 pump men, at an average salary of \$720. The total number of employees in the service is 2,307.

I might say in connection with the elevator conductors that we have to pay more for them than the people on the outside, because they are civil service employees and they are men we can not employ except under the civil service.

Mr. SULLIVAN. What can they be employed for by outside individuals?

Mr. LUDLOW. For \$40 or \$50 a month; but most of them are boys.

Mr. SULLIVAN. Fifty-five dollars a month would be more than you pay?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. You get them for an average of \$631.96?

Mr. LUDLOW. Yes, sir. We pay \$720 here in Washington.

Mr. SULLIVAN. How long do they work, what time do they go on and what time do they go off?

Mr. LUDLOW. Whenever the offices close. The hours vary in the various cities. These employees are under the direction of the custodian.

Mr. SMITH. Who is the postmaster?

Mr. LUDLOW. Yes, sir; in post-office buildings. Collectors of customs and collectors of internal revenue are custodians in some buildings.

Mr. SULLIVAN. They go to work at 8 o'clock in the morning and work until 5 o'clock in the afternoon?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. That is just about as long as the elevator conductors here in the Capitol work.

Mr. TAYLOR. What proportion of your elevator men is colored and what proportion is white?

Mr. LUDLOW. I do not know of any way of ascertaining that information except by writing to the custodians. I have not visited any public building where there was a colored elevator conductor; but in the South we have them.

Mr. TAYLOR. You have nothing to guide you in regard to that?

Mr. LUDLOW. No, sir.

Mr. TAYLOR. I thought that might account for the lower wages?

Mr. LUDLOW. No, sir. We take them from the civil service register. We have no choice. We have to take one certified.

The CHAIRMAN. I observe that the last Congress appropriated substantially all you estimated to be necessary for this fiscal year and you say you have a deficiency of \$45,000?

Mr. LUDLOW. No, sir. Congress cut the estimate \$51,000.

The CHAIRMAN. And that is explained by the fact that some 22 or 23 new buildings were brought into commission not included in your estimate?

Mr. LUDLOW. The deficiency?

The CHAIRMAN. Yes, sir.

Mr. LUDLOW. Not entirely; it was on account of the cut in the estimates. Congress cut the estimates \$51,000.

### GENERAL INSPECTOR OF SUPPLIES.

The CHAIRMAN. The next item is "General inspector of supplies for public buildings."

Mr. LUDLOW. He is the traveling inspector. He is traveling constantly. He visits the public buildings and reports on their condition, how they are cared for, and makes suggestions in regard to improvements in maintenance, if any are to be made, and there are always improvements to be made.

The CHAIRMAN. How many public buildings have you?

Mr. LUDLOW. About 400. He is constantly traveling, but he can not make a round in two years.

Mr. SMITH. Have you not more than 500 public buildings?

Mr. LUDLOW. Not yet; I expect we will have.

The CHAIRMAN. You have 400 public buildings?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. When was this office created?

Mr. LUDLOW. I think it was created about seven or eight years ago.

The CHAIRMAN. How did the Department get this information prior to that time?

Mr. LUDLOW. If complaints came in, as they frequently did, I think they sent an inspector from here to the particular building. I think this office was created in the Senate.

The CHAIRMAN. From what State is the gentleman who fills this office?

Mr. LUDLOW. He is from Wisconsin. He is a very competent man.

Mr. TAYLOR. Has the first appointee held the office all the time?

Mr. LUDLOW. No, sir. There have been two inspectors. The former inspector also was from Wisconsin.

Mr. TAYLOR. What State is the present inspector from.

Mr. LUDLOW. Wisconsin.

Mr. TAYLOR. How long has the present incumbent been in office?

Mr. LUDLOW. I think three or four years; I will not be positive.

Mr. SMITH. Has this office resulted in any economy?

Mr. LUDLOW. Without a question. It should have been created years ago.

Mr. SULLIVAN. Is there anyone who is able to say that this man really does inspect? Is there any track kept of his peregrinations?

Mr. LUDLOW. Yes, sir; he follows an itinerary laid out by the Department.

Mr. SULLIVAN. What check is kept on him?

Mr. LUDLOW. He reports on every building.

Mr. SULLIVAN. Does anybody make any report on him?

Mr. LUDLOW. No, sir; the custodian usually reports that he has visited the building, but he is not instructed to do so.

Mr. SULLIVAN. He usually does?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. Where is that report found?

Mr. LUDLOW. In my office.

Mr. SULLIVAN. In a report to the Treasury Department?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. So you can keep track of him through the custodians' reports?

Mr. LUDLOW. Yes, sir; but that is not necessary with this inspector. He is an honorable and competent man.

Mr. SMITH. In examining the Supervising Architect, he told us that there were 528 buildings under the Treasury Department, and upon that he made his estimate for repairs and preservation of public buildings. Where is the difference between the 528 and the 400 of which you speak?

Mr. LUDLOW. Unless it comprises mints, assay offices, and marine hospitals I do not know. I do not have anything to do with them.

Mr. SMITH. That might explain the discrepancy?

Mr. LUDLOW. Yes, sir.

Mr. SMITH. Is it not a fact that the Supervising Architect has special agents also looking after the public buildings?

Mr. LUDLOW. In a different way. His inspection relates to the buildings; our inspection relates to the care and maintenance of the buildings.

Mr. SMITH. Whenever an application is made for any money to be expended for repairs on a public building, the Supervising Architect generally sends one of his own inspectors to make the examination?

Mr. LUDLOW. If it is a part of the building. If there is a door to be cut or a window or a partition is to be changed, it comes under the Supervising Architect.

### INSPECTOR OF FURNITURE.

Mr. SMITH. I notice the next item is for an inspector of furniture.

Mr. LUDLOW. That is under my office.

Mr. SMITH. You have inspectors for all repairs on the buildings, and you have a distinct inspection of furniture and other furnishings, including fuel, lights, personal services, and other current expenses?

Mr. LUDLOW. Yes, sir.

Mr. SMITH. It is difficult for me to see just the sphere of these men, the difference between the two.

Mr. LUDLOW. The inspector of furniture inspects the furniture that is being manufactured. Before it is manufactured he goes to the factory and inspects the material. He goes there afterwards and inspects the furniture after it is ready for delivery, and frequently, in the large

buildings, he goes there and inspects it after it is placed in position to see that it is all properly made and in proper condition.

Mr. SMITH. And it is also his duty to "examine into their requirements for furniture and other furnishings?"

Mr. LUDLOW. When a new building is erected and about ready to be turned over to the Government by the contractor we send the furniture inspector there to ascertain the requirements of furniture for that particular building.

Mr. SMITH. Is it not a fact that by some system of comity or the like you exchange the services of these inspectors?

Mr. LUDLOW. We do. Our general inspector of supplies seldom sends in a report that he does not report something that is under the supervision of the Supervising Architect, and they do likewise.

Mr. SMITH. As a matter of fact, the Supervising Architect's inspector goes out if it is thought necessary to make repairs on any part of the building?

Mr. LUDLOW. Yes, sir; but they have inspectors, one in Chicago, for instance, who attends to anything within a certain territory.

Mr. SMITH. And they have one at Omaha?

Mr. LUDLOW. I do not know.

Mr. SMITH. The furniture inspector is required to report as to the requirements of furniture and as to the quality of the furniture?

Mr. LUDLOW. Only on large contracts. The custodian will send in a request for a particular piece of furniture, and we authorize its purchase locally if he gives a good reason for its necessity.

Mr. SULLIVAN. Is this inspector a competent judge of furniture and furnishings?

Mr. LUDLOW. Yes, sir; he is.

Mr. SULLIVAN. Why is it necessary for him to inspect during manufacture and before delivery, and also to inspect after delivery? Why would not an inspection at delivery be sufficient?

Mr. LUDLOW. The contractor for furniture might stick anything into the furniture and cover it up.

Mr. SULLIVAN. So your competent judge could not discover it?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. Then is he competent?

Mr. LUDLOW. Yes, sir.

Mr. SMITH. Interior defects are not visible after construction?

Mr. LUDLOW. No, sir. All of our furniture is made according to specifications prepared by the Department. It is the best furniture that can be made. It is the most durable, and we permit nothing to be put into it that is not up to the specifications.

Mr. SULLIVAN. Is the order for furniture based upon a consideration of the locality? For instance, if you were contracting for furniture in an Omaha public building, would you try to have it manufactured near there?

Mr. LUDLOW. No, sir. We send out our specifications to anybody who wants to bid on furniture for any building.

Mr. SULLIVAN. In all parts of the country?

Mr. LUDLOW. Yes, sir. We buy only from manufacturers. We do not buy from the middleman or the retailer, except for a particular piece.

Mr. SULLIVAN. Would you be likely to have furniture for a San Francisco building made by a Boston manufacturer?

Mr. LUDLOW. Our contracts are all made east of the Rocky Mountains. Beyond the Rocky Mountains very few of the contractors will bid on account of the freight rates.

Mr. SULLIVAN. Then the contract might go to a Boston man for a San Francisco building?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. So the question of transportation is not considered?

Mr. LUDLOW. Not at all; they pay the freight and install the furniture.

Mr. SULLIVAN. So the eastern manufacturer, under those circumstances, would be at a disadvantage with the western manufacturer?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. Can you tell me about how many factories make furniture for the Government under these contracts?

Mr. LUDLOW. We send our specifications to any manufacturer who wants them. He has to submit a sample cabinet to the Department made according to the specifications before we will consider his proposal.

Mr. SULLIVAN. He has to submit it to the Department?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. You do not mean here in Washington?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. It has to be sent here to Washington?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. And that is where the inspector makes his inspection?

Mr. LUDLOW. No, sir. We make the contract and the inspector goes to the factory after the lumber has been prepared and inspects it.

Mr. SULLIVAN. Does this result that a dozen factories in different parts of the country are making furniture at the same time under several contracts for the Government?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. So the inspector would have to visit several places?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. Scattered all over the country?

Mr. LUDLOW. Yes, sir. Usually we give the contractor ninety or one hundred and twenty days in which to complete his contract.

Mr. SULLIVAN. The inspector would have to lead a somewhat strenuous life in order to keep up.

Mr. LUDLOW. Yes, sir; he does. He is in the Far West now.

Mr. SMITH. The general inspector is an inspector of the care of the buildings?

Mr. LUDLOW. The care and the force of the buildings, the custodian's force, the engineers, and janitors. He reports on them and whether they are performing their duties properly.

Mr. SMITH. The other inspector is an expert inspector of materials?

Mr. LUDLOW. Yes, sir.

Mr. SMITH. The man who simply sees to the care of the building gets \$500 more than the man who sees whether the furniture is properly made?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. He is appointed by the President and confirmed by the Senate?

Mr. LUDLOW. Yes, sir. I can not too highly commend the inspectors' force, so far as our office is concerned.

Mr. SMITH. My observation is limited to my own public building and every change which has been made could have been seen by one outside. The inspection is made by the inspector under the supervising architect at Omaha. Every time we want the slightest thing done he is the man who comes there.

Mr. LUDLOW. Putting in elevators comes under the Supervising Architect—not their operation, but putting them in, and all things of that character. In a number of public buildings that are built with wells for elevators, no elevators have been installed.

Mr. SMITH. This inspector has supervision of the janitor or engineer force?

Mr. LUDLOW. Yes, sir; he checks them up and tells them what they have to do, and instructs them as to their duties. The custodians are bonded officers, but they are Presidential officers. Many of them take a great interest in the buildings, to see that they are properly kept up; others do not.

The CHAIRMAN. If they do not, they are subject to removal?

Mr. LUDLOW. We can not remove them.

The CHAIRMAN. You can bring their delinquencies to the attention of the Post-Office Department?

Mr. LUDLOW. When anything of that kind occurs we very frequently send a report to the Post-Office Department.

Mr. SULLIVAN. Are removals made in consequence of such reports?

Mr. LUDLOW. No, sir.

Mr. SULLIVAN. Under the present system then we have practically four inspections of the building and furniture. First we have the Supervising Architect's inspector.

Mr. LUDLOW. He does not have anything to do with the furniture, or the care of the building, its furnishings, or the personnel of the custodian's force. I do not think he inspects at all except when there is something to be done to the building, and then they detail an inspector to see whether it should be done.

Mr. SULLIVAN. You have the custodian of the building who is the postmaster. He is charged with the responsibility of caring for the building and looking after the force and seeing that the work incident to the care and custody of the building is properly performed?

Mr. LUDLOW. Yes, sir.

Mr. SULLIVAN. In the event that there is any change or repairs needed he reports that to the Treasury Department and the Supervising Architect sends a man out to make an inspection?

Mr. LUDLOW. Yes, sir; I presume that is the way it is done.

Mr. SULLIVAN. It goes to the Supervising Architect's office, and he sends a man out. Then in addition to that you have this Presidential inspector, who is constantly traveling about inspecting?

Mr. LUDLOW. The general inspector.

Mr. SULLIVAN. Which is also the character of the inspection made by the custodian. He has to make a general inspection. It is his duty all the time, because the condition of the building is constantly under his eye. Why would not the one service be sufficient, and was it not sufficient prior to the time that this Presidential inspector was appointed?

Mr. LUDLOW. I do not think it was, or I do not think the Department would have asked for this position.

Mr. SULLIVAN. Did the Department ask for it originally?

Mr. LUDLOW. I presume it did.

Mr. SULLIVAN. Can you ascertain if it did, whether they recommended it?

Mr. LUDLOW. I can.

Mr. TAYLOR. As to the inspector of furniture and furnishings; was that position asked for by the Department?

Mr. LUDLOW. I think so; yes, sir.

The CHAIRMAN. In relation to the furniture, would it not be entirely practicable for the post-office inspectors, who are constantly going to and fro in the service of the Post-Office Department, to report on the condition of the furniture?

Mr. LUDLOW. No, sir; it would not.

The CHAIRMAN. Would it not be practicable for the Supervising Architect, upon receiving a report from the custodian as to the necessity for additional furniture or the repair of furnishings, to send his inspector out?

Mr. LUDLOW. No, sir.

The CHAIRMAN. Why?

Mr. LUDLOW. Because they handle another appropriation; it is not under their office.

The CHAIRMAN. If it was made available?

Mr. LUDLOW. Our inspector of furniture is an expert in that line. The same is true of the Supervising Architect's force. His people are technical people, and as to the post-office inspectors they report to the Postmaster-General. They have in instances made reports, and the Postmaster-General has transmitted their reports to the Treasury Department with the request that we furnish this or that or some other thing, and upon investigation we find that they do not need it. The postmaster or the assistant postmaster would then be the arbiter of what he wants in a post-office. We refuse requests from custodians. We do not grant the request of a custodian unless he shows the absolute necessity for the particular article he desires.

The CHAIRMAN. And that necessity you say could not be ascertained reliably by the post-office inspectors?

Mr. LUDLOW. It could not, because they do not know anything about it. They do not know anything about the furniture.

The CHAIRMAN. It would not take a very high degree of skill to determine whether there should be an additional typewriter or an additional desk or a few more chairs?

Mr. LUDLOW. Those things all cost money, and we want to know why they want them and why they are required.

The CHAIRMAN. It would not require a technical man to determine that?

Mr. LUDLOW. The duties of this inspector of furniture are almost entirely in new buildings and in large contracts.

## FURNITURE AND REPAIRS OF FURNITURE, PUBLIC BUILDINGS.

(See also H. Docs. Nos. 419 and 712.)

The CHAIRMAN. The next item is on page 50 of the bill, "Furniture and repairs of furniture," and your estimate for the coming fiscal year is \$55,400 more than the current appropriation. Will there be a deficiency in the appropriation under that head for this year?

Mr. LUDLOW. No, sir.

The CHAIRMAN. There was a deficiency?

Mr. LUDLOW. Of \$79,000, which you gave us on the deficiency bill, for new buildings.

Mr. TAYLOR. The urgent deficiency bill of this year?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. This furniture includes new furniture as well as repairs to furniture?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. Does this \$455,400 you estimate for the fiscal year 1907 include the new furniture for the new buildings that will go into commission during the year, the 30 new buildings?

Mr. LUDLOW. Up to the end of this fiscal year?

The CHAIRMAN. I mean the number of new buildings to be completed during the year 1907?

Mr. LUDLOW. That is this year's appropriation. The estimate for 1907 is \$495,400.

Mr. SULLIVAN. That is on account of the \$40,000 for Seattle?

Mr. LUDLOW. Yes, sir. I think that was omitted from the former estimate because it was not known that the building would be completed during the fiscal year.

Mr. TAYLOR. On page 50 I notice in brackets this language: "And in buildings rented by the United States." That means the language is to be stricken out. Do you want that language stricken out, and why should it be stricken out?

Mr. LUDLOW. I do not think we put that in. One of the committees put that in last year.

The CHAIRMAN. Was it not on account of the renting of certain buildings in Rome, Ga., and some other place?

Mr. LUDLOW. Atlanta. We had to move the offices out into rented quarters.

Mr. TAYLOR. Is there any necessity for this language to remain in the bill.

Mr. LUDLOW. I think it should remain in the bill.

The CHAIRMAN. Your estimate recommends that this language be omitted this year?

Mr. LUDLOW. I guess we copied the old estimates, and that is the reason. It was put in by the Senate last year. It never was in the bill before last year, and I expect the Department copied the language of an old estimate.

The CHAIRMAN. Copied the language of the appropriation for the year 1905?

Mr. LUDLOW. Yes, sir; after the amendment was put in we copied the original estimate.

The CHAIRMAN. How do you arrive at this amount, Mr. Ludlow, as being necessary for the next fiscal year?

Mr. LUDLOW. On the experience of the past year and on the expansion of the service, particularly the post-office, which we estimate will take 60 per cent of this appropriation.

The CHAIRMAN. Do you get any reports from the custodians of these buildings prior to submitting your estimates—reports as to what will be required during the next fiscal year?

Mr. LUDLOW. No, sir. That would be almost impracticable, because they do not know. Of the \$495,400, \$245,400 is for new buildings that are to be—

The CHAIRMAN. The furniture for the new buildings that are to be completed during the next fiscal year?

Mr. LUDLOW. Yes, sir; \$245,400. That means \$250,000 for other supplies.

The CHAIRMAN. How much was expended for repairs during the fiscal year 1905?

Mr. LUDLOW. I can not state. However, when I was here concerning the deficiency appropriation I made the remark that the repairs were about 10 per cent, and I verified that after I got back to the Department. That is as near as we can figure it. You see the repairs are made at the place where the building is located.

Mr. TAYLOR. Do you know how that compares with the large buildings owned by private individuals?

Mr. LUDLOW. No, sir. In the large buildings we have a skilled workman who is a cabinetmaker, and he makes the repairs.

Mr. TAYLOR. But the salaries of your own employees are a part of the cost?

Mr. LUDLOW. Yes, sir; but they are not salaried according to the abilities. We might have a plumber or a watchman, and those people make the minor repairs. He is not rated as a cabinetmaker or a repairer of furniture, but he is a watchman and does that in connection with his other duties. In the larger buildings like Chicago, San Francisco, Salt Lake, and Indianapolis, we have got to have skilled workmen to take care of things of that character.

The CHAIRMAN. What did you say the amount for repairs would aggregate during the fiscal year, 10 per cent of the total appropriation?

Mr. LUDLOW. That is as near as we can approximate.

The CHAIRMAN. Ten per cent of what?

Mr. LUDLOW. Of the balance of the appropriation, \$250,000. The post-office service is increasing, as you know, immeasurably. They are adding rural carriers and city carriers, and for every one of them we have to put up a distributing cage, which costs considerable money. Each individual has to be supplied with a case running from 70 to 150 pigeon holes, and as near as we can figure it 60 per cent of the increased cost of furniture is for the Post-Office Department.

### FUEL, LIGHTS, AND WATER, PUBLIC BUILDINGS.

The CHAIRMAN. The next item is on page 51, "Fuel, lights, and water for public buildings, \$1,243,520." You have a deficiency in that appropriation for the current year?

Mr. LUDLOW. We asked for one, but Congress declined to give it to us, and we are trying to keep within the appropriation, and I think we will. Of course it is a pretty hard strain.

Mr. SULLIVAN. Do you postpone the work?

Mr. LUDLOW. We postpone everything we can until after the end of the fiscal year.

The CHAIRMAN. The estimate is \$143,500 in addition to the current appropriation?

Mr. LUDLOW. Of this appropriation for the old buildings we estimate \$1,175,000, and for the 30 new buildings it amounts to about \$68,520. We can not tell exactly. We have to take a building of a similar size and estimate for the new building on that, because we can not tell exactly what it is going to cost. We can not tell how much

fuel is going to be required to a nicety, how much electric current, or anything of that character.

The CHAIRMAN. Can you give us the number of buildings that were supplied with the various articles included under this head of "Fuel, lights, and water" for 1905?

Mr. LUDLOW. I have not the figures with me.

The CHAIRMAN. Can you furnish a statement of the number of buildings to which this appropriation was applicable during the fiscal year 1905, and also whether or not there was any portion of it turned back into the Treasury? I see you had no deficiency in 1905?

Mr. LUDLOW. I will supply that information. I was going to ask for an additional appropriation under this heading. In previous years where there has been a surplus we have used that for rewiring an old building or installing wires in a new building or making betterments in wiring facilities. In the six years from 1900 to 1905, 62 buildings were wired or rewired at a total expenditure of \$377,000, an average of \$62,000 a year. The last year we did not do anything scarcely and this year I have a list of a number of buildings which it would be economy for the Government to rewire or wire so that we could use electric current, but I am almost afraid to say anything about it.

The CHAIRMAN. What do you estimate the cost would be?

Mr. LUDLOW. Eighty-four thousand dollars.

The CHAIRMAN. In addition to this appropriation?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. Wherein would the economy result?

Mr. LUDLOW. In the difference between the cost of gas in many instances where we can not use electric current, where the buildings are not wired for electric light, but piped for gas. We have one building at Rochester, N. Y., and we had a complaint the other day. The wires are overcharged all the time, and are constantly being broken—I have not that in this list—on account of the overcharging of the wires by the electric current necessary to supply the light.

The CHAIRMAN. When was that building wired?

Mr. LUDLOW. Years ago; when it was built.

The CHAIRMAN. The wires are not heavy enough to carry the current?

Mr. LUDLOW. To light the building.

Mr. SULLIVAN. The building has not increased in size?

Mr. LUDLOW. No, sir; but the business has. That is where the furniture comes in. We put up a new case, and we have to light it and extend the wiring.

Mr. SULLIVAN. You need more current?

Mr. LUDLOW. The present wires will not carry the current to give sufficient light.

Mr. SULLIVAN. There was no way to estimate the size of the wires in the beginning?

Mr. LUDLOW. No, sir.

Mr. SULLIVAN. But as the necessity for light grew they tried to carry the current along on the same wires?

Mr. LUDLOW. Yes, sir.

The CHAIRMAN. Are not the wires in the new buildings put in in anticipation of the maximum amount required?

Mr. LUDLOW. Yes, sir; but these are the old buildings.

The CHAIRMAN. You can submit that statement?

Mr. LUDLOW. This is only a memorandum I had prepared within a day or two. I did not expect to be called before this committee so soon as I have been, but I will furnish a statement.

Mr. SULLIVAN. You will also please give the list of employees and the salaries?

Mr. LUDLOW. Yes, sir.

[Memorandum for Hon. James A. Tawney.]

Supplementing the statement made by me while before the Committee on Appropriations, I have the honor to submit the following information:

*General inspector of supplies for public buildings.*—This position was created by Congress in 1898, in compliance with a request contained in Department letter of March 21, 1898.

*Inspector of furniture and other furnishings.*—This position was created in the sundry civil act of July 7, 1884, the salary being fixed at \$3,000 per annum with an allowance of \$2,000 for expenses. The salary was reduced to \$2,500 in 1898.

*Fire-alarm system, Treasury Department.*—The installation of this system was authorized by a joint resolution of Congress dated March 3, 1891. The proposal of the National Automatic Fire Alarm Company, in the sum of \$7,300, included service for the fiscal year ending June 30, 1892. The service was discontinued June 30, 1894, but was resumed on July 1, 1898, and has been continued since that time.

No other Executive Department has an automatic alarm system, but it is understood that a complete system, similar to the one in the Treasury, is now being installed in the St. Elizabeth Hospital for the Insane.

*Number of public buildings occupied, year 1905.*—At the beginning of the fiscal year 1905 there were 316 buildings completed and occupied, while at the close of the year the number of such buildings had increased to 349.

*Balances to credit of appropriations, fiscal year 1905.*

Furniture and repairs of same for public buildings.....	\$142. 57.
Fuel, lights, and water for public buildings.....	No balance.
Pay of assistant custodians and janitors.....	4, 323. 64
Contingent expenses, Treasury Department:	
Newspapers and books.....	No balance.
Investigation of accounts and traveling expenses.....	18. 10
Freight, telegrams, etc.....	579. 03
Rent.....	5, 787. 63
Horses, wagons, etc.....	No balance.
Ice.....	90. 68
File holders and cases.....	1. 50
Fuel, etc.....	. 64
Gas, etc.....	No balance.
Carpets and repairs.....	No balance.
Furniture, etc.....	4. 75
Miscellaneous items.....	No balance.
Numbering, adding, and other machines, Treasury Department.....	5. 00
Fire-alarm system, Treasury Department.....	No balance.
Shelving and transferring records, etc., Treasury Department.....	. 06
Treasury building, Washington, D. C.....	No balance.
General inspector of supplies (expenses).....	719. 81
Inspector of furniture, etc. (expenses).....	156. 60

There are still various claims outstanding against some of the above appropriations. The balances of appropriations are not turned into the Treasury until the expiration of two years from the fiscal year of the appropriation.

*"Wiring and rewiring public buildings."*—In connection with the inquiry made by you as to the advisability of wiring or rewiring certain public buildings, I attach hereto a memorandum showing the advisability of such action on the part of the Government, and indicating the buildings where this work could be done to advantage, the estimate submitted by this office not contemplating the performance of any such work.

W. W. LUDLOW,  
Chief Clerk Treasury Department.

<sup>a</sup> The balance remaining to the credit of "Rent," 1905, was due to the fact that the additional floor in the Union Building, as well as other quarters deemed necessary when the estimate was made, were not required during that year.

[Memorandum for Hon. James A. Tawney.]

During the six fiscal years 1900 to 1905, inclusive, 62 buildings were wired or rewired, and new electric light plants, or extensions thereto, installed in certain buildings, at a total expenditure of \$377,163, or an average cost of \$62,860 per year.

The insufficiency of the appropriation "Fuel, lights, and water for public buildings," for the present fiscal year, has resulted in excluding practically all further expenditure for the maintenance and betterment of lighting facilities (the wiring of one building only having been authorized thus far), and consequently the lighting equipment in a number of buildings has become so inadequate and unsatisfactory as to be the frequent cause of complaint on the part of the occupants, and to create, in many instances, an actual fire hazard by reason of defective and overloaded electrical circuits.

Improvements to the lighting systems are necessary in the buildings named below, and for reasons set forth in detail with respect to each building.

While the maintenance and betterment of the lighting equipment in the buildings herein enumerated, averaging twenty-one years in age, is essential to their proper upkeep, the application of the more modern systems of illumination, and the stimulation of competition between gas and electric companies in cases where the use of electricity is now precluded by the lack of electrical wiring, will result in a material saving in the annual cost of lighting which, in the light of the experience of the Department, will alone justify the expenditures necessitated therefor.

## LIST OF BUILDINGS.

*Abingdon, Va., court-house and post-office.*—Lighted by electricity at a cost of \$1,080 for the fiscal year 1905. The wiring is obsolete, and circuits overloaded are the cause of frequent complaints by custodian of building. Number of lights in building, 200.

*Albany, N. Y., custom-house.*—Lighted by gas at a cost of \$4,722 for the fiscal year 1905. The building is wired, but wiring equipment obsolete and unserviceable. The present cost of lighting is deemed excessive, and rewiring of building will secure competition in rates which will operate, in conjunction with modern fixtures, to reduce the cost of lighting. The size, location, and age of this building, together with complaints as to the present unsatisfactory service, and the probable economies which will be effected by a new system of lighting, all combine to make this case an urgent one. Number of lights, 750.

*Austin, Tex., court-house and post-office.*—The building is lighted by electricity at a cost of \$459 for the fiscal year 1905. The wiring equipment is now obsolete in character and workmanship, which results at present in fire hazard and frequent complaints, especially by the postal authorities, who allege faulty distribution of light, which is further aggravated by overcrowded conditions. Number of lights, 250.

*Brownsville, Tex., custom-house.*—The building is lighted by a gas machine and is not wired. The present lighting service is very unsatisfactory. Recent proposals for electric-light current show that this latter service could be economically procured. Number of lights, 130.

*Carro, Ill., custom-house.*—The building is only partially wired for electricity, eight electric lamps being at present installed. The cost of lighting service for the fiscal year 1905 was \$431. The gas fixtures are of an antiquated type and have frequently been reported to be in a leaky condition. The competition in lighting rates and improvement of the present antiquated equipment, which would be secured by the installation of a modern wiring system, would result in economy and efficiency of the lighting service. Number of lights, 250.

*Carm City, Nev., court-house and post-office.*—The building is not wired. The cost of lighting service for the fiscal year 1905, \$831. The lighting service is confined at present to the exclusive use of gas at the rate of \$3 per 1,000 cubic feet. The wiring of this building is considered advisable in order to secure economy in operation. Local electric companies desire to bid for lighting service but are now precluded from doing so. Number of lights, 300.

*Chester, Pa., post-office.*—The building is not wired, but conduits for electric wires were installed in course of construction of building. Gas is used exclusively at a cost of \$500 for the fiscal year 1905. The present cost of gas is considered excessive and has been the subject of reports from the custodian and agents of this Department. The wiring of the building will establish competition in lighting rates and will thus operate to reduce the cost of the lighting service. Number of lights, 175.

*Danville, Va., court-house and post-office.*—The building is partially wired, two electric lamps only being in place. The cost of lighting by use of gas for fiscal year 1905, \$252. The unsatisfactory character of the gas service makes it advisable to

complete the wiring system by the installation of modern fixtures. Complaints have been made by the officials of the court concerning the poor lighting facilities in this building. Number of lights, 200.

*Frankfort, Ky., court-house and post-office.*—The building is lighted by use of gas exclusively, at a cost of \$412 for fiscal year 1905. The present cost of gas is \$1.75 net per thousand cubic feet. At rates which have been proposed for electricity the lighting service upon the installation of a modern electrical system with new fixtures would be more economical. The present gas fixtures are in a very dilapidated condition. Number of lights, 65.

*Grand Rapids, Mich., court-house and post-office.*—The building is partially wired and the lighting service is a combination of gas and electricity, at a cost of \$1,870 for the fiscal year 1905. The wiring at present in the building has been reported by agents of this Department to be the most obsolete and unworkmanlike at present installed in any Government building, and such system is not only defective as compared with modern requirements, but constitutes at all times a most serious fire hazard. The present condition of lighting in this building has been the cause of serious complaints by the postal authorities. All these facts would seem to make this case one requiring prompt attention. Number of lights, 425.

*Haverhill, Mass., post-office.*—The building is lighted by the use of gas exclusively, at a cost of \$312 for fiscal year 1905. The building is not wired for electricity. The present gas-lighting service has been represented to be very poor and inadequate. The building should be wired to secure a satisfactory service and in order to establish competition in lighting rates. Number of lights, 150.

*Lafayette, Ind., post-office.*—The building is lighted by the use of gas almost exclusively. The building is not wired, and only one electric lamp is now in use. The published rates of local electric lighting company would seem to indicate that the use of electric current would be more economical than that of gas, the cost of which for the fiscal year 1905 was \$789. Number of lights, 175.

*Manchester, N. H., court-house and post-office.*—The building is at present lighted by gas exclusively, at a cost of \$642 for the fiscal year 1905. The wiring in place is obsolete in character. The gas furnished is reported by the postmaster to be unsatisfactory in the winter season, and has been the cause of frequent complaints to this office. The installation of new and modern fixtures is necessary in order to secure satisfactory and efficient service, and the rewiring of this building will establish a competition in lighting rates which will be advantageous to the Government. The improvements suggested are urgent. Number of lights, 375.

*Martinsburg, W. Va., court-house and post-office.*—Gas is used exclusively for lighting purposes, at a cost of \$314 for the fiscal year 1905. The building is not wired for electricity. The present cost of gas is \$1.60 net per thousand cubic feet, and the service uncertain and inadequate to the needs of the building, frequent recourse being had to the use of kerosene, owing to the failure of the gas supply. Wiring of the building will not only avoid frequent complaints due to the interruption of the present gas supply, but will secure to the Government the advantages of competition in lighting rates. Number of lights, 300.

*Montpelier, Vt., court-house and post-office.*—Building is lighted by the combined use of gas and electricity, at a cost of \$467 for the fiscal year 1905. The electrical service is now being served by a system, temporary in character, unsightly in appearance, improvised in construction, and very hazardous in operation. The exclusive use of electricity, if the building were wired and equipped with new and modern fixtures, would not only give satisfactory and safe service, but would be cheaper than the present combined method of lighting. Number of lights, 280.

*Pawtucket, R. I., post-office.*—Building is lighted by the use of gas exclusively, at a cost of \$217 for the fiscal year 1905. The building has not been wired for electricity. The present distribution of light is unsatisfactory in character, and the lack of competition in lighting rates renders advisable the installation of a modern wiring system with a rearrangement of the fixtures to secure greater and better distribution of light. Number of lights, 150.

*Raleigh, N. C., court-house and post-office.*—Building is lighted by the combined use of gas and electricity, at a cost of \$1,244 for the fiscal year 1905. The public patrons of the post-office have complained to the agents of this Department through the postmaster in reference to the inadequate lighting facilities in the public corridors of this building. The importance of the building, located in the capital of the State, and the present unsatisfactory condition of the lighting facilities would justify the introduction of a modern system of illumination. Number of lights, 450.

*San Francisco, Cal., appraisers' stores.*—Building is wired and lighted by electricity at a cost of \$3,058 for the fiscal year 1905. The system is antiquated and worn out, which calls for frequent and excessive expenditures for repairs and maintenance.

The present unsatisfactory lighting service is the cause of frequent complaints, and the replacement of the present wiring system in the near future is absolutely necessary in order to secure an adequate and safe lighting service. Other recent improvements in this building made under the supervision of the Supervising Architect, as well as the importance of the work of the customs department in this building, make prompt action in this case advisable. Number of lights, 1,500.

*Stout Falls, S. Dak., court-house and post-office.*—Building is lighted by the use of gas exclusively, at a cost of \$661 for the fiscal year 1905. The building is not wired for electricity. At present cost of gas of \$1.60 net per 1,000 cubic feet it is believed that the use of electric current will operate with greater economy by resulting in establishing a competition in lighting rates, and the consequent improvement in the lighting facilities which will be secured by the installation of a modern system of wiring in the building. Number of lights, 350.

*Troy, N. Y., court-house and post-office.*—Building is lighted by the use of gas exclusively, with the exception of two arc lamps, at a cost of \$1,619 for the fiscal year 1905. The building has been conduited for electrical service, but no interior wiring system has been installed. The present cost of lighting is deemed to be excessive, owing to its faulty distribution, and this condition would be remedied by the introduction of a modern electric-lighting equipment, which would result in a sufficient saving to justify the cost of the proposed improvement. Number of lights, 87.

*Wichita, Kans., court-house and post-office.*—Building is lighted by the use of gas exclusively and is not wired. Complaint has been made that the gas service is very unsatisfactory and has often failed entirely, when recourse was had to the use of gasoline lamps, a dangerous, as well as an unsatisfactory, expedient in lighting a public building. The use of electric current will secure greater economy at the rates at which electricity has been offered by the local companies. This case is considered exceedingly meritorious. Number of lights, 500.

W. W. LUDLOW, *Chief Clerk.*

---

SATURDAY, April 21, 1906.

## LANDS AND OTHER PROPERTY OF THE UNITED STATES.

### STATEMENT OF MR. LOUIS JORDAN, CHIEF MISCELLANEOUS DIVISION.

The CHAIRMAN. You have charge of the appropriation under "Lands and other property of the United States," on page 55 of the bill?

Mr. JORDAN. Yes, sir.

The CHAIRMAN. What is that service?

Mr. JORDAN. Those are lands that are acquired by the United States through judgment. The lands are in charge of the Solicitor of the Treasury, but he can not sell them without the approval of the Secretary of the Treasury. This appropriation is to pay the expenses of the sale of those lands, and sometimes it occurs that the lands which are bought in on execution have liens on them for taxes, etc., incurred before the United States obtained the judgment. This appropriation is used to pay the liens, the auctioneer fees, and things of that kind.

The CHAIRMAN. Was the appropriation for 1905 all expended?

Mr. JORDAN. No; it was not. There was one claim of \$197,000 that we could not tell much about. There may be claims requiring nearly the whole of this appropriation, and they may require very little of this appropriation. So far this fiscal year we have expended only about ninety-odd dollars.

The CHAIRMAN. It is for the purpose of paying liens on property acquired by the United States through judgment which liens existed prior and at the time the judgment was obtained?

Mr. JORDAN. Yes, sir.

The CHAIRMAN. And which payments must be made in order to give the Government a clear title to the property?

Mr. JORDAN. Yes, sir; and then for auctioneer fees and for advertising the property. The old law requires the property to be advertised three months, which is entirely too long, and that sometimes is very expensive. That law ought to be changed. We had some lands in Alabama, and the description was very long, taking nearly a column in the newspaper. That had to be advertised three months, under the law.

The CHAIRMAN. Does the law specify how often during the three months the land should be advertised?

Mr. JORDAN. Each week.

The CHAIRMAN. Once each week?

Mr. JORDAN. Yes, sir; that is my recollection. That law ought to be changed so that the lands could be sold upon shorter notice.

The CHAIRMAN. This is the only item in the bill in which you are concerned?

Mr. JORDAN. Yes, sir. The act itself specifies all the various purposes for which the fund is to be used.

---

FRIDAY, April 13, 1906.

## MARINE HOSPITALS.

(See also p. 240.)

**STATEMENT OF DR. WALTER WYMAN, SUPERVISING SURGEON-GENERAL, BUREAU OF PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE, ACCOMPANIED BY MR. H. P. HUDDLESON AND DR. A. H. GLENNAN.**

### KEY WEST, FLA.

The CHAIRMAN. The first item, Doctor, is on page 17 of the bill before you.

Doctor WYMAN. For improvement of breakwater, Key West, Fla., \$5,000.

The CHAIRMAN. That is a new item?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Explain to the committee, Doctor, the necessity for it.

Doctor WYMAN. We have a marine hospital at Key West, and the breakwater surrounds the sea side of it. The north and south ends of the breakwater do not inclose the proper or legal limits of the reservation. The west front of breakwater has cracked in places and has been temporarily repaired by filling cracks with cement.

The extension at south end is necessary, so that the isolation ward may be placed on solid ground. It is now supported on piles.

The CHAIRMAN. Is this the first time you have asked for it?

Doctor WYMAN. We have asked for it before, in the estimates for 1905 and 1906.

The CHAIRMAN. How long ago was it washed away?

Mr. HUDDLESON. It has been several months. I could not say just exactly. Not washed away, but cracked in several places, leaving crevices that must be repaired to prevent further damage.

Doctor WYMAN. Here is a note upon it.

The present breakwater does not inclose the reservation at the north and south ends. The space is much needed. The isolation ward is now supported on piles. It is proposed to extend the breakwater to the lines of reservation, fill with sand, and repair the breakwater, which is reported to be cracked and leaking. The breakwater is constructed of concrete.

The CHAIRMAN. How high is the breakwater?

Doctor WYMAN. Three or 4 feet above water level.

The CHAIRMAN. How deep do you have to go for foundation?

Doctor WYMAN. It is shoal water there.

The CHAIRMAN. There seems to be 314 feet of breakwater to be built, and you estimate that that would cost \$5,000?

Doctor WYMAN. Yes, sir; for the whole cost of improvement.

The CHAIRMAN. Who made this estimate?

Doctor WYMAN. It was made by the officer in charge of the station, revised by an expert in the Bureau.

The CHAIRMAN. What material do you contemplate building it out of?

Mr. HUDDLESON. Rock foundation, with concrete top.

The CHAIRMAN. What they call reenforced concrete?

Mr. HUDDLESON. Yes, sir. That is my understanding of it.

Mr. SMITH. You do not mean there is any heavy iron or steel in this, do you?

Mr. HUDDLESON. No, sir.

Mr. SMITH. I understood reenforced concrete is concrete reenforced by steel rods. Do you not think it would be best to abandon this breakwater down here altogether?

Doctor WYMAN. No, sir. It protects the property there. This is rather an old chart [indicating chart].

The CHAIRMAN. I see this was made January 20, 1901.

Doctor WYMAN. That is an old one that I picked up, simply to show you an idea of the hospital.

The CHAIRMAN. This would indicate that the estimate was made long ago.

Doctor WYMAN. Yes, sir.

The CHAIRMAN. What part of the breakwater has recently fallen down?

Doctor WYMAN. It has been deteriorating in various places.

The CHAIRMAN. What is that breakwater composed of now?

Doctor WYMAN. It is of concrete.

The CHAIRMAN. It has been there how long?

Doctor WYMAN. A good many years.

The CHAIRMAN. How long has the hospital building been there?

Doctor WYMAN. A good many years; since 1845. I can have a little plainer draft made of this and send it to you.

Mr. SMITH. Would you be willing to make such inquiries as to find out if there are any projects now pending there to reclaim additional land?

Doctor WYMAN. Yes, sir.

Mr. SULLIVAN. Find out the depth of the breakwater also, so that we can know the total number of feet of construction.

The CHAIRMAN. This is Eaton street, extending down beyond the point where you propose to build this breakwater?

Doctor WYMAN. Yes.

The CHAIRMAN. Who owns this land in here [indicating]?

Doctor WYMAN. We own it. The water comes up around there [indicating].

The CHAIRMAN. Are you now using this land for any purpose?

Doctor WYMAN. No.

The CHAIRMAN. Is the use of this land necessary?

Doctor WYMAN. It adds to the area of the reservation, and it will probably be necessary in putting on other buildings for hospital attendants or something of that kind. At any rate, it will protect what the Government now owns.

The CHAIRMAN. But if the Government has no use for it, is there any necessity of extending the breakwater for the purpose of protecting that which is useless?

Doctor WYMAN. It would add to the area of the reservation, which is very desirable.

The CHAIRMAN. If you can give us any information as to what part of this breakwater has fallen or what repairs are necessary, we would be glad.

Doctor WYMAN. I will, and I will send you a better sketch.

The CHAIRMAN. If you have any information about this since 1901, we would like to have it.

Mr. SMITH. I would like to know if this project ever existed to reclaim additional land and build the breakwater farther out, and if so, whether it has been finally abandoned, because we do not want to spend money on this breakwater if you are going to build another one outside of it later on.

NEW YORK, N. Y.

(See also p. 242.)

The CHAIRMAN. The next item is New York Marine Hospital: For improvement of fences, roadways, and walks, \$10,000.

Doctor WYMAN. That is the hospital on Staten Island which we have bought.

The CHAIRMAN. What information can you give the committee, Doctor, as to the necessity for this improvement?

Doctor WYMAN. This is an old hospital that we bought from the Marine Society of New York. It is about 50 years old. It needs a general overhauling; in fact, almost rebuilding, inside at least.

The CHAIRMAN. You could not make any repairs on the hospital itself from this appropriation of \$10,000? This is for improvement of fencing and roadways and walks.

Doctor WYMAN. The Secretary was willing to allow this much to go in. We have there about 500 feet front, and the fences are breaking down and are unsightly. The roadways are worn out.

The CHAIRMAN. Do these fences constitute the inclosure around the hospital and grounds?

Doctor WYMAN. Yes, sir; around the grounds.

The CHAIRMAN. How extensive are they?

Doctor WYMAN. We have a front of 500 feet, running back, I suppose, a thousand feet. The fences are mere wooden fences that we

acquired with the property, and they are not in keeping with the surrounding properties; and what is more, they are not strong enough to serve their purpose and keep people out.

The CHAIRMAN. What is the necessity of having any fence at all? What public purpose does it serve?

Doctor WYMAN. I will admit that I do not believe much in fences myself, but this is exceptional there. It is right on the main road, which runs along the shore, and is between two busy little towns on Staten Island—Stapleton and Clifton—and all the traffic along that coast goes along in front of the hospital. This fence is on that road, and it is necessary to have it there in order to keep people off the reservation.

Mr. SULLIVAN. That is, on the 500-foot part—the front?

Doctor WYMAN. Yes; and on the other side, too. We have had a great deal of trouble there.

The CHAIRMAN. Is there a fence in the rear of the hospital?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Is there a road running along the rear of the hospital?

Doctor WYMAN. No, sir; no road, but there is an open territory there that is much used by tramps and others, and it is necessary to have a fence surrounding the whole reservation in order to protect it and keep people out.

The CHAIRMAN. To keep trespassers off?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. And it is a wooden fence now?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. What kind of a fence do you hope to build?

Doctor WYMAN. We hope to build an iron fence in front and an iron post and wire fence on the south side.

The CHAIRMAN. What is the estimate for completing that work?

Doctor WYMAN. We have not estimated the cost of that.

The CHAIRMAN. How do you know what amount is necessary if you have not estimated for it?

Doctor WYMAN. We got that from the officer who made the estimate.

Mr. SULLIVAN. Have you an estimate on the improvement of roads and walks?

Doctor WYMAN. Not specifically.

The CHAIRMAN. How extensive a roadway do you intend to build?

Doctor WYMAN. There is one principal roadway proceeding from the center of the front of the reservation up to the hospital. That is now covered with cinders and washes with every rain.

The CHAIRMAN. How long is that road?

Doctor WYMAN. I suppose about 500 feet.

The CHAIRMAN. Does the hospital sit back from the main road 500 feet?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. This is a roadway as well as a walk?

Doctor WYMAN. Yes, sir. There ought to be a good road there, because the coal and all our supplies are brought up on that road.

Mr. TAYLOR. What material would you use for the walk?

Doctor WYMAN. I suppose stone paving.

Mr. TAYLOR. That is the roadway. Of what do you intend to make the walk?

Doctor WYMAN. The walks are of flagstone at present, and I suppose they would be the same when repaired, or of concrete.

The CHAIRMAN. Has the officer in charge of the hospital submitted a detailed estimate of the cost of improvements and fences and roadways and walks, showing what materials are intended to be used, and what the cost will be per square yard or square foot to make that improvement?

Doctor WYMAN. I do not think he has submitted that much of a detailed estimate.

The CHAIRMAN. How do you know, then, that this amount is necessary? How can we ascertain without having some detailed information?

Doctor WYMAN. His estimate is backed up by an estimate of our expert, who has visited the place.

The CHAIRMAN. Do you not require any detailed estimate to be submitted to you in connection with these estimates before submitting them to Congress, so that you can pass an intelligent judgment upon the reasonable correctness of the estimates?

Doctor WYMAN. Yes; I can furnish you with all those details. I have not brought them with me.

Mr. SULLIVAN. I suppose, General, if it should cost, say, \$3,000 for repairing the roadways and walks and constructing the wooden fences around three sides of the reservation that the man in charge could very easily spend the balance—whatever it might happen to be—on an iron fence of 500 feet frontage? Whether it was a six-hundred-dollar balance or a one-thousand-dollar balance he could expend it to fit the appropriation without much trouble?

The CHAIRMAN. You see, Doctor, when we go into the House with an item of this kind and are interrogated as to the basis of our judgment in recommending that amount, and can only say that we base our judgment on the judgment of the man in charge of the marine hospital; they may go back farther than that and find he has based his estimate on the opinion of the man in charge of the immediate place in question without any detailed estimate of the cost, and it does not give us a great deal of information.

Doctor WYMAN. Will you permit me to send in those estimates?

The CHAIRMAN. Certainly. We will be very glad to have you do it.

Doctor WYMAN. I asked for quite a number of items under marine hospitals and they were stricken out by the Secretary, and only these two were left; and in coming over this morning I had other matters more particularly in mind than those, and in my office are all these items that are necessary, and I would like to have the privilege of submitting them.

The CHAIRMAN. We would not only give you the privilege, but would exact from you that you give us that information.

Mr. SMITH. What kind of a road is this outside the main fence?

Doctor WYMAN. It is a regular street.

Mr. SMITH. How is it paved; macadam? or is it paved at all?

Doctor WYMAN. I think it is a macadamized street, though it may be asphalt. It is a good village street.

The CHAIRMAN. That is practically all you intend to build up to the hospital—a macadam road—is it not?

Doctor WYMAN. Yes, sir; or, possibly, a paved road.

## QUARANTINE STATIONS.

(See also p. 245.)

## BISCAYNE BAY, FLORIDA.

(See also p. 245.)

The CHAIRMAN. The next item is under quarantine stations: Biscayne Bay quarantine station; for new launch, \$3,500. Have you a launch at this quarantine station now?

Doctor WYMAN. We have a launch that we bought from the State of Florida at the time we took over the quarantine. It is entirely worn out, and we need a new launch there. That is at Miami, Biscayne Bay, on the east coast of Florida.

The CHAIRMAN. It is necessary to have a launch in connection with the service at that station?

Doctor WYMAN. Yes, sir; it is very necessary.

Mr. SMITH. Where do you say this quarantine station is? With my old geography I do not locate it.

Doctor WYMAN. It is away down on the east coast of Florida. There is a new line of steamers running in there now from Habana, and another one from Nassau.

The CHAIRMAN. What information have you, Doctor, as to the amount here stated to be necessary for the purchase of that launch?

Doctor WYMAN. That is about the average cost. We have bought a good many launches in the last few years, and this is about the average price.

The CHAIRMAN. What is the supposed capacity of that launch? How many people would it accommodate?

Doctor WYMAN. I suppose it would carry quite a number of people; but its function is not so much to carry a number of people as to go out and board vessels coming in and to carry two or three persons—an engineer, a pilot, and an inspector. It is not for the transportation of people; it is an inspection launch.

The CHAIRMAN. Is it a steam or a gasoline launch?

Doctor WYMAN. A gasoline launch.

Mr. SULLIVAN. There is one on the next page for \$3,000; \$500 less.

Doctor WYMAN. Yes.

Mr. TAYLOR. Where is Boca Grande?

Doctor WYMAN. That is on the west coast of Florida, at the entrance of Charlotte Harbor.

The CHAIRMAN. How many launches have you in the Marine-Hospital Service?

Doctor WYMAN. We have twenty-five or thirty, including those in Porto Rico and the Philippines and in Hawaii.

The CHAIRMAN. Can you inform the committee as to what the horsepower of this proposed launch at Biscayne Bay is to be, or would be necessary?

Doctor WYMAN. No; I can not.

The CHAIRMAN. The price of the launch, you know, is governed entirely by its power and capacity.

Doctor WYMAN. I do not know.

The CHAIRMAN. Do either of you gentlemen know?

Doctor GLENNAN. Sixteen horsepower, and about 36 feet in length.

Mr. SULLIVAN. Is that a stock size?

Doctor GLENNAN. Yes.

Mr. SULLIVAN. Is that the regular price for that stock size?

Doctor GLENNAN. Yes.

Mr. SULLIVAN. Are these bought in competition?

Doctor WYMAN. Yes; under advertisement.

Mr. TAYLOR. Why should you estimate one at \$3,000 and one at \$3,500?

Mr. HUDDLESON. They need a larger one at Miami than at Boca Grande.

Mr. SULLIVAN. There is more business for it there at Miami?

Mr. HUDDLESON. Yes.

Doctor WYMAN. It is a more important station.

Mr. SULLIVAN. It is on the ocean side?

Doctor WYMAN. Yes.

#### BOCA GRANDE, FLA.

(See also p. 245.)

The CHAIRMAN. The next item is Boca Grande quarantine station: For boarding launch, \$3,000. Have you a launch there now?

Doctor WYMAN. We have one that we took over when we bought the State quarantine, but it is now out of service.

The CHAIRMAN. How long has it been out of service, Doctor?

Doctor WYMAN. Very nearly a year. This season it is unserviceable.

The CHAIRMAN. How many people are stationed at Boca Grande quarantine station?

Doctor WYMAN. Only three or four. It is a small station.

The CHAIRMAN. It is located on the west coast of Florida?

Doctor WYMAN. Yes.

The CHAIRMAN. How far up the coast?

Doctor WYMAN. It is about halfway up the coast. It is below Tampa; south of Tampa.

The CHAIRMAN. Is there any considerable amount of commerce and passenger traffic at that point?

Doctor WYMAN. Not so much passenger traffic as there is commerce of a varied character. There is a good deal of fertilizing business there, and the commerce of that section is increasing right along.

Mr. SULLIVAN. The passenger traffic would be at Tampa, I presume?

Doctor WYMAN. Yes.

Mr. SULLIVAN. And you have, of course, a quarantine station and launch there?

Doctor WYMAN. Yes.

Mr. SULLIVAN. And the launch and service at Tampa could not do the service at Boca Grande?

Doctor WYMAN. No, sir.

The CHAIRMAN. Is it not possible at a small station like Boca Grande to hire launches to go out and board vessels?

Doctor WYMAN. No, sir. It is quite an isolated station, and it is not possible to get anything there. We have to have our own outfit.

The CHAIRMAN. There must be very little business at that port.

Doctor WYMAN. A good deal of shipping comes in there. This is

an outlying place. We put our stations in outlying places and positions, you know.

Mr. SULLIVAN. You have to have them on call at any time when a ship comes in? They have certain hours? They do not go out at night? If a ship comes in it must wait for a certain hour in the morning, and the same is true in the afternoon, but during a day the station is liable to be called upon at any time?

Doctor WYMAN. Yes.

SAN FRANCISCO, CAL.

The CHAIRMAN. The next item is under the San Francisco quarantine station; for laundry, ballast cars and track, and improvements to station, \$9,800. What information, Doctor, have you as to the necessity for that improvement, and on what basis is the estimate made?

Doctor WYMAN. We need a new laundry at the San Francisco quarantine station. That is one of the largest quarantine stations in the world. It receives all the traffic from the Orient—from China and Japan and the Hawaiian Islands—and we very frequently have to take off people at that station and take care of them. We want a laundry for the first-cabin passengers, so as not to mix up the laundry of the Chinese and the lower class of people with that of the better class. In fact, we have not got enough laundry facilities as it is.

The CHAIRMAN. What do you estimate as to the cost of the laundry?

Doctor WYMAN. Generally about \$5,000.

Mr. SULLIVAN. Have you received an estimate, General, on that?

Doctor WYMAN. Yes.

The CHAIRMAN. Does the estimate show the size of the laundry?

Doctor WYMAN. I do not know that we have that estimate at all as to the size of the laundry.

The CHAIRMAN. You rely in this item, as in the others, on the judgment of the person who makes the request for the appropriation?

Doctor WYMAN. Yes; backed up by the judgment of an architect that we have in the Bureau.

The CHAIRMAN. You think the data are over there in your office?

Doctor WYMAN. Yes.

The CHAIRMAN. Has he made an estimate for it?

Doctor WYMAN. He has. He has made a memorandum of it.

Mr. SULLIVAN. Then he has received a detailed estimate from San Francisco, has he?

Doctor WYMAN. Yes.

Mr. SULLIVAN. And on that he bases his own memorandum of estimate? Is that the manner of proceeding?

Doctor WYMAN. Yes, sir; sometimes. In this case he has visited this station himself.

Mr. SULLIVAN. And are these items of that estimate "For laundry, ballast cars and track, and improvements to station," all separately estimated for?

Doctor WYMAN. Yes, sir. I do not have that with me. The gentleman who has charge of these quarantine stations did not accompany me. I did not think it was necessary to bring him over, but I can give you the items.

The CHAIRMAN. We would be very glad to have detailed information. Now, ballast cars and track are also included in this item. Do you know how much is to be expended for that purpose?

Doctor WYMAN. I can not give it off hand, but I will give it to you in a note. (See p.—.)

The CHAIRMAN. We would also like to have an estimate of the amount to be expended in improvements. In lumping the appropriations in this way it is necessary that we should be able to know, at least approximately, the estimated amount of each specific item.

#### HONOLULU, HAWAII.

The next item is the Honolulu quarantine station: "For construction of wharf at United States quarantine station, Honolulu, Hawaii. \$50,000 in lieu of \$55,000, and for a runway to connect wharf with the island, \$15,000 instead of \$10,000, under the original limit in the sundry civil act," and so forth.

Mr. TAYLOR. You will find in the document submitted there, Mr. Chairman, that this does not apply to the Doctor. This is a document sent up here from the Supervising Architect. It simply requests a change of language used in the sundry civil act of 1903.

The CHAIRMAN. They want to deduct from the amount appropriated for the building of the wharf a certain amount and apply it to the building of a runway, the amount for which has not been sufficient?

Mr. TAYLOR. It seems to belong to the Supervising Architect, and not to the Surgeon-General, according to this document.

Doctor WYMAN. Yes, sir.

Mr. TAYLOR. Do you know anything about it, Doctor?

Doctor WYMAN. Yes; I know all about it.

Mr. TAYLOR. Go ahead, then.

Doctor WYMAN. For the wharf \$50,000 in lieu of \$55,000, and for the runway \$15,000 instead of \$10,000. They need that difference on the runway instead of the wharf. It does not call for any additional money.

Mr. TAYLOR. It calls merely for a reapportionment of a sum already appropriated?

Doctor WYMAN. Yes.

Mr. TAYLOR. Between the runway and the wharf?

Doctor WYMAN. Yes. The wharf is out in the channel. I have been there and have seen the site, and it requires a long runway to reach over the shallow waters to the station, and they found they could save on the wharf and needed more money on the runway.

Mr. SULLIVAN. Now, in this report of the Supervising Architect there is a statement that "Drawings have therefore been prepared, cheapening the work as much as practicable and more than sound construction warrants, and the proposal obtained is still in excess of the amount available under the act." Does not that indicate to you that by taking a part of the appropriation for the wharf and applying it to the runway it will leave the construction of the wharf unsound?

The CHAIRMAN. I think it is ambiguous. It says here:

I have the honor to state that the original plans prepared for carrying out the work provided for such construction as it was considered would meet the peculiar conditions of the case from an engineering standpoint, and it has been found impossible to construct the runway to connect the wharf with the island for less than \$14,300 in accordance with such plans.

Drawings have therefore been prepared, cheapening the work as much as is practicable and more than sound construction warrants, and the proposal obtained is still in excess of the amount available under the act. I have the honor, therefore, to sug-

gest that the attention of Congress be called to the matter with recommendation that the following item be included in the urgent deficiency bill with the statement that this legislation, if enacted, will not in any way increase the amount appropriated for the entire work, but simply change the apportionments for the runway and wharf.

Mr. TAYLOR. It just takes \$5,000 off the wharf and applies it to the runway.

The CHAIRMAN. It makes available \$15,000 for building the runway, which can not be built safely for less than \$14,300 according to this estimate, and leaves \$50,000 available for the construction of the wharf, and there is no evidence here to show that \$50,000 is not sufficient for the construction of the wharf.

Mr. SULLIVAN. And therefore the words "sound construction" relate to the runway?

The CHAIRMAN. Yes. It is the ambiguity in the letter itself.

## PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE.

(See also p. 249.)

If there is nothing further on that we will go to the next item, on page 56, Public Health and Marine-Hospital Service. There are several items under that heading.

Doctor WYMAN. Now, Mr. Chairman, if I may be permitted, in regard to all these items I wish to say that in submitting my estimate to the Secretary I presented a form modeled after that of the Revenue-Cutter Service, just as the Revenue-Cutter Service is appropriated for. You will remember that this is the first time that this Service will be specifically appropriated for by an act of Congress on the appropriation bills.

The CHAIRMAN. On specific estimates?

Doctor WYMAN. Yes. I spoke to the Secretary about it, and it seems these estimates were put in instead of the phraseology as it should be, following the phraseology as near as could be of the Revenue-Cutter Service. By a mistake, possibly in the warrant division or elsewhere, the phraseology was left off, and the items only were inserted. These items, if they were enacted into law, would not provide for the care of our entire service. They were simply items to show how the total amount asked for was arrived at, and I spoke to the Assistant Secretary about it this morning, Mr. Taylor, and he told me he had no objection at all to my speaking to the committee about it, and suggested that the phraseology be made like that of the Revenue-Cutter Service, and I have drawn it up here [submitting document].

The CHAIRMAN. I want to ask you a few questions as to how your estimates are made up. Do you estimate the specific amounts required for particular branches of the service and then impose upon some subordinate or clerk the duty of phrasing the estimates, following, in case previous estimates have been made, that language of the previous estimate, and do you afterwards, when the estimate is finally made up and submitted to the Secretary of the Treasury, go over it yourself?

Doctor WYMAN. Certainly; I go over it myself.

The CHAIRMAN. Did you do that in this instance?

Doctor WYMAN. I did, and I submitted it in person to the Secretary.

The CHAIRMAN. Where was the final estimate acted upon?

Doctor WYMAN. That is what I do not know. Sometimes I take my estimates down and discuss them with the Secretary, and I leave them

with him. I believe they have a committee that goes over estimates generally, and then they go to the warrant division, and there they get them out for the printer. Greatly to my surprise, this was put in in the form in which you have printed it there instead of the phraseology I wanted to put in. This is simply explanatory. There are certain things which, if enacted in this form, would cut off some of our work. For instance, if this would go this way there is nothing in here to indicate that we have a right to continue the work in our hygienic laboratory.

The CHAIRMAN. Have you more than one copy of that document?

Doctor WYMAN. Yes. I will read it to you.

The CHAIRMAN. No; your reading would not furnish us with what we want.

Mr. HUDDLESON. We can furnish you with more copies.

The CHAIRMAN. We would like to have the copies in order to interrogate the Doctor as to the amount estimated. This is entirely new, providing for the Marine-Hospital Service on specific estimates, and it is important that we should go through it pretty carefully, because it would become a precedent for all future appropriations.

Mr. SMITH. Have you three copies of it, Doctor?

Doctor WYMAN. Yes.

Mr. SMITH. Suppose you give one to the chairman and one to Mr. Taylor, and Mr. Sullivan and I can get along with one.

The CHAIRMAN. We might postpone these items until we have a chance to look them over. Suppose we do that, Doctor, and have you return here sometime next week, and we will take it up with you.

Doctor WYMAN. Very well.

---

WEDNESDAY, April 25, 1906.

#### MARINE HOSPITALS—Continued.

#### STATEMENT OF DR. WALTER WYMAN, SUPERVISING SURGEON-GENERAL PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE. ACCOMPANIED BY DR. A. H. GLENNAN, ASSISTANT SURGEON. AND MR. H. P. HUDDLESON, ACCOUNTANT.

The CHAIRMAN. Doctor, your estimates in this bill, to which your attention was previously directed, are on pages 17 and 56.

Doctor WYMAN. Previous to that, Mr. Chairman, I have some additional items about the marine hospitals at Key West and New York, and I can leave the memorandum with you or read it, just as you prefer. I have a statement in great detail concerning that.

#### KEY WEST, FLA.

The CHAIRMAN. The first item relating to your Service is a new item there, on page 17: "Key West, Fla., marine hospital, for improvements to breakwater, \$5,000." At the last hearing you were not able to give us the detailed information upon which this item is based, and the hearing was continued in order to give you the opportunity to get that information.

Doctor WYMAN. Yes, sir. The marine hospital at Key West was built in 1845. The grounds cover about 1 acre. The rear of building is toward the sea. The breakwater was begun in 1873, being simply loose rocks placed there by the officer in charge. In 1886 the present breakwater was constructed, of concrete, along the sea front of the lot, but not including the north and south ends of the reservation.

This breakwater, built about twenty years ago, is now reported as being cracked in several places and bulging out in consequence, evidently moving on its footing, permitting the sand filling back of the breakwater to wash out. Consequently there is a gradual sinking of the ground for a space of 30 feet. It is proposed to repair the breaks and at the same time construct a new breakwater 32 feet beyond the old one and fill in with sand from the sea; at the same time to extend this new breakwater so as to thoroughly include protection to the south and north ends of the reservation.

In this manner the area of the reservation will be increased and the isolation ward, constructed in 1893, which is now on piles, will be set on solid foundation. The necessity of this new breakwater is further shown by the fact that in storms the water washes over the present breakwater, reaching the hospital buildings, which are 40 feet back of the breakwater. The proposed new breakwater will be 791 feet in length, 581 feet of which are included in the sea front wall and the remainder includes the two ends. It is proposed to make this wall 4 feet thick at the base and 2 feet thick at the top.

Following is the estimate in detail:

ESTIMATE OF COST.

*Repairs to breakwater, marine hospital, Key West, Fla.*

Seven hundred and eighty-one linear feet of wall, 6 feet high and 3 feet average thickness—527 cubic yards of concrete.

Cost of materials at Key West:

Portland cement.....	per barrel.....	\$2. 65
Sand.....	per cubic yard.....	. 30
Stone.....	do.....	1. 50

Estimated cost per cubic yard of wall in place:

Cement.....	3. 00
Sand.....	. 20
Stone.....	1. 50
Iron.....	1. 00
Labor.....	1. 30
Total.....	7. 00

SUMMARY.

527 cubic yards concrete wall, at \$7.....	\$3, 689. 00
5,382 cubic yards sand filling (labor only), at 20 cents.....	1, 176. 00
Grading and sodding.....	135. 00
Total.....	5, 000. 00

Area of land gained, 24,217 square feet.

Mr. SMITH. What is the use of repairing the old wall if you are going to build a new one farther out?

Doctor WYMAN. Just minor repairs, stopping those cracks. We said "repairs to the breakwater" in the estimate, but it is really

more than repairs. It is repairs as it is generally counted in Government work. We will have to fix it up to some extent. We can do it out of this appropriation, possibly, by station labor.

MR. SMITH. I do not understand yet, if you are going to build an entirely new breakwater farther out, what function at all the old one will perform. That is my ignorance, perhaps, but I would like to know about it.

DOCTOR WYMAN. It will have to be made firm in order to meet the conditions and make the whole thing solid from the outer breakwater back. It is really a new breakwater that is wanted.

MR. TAYLOR. You mean a new breakwater on the line of the old breakwater, or a new one farther out?

DOCTOR WYMAN. Farther out. The sinking of the ground just back of the present breakwater 30 feet along the front would require repairing the breakwater and filling in behind to original level; and the old breakwater must be used until the new one is completed.

MR. SULLIVAN. And by filling the sand in between the two breakwaters you reenforce the old?

DOCTOR WYMAN. Yes.

MR. SULLIVAN. You pay \$2.65 per barrel for Portland cement. Is not that an extraordinary price?

DOCTOR WYMAN. I do not think that it is. That estimate has been made up by people who are posted on the price of this material.

MR. SULLIVAN. Do you know what the price of it is in New York or Boston?

DOCTOR WYMAN. No, sir; I do not. The prices are generally higher down there at Key West on account of its isolated position.

THE CHAIRMAN. The Panama Canal Commission say the cement people offer cement to them for how much?

MR. COURTS. They are paying about \$1.70.

MR. TAYLOR. \$1.75 is about right.

MR. COURTS. It is 37 cents less than the domestic price at Colon.

#### NEW YORK, N. Y.

THE CHAIRMAN. Now, we will pass to the next item, "New York marine hospital; for improvement of the fences, roadways, and walks, \$10,000." On this item you were not able to give the committee the details upon which your estimate was based. Have you since obtained those details, Doctor?

DOCTOR WYMAN. Yes, sir. The first item mentioned is fences. The hospital grounds have a front of 510 feet on Bay street, and the fence is an old wood-picket fence, whose posts and rails are rotting, the pickets falling off, and the fence requiring constant repair. The estimated cost of an iron fence, 6 feet high, with two entrance gates, is \$2,350.

On the south side of the reservation there is no fence at all, and it will require 1,002 lineal feet of fencing, at a cost of \$1.50 per foot, making \$1,503. This fence it is proposed to make of iron posts and wire.

THE CHAIRMAN. Now, let me ask you, Doctor, what is the necessity for a 6-foot fence in front of a hospital—a fence 6 feet high?

DOCTOR WYMAN. There is a terrace there. The hospital grounds are rather high, and there is a terrace right behind the fence; and to

make it proportionate a 6-foot fence, including the foundations and everything, would be necessary to keep intruders out. They have been very much annoyed by boys pulling off these palings and getting through and running through this reservation, and making a passage-way to other parts of the village through the reservation, and a good fence of reasonable height seems to be necessary.

The CHAIRMAN. That may be true, but it occurred to me that a fence 6 feet high was not a reasonable fence merely to prevent trespassing upon the grounds by passers-by. On the sidewalks, ordinarily, in cities where people have a fence around their dwellings, where it is just as essential to keep people out as it is there, they do it with an iron fence, where they have an iron fence 3 or 4 feet high. I wondered whether there were any peculiar conditions that necessitated a 6-foot fence in order to meet requirements beyond those that are met by people in fencing their private residences with a fence of 4 feet. A higher fence would be more expensive.

Doctor WYMAN. I can not say that a fence of smaller height would not answer, but that was the judgment of those who designed the plans and made this estimate.

The CHAIRMAN. The next item is roadways.

Doctor WYMAN. The present roadway, from Bay street through the hospital grounds to and including the whole front of the hospital, a linear distance of 718 feet, with a width of 16 feet, it is estimated will require 1,277 square yards of granite block paving at \$2.50 a square yard, making \$3,192.50. The present roadway was once macadamized. It is badly rutted and poorly graded and requires constant repairs. The grade from entrance gate is about 10 per cent. and granite block paving, with curb, is necessary. Eleven hundred and sixteen linear feet of stone curbing will be required, at an estimated cost of \$1 per foot, making \$1,116.

The CHAIRMAN. You may have stated it, but I did not catch it. Is this street or roadway entirely within the reservation?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. No part of it is on the outside?

Doctor WYMAN. No, sir. No part of it is on the outside of the reservation. It goes up to the center of the hospital in front and then extends to each side.

The CHAIRMAN. By block pavement you mean these small square blocks about the shape of a brick, only a little larger?

Doctor WYMAN. Yes, sir; larger.

The CHAIRMAN. Does that include the walks?

Doctor WYMAN. That includes the roadway. Then there are the walks in addition.

The CHAIRMAN. The next item is the walks?

Doctor WYMAN. Yes. The Bay street sidewalk is at present of 3-feet wide flagstone placed in the middle of the width of the walk. It is proposed to completely cover the sidewalk with a cement concrete walk 12 feet in width, containing 680 square yards, at \$1.90 per square yard, costing \$1,292. Bay street in front of the reservation is paved with asphalt, and there is a cut granite curb to the sidewalk. There is proposed a walk of the same material (cement concrete) alongside of the roadway from the entrance gate to the front door of the hospital. This will be 270 linear feet, and being 3 feet wide will

contain 270 square yards of cement concrete, at \$1.90 per square yard, costing \$513.

*Marine Hospital, New York, N. Y.*

Item: Improvement of fences, roadways, and walks----- \$10,000.00

ESTIMATE.

Fences:

510 linear feet of iron fence on Bay street front, 6 feet high, with corner and gate posts, \$4 per linear foot -----	\$2,040.00	
Two entrance gates -----	310.00	
		2,350.00
1,002 linear feet iron post and wire fencing on south side of reservation, \$1.50 per linear foot -----		1,503.00

Roadways:

398 linear feet of granite block paving of roadway from hospital gate to front of hospital, 16 feet wide, 707 square yards, \$2.50 -----	1,767.50	
320 linear feet of granite block paving of roadway in front of hospital, 16 feet wide, 570 square yards, \$2.50 -----	1,425.00	
		3,192.50
1,116 linear feet of stone curbing to roadway, \$1. -----		1,116.00

Walks:

680 square yards of cement concrete walk on Bay street, 12 feet wide, \$1.90 per square yard -----	1,292.00	
270 square yards of cement concrete walk, 3 feet wide, at side of road from entrance gate to front door of hospital, \$1.90 -----	513.00	
		1,805.00
		9,966.00

The CHAIRMAN. Doctor, does this sidewalk 12 feet in width conform to the width of the sidewalk at either end of the property of the Government on this street?

Doctor WYMAN. The Government property abuts on Bay street on the north with other property.

The CHAIRMAN. What is the width of the sidewalk on either side of the Government reservation facing Bay street?

Doctor WYMAN. There is only one sidewalk. The other side of the street is on the bay, and there is no sidewalk there.

The CHAIRMAN. What is the width of the sidewalk up to the point where this sidewalk in front of the property begins, and what is the width of the sidewalk on the other side?

Doctor WYMAN. It is all 12 feet wide.

The CHAIRMAN. So that this would be uniform in width with the rest of the sidewalk on that street?

Doctor WYMAN. Yes, sir. The sidewalk would simply be a continuation of the town sidewalk above and below it.

The CHAIRMAN. Is not that an unusually wide sidewalk—12 feet in width?

Doctor WYMAN. It is not a narrow one, but I do not know that it is a very unusually wide one.

Mr. SMITH. Do you not know, Doctor, that \$1.90 per square yard for concrete is an unreasonable price?

Doctor WYMAN. No, sir; I do not know it.

Mr. SMITH. Do you not know that it can be laid all over the United

States at two-thirds of that? It is laid all over the United States at 14 cents a square foot. This is 21 cents a square foot.

Doctor WYMAN. It is \$1.90 per square yard.

Mr. SMITH. It is fully 50 per cent higher than anywhere else in the United States, in my judgment, for this kind of work.

Doctor WYMAN. I can not defend the prices here, because I had to take the values from the man who is supposed to know.

Mr. SMITH. I never heard of any being laid above 16 cents a square foot in many years.

## QUARANTINE STATIONS.

### BISCAYNE BAY AND BOCA GRANDE, FLA.

The CHAIRMAN. The next item, I believe, is disposed of—"Biscayne Bay quarantine station, for new launch, \$3,500." I think you gave us full information on that.

Doctor WYMAN. I think so; but I think we have it here repeated.

The CHAIRMAN. You can submit that to the stenographer and let it go in.

Doctor WYMAN. That was for two launches, for Biscayne Bay and for Boca Grande quarantine station, boarding launch.

The proposed launch for Biscayne Bay quarantine station is to be of a length of 36 feet; breadth, 8 feet; and draft, 3 feet 6 inches; 16-horsepower 2-cylinder gasoline engine, with complete equipment of lights, anchors, cables, flagstuffs, life-preservers, ring buoys, etc.

The launch for Boca Grande quarantine station, length, about 30 feet; breadth, 7 feet; draft, 3 feet 6 inches; 12-horsepower 2-cylinder gasoline engine, complete equipment of lights, anchors, cables, flagstuffs, life-preservers, ring buoys, etc.

### SAN FRANCISCO, CAL.

The next is the San Francisco quarantine station.

The CHAIRMAN. Yes; for a laundry, etc. That item embodies a number of different elements upon which you were unable to give us detailed information when you were here before.

Doctor WYMAN. It is for laundry, ballast cars and tracks, and improvements to the station.

It is proposed to erect a new building near to the steam boilers, and thus save the cost of a separate boiler and in the consumption of fuel, as the electric-light machine and pumps will be frequently in use and the laundry can be served with steam without much extra cost. The estimate of \$5,000 covers all expenses, and in addition will release, as quarters for attendants, a building which is now occupied as a laundry. These attendants are at present quartered in buildings intended for detained passengers. The new building will be about 60 by 20 feet.

That was estimated by an architect who was out there on the spot. I have here a map of this quarantine station, if you gentlemen are interested in seeing it. That San Francisco quarantine station is one of the largest quarantine stations in the world and does as much business as any other quarantine station in the world. Here is the cove [submitting photograph]. Here are the officers' quarters, and

here is the detention shed, and here is the laundry, and here the bath houses for steerage passengers and cabin passengers [indicating on photograph]. Here it is in detail, with numbers showing what the buildings are.

The CHAIRMAN. This laundry, you say, is to be built where?

Doctor WYMAN. Right here [indicating]. Here is the boiler house [indicating], and the laundry is to be built here [indicating].

The CHAIRMAN. Where would that be on this blueprint?

Doctor WYMAN. Right here [indicating]. You can not see the boiler house very well here.

The CHAIRMAN. Now, on this map here, where are the men's quarters?

Doctor WYMAN. Some of them are put in No. 20 at present, where they ought not to be.

The CHAIRMAN. Do you think you need a laundry of that size there?

Doctor WYMAN. Yes, sir. We ought to have every facility possible there. This port receives passengers from the Orient—Hong-kong, Shanghai, Yokohama, the Philippine Islands, and Hawaii.

The CHAIRMAN. That includes equipment and machinery and everything?

Doctor WYMAN. Yes, sir. I do not think it includes the machinery; but we can move the machinery in there.

The CHAIRMAN. You have sufficient machinery now in the present building you are occupying and using as a laundry?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. And this estimate includes the cost of moving the machinery?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Do you contemplate any new equipment?

Doctor WYMAN. No, sir.

The CHAIRMAN. You get your steam from the boiler and power plant there [indicating]?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Which was established first—the present laundry, or the power house?

Doctor WYMAN. I think the present laundry was established first. I think the power house came along later.

The CHAIRMAN. Have these buildings, do you know, been affected by the recent earthquake?

Doctor WYMAN. Only slightly. The chimneys were knocked down at the hospital. We got word from the commanding officer that the buildings were injured very slightly.

The CHAIRMAN. Now we will go to page 58.

Doctor WYMAN. I have not finished with the details at San Francisco.

The CHAIRMAN. Very well. Give us the rest.

Doctor WYMAN. The ballast cars (2) and track (100 feet rail). These items are necessary, as sailing vessels coming from the Orient usually carry ballast, and such ballast is considered dangerous and must be removed. Under local harbor regulations ballast can not be dumped into the bay. The intention is to fill in a space marked out by a riprap wall constructed by attendants with the ballast thus removed, and in this way at one and the same time dispose of the

ballast and comply with the local harbor regulations. Estimated cost, \$200.

Now, as to improvements to the station——

The CHAIRMAN. The amount you estimated for the ballast cars and tracks is what?

Doctor WYMAN. Two hundred dollars.

The CHAIRMAN. The next item is improvements to the station.

Doctor WYMAN. Under that we have a mortuary. At present there are no suitable facilities for necropsic examinations.

Mr. SULLIVAN. "Necropsic"—what is that?

Doctor WYMAN. The examination of a body after death.

Mr. TAYLOR. Is there any difference between that and a post-mortem?

Doctor WYMAN. No; it means post-mortem. It seems to be a more exact term than post-mortem. The words are used synonymously. A building for that is necessary.

That is the \$300 item, a small building.

Next is a coal shed. At present our coal is dumped on the pier and left in the open, and the coal deteriorates when piled up in the open air. The shed will be a matter of economy, not only in preventing this deterioration, but in enabling larger quantities of coal to be stored than is now possible. Coal purchased in larger quantities can be obtained cheaper, and there will be a saving in the expenses of the station by lessening the necessity of the boats making trips from the station to the city for the purpose of filling their bunkers, to be about 20 by 30 feet, to hold about 150 tons of coal. Estimated cost, \$800.

The next clause is improving bath house and steerage accommodations. The steerage passengers' bath house has dressing stalls on one side and bath stalls on the other, separated by an open space. These should all be moved to the center, so that persons can go in one side, undress and bathe, and emerge dressed from the opposite side. The present arrangement is inconvenient, is the cause of much delay, and is hardly decent. The building is 74 by 20 feet, with shower baths, dressing rooms, etc. New partitions and fixtures and rearrangement, as shown in red on plan (including labor and material):

5,040 square feet partitions, lined, at 50 cents.....	\$2, 520
600 square feet grated floors, at 25 cents.....	150
12 shower baths, including hot and cold water supply pipes, wastes, in place, \$40 each.....	480
12 seats, hook rail and hooks for clothes, at \$5 each.....	60
Resetting 3 bath tubs, including partitions and doors.....	290
	<hr/>
	3, 500

We ought to have everything at that station right up to the mark in matters of efficiency and decency. These steerage passengers have to be bathed, and the present arrangement is not a proper one. This would make it easier in facilitating the bathing and relieve the criticism as to their being unnecessarily exposed.

#### QUARANTINE STATION, PORTLAND, ME.

The CHAIRMAN. We have a supplemental estimate here, Document No. 666, for a quarantine station at Portland, Me. Will you please state to the committee the necessity for this item?

Doctor WYMAN. It is all explained in the document. It is an old debt of \$2,000 for the purchase of the Portland quarantine plant at the time they turned it over to us.

The CHAIRMAN. It is a claim against the Government?

Doctor WYMAN. Yes.

Mr. SMITH. Have you ever given a deed for it?

Doctor WYMAN. This was simply the property, on Government ground; but they turned over their quarantine functions to us, with the understanding that we would buy what they were using for quarantine. They had there a one and one-half story cottage, a steam disinfecting chamber, two steam boilers, one small steam engine, two wagon trucks.

The CHAIRMAN. Under what authority did we purchase that?

Doctor WYMAN. Out of the epidemic fund, it being necessary to prevent the introduction of contagious diseases from abroad. The local quarantine at Portland, Me., was very badly managed, and there was great danger of smallpox being introduced through that quarantine. We had a demand from the State of Michigan, which receives immigrants coming through Portland, and others, for the National Government to take charge of that quarantine, and the city authorities of Portland concluded to give it to us. We made an examination of the property, and this was considered a very reasonable sum for what they had, so it was purchased by the Secretary of the Treasury, to be paid for from the epidemic fund, but the Auditor, much to my surprise, declared it could not be paid from that fund, and that is the reason it is before you now for payment. Mr. Allen could make a statement concerning it, I suppose.

Mr. SMITH. I call your attention to the language of that document:

No appropriation for the quarantine station at the port of Portland, Me., was made by Congress until March 3, 1903, when the sundry civil act for that year contained the following item: "Portland, Me., quarantine station: For purchase of site, erection of buildings, and equipment of station, \$50,000. The appropriation having been made later than the date of the transfer of the property, no part thereof is available for the payment of the obligation to the city of Portland."

You refer there to this item as if you had anticipated paying it out of this item. Did you ever understand that it would be paid out of this item?

Doctor WYMAN. No; I did not. Perhaps it was under consideration at the time whether we could or could not, and we found that we could not.

Mr. SMITH. Did the Government own this land before on which these buildings stood?

Doctor WYMAN. Yes, sir; House Island. The Government owns one-half and the other half was owned by private parties. The Army would not give us the control of the other part of it, so out of this appropriation referred to there we bought the other half of the island.

Mr. SMITH. Were these buildings at the time you acquired them standing upon the War Department's account?

Doctor WYMAN. Yes, sir.

Mr. SMITH. So you had to move them?

Doctor WYMAN. We had to do without them altogether or move them. We are constructing the station now under an appropriation.

Mr. SMITH. Did you abandon all of these buildings?

Doctor WYMAN. We have practically abandoned them. We haven't

made any disposition of them. They were very cheap buildings. Whether we will use the property that is there or not we have not quite determined.

Mr. SMITH. Was a formal written contract entered into for the purchase of this property?

Doctor WYMAN. There was a proposal made by the Portland authorities for the sale of it, and we accepted at—\$2,000.

Mr. SMITH. That correspondence is not set forth in this document.

Doctor WYMAN. It is not in here; no.

Mr. SMITH. And there never was any bill of sale given, or any other conveyance of the property, excepting the proposal and acceptance. Is that right?

Doctor WYMAN. I think there was a bill made out. There was a proposal made, a bill rendered, and that was sent over, and the Auditor refused to pay it out of the epidemic fund.

Mr. SMITH. Had you taken possession before he refused to pay it?

Doctor WYMAN. Oh, yes.

Mr. SMITH. And you never got any bill of sale or other conveyance of the property?

Doctor WYMAN. A bill of sale would be an ordinary bill against us—

Mr. SMITH. A bill of sale is a conveyance of personal property usually similar to a deed as to real estate.

Doctor WYMAN. A bill was rendered which was referred to the Auditor.

Mr. SMITH. There was never any formal instrument of transfer of any kind.

Doctor WYMAN. No; but we took possession.

Mr. SMITH. And it was after you took possession that the Auditor refused to allow it out of the epidemic fund.

Doctor WYMAN. Yes, sir.

Mr. SMITH. And you did not turn the property back?

Doctor WYMAN. No; we didn't turn it back.

## PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE (AGAIN).

The CHAIRMAN. We will now go to page 56. When before the committee at a previous hearing you stated that the estimates as submitted here and printed in the bill would not meet the requirements of your Service, and you desired to submit your estimates in different form.

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Have you prepared your estimates now?

Doctor WYMAN. Yes. Here is a copy [handing statement to the chairman]. I have here two pages, the first containing the phraseology, and the second the itemizations under each provision made. This is a substitute for the italics printed on pages 56, 57, and 58.

The CHAIRMAN. Have you, in this detailed statement here, followed substantially the language printed in this bill?

Doctor WYMAN. Yes; that was the purpose. In what bill do you mean? Do you refer to the bill of the committee?

The CHAIRMAN. Yes.

Doctor WYMAN. No; not in all respects. This is slightly different, and, as I explained before, that in the bill was not intended, when it

was submitted, to be enacted into law. It was a memorandum accompanying the form, similar to the form on the first page of the two just handed you, and it was by mistake printed in the estimates.

#### INSANE, CARE OF.

The CHAIRMAN. In your memorandum, then, which was submitted and printed in this bill, there is an item "For care of patients, Government Hospital for Insane, \$8,324." I don't see that in your detailed estimate here, or any item that would authorize that expenditure.

Doctor WYMAN. That would come under the clause "For medical examinations, care of seamen, care and treatment of all other persons entitled to relief, at other than marine hospitals." We didn't make a specific item of it, but it would be provided for. It is included in this \$185,000 item, and would be provided for by the phraseology of the law as suggested on the first page.

The CHAIRMAN. This Government Hospital for the Insane referred to here at the top of 58 means the St. Elizabeth Hospital?

Doctor WYMAN. Yes, sir. We would suggest that we have insane patients in other hospitals, some on the Pacific coast, and occasionally in some far-distant place, when it is not considered economical to transfer them here, either because they are cases which may be temporary, or the expense of transportation is too great and it is cheaper to keep them where they are.

Mr. SMITH. Then why not strike out the word "Government?"

Doctor WYMAN. We are requesting that this be substituted.

The CHAIRMAN. You say that the language in your proposed substitute—

Medical examinations, care of seamen, care and treatment of all other persons entitled to relief at other than marine hospitals, and to be used for like purposes as were the tonnage taxes prior to July 1, 1906, \$185,000.

Doctor WYMAN. That item is practically included on the first page.

The CHAIRMAN. That item covers or includes what you have here on page 58, "For care of patients, Government Hospital for Insane?"

Doctor WYMAN. Yes, sir; it includes that.

The CHAIRMAN. Does that include railroad transportation, sick and insane seamen, freight, and so forth, \$10,000?

Doctor WYMAN. No, sir; that is provided for in what I submit to-day.

The CHAIRMAN. What in this estimate would include that?

Doctor WYMAN. Freight, transportation, and traveling expenses.

The CHAIRMAN. What item of your substitute would cover the item for "Burial of deceased seamen?"

Doctor WYMAN. "All other necessary miscellaneous expenses which are not included under special heads."

The CHAIRMAN. What item in your proposed substitute would include the "pay of 30 watchmen for 14 closed hospitals?"

Doctor WYMAN. For pay of all other employees, and this clause, also.

The CHAIRMAN. Have you included that in the \$273,000 item under the head "Pay of all other employees?"

Doctor WYMAN. We included all that we think is necessary for running the service in the items, and of course the specific charges would have to come under one or the other of them.

The CHAIRMAN. How do these estimates under the several heads

which you propose compare with the amount expended under each one of these heads during the last fiscal year?

Doctor WYMAN. Most of them are based upon amounts expended.

There are one or two exceptions where the amount is less than last year, and one or two—I think one—where the amount is greater. The sum total of the estimates is just about the same as the sum total of the expenditures for the last year—a trifle less.

The CHAIRMAN. Which sum total do you refer to in that statement? The sum total of the sheet here, which gives in detail the appropriations? Which sum total is it—the \$1,312,848, or do you include the sum total in the lump sum of \$1,290,000?

Doctor WYMAN. In the lump sum. It is really \$1,190,000, but we have added \$110,000 for the immigration service.

The CHAIRMAN. Which sum total do you refer to when you say that the sum total is less than the expenditure during the fiscal year 1905? Can you give the sum total of expenditures for 1905?

Doctor WYMAN. About \$1,198,000, in round figures. In the annual report the total expenditures for 1905 were given as \$1,183,627.23, but when the account for the year was closed, September 1, 1905, there was some outstanding indebtedness—bills for which had not been received—amounting to about \$15,000, so that the total cost of the Service, as stated (\$1,198,000), is nearly correct. Here is one item that is less—that is, "For purveying depot and purchase of medical, surgical, and hospital supplies, \$30,750." That is less than the expenditure last year. A less amount is required because we have ceased to purvey certain articles from the purveying depot. And also the rent of the building here in Washington is less than it was last year.

#### PAY AND ALLOWANCES OF OFFICERS.

The CHAIRMAN. Your estimate of \$375,910 for pay, allowances, and commutation of quarters for commissioned medical officers and pharmacists which you now have in your employ?

Doctor WYMAN. Yes.

The CHAIRMAN. Have you contemplated increasing that force in the next fiscal year?

Doctor WYMAN. We have made no special provision for increasing the force.

The CHAIRMAN. Is that amount necessary to pay the present force?

Doctor WYMAN. It is; yes, sir.

The CHAIRMAN. And also to pay for commutation of quarters for commissioned officers?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. And allowances. You do not contemplate adding any additional men?

Doctor WYMAN. No; we do not.

The CHAIRMAN. Or any increases of salaries?

Doctor WYMAN. The salaries increase themselves under the longevity pay that we have. We have taken that into account in making the estimates.

The CHAIRMAN. How did you arrive at the estimate of \$273,436 for the pay of all other employees?

Doctor WYMAN. That is the estimate on the past year—the present force.

The CHAIRMAN. On the basis of your present force?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Is any part of that force temporary?

Doctor WYMAN. No, sir.

The CHAIRMAN. It is all an annual force, is it?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. What salary do you pay?

Doctor WYMAN. Attendants?

The CHAIRMAN. Take the first item, for example, "commissioned officers and pharmacists;" what salaries do you pay?

Doctor WYMAN. The salary of a surgeon is \$2,500, with 10 per cent additional for every five years of service up to 40 per cent, as longevity. We have commutation of quarters at the rate of \$50 per month. The passed assistant surgeons receive \$2,000, with corresponding longevity pay. An assistant surgeon receives \$1,600. After five years of service they become passed assistant surgeons, at \$2,000.

The CHAIRMAN. "Medical officers." Those are the doctors, surgeons, and assistant surgeons. What salaries do you allow your pharmacists?

Doctor WYMAN. We pay the pharmacists according to the grade. There are three grades, \$700, \$800, and \$1,000.

The CHAIRMAN. One thousand dollars is the highest salary?

Doctor WYMAN. Yes, sir.

#### EMPLOYEES.

The CHAIRMAN. Under the next item, "Pay of all other employees," what class of service do these employees render?

Doctor WYMAN. They are hospital attendants and acting assistant surgeons, or contract surgeons.

The CHAIRMAN. What do you pay them?

Doctor WYMAN. We pay acting assistant surgeons on the average \$712 a year—some more and some less, but that on the average.

The CHAIRMAN. And on that basis you will need \$273,436 to meet that expenditure during the coming fiscal year?

Doctor WYMAN. Yes, sir; for acting assistant surgeons and all hospital attendants.

The CHAIRMAN. Are there any conditions that would make the expenditure less or more during the last fiscal year than you have reason to anticipate during the coming fiscal year?

Doctor WYMAN. No, sir.

#### FUEL, LIGHT, AND WATER.

The CHAIRMAN. "Fuel, light, and water, \$75,000." Does that include fuel for the buildings you occupy in Washington?

Doctor WYMAN. No, sir; that comes under another appropriation of the Treasury Department.

The CHAIRMAN. The fuel for all buildings occupied here in Washington comes out of the Treasury Department?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. This fuel, light, and water supplies your hospitals throughout the country?

Doctor WYMAN. Yes, sir.

#### REPAIR AND PRESERVATION OF HOSPITALS.

The CHAIRMAN. "Repairs and preservation of marine-hospital buildings, and the grounds thereof, \$40,000."

Doctor WYMAN. That is based on actual estimates made, and practically of the cost of repairs of the previous year. That is about the usual annual expenditure for ordinary repairs.

The CHAIRMAN. Have you got a statement there of the annual expenditure under this item running back for three or four years?

Doctor WYMAN. No, sir; I haven't any such statement prepared.

The CHAIRMAN. Can you state from general information that you may have, whether or not that has been the usual annual expenditure for this purpose?

Doctor WYMAN. Yes, sir; it has. Some years we have far exceeded that, because it depends upon the amount of repairs necessary. Sometimes in some instances there are quite expensive repairs necessary at hospitals, and it has not been uniform.

The CHAIRMAN. How frequently have you asked for specific appropriations for repairs such as you are now asking for, repairing and improvement of grounds in the New York Hospital?

Doctor WYMAN. I think that is the first specific estimate or request for repairs of that kind that we have made.

The CHAIRMAN. Who determines whether the repairs are necessary or not?

Doctor WYMAN. We have an architect who visits the place and makes an estimate, and not only passes upon whether things are desirable and necessary, but estimates the cost. The medical officer at the station first calls our attention to the matter, then we send this man there to look it over and to give us exact information—expert advice.

The CHAIRMAN. And on his recommendation the repairs are ordered to be made by you?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Do you have an inspector of buildings?

Doctor WYMAN. Yes, sir. This gentleman is inspector of buildings.

The CHAIRMAN. And also architect?

Doctor WYMAN. And architect; yes, sir.

The CHAIRMAN. What compensation does he receive?

Doctor WYMAN. Two thousand two hundred dollars.

#### WATCHMEN FOR CLOSED HOSPITALS.

Mr. SMITH. I notice in your original estimates that you have an item for pay of 30 watchmen for 14 closed hospitals, at \$500 per year. Are these hospitals closed?

Doctor WYMAN. We haven't heard of any determination to have them closed.

Mr. SMITH. Are they to be closed next year?

Doctor WYMAN. I don't know. I haven't been informed.

Mr. SMITH. Now, this item will either not be expended, or, if it is, it will result in a great reduction in your general expenses, will it not?

Doctor WYMAN. No, sir.

Mr. SMITH. If you should close 14 hospitals in the next year, would it not result in quite a cut in these estimates all along the line?

Doctor WYMAN. No, sir. We have made estimates for conducting the service as it is conducted now, and we have estimates for con-

ducting the service with the closed hospitals, and they are practically the same.

Mr. SMITH. So that your contention is that closing these hospitals will effect no economy whatever?

Doctor WYMAN. Closing them and substituting a contract system for them, the sum total of appropriations will be the same.

Mr. SMITH. I was of the impression that it was the contention of the Treasury Department that the closing of these hospitals would materially reduce the expense.

Doctor WYMAN. Well, we made the estimate honestly and carefully, and we found, and I so informed the Secretary, that the estimate was, if anything, a little bit more.

Mr. TAYLOR. For the contract system?

Doctor WYMAN. For the contract system.

Mr. SULLIVAN. Why do you close them?

Doctor WYMAN. I do not know that they are to be closed.

Mr. TAYLOR. Who has that discretion, the Secretary?

Doctor WYMAN. The Secretary.

Mr. SMITH. What is the value of the property to be watched at these hospitals if they should be closed—that is, after you have removed, as I suppose you would, the portable matter?

Doctor WYMAN. It would be difficult to state offhand. There would be buildings to be watched, some property in them, fixtures, and so forth. The value of the buildings I could not tell you right offhand.

Mr. SMITH. Can you give me an estimate as to whether it is a million or a thousand dollars?

Doctor WYMAN. Some of those buildings were built so long ago that it would be pretty hard to estimate what they cost or what their present value is.

Mr. TAYLOR. The whole number of 14 that is suggested to be closed, is what Mr. Smith means; can you give us an estimate of that?

Mr. SMITH. I don't mean the value of the real estate, nobody would steal that. I am talking about how much we would be paying relatively to watch that, which is on the real estate what that is worth. You propose spending \$7,000 every year in watching that. Couldn't you give me the slightest general idea as to the value, exclusive of the land?

Doctor WYMAN. I could not offhand.

Mr. SMITH. Not even whether it is worth \$1,000 or \$10,000,000?

Doctor WYMAN. Between those limits, surely.

Mr. SMITH. That is as near as you can get, is it?

Doctor WYMAN. Well, yes.

Mr. SULLIVAN. Have any of them been closed in the last year?

Doctor WYMAN. No, sir; except that one was closed at Cincinnati on account of its requiring an unusual amount of repairs, and the hospital being badly located there.

Mr. SULLIVAN. You closed that yourself?

Doctor WYMAN. Yes, sir.

Mr. SULLIVAN. Then you have authority to close them independent of the Secretary?

Doctor WYMAN. I had the Secretary's approval. We determined in that case that we did not want to spend a large amount for repairs. The railroads and the factories having come up around it, it was an

improper place for a hospital, and rather than continue it and spend a large amount of money on repairs, it was discontinued.

Mr. SULLIVAN. I assume that similar conditions would require similar treatment. If you found conditions like that elsewhere, you would make a similar recommendation?

Doctor WYMAN. Yes, sir.

Mr. SULLIVAN. And I think that the Secretary of the Treasury does not have really any initiative in the matter, but that the information is first furnished him, together with a recommendation from you, and upon this he acts.

Doctor WYMAN. That is the case with reference to Cincinnati.

Mr. SULLIVAN. Now, then, how did this language get into this bill on page 58, "for the pay of 30 watchmen for 14 closed hospitals?"

Doctor WYMAN. That was an estimate not intended to be printed, and was made in accordance with the request of the Secretary. After I had made a previous estimate for the care of the service, he asked me to make an estimate on the care of the service on that plan.

Mr. SULLIVAN. Who made the estimate?

Doctor WYMAN. We made it.

Mr. SULLIVAN. How did the idea of closing these 14 hospitals find lodgment in the brain of the Secretary?

Doctor WYMAN. He wanted an estimate made as to the cost of maintaining the Hospital Service, maintaining only 7 marine hospitals, the other stations to be maintained under the contract system.

Mr. SULLIVAN. What was it that caused him to select 14 as the number?

Doctor WYMAN. Because there were 21, and he said he would keep 7. He took 7 as an arbitrary number, as I understand it.

Mr. SULLIVAN. You think it was done arbitrarily?

Doctor WYMAN. I would like to correct my expression in regard to that. He said 7 marine hospitals, presumably the largest or most important.

Mr. SULLIVAN. Then it is your judgment that he did not select these arbitrarily?

Doctor WYMAN. No; he selected 7.

Mr. SULLIVAN. Upon what did he base his judgment when he made the selection of 7, instead of 10, 12, 14, 19, or 20?

Doctor WYMAN. I do not know.

Mr. SULLIVAN. You are certain that the information did not come from you or any officer of your department?

Doctor WYMAN. No, sir.

Mr. SULLIVAN. Nor any recommendation that 14 be closed?

Doctor WYMAN. No, sir.

Mr. SULLIVAN. You don't know how he got this item in his head?

Doctor WYMAN. No.

Mr. SULLIVAN. That is an extraordinary state of affairs. Do either of these gentlemen happen to know?

Mr. HUDDLESON. No; excepting that the 7 hospitals are probably the largest seaport hospitals.

Mr. TAYLOR. I understand you to say that your cost does not increase whether you close them or not?

Doctor WYMAN. That is right.

## TOTAL ANNUAL COST.

Mr. TAYLOR. Is that due in any way to the regular employment of your surgeons and commissioned officers? Does not that go into the cost of the hospitals throughout the United States?

Doctor WYMAN. It is due partly to the fact that our officers, while they are conducting the Marine Hospital relief, for illustration, are also obliged to do a good deal of other work, such as examining of pilots for color blindness, the examinations with reference to the Revenue-Cutter Service, examinations for the Life-Saving Service, etc.

Mr. TAYLOR. The point I want to arrive at is, was not the expense paid by your Marine-Hospital Service for its maintenance a part of the estimate in making up the cost of maintaining the hospital so far as the individual patients were concerned? Was not that estimated in making up the cost as compared with the contract service—the total cost of your whole service, including your surgeons, pharmacists, and attendants at hospitals?

Doctor WYMAN. Everything was included.

Mr. TAYLOR. And you would not reduce your commissioned officers if these different hospitals were abandoned?

Doctor WYMAN. No, sir.

Mr. TAYLOR. Nor do you ask to increase them?

Doctor WYMAN. No.

Mr. TAYLOR. So that the pay of your officers was included in the estimate of the total cost per port of the Marine-Hospital Service in its attention to seamen.

Doctor WYMAN. Yes; exactly; in our estimates.

Mr. SMITH. If I understood you, you said the expense of your entire service last year amounted to \$1,198,000.

Doctor WYMAN. In round numbers.

Mr. SMITH. Now, in this proposed substitute for the bill you put \$1,312,846.

Doctor WYMAN. Please see the note at the top of the page. We put \$1,312,000 on the page containing the amounts for each class of expenditures, but here on the first page we put it at \$1,290,000. The reason of that is that it is an administrative fact that if you appropriate for each one of these items so much we could not save on one to pay out of it in cases required in the other. That is, if you itemized these expenditures we would have to have that much total, and we would be limited to the specific amount opposite each item. That same principle is brought out in the Revenue-Cutter Service.

Mr. SMITH. What you claim is that this increase from \$1,198,000 to \$1,312,000 is made necessary by the segregation of the items?

Doctor WYMAN. Yes.

Mr. SMITH. How do you explain the increase from \$1,198,000 to \$1,290,000?

## EXAMINATION OF IMMIGRANTS.

Doctor WYMAN. One hundred thousand dollars is put on. We had it \$190,000 originally, but we pay for the examination of immigrants, then we put in a bill for reimbursement under the law. The chairman thought that instead of authorizing us to immediately collect that reimbursement they would add \$100,000 to this amount of

\$1,190,000, of which sum \$110,000, or as much as may be necessary, shall be paid direct from the immigrant fund.

Mr. SMITH. But would this language be sufficient to deprive you of the right under existing law to obtain reimbursement in addition to the \$110,000?

Doctor GLENNAN. The Comptroller has decided that where there is a specific appropriation for a specific object no other money can be used to augment that appropriation.

Mr. SMITH. But this does not provide that \$110,000 may be used for the aiding of the Immigration Bureau in examinations of immigrants. It simply provides that \$110,000 shall be paid from the immigration fund. He certainly would not hold that that changed existing law, that that entitled you to pay for examinations made in the Immigration Bureau.

Doctor WYMAN. It might be that the phraseology should be changed.

Mr. SMITH. If I understand you, you say that the segregation of the items only makes a difference of about \$22,000 or a little over, or the difference between \$1,290,000, as shown in this item, and \$1,312,000, which would be between twenty-two and twenty-three thousand dollars, which is all you say the appropriation is increased.

Doctor WYMAN. I think I am right on that.

Mr. SMITH. I would like to have the two statements explained.

Mr. SULLIVAN. Allow me to state right there: A moment ago didn't you state that it was an administrative fact that when these items were segregated the appropriation would have to be increased in order to afford you sufficient margin to work on, because you could not use this fund interchangeably and rob Peter to pay Paul, and therefore that appropriation of \$1,190,000, which I understood you then to say would be adequate under your system, would not be sufficient under the system provided by the committee, but that under that system \$1,312,000, or \$122,000 more, would be provided? Which did you have in mind when you made up that statement, \$1,190,000 or \$1,290,000? In other words, did you have in mind a fund of \$122,000 or only \$22,000 which would be required to give you sufficient leeway to manipulate properly?

Doctor GLENNAN. One hundred and twenty-two thousand dollars.

Mr. SULLIVAN. That was my impression.

Mr. SMITH. Now, you state that the second statement is not correct, do you?

Doctor GLENNAN. This is incorrect on the second sheet in that this \$110,000 has been added since, but should be added to this 1,000,000—

Mr. SMITH. So that you now state that if the item were segregated and this language used as to the \$110,000 of immigration fund in lieu of reimbursement, that you must have \$1,422,000. Is that correct?

Doctor GLENNAN. If the language should be changed or arranged in any way so that we could be reimbursed, our own appropriation for conducting the Marine-Hospital Service need not exceed \$1,190,000; but the actual amount paid to immigration employees to-day is \$105,400.

Mr. SMITH. Doctor, when you said that the actual expense of your Bureau last year was \$1,198,000, did you mean to say that it was

\$1,198,000 plus the \$95,000 that was reimbursed to you by the immigration service?

Doctor GLENNAN. Seventy-three thousand dollars.

Mr. SMITH. I think you said it was \$95,000.

Doctor GLENNAN. No; I say the immigration service is growing all the time; we are putting on new offices which are requested at the different ports, and the expense is \$105,000.

Mr. SMITH. How much did the Immigration Bureau reimburse you last year?

Doctor GLENNAN. Seventy-three thousand dollars.

Mr. SMITH. When you say the expense of your Bureau was \$1,198,000, do you mean \$1,198,000 plus \$73,000?

Doctor GLENNAN. No; but the \$73,000 has not been reimbursed; part has not been paid back yet.

Doctor WYMAN. But that \$1,198,000 included what we paid out for immigration service last year.

Mr. SMITH. And did not include anything that had been reimbursed?

Doctor WYMAN. No.

Mr. SMITH. When you say you paid \$1,198,000, I want to know whether that is all you paid out, or whether you paid that out and got the reimbursement, too.

Doctor GLENNAN. I know there was some that has not been paid back, but I don't know the exact amount.

Mr. SMITH. The question is whether \$1,198,000 was all you paid out, or whether you paid that out and received the reimbursement, too.

The CHAIRMAN. What is the amount that you actually expended? One million one hundred and ninety-eight thousand dollars expenditure for your own service, and for the amount employed in the immigration service regardless of any reimbursement? If that is so, then the reimbursement, whatever the amount you are entitled to have reimbursed, should be deducted from our aggregate expenditure, which would make the total amount of expenditure—

Doctor GLENNAN. I think the \$1,198,000 included the \$73,000 expended for immigration service.

Mr. SMITH. Included it or excluded it?

Doctor WYMAN. Included it.

Mr. SMITH. If that is true, you are asking an increase of over \$200,000 this year, are you not?

Doctor WYMAN. Subtracting \$73,000 from \$198,000 and then adding \$100,000 for the immigration fund—is that what you mean?

Mr. SMITH. No; if you now say you need \$1,412,000, counting the immigration fund, then that is a direct increase of more than \$200,000 in one year, is it not?

Doctor WYMAN. Yes.

Doctor GLENNAN. We have to have this money if these things are itemized, to pay out regardless of whether we get it back or not. When we get this money back it will go into the Treasury, but the chances are they will be six months behind in reimbursing; therefore we have got to have money to meet these expenses.

Mr. SMITH. If we give you \$1,200,000 you would have all you spent last year.

Doctor GLENNAN. But the immigration service has grown.

Mr. SMITH. There is no increased expense to amount to anything in these estimates. I want to see whether there is any more \$200,000 increase in these estimates.

Doctor GLENNAN. Not on account of the Marine-Hospital Service.

Mr. SMITH. You don't claim that there is any such increase as that in the immigration service?

Doctor GLENNAN. Yes.

Mr. SMITH. In place of asking an increase of a small amount as appears here, \$22,000, on account of the segregation and other causes, the increase is more than \$200,000 over last year.

Doctor WYMAN. One hundred and ten thousand dollars is immigration service.

Mr. SMITH. No; you have \$73,000 of that \$110,000 last year; so the utmost you could say would be the difference between \$73,000 and \$110,000, which is your estimate for this year, and that would be \$37,000. That would leave you still more than \$160,000 of increase. That would be somewhere in the neighborhood of 12 or 15 per cent increase all along the line. Do you think that is necessary?

Doctor WYMAN. I don't think 12 per cent increase is necessary, but some increase is necessary.

Mr. SULLIVAN. What you had better find out is whether your total expenditure, including that for immigrant stations, was \$1,198,000 or \$1,198,000 plus \$73,000, which would make \$1,271,000.

The CHAIRMAN. Whether \$1,198,000 less \$73,000 reimbursed, or \$1,198,000 plus \$73,000.

Mr. SMITH. Yes. Your last figures make an increase of \$214,000.

Doctor WYMAN. We can get that from our bookkeeper. I will find out positively whether that was net, seventy-odd thousand dollars for immigration work was accredited in giving our sum total of cost of service or not. My impression was that \$1,198,000 was the net cost of the Service.

Mr. SMITH. After you put in the record whether the \$1,198,000 included the \$73,000 or not, upon the assumption that you seem to think now it was included, then your final estimate here of \$1,412,000 means an increase of \$214,000, if you say \$37,000 of that would be accounted for by increase of immigration allowance. You just explained to us that if the second statement was taken that \$110,000 must be added. If that is a mistake in making up this statement—

Doctor WYMAN. I think I am wrong.

Mr. SMITH. Don't you now acquiesce that after this statement was completed this \$110,000 matter was added, so that it was to be increased \$110,000 in order to cover it?

Doctor WYMAN. It says "of which sum \$110,000 shall be paid from the immigration fund."

Mr. SMITH. I wish you would find out, in addition to the other matter, whether at the time this statement, which is the second sheet you have given us, was made, you had in contemplation, in addition to the sum there given, the keeping under existing law of the reimbursement under the Immigration Service, because that is very vital. It makes a difference of more than \$100,000 whether you keep that, or whether you state at the time the figures were made that they were to be excluded.

Doctor WYMAN. All right.

APRIL 25, 1906.

AFTER RECESS.

PUBLIC HEALTH AND MARINE-HOSPITAL SERVICE—  
Concluded.

The CHAIRMAN. Now, Doctor, can you inform us as to whether or not that \$73,000 which was expended on account of the immigration service is included or excluded from the total expenditure of \$1,198,000?

Doctor WYMAN. It is included in the expenditure of \$1,198,000. It, however, is a long while in being reimbursed, six months or a year.

The CHAIRMAN. Why is that?

Doctor WYMAN. I do not know.

The CHAIRMAN. Whose fault is that?

Doctor WYMAN. I think it is between the Department of Commerce and Labor and the Auditor.

The CHAIRMAN. Are your accounts rendered promptly for this service?

Doctor WYMAN. Our accounts are rendered monthly now.

The CHAIRMAN. So your reimbursement is more frequent now under your present system than heretofore?

Doctor WYMAN. We haven't had a reimbursement for some time.

The CHAIRMAN. Has this delay in reimbursement embarrassed your Service to any extent?

Doctor WYMAN. No; but it might.

The CHAIRMAN. Have you taken any steps to ascertain the cause of the delay?

Doctor WYMAN. Yes; I have, and I have urged a more prompt settlement.

Mr. SMITH. Have you now ascertained, Doctor, whether when this estimate of \$1,312,000 was made you suppose you would also receive the reimbursement?

Doctor GLENNAN. It was supposed that it would come back into the Treasury, but we would not get it early enough to be available for use in that way.

Doctor WYMAN. We expected to have to pay out this much, and we expected to get finally a reimbursement, but the reimbursement was so slow in coming in that we can not count upon them as assets. That is the rule heretofore. Under this new plan that is proposed that will not be the case, because there will be a direct appropriation and we can call upon it; but the reimbursement has been so slow that we could not count upon it.

Mr. SMITH. I understand you now to say that the \$1,312,000 would be sufficient, without your getting any reimbursement?

Doctor WYMAN. I think so.

Mr. SMITH. If we take the reimbursement away from you, turn it into the Treasury, would you still say that \$1,312,000 would be sufficient?

Doctor WYMAN. I think that is correct.

Mr. SULLIVAN. And if that were done, Doctor, you would have a more clean-cut settlement than you have now. In other words, you would not have this hanging in the balance all the time.

Doctor WYMAN. Yes, sir.

The CHAIRMAN. At the same time, it would not correctly represent the aggregate expenditure of your Service that is strictly in line with the Marine-Hospital Service?

Doctor WYMAN. No; because we have to pay the money out.

The CHAIRMAN. And that money is paid out in connection with another service—namely, the immigration service.

Doctor WYMAN. Yes, sir.

Mr. SMITH. Suppose we gave you \$1,202,000 and provided that in addition thereto you should have \$110,000 in lieu of the reimbursement to be paid out of the head tax?

Doctor WYMAN. That would suit us, but I would like to just suggest to you that the amount from the head tax might possibly be increased. The immigration medical inspection is growing constantly. We are now spending \$105,000, and the demand for additional medical officers for immigration work at various ports is increasing. And the medical inspection of immigrants is becoming more stringent, and the demand for very stringent examinations is growing and in a greater number of places, so that while we spent \$73,000 for that last year, for the coming year if you could make it so that we would not be restricted—

The CHAIRMAN. Doctor, if we were to provide, as suggested by Mr. Smith, a sum in addition for any additional service required up to the limit of that service, would that meet any increase in service?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. What we provide for, then, would be specifically for your service, leaving the service which you render for the Immigration Bureau dependent upon the extent of the service.

Doctor WYMAN. That would be excellent. I would like that very much.

Mr. SMITH. Take this second page of the proposed law with reference to that Bureau. I want to ask you out of what items this \$110,000, we will call it, should come in that statement?

Doctor WYMAN. Well, pay, allowances, and commutation of quarters for commissioned medical officers and pharmacists, and pay for all other employees; those two.

Mr. SMITH. That is, you say it should come out of the first two items of your statement that you sent in this morning?

Doctor WYMAN. Yes.

Mr. SMITH. In what ratio?

Doctor WYMAN. Well, I can not give that ratio at once. We can give you the number of men that we have on immigration duty.

The CHAIRMAN. Could you give us the amounts paid during the fiscal year 1905 from these three items on account of the service you have rendered for the Immigration Bureau? From which one of the three items the payment is made—pay of commissioned officers, pay of other employees, and traveling expenses?

Mr. SMITH. May I suggest that possibly the increase on the items would not be in the same ratio? And secondly, I would suggest that by furnishing what you ask upon the assumption of an allowance of \$110,000 for the immigration service, that the Doctor be requested to report to us how much should be subtracted from each of these items to distribute the \$110,000 through the estimates in the next fiscal year.

Doctor WYMAN. Can I send that in?

Mr. SMITH. We want you to take \$110,000 out of these estimates furnished this morning and tell us how much will come out of each item in these estimates.

Doctor GLENNAN. I see the point, but these officers here shift from time to time. They don't remain on duty all the time. We have a surgeon at one station now, and in July we may have an assistant surgeon at that station.

Mr. SMITH. I know that there might be slight variations; but you can estimate certainly what it would be. Can you cite us the statute that provides for these reimbursements?

Doctor GLENNAN. Section 17 of the act of March 3, 1903, the present immigration law.

Doctor WYMAN. Can you not make that more than \$110,000 for the immigration work?

The CHAIRMAN. How much do you estimate will be necessary?

Doctor WYMAN. We have been thinking it over a good deal, and I think we ought to have at least \$120,000. Of course we won't spend it if we don't need it, but we hate to have that limit and find the necessity for the employment of men.

#### FURNITURE AND REPAIRS.

The CHAIRMAN. Now, as to the item for furniture and repairs, \$10,000. On what do you base that estimate?

Doctor WYMAN. We base it partly upon the amount spent last year and partly upon an estimated increased amount needed the coming year.

The CHAIRMAN. For new furniture?

Doctor WYMAN. Well, yes; for new furniture of hospitals, hospital wards, and the residences of officers, and so forth.

The CHAIRMAN. How many hospitals have you in the aggregate?

Doctor WYMAN. Twenty-one.

The CHAIRMAN. Does that include furniture in your office here?

Doctor WYMAN. No, sir.

The CHAIRMAN. It includes furniture simply in the hospitals and the residences. Do you furnish the residences of the officers—the officers' quarters?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Furniture in the quarters?

Doctor WYMAN. Yes, sir.

#### PURVEYING DEPOT.

The CHAIRMAN. The next is purveying depot, purchase of medical, surgical, and hospital supplies, \$30,750.

Doctor WYMAN. That I explained to you before. That is less than we spent last year by a good deal, and I explained the reason.

The CHAIRMAN. The next is the rent of buildings or floor space for purveying depot in Washington, D. C., \$3,250. That is what you are now paying for the rent of the space occupied in the Union Building of this city for that purpose?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Have you made any inquiry to ascertain whether

you could obtain suitable quarters and of sufficient size to accommodate you for a less amount than you are now paying?

Doctor WYMAN. We have not made specific inquiry, but we have talked among ourselves as to whether we could probably obtain the requisite floor space at this figure.

The CHAIRMAN. Do you know how many feet of floor space you have?

Doctor WYMAN. Seven thousand six hundred square feet.

The CHAIRMAN. That is about 50 cents per square foot. How did you come to go to the Union Building?

Doctor WYMAN. We were told to go there.

The CHAIRMAN. Who told you to go there?

Doctor WYMAN. The Assistant Secretary of the Treasury.

The CHAIRMAN. Did you make the contract for this rental?

Doctor WYMAN. No, sir. He told us we would get the floor space free for this year—that is, so far as our fund was concerned.

The CHAIRMAN. Then the rent this year was not charged against you?

Doctor WYMAN. No, sir; they had it already leased, I understand, and they gave us the floor space.

The CHAIRMAN. Where did you have this purveying depot before?

Doctor WYMAN. In New York.

The CHAIRMAN. What is the nature of this service?

Doctor WYMAN. It consists at the present time in making contracts for medicines, drugs, surgical instruments, and supplies of various character, and shipping them to the various stations on requisitions. We obtain wholesale contract prices and keep a large amount in stock, and when we get the requisitions we fill them from the stock in hand.

The CHAIRMAN. In your experience have you found it more economical to maintain that purveying depot here than in New York City?

Doctor WYMAN. Yes, sir; but the service has been very materially decreased. We formerly purveyed for the Immigration Service and for the Coast and Geodetic Survey, for the Revenue-Cutter Service, and even for the Canal Zone for a while. We have lopped off all of that, and also lopped off purveying certain hospital supplies of a bulky character that we now require them to make local contracts for at the stations. Whether that is going to prove really more economical or not can only be determined by experience. But getting the rent free here and lopping off the utilities of the purveying depot to this extent has made the purveying depot cost less.

The CHAIRMAN. It naturally would, of course. You mean, of course, that the cost of administration is much less than when you were purchasing a great deal more for those different departments?

Doctor WYMAN. Yes.

The CHAIRMAN. Do you think that the cost of maintaining the purveying depot on the basis that it is now maintained would be greater in New York City than at Washington if you had to pay rent here?

Doctor WYMAN. I think the cost of rent would be very much higher in New York City than in Washington.

Mr. SULLIVAN. Wouldn't there be a great advantage in having a central location, like New York City, for purposes of distribution throughout the United States?

Doctor WYMAN. That is one reason why we went there.

The CHAIRMAN. From the standpoint of convenience, it would be preferable?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Have you taken into consideration the question of transportation?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Is not the item of transportation less in New York than here?

Doctor WYMAN. It is.

The CHAIRMAN. What rent did you pay in New York when the depot was maintained there?

Doctor WYMAN. Six thousand dollars at first; later, \$7,000.

The CHAIRMAN. How did your floor space there compare with the floor space you now occupy?

Doctor WYMAN. It was a good deal more.

The CHAIRMAN. You needed larger quarters then because of the more extensive business?

Doctor WYMAN. The functions were larger; yes, sir.

Mr. SULLIVAN. How much more floor space did you have in New York?

Doctor WYMAN. About four times the size, I think.

Mr. SULLIVAN. Then, measured by floor space, the rent was actually cheaper.

Doctor WYMAN. That may be.

Mr. SULLIVAN. The rental was \$6,000 in New York, as compared with \$3,250 here, and the floor space there was four times as much as here, which would make it appear that the rent here is about twice as much as there, measured by floor space. Now that you have begun to pay rent here, it seems that the advantages of having a central point for shipment, together with the increased advantages of New York City as a railroad center, would require, in the interest of good service, that the depot be established there.

The CHAIRMAN. Who initiated this transfer from New York to Washington?

Doctor WYMAN. The Assistant Secretary.

The CHAIRMAN. What is his name?

Doctor WYMAN. Mr. Taylor.

The CHAIRMAN. Did he consult you?

Doctor WYMAN. Yes; he consulted me, and I made my report to him as to why I thought we should remain where we were to better advantage.

The CHAIRMAN. Why you should remain in New York to better advantage?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Notwithstanding your recommendation the change was made?

Doctor WYMAN. The change was made.

The CHAIRMAN. In view of the reduction in the service, do you think, taking into consideration the matter of convenience and transportation, that it would be more economical to maintain the purveying depot in New York City than in Washington?

Doctor WYMAN. I can not believe it will be more economical; at any rate I would prefer, inasmuch as the change has now been made,

while it makes no particular difference to me, still I think it would be well to continue doing the work here and see whether it will be more economical. Later on we might make a recommendation for removal to New York again.

The CHAIRMAN. What has become of the remainder of the service that you had formerly rendered, purveying for the different departments; where is that done?

Doctor WYMAN. Well, the Army Medical Department is purveying for the medical department of the Canal Zone, and is also purveying for the immigration service.

The CHAIRMAN. Who is purveying for the Revenue-Cutter Service?

Doctor WYMAN. There is not much medical purveying for them. We have not purveyed for them since that time at all. I don't know; I think probably they make their own purchases.

Mr. SULLIVAN. Where is the army purveying depot?

Doctor WYMAN. In New York; in the business section of New York.

Mr. SULLIVAN. Where the rents are high?

Doctor WYMAN. Yes, sir.

Mr. SULLIVAN. They find it to be of advantage to remain there?

Doctor WYMAN. Yes, sir; I think so.

Mr. SULLIVAN. What are your total purchases annually for medical supplies?

Doctor WYMAN. Eighty-eight thousand dollars.

Mr. SULLIVAN. Do you think that you could get floor space in New York City of the same size as this for about the same rental, \$3,000?

Doctor WYMAN. I doubt it.

Mr. SULLIVAN. You used all of your floor space, then?

Doctor WYMAN. Yes.

Mr. SULLIVAN. Now, you say you believe in waiting to see whether this system will be more economical than the one which had its location in New York. Have you any reason to believe that it will be more economically administered from Washington than New York?

Doctor WYMAN. In the long run?

Mr. SULLIVAN. Yes.

Doctor WYMAN. I think it is very problematical in the long run. Since this change was made we have decreased our functions—that is, the number of services.

Mr. SULLIVAN. I am speaking now of the diminished service, your present status?

Doctor WYMAN. I believe it is a little more economical here, because we haven't any medical officers in the depot here. If we were there we would have to have a medical officer there.

Mr. SULLIVAN. You don't have to have one here?

Doctor WYMAN. No; because we utilize one of the officers in the bureau to supervise the purveying depot here.

Mr. SULLIVAN. Does that same condition exist in the War Department; do they have to have a medical officer there?

Doctor WYMAN. Oh, yes; they have a medical officer of high rank over there.

Mr. SULLIVAN. And they could dispense with one here, the same as you do.

Doctor WYMAN. If they have it done here the same as we do?

Mr. SULLIVAN. No; I mean if they establish their purveying depot here they could dispense with the medical officer, just as you do.

Doctor WYMAN. I don't know.

Mr. SULLIVAN. Why not?

Doctor WYMAN. Well, I don't know what available officers they have to give attention to their duty.

Mr. SULLIVAN. Why couldn't they have an officer as well as you have one?

Doctor WYMAN. They possibly could.

The CHAIRMAN. You say that during this fiscal year you occupied this Union Building rent free. Do you mean by that that you are not paying or that the owner of the building is giving it to the Government free?

Doctor WYMAN. I didn't mean either. I mean that the Treasury Department, as I understand it, had leased that building; at any rate they told us that there would be no charge against our fund for rental there. They already had it under their control and we were told to go in there.

The CHAIRMAN. Then your understanding is that they rented the building at a gross rent, and that they had space enough there over and above what they really needed to enable you to occupy this space for your purveying depot?

Doctor WYMAN. That is it; yes, sir.

The CHAIRMAN. And the Treasury Department is simply giving you the use of the building free without charging it to your appropriation, and the Treasury Department is paying the owner of the building for the gross amount of rent; is that your understanding?

Doctor WYMAN. That is my understanding.

Mr. SULLIVAN. Why do they charge you rent now? Are you going into another building?

Doctor WYMAN. We don't know. This present arrangement exists until June 30, 1906.

Mr. SULLIVAN. Do you expect to stay in this same building?

Doctor WYMAN. I don't know whether we can or not. I am inclined to think that the Treasury Department will not lease it next year. At any rate, we would have to lease floor space there or somewhere else.

Mr. SULLIVAN. If you stay there, you will have to pay rent?

Doctor WYMAN. Yes; if we stay there.

#### HYGIENIC LABORATORY.

The CHAIRMAN. The next item is "For maintaining the hygienic laboratory, \$16,000." Where is that laboratory?

Doctor WYMAN. On the other side of the War Department building.

The CHAIRMAN. What does that item include—salaries?

Doctor WYMAN. No; it includes the running expenses of the laboratory—fuel, light, and water. It is a hygienic laboratory in which there are a number of investigations made relating to public health. There are four divisions of it—a laboratory of bacteriology, one of chemistry, pharmacology, and one of medical zoology. We have to equip the different divisions, and have to supply material to them of

various kinds—drugs, chemicals, and even animals for experimentation. This is based largely on what was spent last year and the new division of chemistry.

#### MAINTENANCE OF MARINE-HOSPITAL STATIONS, ETC.

The CHAIRMAN. The next item is, "For maintenance of marine-hospital stations, including subsistence and for all other necessary miscellaneous expenses which are not included under special heads, \$255,000." What do you include in that item, "Maintenance of marine-hospital station?"

Doctor WYMAN. Subsistence, etc.

The CHAIRMAN. That is included subsequently.

Doctor WYMAN. The item reads first, maintenance of marine-hospital stations.

The CHAIRMAN. Then you say including subsistence and for all other necessary miscellaneous expenses which are not included under special heads. Outside of subsistence, which is specifically mentioned, what do you include in that item?

Doctor WYMAN. Ambulance service, telephone service, telegraph service, burials, rent for officers, miscellaneous articles such as cooking utensils, repairs to surgical instruments, etc.

The CHAIRMAN. Does the Government furnish subsistence to men in charge of these hospitals?

Doctor WYMAN. No, sir.

The CHAIRMAN. Does the item of subsistence then refer to subsistence of patients?

Doctor WYMAN. Yes, sir; and attendants, of course; also the pharmacists, but not the medical officers.

The CHAIRMAN. You do furnish subsistence to a pharmacist?

Doctor WYMAN. Yes; but not for his family; just for the pharmacist.

The CHAIRMAN. How do you arrive at the amount of allowance to make for just one alone?

Doctor WYMAN. For one man we have a ration that he is entitled to draw.

The CHAIRMAN. Can they commute the ration?

Doctor WYMAN. No, sir; they have either to draw their cooked or uncooked rations. There is no commutation at the hospitals.

The CHAIRMAN. Is \$255,000 the amount that you expended for that service in 1905?

Doctor WYMAN. Yes. It is based upon the expenditure. I can not say that it is exactly the same amount, but it comes very close to it.

#### MEDICAL EXAMINATIONS, ETC.

The CHAIRMAN. The next item is for medical examinations, care of seamen, care and treatment of all other persons entitled to relief at other than marine hospitals, and to be used for like purposes as were the tonnage taxes prior to July 1, 1906, \$185,000. How do you arrive at that estimate?

Doctor WYMAN. There were a number of hospitals where we cared for the seamen by contract. Then there are the insane patients, the rent of offices at a number of stations where we don't have regular hospitals.

## PER CAPITA COST OF PATIENTS.

The CHAIRMAN. How does the cost of taking care of patients at contract hospitals compare with the cost of taking care of patients at the Government hospitals?

Doctor WYMAN. In general, take the service through, if you based it on the contract system and base an estimate on the running service as it is now, it is just the same, and a little bit in favor of the present system.

The CHAIRMAN. Do you mean by that that the cost at Government marine hospitals is a little less than the contract hospitals?

Doctor WYMAN. I mean that to take the entire service it costs less to operate it as now than to substitute the contract system.

The CHAIRMAN. What is the per capita cost?

Doctor WYMAN. Do you mean the subsistence ration a day?

The CHAIRMAN. Including everything.

Doctor WYMAN. About \$1.62 a day, on the average.

The CHAIRMAN. At the marine hospital?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. What do you pay at the contract hospital?

Doctor WYMAN. Various prices. Perhaps the average would be \$1.00 a day, but for board, lodging, and nursing only.

Doctor GLENNAN. Exclusive of medical and surgical attendance.

The CHAIRMAN. Do you supply medical attendance in addition to that, or do these contract hospitals supply the medical attendance?

Doctor GLENNAN. We furnish the medical and surgical attendance.

The CHAIRMAN. At the contract hospital?

Doctor GLENNAN. Yes, sir.

The CHAIRMAN. With that medical attendance added, what would be the cost at the contract hospitals?

Doctor WYMAN. It is difficult to make a comparison between the contract hospitals and the marine hospitals. The medical officer at the Marine Hospital station is on duty all the time, while at most of the contract stations the contract physician gives but a portion of his time.

The CHAIRMAN. In arriving at your estimate for per capita cost of keeping patients in Government hospitals, what do you include; what do you charge to that cost, merely subsistence, medical attendance?

Doctor WYMAN. No; we estimate the subsistence, the fuel, light, and water, the medical attendance—practically everything.

The CHAIRMAN. Do you include in your estimate depreciation on the cost of the plant?

Doctor WYMAN. No.

The CHAIRMAN. Do you charge any part of the general service of the marine hospital to that cost?

Doctor WYMAN. Repairs and preservation?

The CHAIRMAN. Yes; and administration.

Doctor WYMAN. The administration we do, but not repairs and preservation. We don't count those in as a part of the cost of maintenance.

The CHAIRMAN. No. Do you charge any part of the cost of repairs and maintenance to the per capita cost of the treatment of the patient of the Government hospitals?

Doctor WYMAN. I think not.

Mr. SULLIVAN. Can either of these gentlemen answer definitely that question?

Doctor WYMAN. No; we do not. No part of the cost of repairs and preservation.

Mr. SMITH. Who made up the figures you referred to this morning in which you said that the cost of the Government hospitals and the cost of the contract hospitals was substantially identical?

Doctor WYMAN. That is not exactly the way I put it. I said the cost of maintaining the Service under the present system—that is, maintaining our present marine hospitals—is no higher than the cost would be of maintaining the Service with the contract system substituted for the hospitals.

Mr. SMITH. Who made up these figures?

Doctor WYMAN. They were made up in our office.

Mr. SMITH. I infer from your answers now that you did not personally make them up?

Doctor WYMAN. I personally went over them. I did not personally go to the books and dig them out, but I personally examined the figures, and they were gotten up under the personal supervision of Doctor Glennan.

The CHAIRMAN. You have not included all the elements of cost of maintaining the Marine-Hospital Service in your estimates of per capita cost of treating patients in Government hospitals. Do you think your estimate as to that cost is a reliable one?

Doctor WYMAN. I think it is.

The CHAIRMAN. You have how many hospitals in the United States?

Doctor WYMAN. Twenty-one.

The CHAIRMAN. You have an aggregate appropriation of \$1,200,000, in round figures. One hundred and ten thousand dollars of that you may say is for the use of the immigration service. The remainder of it, in round numbers, say a million dollars, is charged to the Marine-Hospital Service. All of that money goes to the maintenance of these hospitals, the care and treatment of the inmates, their subsistence, and the attendance; also repairs and maintenance of buildings, and administration here in Washington. Should not all of the cost represent the cost of treating the aggregate number of patients in these 21 hospitals?

Doctor WYMAN. With two exceptions. Not only the 21 marine hospitals, but there are a number of other contract stations where we treat patients in contract hospitals. The administrative functions in Washington cover much more than the administration of marine hospitals and relief stations.

The CHAIRMAN. Now, in order to arrive at the cost, deducting the amount expended for immigration service, the amount of cost of quarantine service which is under your jurisdiction, that would not give you then—that balance would be the actual cost of treating and caring for the patients in the marine hospitals, would it not?

Doctor WYMAN. Marine hospitals and relief stations.

The CHAIRMAN. And then deducting also the amount expended in your contract hospitals, the balance after making these three deductions—the immigration service, the contract hospital service, and the quarantine service?

Doctor WYMAN. The quarantine service would not come in. We have a special appropriation for that.

The CHAIRMAN. That is right. But deducting these two items, then, the balance is the cost of maintaining the number of patients that are treated and cared for; or that is the cost of treatment and maintenance and subsistence of the patients that are cared for in the hospitals?

Doctor WYMAN. That would seem true at first thought; but the medical officers who treat those patients, and whose salaries add largely to the expense of the marine-hospital fund proper, are doing duty at the same time of a very important character for other branches of the Service.

The CHAIRMAN. What other branches of the Service?

Doctor WYMAN. We examine all pilots as to color-blindness. We examine physically all the crews and the surfmen and the captains of the Life-Saving Service. We examine the officers and cadets of the Revenue-Cutter Service, or those who are trying to enter that Service. We also perform certain sanitary measures on merchant-marine vessels, we furnish surgeons on the revenue cutters, we serve on boards of various characters for deciding upon the physical condition of officers of Revenue-Cutter Service, and sometimes other officers of the Treasury Department, also physical examinations for the Canal Zone. Moreover, we are engaged very largely in aiding other services. We make examinations in New York, for instance, of applicants for the civil service, and there are other duties that these officers are called upon to perform. Their headquarters are at the hospitals, and their salaries are charged up against the hospital service, but they are more than simply marine-hospital surgeons.

The CHAIRMAN. Do they receive any compensation for any part of this service, other than their salaries?

Doctor WYMAN. No, sir.

The CHAIRMAN. Could you not form a reasonable and accurate estimate of what this service that you now speak of costs the Government?

Doctor WYMAN. Well, it would take some time to do that.

The CHAIRMAN. If you went at it to ascertain accurately what it is costing the Government to treat and care for the patients in the marine hospitals of the United States, you could, by eliminating two items that I mentioned a moment ago—the contract service and the immigration service—and then approximately estimate the time which is employed by these employees of the Marine-Hospital Service and the outside service that you now speak of—that would give you the balance, the total cost of the treatment and care of patients in the hospitals, would it not?

Doctor WYMAN. In a general way, I should say yes.

The CHAIRMAN. How many patients did you treat in the 21 marine hospitals in the fiscal year 1905?

Doctor WYMAN. About 57,000 altogether, in marine hospitals and relief stations. We could prepare those figures in a statement for you, but we haven't got it now. The statistics are not arranged according to the division that you request.

The CHAIRMAN. I just wanted the number of patients that you treated.

Doctor WYMAN. Generally speaking, we treat about 57,000 annually.

Doctor GLENNAN. That would not be a fair estimate anyway, because one patient might be in a week, another six months. The number of days' relief would have to be given.

Mr. SULLIVAN. I understand the difficulty you experience in arriving at an accurate estimate of comparative cost of treating patients at the Government hospitals and in hospitals under the contract system is that medical officers in attendance at Government hospitals perform other duties than attending to patients, and that you charge the entire salary of these medical officers to the Government hospitals.

Doctor WYMAN. Yes.

Mr. SULLIVAN. Whereas in order to get your estimate accurate, you have to find out the proportion that the medical attendance of such officers would bear to the total service performed for the Government and estimate accordingly. Now, in leaving out that element, I take it that the three main elements are alike under the two systems—that is, subsistence, medical attendance, including nursing, and fuel, light, and water. Those three are alike under the two systems, are they not?

Doctor WYMAN. No; under the contract system we don't have to have fuel, light, or water.

Mr. SULLIVAN. Of course you don't have to have it, but the people who maintain the hospitals do have to have it, and they have to have subsistence for the patient. Subsistence, fuel, and water, those three elements are alike in both cases. No, at these contract hospitals you say you supply the medical attendance.

Doctor WYMAN. At most of them.

Mr. SULLIVAN. I understood that the Government physician did it all; that you furnished that to them.

Doctor WYMAN. Practically, we do.

Mr. SULLIVAN. So that we can eliminate the element of medical attendance in making this comparison. Now, if you are going to make this estimate, I want to ask you if you will not take into consideration these elements which exist in the case of the contract hospitals, and which you have omitted in your calculations, namely, the cost of the land for the Government hospital, the cost of the building of the Government hospitals, and the cost of repairs upon the Government hospitals; those three elements. And in addition, take into consideration the profit which the contract hospital makes, and which the Government hospital does not make, in the care of patients. Now, then, if you have all of those elements you can arrive at a fair working estimate of the comparative cost of the two. There may be other elements, and if there are I wish you gentlemen would suggest them, so that we may have it all in the record. Do either of you gentlemen think of any other elements?

Mr. HUDDLESON. I think that is all.

Doctor GLENNAN. No.

The CHAIRMAN. The last item is for the purchase of books and journals for the use of the Public Health and Marine-Hospital Bureau. \$500. That is the usual appropriation, I suppose.

### QUARANTINE SERVICE.

The CHAIRMAN. Page 58, quarantine service. For the maintenance and the ordinary expenses, including pay of officers and employees of

the quarantine stations named, including the Hawaiian Islands and Porto Rico. I observe that your estimate for the coming fiscal year under this item is \$40,000 less than the current appropriation.

Doctor WYMAN. My estimate, as I sent it in to the Secretary, was for \$340,000. When the printed estimate came, I saw it had been reduced to \$300,000. I spoke to Assistant Secretary Taylor about it, and I told him that we simply could not run the quarantine service on that appropriation, and he told me that I was at liberty to make my statement before the committee. I don't know on what principle they cut out \$40,000. Our total expenditures for this year would come up, as far as we can accurately determine, to at least \$338,000.

The CHAIRMAN. To what extent was that expenditure on account of the yellow-fever epidemic at New Orleans?

Doctor WYMAN. None whatever. This is the regular quarantine maintenance appropriation—for maintaining the United States quarantine station.

The CHAIRMAN. I didn't know but what your expenditures during the current fiscal year were greater on account of that.

Doctor WYMAN. Not appreciably.

Mr. TAYLOR. I see you have some increased stations here—Port Inglis, Punta Rassa, San Pedro, and Santa Barbara, Eureka, and substations on the Columbia River.

Doctor WYMAN. The following additional stations now payable from the epidemic fund have been estimated for the new appropriation for the quarantine service for 1907: Four substations of Columbia River quarantine in the State of Oregon. They are new stations. They are small stations, but they amount to \$600 a year. Then we have Punta Rassa, Fla.; Santa Barbara and San Pedro, Cal.; and Port Inglis, Fla., and Eureka, Cal., so that our actual expenses for the next year will be, so far as we can ascertain, \$343,000, and this appropriation should be made accordingly. It should be at least \$345,000.

The CHAIRMAN. You will spend, you say, \$343,000 during this year?

Doctor WYMAN. Three hundred and thirty-eight thousand two hundred and sixty-five dollars.

The CHAIRMAN. How much did you expend during the fiscal year 1905?

Doctor WYMAN. I think there was about one thousand or eighteen hundred dollars turned in. Another reason for asking for more this year is on account of our floating property, which this year we have not spent a great deal of money on, but which next year we ought to spend more on.

The CHAIRMAN. Have you an estimate of the increased expenditure, in the event that the quarantine bill passes the House, which carries an appropriation of \$500,000 for the purchase of State quarantine stations?

Doctor WYMAN. Yes; if that bill goes through as I understand the measure, it is contemplated that the Government shall obtain control of the quarantine plants at Galveston and Sabine Pass in Texas, New Orleans, La., Mobile, Ala., and Charleston, S. C. The \$500,000 to be appropriated under that bill I understand is to provide for the purchase of these plants, and I suppose also for the maintenance of

the quarantine stations after we get them, as well as other measures which are to be put in force.

The CHAIRMAN. How many of the present quarantine stations did the States donate to the Government of the United States?

Doctor WYMAN. No State has donated any quarantine station to the Government.

The CHAIRMAN. They have not?

Doctor WYMAN. No, sir.

The CHAIRMAN. Have any of them in fact donated by giving a deed to the property to the Government for a nominal consideration?

Doctor WYMAN. No, sir; they have leased them to us for a nominal consideration, but when it comes to turning them over the rule has been that an appraiser has been appointed by the Treasury Department and one by the State and they choose another, and an appraisal of the property is made, and then the amount necessary for the purchase of the property is set before Congress and an estimate for an appropriation is made.

The CHAIRMAN. Can you give the committee any estimate of what the Government had to pay for the State quarantine stations, approximately, for those that have been acquired?

Doctor WYMAN. There were 17 quarantine stations in Florida. It is all a matter of record, but the price was not very much.

The CHAIRMAN. Do you mean to say that where the States in the past have maintained quarantine stations the Government of the United States came in and proposed to take those quarantine stations and maintain them and bear all of the cost of maintenance and give to the States a quarantine service superior to that which they had under their own system, and in addition to that they demand of the Federal Government compensation for their property?

Doctor WYMAN. Yes; they have.

#### PRINTING ON ACCOUNT OF QUARANTINE SERVICE.

The CHAIRMAN. The next item here is an expenditure of not to exceed \$500 which may be incurred during the fiscal year 1907 for printing on account of the quarantine service at times when the exigencies of that service require immediate action and chargeable to the appropriation "Preventing the introduction and spread of epidemic diseases." That simply means that in the event of an emergency demanding additional printing over and above that which is authorized under other appropriations that you can, out of this epidemic fund, appropriate \$500 for that purpose?

Doctor WYMAN. Yes. We are supposed to get printing done in the Government Printing Office, and we want to have it done right at the place sometimes.

The CHAIRMAN. Do you recommend the striking out of the next paragraph, on page 59, for books and journals for use of the Public Health and Marine-Hospital Bureau?

Doctor WYMAN. I think that is included in our estimate for the Service. I don't know why that was put in brackets, but I looked at it to-day, and I concluded that it was provided for in the proposed appropriation for the Service. We had it in for books and journals for use of the Public Health and Marine-Hospital Service, so that it need not be put in there if it is put in the other place.

## PREVENTION OF EPIDEMICS.

The CHAIRMAN. The next item is the prevention of epidemics. An appropriation is there made to be disposed of in the discretion of the President of the United States in cases where the emergency is such as to justify it, which is described in this paragraph. I observe that you estimate there shall be appropriated for this fund \$200,000 in connection with the current appropriation. How much of a balance have you in this fund?

Doctor WYMAN. On the 31st of March we had about \$142,000.

The CHAIRMAN. How much do you usually have?

Doctor WYMAN. Well, it varies. We ask for this increase in this epidemic fund according to the condition of the fund. Sometimes we won't ask for any addition to it at all. This year we have asked for \$300,000.

The CHAIRMAN. Will you prepare and furnish us a statement, for the record, of the expenditures out of this fund for each year during the past five years?

Doctor WYMAN. Very well.

The CHAIRMAN. Including the expenditure during the fiscal year, which included the yellow-fever epidemic at New Orleans, and then the surplus you had.

Mr. SMITH. You spoke about asking for an increase when your fund has become depleted. Has it, in fact, been seriously depleted by the epidemic?

Doctor WYMAN. Oh, yes: by reason of the epidemic in New Orleans; yes, sir. One hundred and forty-three thousand dollars we had on the 31st of March.

The CHAIRMAN. How much did you have at the beginning of the fiscal year?

Doctor WYMAN. July 1, 1905, \$331,000.

The CHAIRMAN. And on the 1st of April about how much?

Doctor WYMAN. About \$142,000.

The CHAIRMAN. You are familiar with the appropriation contained in the bill that passed the House and is now in conference between the two Houses. Is the \$500,000 appropriated by that bill available under this emergency fund?

Doctor WYMAN. No, sir.

The CHAIRMAN. Or any part of it?

Doctor WYMAN. The \$500,000 relates only to the yellow fever. This emergency fund relates to yellow fever, cholera, smallpox, typhus fever, and bubonic plague. I will add, it is very necessary to make that appropriation of \$300,000. Very few people realize the dangers to which we are subjected by the importation of bubonic plague, cholera, and yellow fever from abroad. Bubonic plague is threatening us all the time, and we should have the funds necessary to take preventive measures.

Yellow fever is provided for in that \$500,000, but how much of it can be used for keeping out yellow fever I do not know. There has got to be other uses to which that \$500,000 is to be put rather than the exclusion of yellow fever. The sanitation comes in under that—sanitation to prevent the breeding of mosquitoes. And there is also the necessary purchase of quarantine stations. This epidemic appropriation ought to be considered a matter apart from the other.

Mr. TAYLOR. If the quarantine bill, with its appropriation, passes at this session, you would not need it then?

Doctor WYMAN. Yes, sir; I think we should have it.

Mr. TAYLOR. You should have that \$300,000 now for general epidemic purposes?

Doctor WYMAN. Yes, sir.

Mr. TAYLOR. The other being applicable to special conditions?

Doctor WYMAN. Yes; that is right.

The CHAIRMAN. Doctor, if the bill which is now pending should become a law, is there any reason why that appropriation of \$500,000 should not be available for any purpose in connection with the quarantine service in preventing epidemics?

Doctor WYMAN. The bill itself says that it relates only to the question of yellow fever.

The CHAIRMAN. I know; but if it was fixed so that it would be available for general quarantine service in preventing epidemics, would there be any necessity, then, of appropriating this \$300,000 additional?

Doctor WYMAN. I think there is a necessity to appropriate this \$300,000 apart from the \$500,000 carried by the quarantine bill.

The CHAIRMAN. Would there be any necessity for it if this was made available for epidemics generally?

Doctor WYMAN. Yes, sir; there would be necessity for this appropriation.

Mr. SMITH. As a matter of fact, did not the State of Louisiana pay something like \$400,000 in taking precautions against yellow fever last year?

Doctor WYMAN. I think they raised \$250,000 in helping to suppress yellow fever—doing the sanitary work. They furnished the materials and helped to furnish the labor to our office during that epidemic.

The CHAIRMAN. How can you administer that \$500,000 appropriation and make it applicable to yellow fever alone? If you go out and board a vessel for the purpose of detecting or discovering yellow fever and should discover bubonic plague, would you make a different charge from that which you would make in the event you found yellow fever?

Doctor WYMAN. No, sir. Of course if we get these quarantine stations under this yellow-fever act we should certainly use them for the exclusion of other diseases besides yellow fever, but we could do that under the law as it exists now.

Mr. TAYLOR. But you would charge whatever expense was incurred on account of bubonic plague to this fund and not to the yellow-fever fund?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. Do you want this \$500,000 tied up for the purpose only of detecting and destroying yellow fever?

Doctor WYMAN. I think it should be left just as it is appropriated in that bill. I think it will all be needed.

The CHAIRMAN. I do not see why it would not be better for your Service to include also for the purpose of detecting and keeping out other diseases?

Doctor WYMAN. Our quarantine maintenance funds pay for the running of our present quarantine stations as we have got them, and

we keep out all diseases. This fund would have to be used for the running expenses of these four or five local quarantine stations which we expect to get and maintain.

The CHAIRMAN. You do not intend to maintain those only in connection with keeping out yellow fever?

Doctor WYMAN. They are particularly yellow-fever quarantine stations, but of course we would not hesitate to keep out any other diseases that came along. We have to make the inspection for yellow fever anyhow and in doing that we really inspect for every other disease.

The CHAIRMAN. Certainly. I can not see why this \$500,000 could not be available for your general quarantine service and how you could possibly use it and keep it entirely separate and distinct from your other appropriations for the same service.

Doctor WYMAN. It is for carrying out the provisions of the act. That \$500,000 is to acquire those stations and administer them.

The CHAIRMAN. But the general law requires you, in connection with your service, to make investigations and keep out yellow fever at all the other stations in connection with the detection of all other epidemic diseases and in connection with keeping them out?

Doctor WYMAN. Yes, sir.

The CHAIRMAN. And you would perform the same service at these five new stations, if we get them, that you are performing at all the other stations, would you not?

Doctor WYMAN. Yes; but they have not been appropriated for. Where would we get the money for running them? We have not put them into this quarantine maintenance fund and enumerated them there, because we have not got them yet. But if we get them, then the only fund available to run them would be this fund.

## LEPROSY IN HAWAII.

May I be allowed to bring up one matter which the Secretary of the Treasury invited your attention to? I see no reference to it, however, published in a public document. Here is his letter to you [reads]:

TREASURY DEPARTMENT,  
Washington, January 29, 1906.

To the CHAIRMAN COMMITTEE ON APPROPRIATIONS,

*House of Representatives.*

SIRS Referring to an act to provide for the investigation of leprosy with special reference to the care and treatment of lepers in Hawaii (59th Cong., 3d sess.), I have the honor to invite your attention to section 5 of the said act, which states:

"That the sum of \$100,000 is hereby appropriated from any money in the Treasury not otherwise appropriated for the erection of the necessary buildings and other equipment, and \$50,000, or so much thereof as may be necessary, for the maintenance and pay of all officers and employees during the fiscal year ending June 30, 1906."

I am informed by the Surgeon-General of the Public Health and Marine-Hospital Service that a transfer of funds has been made to the books of the Supervising Architect, Treasury Department, for the erection of the necessary buildings, and that the nomination of a chief, or director, of the experimental station has been submitted and will receive the approval of the Department. It has been impossible to secure the services of a fit person to be director or chief of the experimental station at an earlier date.

Upon the suggestion of the Surgeon-General, I have to recommend that the balance of the said \$50,000, or as much thereof as may be necessary, provided for maintenance and pay of all officers and employees during the fiscal year ending June 30, 1906, be reappropriated and be available for like purposes during the fiscal year ending June 30, 1907.

Respectfully,

L. M. SHAW, *Secretary*.

The \$50,000 was appropriated for the maintenance of the institution for the present fiscal year, and we have been able only to use a very small portion of it—the salary of the director who has been appointed.

The CHAIRMAN. I suggest that you call the attention of the Treasury Department to the fact that that communication has not been officially communicated to Congress or to the committee, and that the Secretary ought to communicate to Congress in the regular way, and make such recommendations as he may see fit to make.

Doctor WYMAN. This is a copy that I have read. I understood this came over to you.

The CHAIRMAN. Is that printed?

Doctor WYMAN. No, sir; it is not printed.

Mr. TAYLOR. Please state, Doctor, what hospitals for leprosy there are in the United States or in its possession?

Doctor WYMAN. There is no Government hospital for lepers. There are several—three or four—State institutions—one in Louisiana, one now in Massachusetts, and a leper colony under the Territorial government of Hawaii.

Mr. TAYLOR. Only two within the United States—Louisiana and Massachusetts? There is none in New York?

Doctor WYMAN. There is none in New York.

Mr. TAYLOR. I ask because I had a leper patient whom I brought to your attention, from Alabama, and there was no possible way of obtaining any place in the United States for the treatment of that patient.

Doctor WYMAN. We ought to have one, and I believe that eventually Congress will give us that bill which was defeated.

Mr. TAYLOR. I made application to the State of Louisiana, and the State declined to receive any lepers outside of their own jurisdiction.

Mr. BROWNLOW. There is a pretty serious condition now in that regard at one of the Branch Homes for Disabled Volunteer Soldiers. You see we have 3,000 members at the Northwestern Branch of the National Soldiers' Home that are exposed there to a case of leprosy which exists in that Home. Of course we have the man quarantined; we have him off to himself; but you understand how anybody would become panicky at hearing of a case of that sort. I do not know anything about the subject. I only knew that we were confronted with that condition.

Doctor WYMAN. In a number of States they have an isolated case or two, and they take care of them and keep them from the public; but it would be a great boon to the States if there were a general reception hospital for lepers under the control of the Government.

MONDAY, April 23, 1906.

## LIGHT-HOUSES, BEACONS, AND FOG SIGNALS.

### STATEMENTS OF CAPT. URIEL SEBREE, NAVAL SECRETARY, AND LIEUT. COL. DANIEL W. LOCKWOOD, ENGINEER SECRETARY, OF THE LIGHT-HOUSE BOARD.

The CHAIRMAN. Page 61, at the bottom, "Light-houses, beacons, and fog signals." Captain Sebree, what is your connection with the Light-House Service?

Captain SEBREE. I am naval secretary of the Light-House Board. Colonel Lockwood, who accompanies me, is the engineer secretary of the Board. We are two of the executive officers.

The CHAIRMAN. Colonel Lockwood of the Army and you of the Navy?

Captain SEBREE. Yes, sir.

The CHAIRMAN. By whom were these estimates prepared?

Captain SEBREE. By Colonel Lockwood and myself.

The CHAIRMAN. Personally?

Captain SEBREE. Yes, sir; as the executive officers of the Board. The Board meets once a month, and we submitted these estimates before they went to the Secretary of Commerce and Labor.

The CHAIRMAN. What information did you have before you in making up these estimates to determine the amount that was necessary to estimate for the fiscal year 1907?

Captain SEBREE. Do you mean the general estimates, or this particular one?

The CHAIRMAN. The general estimates.

Captain SEBREE. We have the report from the light-house inspector and the light-house engineer in each of the eighteen districts. There are really sixteen districts, and the Porto Rico and Honolulu are sub-districts. We have the estimates of those officers which are submitted to the Board before July 1, and from their reports we make up the estimates for the Light-House Service, considering their reports, not necessarily taking them.

The CHAIRMAN. You don't accept their judgment as final?

Captain SEBREE. No; we cut those down in some cases; we never increase them.

### GUAM LIGHT-HOUSE SERVICE.

The CHAIRMAN. Now, the first item is new, and is "For the Guam light-house service, establishing and maintaining lights, day marks, and buoys in the waters about the island of Guam, and so forth. \$25,000." Will you state to the committee, Captain, whether the necessity for this appropriation is urgent?

Captain SEBREE. They have buoys at the island of Guam now. It is under the Navy Department, and we have had reports from the governor there requesting two light-houses, one at the entrance of the harbor and one at the north end of the island. That was referred by the Secretary of the Navy to the Light-House Board. Our estimate on that is not close. We got an Executive order issued by the President putting the island of Guam under the Light-House

Board, and that order carried the directions for making the estimates. I have been to Guam myself. I went in there on a battle ship, but was there only one day. This is an estimate for \$25,000. We have had nobody go there to make a close estimate, but we could certainly build one, although I don't think we could build two for this money. But this is a starter to build light-houses and put down the necessary buoys.

The CHAIRMAN. Is there much commerce there?

Captain SEBREE. There is not a great deal of commerce. It is on the line from Honolulu to the Philippines. The army transports call there each way, I think. Outside of the Government vessels, I think there is very little local commerce, but a few small steamers and small vessels. It would be a desirable thing to have a light there, or two lights. It might save an army transport twelve hours or a day sometimes, which is a valuable thing.

The CHAIRMAN. Is the necessity for a light-house there demanded in the interest of the Government vessels; is that sufficient to justify or necessary to justify the estimate?

Captain SEBREE. I think it is. At present there are some buoys there maintained by the Navy Department. Of course they would not cost \$25,000, but they have to have buoys, and if the Light-House Board does not put them in the Navy Department has got to do it, and has been doing it so far. If any money should be given for this purpose, that expenditure would be taken off the Navy Department and it would be done by the Light-House Board. I think one light would be very desirable. To say that it would cost \$25,000—that is merely a rough estimate, largely a guess. We have had an appropriation for Porto Rico of something like that, where they did not use it, and if it is not necessary it is not used.

#### STATEN ISLAND, NEW YORK, LIGHT-HOUSE DEPOT.

The CHAIRMAN. You have submitted a supplemental letter to the Secretary of the Treasury, an estimate of \$25,000, for the Staten Island, New York, light-house depot, for the completion and erection of a lamp shop at the general light-house depot, on Staten Island, New York.

Colonel LOCKWOOD. When the original appropriation was made for that structure the amount appropriated was deemed sufficient, but the advance in cost of labor and material has necessitated the Board making this application for additional funds. It is found that at present a suitable building could not be put up for the amount that is available. That is one of the most important features at the depot. The lamps for the different light-houses are constructed there, and all the lens apparatus is tested, besides the making and repairing of the cans that are used in sending oil around the country. The increased cost of labor and material is estimated at something like 20 or 30 per cent—30 per cent.

The CHAIRMAN. What is the size of it?

Colonel LOCKWOOD. It is not built. You know it has only been planned. I could not give you the exact dimensions. They have not gone ahead with it, because they found they could not build it for the money appropriated.

The CHAIRMAN. You estimate it will require \$25,000 additional to complete it?

Colonel LOCKWOOD. Yes, sir.

Mr. TAYLOR. What was the original estimate, \$50,000?

Colonel LOCKWOOD. Yes; but that was some time ago.

Mr. TAYLOR. In 1903, I believe. You didn't complete it for the reason that that was not sufficient to build the necessary equipment?

Colonel LOCKWOOD. Not only that, but there were other buildings that were needed first, and they were attended to in the regular order. The whole institution could not be torn up at one time.

Mr. TAYLOR. So you did not use that money?

Colonel LOCKWOOD. Oh, no; we used the money for the other buildings, but for the lamp shop no money has been used.

Mr. TAYLOR. None of that \$50,000 that was appropriated.

Colonel LOCKWOOD. No.

Mr. TAYLOR. The reason why you didn't use it was because it could not be built for that money?

Colonel LOCKWOOD. Yes.

Mr. TAYLOR. Is it a necessity or simply a matter of convenience?

Colonel LOCKWOOD. Oh no; it is a necessity.

Mr. TAYLOR. Why did you put it off so long?

Colonel LOCKWOOD. We have been getting along with the old lamp shop, and making use of other buildings where we possibly could. We have not asked for modern apparatus for doing the work that is required.

Mr. TAYLOR. This work is to be done for what section?

Colonel LOCKWOOD. The whole United States.

The CHAIRMAN. That is where you manufacture your lamps?

Colonel LOCKWOOD. That is where we manufacture the lamps and the fog-signal apparatus.

Mr. TAYLOR. You have no other shop anywhere that can do the work?

Colonel LOCKWOOD. We have little shops in the different districts—little places where they putty up and solder things.

The CHAIRMAN. That is the only manufacturing plant that the Government has for that purpose?

Colonel LOCKWOOD. Yes, sir.

Mr. TAYLOR. How long has it been in operation?

Colonel LOCKWOOD. Thirty or thirty-five years.

Mr. TAYLOR. It has not been, practically, since?

Colonel LOCKWOOD. Only just to keep it going.

Mr. TAYLOR. And according to the old system?

Colonel LOCKWOOD. Yes; it is not large enough by any means.

Mr. TAYLOR. It is not up to date?

Colonel LOCKWOOD. Oh, no; they work under a great many disadvantages.

#### MIDWAY ISLANDS LIGHT-HOUSE SERVICE.

The CHAIRMAN. The next item is for the Midway Islands light-house service, for establishing and maintaining lights, daymarks, and buoys in the waters about Midway Islands, including purchase of land, pay of officers and crews, etc. You ask for \$111,000. Midway Islands are how far west of Honolulu?

Captain SEBREE. Twelve hundred miles, in round figures.

The CHAIRMAN. It is nothing more than a reef?

Captain SEBREE. It is a reef. We have the cable station there.

This estimate was put in, and is, as you see, quite large. The main cost is for a first-order light, to be seen, say, 20 miles, and on account of its distance from everywhere, the great expense of getting men and material there, the estimate is very high. We have put up since last year what we call a beacon light, because the demand was so strong on the steamships which go to Yokohama and back, something that we are authorized to do without an act of Congress, a temporary thing, a small light that can be seen 6 or 7 miles. But this would be for buoys also.

The CHAIRMAN. Since when has Midway Islands been on the regular traveled course of steamships from Honolulu to Yokohama?

Captain SEBREE. All the time. It is practically on what is called the great circle route—that is, the nearest distance from Honolulu to Yokohama takes the vessels very close to that island. I don't say right there, but very close. I came home on a steamer two years ago. We did not see it, we did not expect to see it, but we were very close to it.

The CHAIRMAN. It is not an inhabited island?

Captain SEBREE. Only by those connected with the cable station. It is the cable relay on the cable line from Honolulu to the Philippine Islands—the American cable—and we have a guard of marines there.

The CHAIRMAN. Since when?

Captain SEBREE. For two years, or about that.

Mr. TAYLOR. Since you established the cable station?

Captain SEBREE. Soon after that. It was requested in connection with that. We have a second lieutenant in command, and I should think 15 or 20 men there. That is because the islands are 1,200 miles from anywhere. There were several employees there of the cable company, and with no particular authority, so they have established a small post with 12 or 15, possibly 20, marines.

The CHAIRMAN. Midway Islands are practically the Sandwich Islands, are they not?

Captain SEBREE. They are in that same group or line of islands, but I don't think they would be called a part of the Hawaiian Islands.

Mr. TAYLOR. But they are a part of the Sandwich Island group?

Captain SEBREE. A part of that same chain of islands. This island is very small; I don't suppose it is more than 3 or 4 miles in diameter.

The CHAIRMAN. In annexing the Hawaiian Islands did we get that island in that way or did we get it by discovery?

Captain SEBREE. I don't know.

Mr. TAYLOR. We took it in 1867.

Captain SEBREE. We have had vessels out there.

The CHAIRMAN. You had a naval vessel wrecked there in 1856.

Captain SEBREE. We had a vessel wrecked close to there in 1871, or somewhere around there.

Mr. TAYLOR. Do you remember when it was they attempted to establish a naval coaling station there?

Captain SEBREE. I don't remember. I remember one of our vessels running ashore on it two years ago, one of the colliers. They were coming over two years ago from Yokohama with the squadron, and one of the colliers ahead ran on that island in the night, but there was no loss.

The CHAIRMAN. Has the absence of light there been the cause of accidents to vessels in the last few years?

Captain SEBREE. The only one that I can recall, and I have not looked that up, is this collier that ran ashore. She was not hurt very much. But a good light would help very much, because a ship would head for it and might not run out of the course if they saw it. I did not consider, however, that this \$111,000 for the Midway Islands is an urgent matter like a great many other things.

#### SAMOAN LIGHT-HOUSE SERVICE.

The CHAIRMAN. The next item is "For the Samoan light-house service; for establishing and maintaining lights, day marks, and buoys in the waters about the American Samoan Islands, and so forth, \$25,000."

Captain SEBREE. That would come under the same thing as Guam. I am quite familiar with that; I was a kind of governor down there for about a year and a half. We have a line of steamers, the Oceanic Line, that runs from San Francisco to New Zealand and Australia. They pass there going each way and call.

The CHAIRMAN. Is there any considerable amount of commerce?

Captain SEBREE. Not much; not a great deal.

Mr. TAYLOR. Is this Samoan Island light-house urgent?

Captain SEBREE. Not urgent like a great many other things that we have in the general bill, but we have some lights there now that the Navy Department is maintaining. I put some up myself when I was there. I think all of the lights under the Government ought to be maintained by the Light-House Board. If anybody attends to it, it ought to be under one head. If we get the money we will take over what lights the Navy has and the buoys. It is important to have lights and buoys there, because it might save one of those steamers twelve hours' time.

---

MONDAY, April 23, 1906.

#### LIGHT-HOUSES, BEACONS, AND FOG-SIGNALS—Continued.

##### TENDER, THIRD LIGHT-HOUSE DISTRICT.

The CHAIRMAN. We will begin on page 63, we having closed our hearing on Saturday at that point. The next item is, "For tender for inspector, third light-house district: For completing the tender for inspector, \$85,000." That is the balance of \$135,000, which is the limit of cost.

Captain SEBREE. Yes, sir. I don't know that that is the proper place to put that. We have just finished the plans on that, and on account of the recent bids on vessels, and the fact that the prices have gone up, I would like to have that increased from \$85,000 to \$100,000, making the total cost \$150,000. I have been trying to find out the right way to increase that. I am afraid that when the bids come in they will all be over that.

It takes six or eight months to draw plans and specifications, and they cost generally  $1\frac{1}{2}$  to 2 per cent. Although I gave orders that they were to design a vessel that could be built for that money, yet from the recent bids that have been opened the prices have advanced possibly 20 per cent, so that the difference between the lowest bid and the highest bid has been as much as 30 per cent. When the shipbuilders themselves, on the same plans and specifications, can not make less difference than that—one of the lowest bids was \$109,000, and the highest bid \$140,000, for a light vessel that we had \$90,000 appropriated for, and we had five of those vessels built for \$82,000 each, so, of course, I supposed that we could get it for \$90,000, but when the bids were opened up the highest bid was \$140,000, or something like that.

The CHAIRMAN. How many bids did you have?

Captain SEBREE. I think I had five.

The CHAIRMAN. Do you know whether the bidders are independent of each other in the matter of shipbuilding?

Captain SEBREE. I think they are.

The CHAIRMAN. Did you make an investigation, to ascertain that fact?

Captain SEBREE. I don't know how to do it. Here is a vessel—not a light-ship, but a tender—and the Maryland Steel Company bid \$168,000, the Harlan & Hollingsworth Company \$136,000, a difference there of \$32,000. The Bath Iron Works bid \$153,000 and the Pusey & Jones Company \$161,000. We had an appropriation of \$130,000, and there was \$128,000 and something available for the purpose; so the lowest bid was more than the money we had and we had to reject them all.

Here is another vessel for the third district, and I hope that Congress will give the money to order three just like that one, on the same plan. The bids will be opened probably in about two months, by the time we get it printed, and have thirty days for the bidders to come in; and if they bid more money, then I have got to make new plans that will cost \$1,000 or \$1,500, or put that off for another year. There are three vessels, but we want one especially in Oregon, one for Porto Rico, and one for Honolulu. If I get any of those, we will build one, two, or three vessels on the same plan.

Mr. SMITH. Will these vessels be built in the next fiscal year, so that you will need all of the money?

Captain SEBREE. Oh, yes. The plans call for completion within twelve months of the date of approval of the contract by the Secretary of Commerce and Labor. Unless we had had something last year I could not have spent anything to make the plans.

The CHAIRMAN. Have you made any investigation to ascertain for yourself the fact whether it is the increase in cost of material, the increase in the cost of labor, or a combination between all of these bidders that has resulted in these increased bids?

Captain SEBREE. I have no way of making any investigations excepting to ask. Now, in one case—the light-ship for Brunswick, Ga.—the firm that had built five just like that one, and built the five for \$82,000 each—of course, in building five they got them down lower—they knew that there was \$90,000 appropriated for that vessel, and I hoped, as she was on the same plans and they had the patterns, that the New York Shipbuilding Company would make the

lowest bid. But they wrote that they would not bid; that they knew the appropriation was \$90,000, but on account of the great increase in cost of material—they did not say anything about labor in their letter, but material—that as steel had gone up \$7 a ton, that as copper had gone up 50 per cent, and lumber had gone up, they could not bid; and that they hoped that no foolish shipbuilder would try to build that vessel for \$90,000, because they simply could not do it.

The lowest bid was \$109,000. I took off everything that I could and be certain that the vessel could be ready for sea. I took everything off that was considered necessary nowadays, such as steam-steering gear and different things like that, so as to bring the cost down: but even with that the lowest bid was \$19,000 more than the money appropriated.

The CHAIRMAN. Are all of these shipbuilding concerns that bid on these tenders busy, and have they plenty of work independent of this Government work?

Captain SEBREE. I understand not. I understand that there is very little work going on with the exception of repair work, or outside of the building of Government vessels, such as battle ships. Of course those are the large firms. But I think there were very few vessels built last year.

The CHAIRMAN. How many firms bid on this tender?

Captain SEBREE. Four on that particular vessel.

The CHAIRMAN. Can you give us the location of those?

Captain SEBREE. Yes. The Maryland Steel Company; that is up at Sparrows Point, near Baltimore.

The CHAIRMAN. Is that a large shipyard?

Captain SEBREE. That is a large concern, I understand, although I have never been there. The Harlan & Hollingsworth Company, of Wilmington, Del. They are now building one vessel for us. They bid low enough so that we let a contract to them for a tender about five months ago. As this particular one for Charleston was in many respects similar, the boiler the same, the engines the same—they were a little different, because the draft had to be a little different—I expected the Harlan & Hollingsworth people would get that vessel, and hoped they would.

The CHAIRMAN. What was their bid?

Captain SEBREE. One hundred and thirty-six thousand dollars. The appropriation was \$130,000, but after the making of the plans and the advertisements and all that we had only about \$128,000 available.

The CHAIRMAN. You could not modify your plans so as to bring that vessel within \$130,000?

Captain SEBREE. I had cut out everything that was possible. I cut out the electric lights, steam-steering gear, steam-anchor engine, and everything that I could and yet be certain that the vessel would be complete and ready for sea. After taking that all out the altered bid was \$126,300. That left me practically a little over a thousand dollars, and she did not have any anchors and chains.

I had purposely left the anchors and chains out, because I wanted to furnish them ourselves, as we wanted the best chain that could be made. So after considering it, and taking into consideration that this vessel would not be complete and ready for sea if she did not

have anchors and chains, I stopped right there, and I got the Secretary to write in and bring the matter before the Committee on Interstate and Foreign Commerce in order to secure additional money for that vessel. You can not take a vessel that is of 700 tons displacement, say, and build that smaller, or you can not take the plans and push it up a little bit here and a little bit there. You can not say that a vessel that is 170 feet long can be made 150 feet long, or that she is 30 feet wide and we will make her 28 feet wide, or that her engines are 500 horsepower and that we will make them 300 horsepower without making changes in the whole plans. You have got to make the plan over.

The CHAIRMAN. Where are these other two companies that bid located?

Captain SEBREE. The Bath Iron Works are located at Bath, Me. They are building battle ships there. The Pusey & Jones Company are located at Wilmington, Del.

The CHAIRMAN. Did the Cramps bid?

Captain SEBREE. They did not bid.

The CHAIRMAN. Were they asked to?

Captain SEBREE. Oh, yes. We sent an advertisement to them; sent specifications to all of the shipbuilding firms.

The CHAIRMAN. Did the Newport News Company bid?

Captain SEBREE. No, sir. The big fellows didn't seem to want to tackle it.

The CHAIRMAN. Neither did the Fore River Shipbuilding Company?

Captain SEBREE. None of those. We sent to them, in addition to the advertisement, a copy of the plans and specifications and a letter showing when the bids would be opened, and all that. They did not bid. I was in hopes that some of the big firms would bid. I don't know what their reason is. The New York Shipbuilding Company is a very large firm right across the river from Philadelphia. They are building two or three battle ships; good ones, too. They built five light-ships for us, and build good ones. They did not say in their letter that it was on account of increase in cost of labor, but since I have talked with Mr. Edwin Cramp, asking him the reason they did not bid on the work. He said, "Well, the labor is about two-thirds of the cost of the ship, although you can not say exactly the percentage, but somewhere from 65 to 75 per cent," although, of course, with a battle ship with expensive armor, that would change it. In that case the labor might be 50 per cent and the material would be 50 per cent. But I think myself that it is on account of the labor.

Labor has gone up so that I do not think they feel sure unless they have a great big margin of profit. Anyway, outside of the Lakes there is very little building going on. We went to the Lake people, to all of the firms, and in addition to the advertisement we sent them copies of the specifications, and we sent copies to the Pacific coast. Of course, we can not expect the Pacific coast people to bid for a vessel to be delivered in New York, but I hoped that we could get some of the tenders that we asked for built on the Pacific coast, to give them a chance to bid, and have the vessel delivered at San Francisco.

The CHAIRMAN. You say that it is your deliberate judgment that this vessel, which has been authorized for the third light-house district, can not be constructed for less than \$150,000, which means an increase of limit of cost \$15,000.

Captain SEBREE. Yes, sir. Last July, when the money became available, I thought that \$135,000 would build it. I wanted a vessel that could be built for that, and I thought the firm could make a good profit out of it and deliver that vessel. We did all we could, but the prices have gone up since last July and since we fixed the general dimensions.

The CHAIRMAN. Since July, 1905?

Captain SEBREE. I think they have; and it seems to me that they are going up every day.

The CHAIRMAN. You say that this vessel for this district is absolutely necessary?

Captain SEBREE. Oh, yes; very necessary. The plans were put on my desk about three days ago, and I want to go over them personally myself. We have not sent them to the printer yet, but as soon as we get them back we will issue the advertisement, giving the bidders thirty days to figure on them. It looks as if we ought to estimate closer, but bids vary.

Mr. SMITH. What two Wilmington, Del., firms bid, and how do those bids compare?

Captain SEBREE. The Harlan & Hollingsworth Company bid on the tender *Cypress*, for Charleston, \$136,000; and the Pusey & Jones Company bid \$161,000, a difference of \$25,000.

#### AMBROSE CHANNEL LIGHT STATION, NEW YORK.

The CHAIRMAN. We will now pass to the next item, the Ambrose channel light station, New York. For completing the light-house at the intersection of the axis of the east channel and the west edge of it, \$100,000.

Captain SEBREE. We have a revised plan and estimate.

The CHAIRMAN. I am inclined to think, after reading that document over, that the extent to which we would have to increase the appropriation to meet the present plans would necessitate your obtaining authority for increasing the limit of cost.

Captain SEBREE. The present plan is less than the former plan by forty or fifty thousand dollars.

The CHAIRMAN. The limit of cost?

Captain SEBREE. That is only the one item, the Ambrose channel light station. In fact, we have cut that out altogether; that particular light we have cut out.

The CHAIRMAN. One hundred and twenty-five thousand dollars is the limit of cost of the light-house?

Captain SEBREE. That was about the cost of the light-house at the junction.

The CHAIRMAN. You were authorized to prepare a detailed estimate, to be submitted to Congress at this next session, for a complete system of lighting. Did you submit that?

Colonel LOCKWOOD. To the Interstate Commerce Committee.

The CHAIRMAN. And they authorized this?

Captain SEBREE. We have not heard whether they have done it or not.

Colonel LOCKWOOD. That was done only about a month ago. This change in the system of lighting only came up about two months ago.

The CHAIRMAN. So there is no authority for appropriating any money in connection with this plan other than the authority here "for completing the light-house at the intersection of the axis of the east channel and the west edge of it, to form a range, \$125,000?" That is all the authority there is? That is the limit of cost on that particular project?

Colonel LOCKWOOD. On that particular item of the project.

The CHAIRMAN. Yes. Now, the whole plan contemplated by the act authorizing estimates in detail to be submitted for the light of the Ambrose channel is before the Committee on Interstate and Foreign Commerce?

Captain SEBREE. Yes.

The CHAIRMAN. And before we could appropriate that committee would have to act authorizing the carrying out of this project as proposed by your plan, they to fix the limit of cost?

Captain SEBREE. That is what I supposed, and the committee called us before them and those plans were put in at \$360,000.

The CHAIRMAN. We will wait, then, until the committee acts upon

GOOSE ISLAND FLATS LIGHT STATION, DELAWARE RIVER.

The CHAIRMAN. The next item is for Goose Island Flats light station, Delaware River; to complete a light and fog-signal station on Goose Island Flats, \$45,000. That, with the appropriation for this year of \$40,000, would bring the amount up to the limit of cost for the light and fog signal.

Colonel LOCKWOOD. That is merely to enable the light-house to be put under contract during the coming season.

Captain SEBREE. We have \$40,000, and we want the other \$45,000, the amount estimated for the cost.

The CHAIRMAN. Will you need the full amount to complete the work?

Colonel LOCKWOOD. Yes; need the full amount to complete the light-house; it will require all of that money to do it.

Mr. TAYLOR. Will it require that money this year, or will you require so much this year and so much another year?

Colonel LOCKWOOD. I think from the situation there now that that might go, because they have not advanced far enough.

Mr. TAYLOR. Do you mean that we can postpone this until the next appropriation bill?

Colonel LOCKWOOD. Yes.

The CHAIRMAN. Then \$40,000 will be sufficient to carry you through to the next fiscal year?

Colonel LOCKWOOD. I think so; yes, sir. It is a difficult work, and it has not advanced far enough yet so that we are able to say when it will be put under contract.

BRUNSWICK LIGHT VESSEL, GEORGIA.

The CHAIRMAN. The next item is for the Brunswick light vessel, Georgia: Brunswick Bar light vessel, seasoast of Georgia, for completing the Brunswick Bar light vessel, \$50,000. The limit of cost

on that is \$90,000, and you now have \$40,000 appropriated. I see that you ask in special document No. 466 an increase in the limit of cost from \$90,000 to \$130,000.

Captain SEBREE. I wrote to the chairman of the Interstate and Foreign Commerce Committee about that, and we asked for \$130,000. That was the one that I mentioned this morning, the case where we had to reject all of the bids.

The CHAIRMAN. Has the bill extending this limit of cost been reported to the House?

Captain SEBREE. No, sir; I think not. That is the vessel that I referred to when I said this morning that I had had a vessel built on the same plan for \$82,000. The bids were \$109,000, \$120,000, and \$135,000, and the firm that built the others would not bid at all. So I think we ought to have \$130,000, so as to be sure and get the vessel. Those bids were opened three months ago, but I don't know where they are going to stop.

The CHAIRMAN. You will require \$130,000?

Captain SEBREE. Yes; for all of the new ones that I am asking for. I have made it \$130,000 on the Atlantic coast and \$150,000 on the Pacific coast, because it will take between \$15,000 and \$20,000 to send her around if she is built at New York. It cost \$28,000 to send two of these \$82,000 vessels around.

The CHAIRMAN. Will you please explain what the service of a light-ship like this one is?

Captain SEBREE. Well, we will take one that is all built and in operation; for instance, the one off South Shoal, Nantucket, 40 miles off shore. All of the steamers coming from Europe for New York sight that vessel; they have wireless telegraph on board. They make for that vessel; the light-ship off Nantucket is a mark for them to head for. At Hatteras we have the same thing.

The CHAIRMAN. How far out is the light-ship at Hatteras?

Captain SEBREE. It is 5 miles off the end of the shoal, and about 14 or 15 miles off land in 30 fathoms of water. The vessels head for her.

The CHAIRMAN. Those vessels take the place of a stationary light?

Captain SEBREE. Yes. They are better than a light, for this reason: Like everything else that is good, they are very expensive to maintain. If a light is on a point of land, or on a shoal, the vessel coming along sees that light off the shoal and she has to head away from it, or, as it is at Hatteras, 10 or 12 miles off shore, they would have to estimate how far they are off. But if it is a light-ship, and if it is anchored out, they can shape their course right for it, and if they drift out by the current a mile or two they will hear a fog whistle and will know exactly where they are. The light-ship, in my opinion, is a much better aid to navigation than anything else, but, as I say, it is much more expensive to maintain. The light-ship off Hatteras costs about \$15,000 a year to maintain.

The CHAIRMAN. How many men are on board?

Captain SEBREE. Ten or eleven or twelve. They have a captain, a mate, an engineer, and an assistant engineer. If they break and go adrift, they steam back. We have two or three firemen and three or four sailors, and then there is the coal; so that with these largest ships, the steel ones, they are costly to maintain.

The CHAIRMAN. Do they run out in the evening and back again in the morning?

Captain SEBREE. No; they lay right there unless they break away. If they break adrift they steam back if they have enough chain on board. If they don't, they steam into port, get a chain, and get back as soon as they can. One sank off Nantucket shoals last December, but fortunately we got the people off just before she went down. I will say that the wireless telegraph helped us out there.

HOLLAND PIERHEAD RANGE LIGHT, LAKE MICHIGAN, MICHIGAN.

The CHAIRMAN. The item is for Holland pierhead range, Lake Michigan, Michigan. That is a transfer.

Colonel LOCKWOOD. Transfer of a part of the former appropriation; \$6,000 of the \$7,500.

Mr. SMITH. I would like to ask if all appropriations for the Light-House Board are continuing appropriations?

Colonel LOCKWOOD. All for construction.

Mr. SMITH. That was my impression. Is this item that is thus transferred a continuing appropriation?

Colonel LOCKWOOD. Yes, sir; the money is still available for the place for which it was appropriated, but the necessity for its use has never been apparent. There is no need of putting any aid to navigation at South Milwaukee.

The CHAIRMAN. There are no outstanding obligations against this appropriation?

Colonel LOCKWOOD. No, sir; nothing has ever been done.

Mr. SMITH. As I understand it, this not only was authorized, but actually appropriated for by the act referred to in this paragraph.

Colonel LOCKWOOD. Yes.

Mr. SMITH. But never drawn.

Colonel LOCKWOOD. Never drawn.

LIGHT-HOUSE ESTABLISHMENT.

SUPPLIES OF LIGHT-HOUSES.

The CHAIRMAN. We will now pass to page 65, supplies for light-houses. Your current appropriation is \$475,000, and you estimate for the next fiscal year \$600,000 for this purpose.

Captain SEBREE. Yes.

The CHAIRMAN. Will you explain the cause and necessity for this increase?

Captain SEBREE. The necessity is that the estimates have been cut down—I think it will show here somewhere—each year, and we have reached a point in regard to these various supplies where we want to get enough to stock up with, so that we will not be in the condition we are now any longer.

The CHAIRMAN. You had a deficiency in the urgent deficiency bill.

Captain SEBREE. Not in those supplies. We had a deficiency in light vessels on account of that one having been sunk and one having been blown ashore and others needing repairs. That was for extraor-

dinary repairs. On this item we are right down now, so that we can not get the supplies that we are in need of. The light-house inspector at New York, where the general supply depot is and where most of these supplies are bought, says that he has to cut these requisitions right in two. A man may ask for so much, but he can not give it to him, and we have no money to buy the supplies with—we are out.

Recently I was down in Florida, and I asked the inspector why he didn't do so and so, and he said: "I can not do it unless you give me the things that I need. I can not do certain things. For instance, this particular building needs painting bad, and I can not get these things and do it unless you give them to me. I made requisition on the general supply depot, but I can not get what I need." It is cheaper, for most things, to buy in quantity in New York, and then send them down to various districts, but we have to cut the requisitions down and can not give the districts what they need because we haven't the money. So we tell them that they will have to do the best they can with what we send them.

The CHAIRMAN. Are all of the supplies carried in this item purchased in bulk by advertising and stored at New York?

Captain SEBREE. Not all of them. There are some things. For instance, a requisition will come in, we will say, from San Francisco. That comes in and is looked over and is sent to New York with an order to the inspector there to look over the stock of supplies and send what can be sent from New York with advantage. I can speak about San Francisco, for I was there three years. There were certain things that we could buy there cheaper than anywhere else, one of the things being paints. They made paints right there at San Francisco, and it was cheaper to buy those paints by advertisement there. Excepting in such instances, the great bulk is bought at New York. For instance, the oil for illuminating is bought there.

— The CHAIRMAN. What oil do you use?

Captain SEBREE. Mineral oil of fine quality. We have a special quality of oil and we test it there. That is one reason we buy it, because we have a very severe test on it, and we test it right there. But on rivers, where they have those little stake lights, lanterns hung on a post or on a tree, we find it better to let the inspector buy by advertisement 5,000 or 10,000 gallons of oil as needed. But in the main light-houses we buy the oil in large quantities, delivered in lots, and after it is tested it is shipped to the various districts. We are very glad when the Standard Oil Company gets the contracts, because we get good oil—get what we want. Every once in a while some one will come along and will bid under a quarter or an eighth of a cent, and we get reports that the oil is not good. I have just opened the bids for next year, and I am glad to say that the Standard Oil Company has gotten it. They were the lowest bidders, eight and four-tenths in bulk being the lowest bid.

The CHAIRMAN. How does that price compare with last year?

Captain SEBREE. I think it is a little bit higher, but not materially.

The CHAIRMAN. And you think this increase is necessary because the supplies on hand are becoming so low that they will have to be replenished?

Captain SEBREE. The inspector over there who buys these things pays for them, and sends them out, wrote me an official letter, and then

a personal letter, saying that we ought to come to Congress for \$300,000 to stock up our depot. I did not put that much in, although I put some of it in the \$600,000, and there is an increase in some of the others. This is an item, Mr. Chairman and gentlemen of the committee, to be perfectly frank, that if you do not give it we have got to do with what you do give, and really it would be best to give it. Of course, if you give \$500,000 we can not have so many things, but it is crippling our service.

The CHAIRMAN. Would the service be crippled in any way, in your judgment, in the event the full amount—\$600,000—was not allowed?

Captain SEBREE. I think it would, to that extent. If you don't give \$600,000, and give only \$500,000, we would only buy \$500,000 worth of supplies.

The CHAIRMAN. Then your current appropriation is not large enough to maintain the supplies that you ought to have on hand and should have in the interest of the service?

Captain SEBREE. I feel sure of that, and it is growing every year; it has to go up every year. It is hard to increase every year with an appropriation that is dropping back. We increase the number of light-houses every year, and it takes more oil and more supplies.

Mr. SULLIVAN. How many light-houses does the Government maintain?

Captain SEBREE. Roughly speaking, about 1,500, and that does not count the little lights on the river. There were 1,464 at the beginning of July. There have been some increases since, practically 8 or 10 altogether. We have 49 light vessels, and 1,800 of the small post lights. Most of those are on western rivers—pretty near a thousand on the Mississippi River from New Orleans to St. Paul.

Mr. SMITH. Can you give us any idea as to how much of this item is used for salaries?

Captain SEBREE. None of it, sir.

Mr. SMITH. It says so.

Captain SEBREE. But that is for salaries of officers and men on the various light-house tenders.

Mr. SMITH. It says, "Including the pay of officers and crews of light-house tenders, and of clerks, and other employees in the offices of the light-house inspectors and light-house engineers, and at light-house depots." How much is covered by salaries and compensation for personal service in that way?

Captain SEBREE. I could not give you that, but I have it at my office. The way that is done, we divide the pay on a light-house tender. Say there are 20 men on it and the expenses of that vessel would run per month, say, \$2,000 for the pay of officers, the crew, the coal, and everything. Now, if she is engaged, say, for a month in delivering these supplies to various light-houses we will charge that pay to supplies, and another month we will charge that to buoys, because the vessel is employed in doing both of those duties.

Mr. SMITH. You do not catch exactly what I am trying to get at. What I want to find out is the fixed charges against this item. You have got some things like paint, etc. You might not paint every year or every two years. But there are certain fixed things that have to be paid out of this item every year, and you want the increase, as I understand it, for these incidentals that are not obligatory every year.

Captain SEBREE. Yes, sir.

Mr. SMITH. I wanted to know whether we are doubling or quadrupling the amount allowed for that. I want to know how much there is in this item that goes for supplies that are not fixed supplies, if I may say so. I would like to eliminate the pay of the men, the oil, and the things that you have to have from this item, and see how much they come to, and also see how much surplus you have left for painting and things like that, to know whether you are doubling or quadrupling this appropriation for those purposes.

Captain SEBREE. I might say, roughly, on this appropriation that \$60,000 or perhaps \$75,000 is to stock up with these things that we don't absolutely have to have every year.

Mr. SMITH. Are you not mistaken about that? If \$475,000 will pay for the indispensable things that you have to have every year, then there seems to be more than \$125,000 in here for the others. What I want to know is whether you have been using twenty-five or thirty thousand dollars, or whether you have been giving six times as much for incidental things.

Captain SEBREE. Yes; I see the point. I can give you that by going to my office. Of course, you can see that we had to get along with \$475,000 last year.

Mr. SMITH. You did not put out any lights on account of it?

Captain SEBREE. No; we haven't put any out.

Mr. SMITH. You didn't leave anybody out?

Captain SEBREE. We did keep back the letting of contracts for some lights, but I have started those now, because we have found that we have enough money to run us through; I am referring to the smaller lights. We have started a lot in the last month or two.

Mr. SMITH. Do you think you had \$50,000 out of the \$475,000 for paint in this class of items?

Captain SEBREE. I would like to have time to give you that.

Mr. SMITH. Now, I will state this question concisely. How much under this head is required for those things which are indispensable, such as oil and the payment of men that come under it, and everything that may be said to be indispensable to be done every year; and then how much of it in rough would be for things like paint, painting buildings, and things like that.

Captain SEBREE. I think I can answer that. Of course, we have increased the number of light-houses within the last year. Say they would cost \$500,000. Now, the other \$100,000 would be to stock up these things that we are getting behind on every year.

Colonel LOCKWOOD. The balance on the 30th of last June left over for supplies was practically \$1,200.

Mr. SMITH. Has not a good deal of it been spent for painting and such repairs?

Captain SEBREE. That painting is necessary. We must paint. If it is a steel light-house, like those down on the Florida coast, we have to paint them.

Mr. SMITH. Certainly; but there is no increase necessary on some lines, practically, at all. This increase all goes practically into one limited line of expenditures.

Captain SEBREE. To stock up on various things; not oil; not, as you say, the pay of crews, unless we get a new tender and put it in commission. That comes every year with the increase. But that is put up there because we have not got what we have asked for for

several years. We dropped back \$25,000 a year until we have got down and have nothing left.

Mr. SMITH. If we were to give you \$600,000, could you, in your judgment, drop back next year part way?

Captain SEBREE. I don't know about that. If you don't give it now, we have got to go on as we have been.

Mr. SMITH. We don't want to cut off the painting or the lights.

Captain SEBREE. I will say that when these estimates were made out, these and the other items on the general appropriation—not for the new things, but the general appropriation—they were gone over very carefully. We had the people who made them go over them carefully. I took the estimates before the full Light-House Board at the monthly meeting and stated what we thought we ought to have from the best information that we could get. I told them that prices were going up, that we had been shut off before, but I wanted to know the idea of the Board. I told them that I would have to go before the Secretary of Commerce and Labor and explain these items, and I wanted to know what the idea of the Board was.

We were told, the colonel and myself, that if there was going to be any cutting down, to let it be by the Secretary of Commerce and Labor and not by the recommendation of the Light-House Board. We went before the Secretary of Commerce and Labor, and I told him that we thought we ought to have these things, that we thought they were necessary, that if they were to be cut down before the estimates went to Congress, of course it would be the right of the Secretary to do it, but it would not be by the recommendation of the Light-House Board.

Now, I think these things are needed to properly run this Service. The Service is growing all the time, and the increase is nothing like the increase of shipping and a number of things that we do. The shipping increases in a very much greater proportion than our general appropriations for light-house increase.

Mr. SMITH. But I would like personally to know how much of the \$475,000 you used for fixed charges, and how much of this increase is for other purposes, to see whether we are giving 500 or 600 per cent increase for other than fixed charges.

Captain SEBREE. I think you are, probably; three or four times. If we had \$25,000 or \$30,000, and you gave \$100,000, that would be 400 per cent increase.

Mr. SMITH. That is just what I would like to know.

The CHAIRMAN. You had better give the salary list.

Colonel LOCKWOOD. Formerly the provision with regard to pay of salaries and pay of crews of tenders, and so forth, was not in any of these estimates, but objection was made by the Auditor and the Comptroller to the fact that all of those should be paid from a separate appropriation for salaries—salaries for everybody in the Light-House Service. The force is a varying one, and it was found practically impossible to do it; so this appropriation was introduced in each one of those general appropriations.

The CHAIRMAN. Have you since that time paid out of this appropriation for supplies for light-houses salaries to any officer or any other employee other than those that are specifically mentioned here in connection with salaries for tenders, clerks, and other employees

in the office of light-house inspectors and light-house engineers and at light-house depots?

Colonel LOCKWOOD. No, sir.

The CHAIRMAN. Have you considered these different appropriations in respect to payment of salaries of employees interchangeable?

Colonel LOCKWOOD. Only in this way: The salaries are paid from the special appropriation that applies to the work upon which they are engaged at any time. It is prorated according to the way in which the force is engaged.

The CHAIRMAN. As to this force of clerks in connection with the office of light-house inspector, light-house engineer, and at light-house depots, are they performing any service in connection with the appropriation for repairs of light-houses?

Colonel LOCKWOOD. Oh, yes.

The CHAIRMAN. Then do you prorate the amount of their services between these two appropriations?

Colonel LOCKWOOD. Oh, no; each one of those general appropriations carries those items. The force is paid according to what work it is employed upon.

The CHAIRMAN. Now, as to these appropriations, supplies of light-houses, repairs of light-houses, salaries of keepers of light-houses, expenses of light vessels, and expenses of buoys, are they all available for the payment of the salaries of these clerks employed in the offices of light-house inspectors, light-house engineers, and at light-house depots?

Captain SEBREE. Well, practically the way it is done is this: Say, out in Oregon, in the district there, the estimates are given; they are sent in before the 1st of July so that when the law is passed we know what the appropriations are; they all send in their estimates for the next year. The estimates are always more than the money we have, so we cut that down, prorate it down, give that man such a percentage of his estimate for supplies, for buoyage, and light vessels, and then he is directed not to exceed that. At the end of his year if he has to pay the expenses of his tender, amounting to \$2,000 for a month, say, and if he has more buoyage than he has supplies—if a vessel has been at work on both of these things—he will pay for that month out of the buoyage. But if he has more supplies, he will pay it out of supplies. Those are interchangeable, and it is a very good thing that it is. The vessel is used for all of this kind of work, and we can not get it right down to the day. She might have one-half a day for supplies and one-half a day for buoyage, so it is paid according to the amount he has. Toward the last few months he might pay all of those months out of this appropriation for supplies.

The CHAIRMAN. Would it tend to improve the administration of this appropriation—result in greater economy—if you were to estimate for the entire salaries of the officers and crews on tenders employed by the Light-House Board separate from those other appropriations? Could not that estimate be made?

Captain SEBREE. It could be made.

Colonel LOCKWOOD. Not very well.

Mr. SMITH. We don't mean separate allowances for officers, but the gross amount for pay of officers and men.

Captain SEBREE. We could take what it was last year and the year before—what they amounted to—and put it all in; but I don't think it would be as easy to do that as it is now. Of course, if there was appropriated a lump sum, just like this matter of salaries in the next item, the salaries of light-house keepers, it could be done in that way.

The CHAIRMAN. If Congress made the appropriation for salaries for officers and crews and clerks and other employees in the offices of light-house inspectors, light-house engineers, and at light-house depots, you could not then employ any more men than the appropriation would pay for.

Captain SEBREE. No, sir.

The CHAIRMAN. As it is to-day, these appropriations are available—that is, if you have a surplus, and you want to put on any other man or any other clerk—

Captain SEBREE. We get the authority of the Department.

The CHAIRMAN. And could not your subordinates do it?

Captain SEBREE. They can not do it.

The CHAIRMAN. It makes the appropriation available if there is any surplus in any of the amounts that are set aside for other purposes—for the payment of salaries, which otherwise could not be paid.

Mr. SMITH. Please make an estimate of how much would be required to pay all of these salaries in a lump sum; and also furnish us an estimate of how much of that lump sum should be taken from each of these items, if we decide to make the appropriation in that form.

Colonel LOCKWOOD. It don't seem possible to carry out that last provision, as to how much should be deducted from each appropriation for that purpose, how much salaries. Say the pay of tenders; that varies every year and every month, and it would not be anything more than a guess.

Mr. SMITH. You must know what you have estimated and put in for the salaries.

Colonel LOCKWOOD. We know what it has been costing from year to year, away back, the whole business, under each head; and that is as close as we could come to figuring out each item.

Mr. SMITH. You take this item of repairs of light-houses. Do you mean to say that you might pay these sums without having any estimate of the salaries?

Colonel LOCKWOOD. We know what the office force is, and we know how much that will cost ordinarily every year; and the district engineer, who submits an estimate as to how much will be required under that head to run his district for the next year, knows how much his force will cost.

Mr. SMITH. That hardly is responsive to the question. Do you say that you make up an estimate for the repairs of light-houses and that you do not have any basis whatever for these services that you put in the estimate which the district engineer will have? Do you not get that?

Colonel LOCKWOOD. We get the whole thing.

Mr. SMITH. You have on file your estimates as to how much is for salaries and how much for other purposes.

Mr. SULLIVAN. Let me ask this question: Isn't it a fact that the men who are under you who make up these estimates do it in this way—first I will state what they do not do. They do not make estimates as if they were embarking on a new service, but they take simply the experiences of the past and then estimate how many new items will have to be provided for this year over and above the preceding year; then take the estimated cost of those items and add to the old amounts, and in that way make up the new estimates; and isn't that all they do?

Colonel LOCKWOOD. That is practically all, as far as we know. We know the pay of the office force runs along from year to year just about the same.

Mr. SMITH. I can not see how it is possible for you to make up an estimate under any one of these headings without estimating how far it is going.

Colonel LOCKWOOD. How is it possible, for instance, to anticipate what the extent for repairs in a district are to be in advance?

Mr. SMITH. You may be very inaccurate in your estimate of repairs.

Mr. TAYLOR. What is an estimate but anticipation of what you expect?

Colonel LOCKWOOD. I will give you a case in the Gulf of Mexico three years ago. You remember the hurricane that cleaned out everything from the jetties to Pensacola—

The CHAIRMAN. There would be no necessity for the different appropriations if it was in a lump sum. You would have an appropriation for that particular service based upon your own estimate of what that service would cost for the year. Then your other appropriations would be entirely free for the purchase of supplies and the making of repairs. It is segregating those appropriations from the appropriations for supplies and repairs.

Colonel LOCKWOOD. But, Mr. Chairman, that would prevent any increase in the force that might be found absolutely necessary. We could not go beyond that. It would be like the salaries of keepers of light-houses.

Mr. SULLIVAN. The committee could allow a little contingent sum.

The CHAIRMAN. Could you not in your estimate for the service put in an estimate for contingencies for any emergency service?

Colonel LOCKWOOD. That might be done, too.

The CHAIRMAN. Do you have occasion frequently to employ temporary service?

Colonel LOCKWOOD. Yes, sir; that happens now and then.

Captain SEBREE. We have to send the superintendent out if some light-house is injured.

Mr. SMITH. Isn't it a fact that your opposition to this method is that you want these appropriations practically interchangeable in a large degree?

Captain SEBREE. I won't say that.

Mr. SMITH. Isn't it because they become interchangeable by your system—that is to say, you being allowed out of every one of about five items to pay the class of expenses that we are talking about. salaries, that if you want to use a little more money under one item you charge a less amount to salaries and push that over to the others? Isn't that the real basis of your opposition?

Colonel LOCKWOOD. That is one basis of the opposition; but I think the great opposition, the reason I would urge against it, is that it prevents anything like elasticity in the force.

Mr. SMITH. The committee is just as unalterably opposed to allowing these sums to be interchangeable as you are in favor of it. The committee does not want these funds to be interchangeable in effect.

Captain SEBREE. There is one thing; if you paid this out of an appropriation for salaries you would cut my supplies down so much, you would cut the buoyage down so much, that in order to get it we would have to give some kind of an estimate as to how much of this clerk hire and the crews' pay is to come out of supplies, and you would want to know how much is paid out of buoyage and this and that and the other, and take that off my estimate for supplies.

Mr. SMITH. That is exactly what we want to do—take off whatever you say is right from each of these items to make up the aggregate for salaries, and have you pick out where it would come from. We are willing to give you the opportunity.

The CHAIRMAN. And then we could ascertain whether this system is more economical in practice than the one you are speaking of.

Colonel LOCKWOOD. It has always seemed to me, from my experience, that there should be as much elasticity in these matters as possible under the law, for the reason that some years the call may be more on one or on the other.

The CHAIRMAN. That is true upon the theory that the administrative head of this Service will always be as competent and efficient as the present heads. We might not always be as fortunate.

Mr. SMITH. If this charge was accurately made, there would be less elasticity under these than ours, for the reason that, for instance, you have an unusual amount of repairs. Now, if you charge to repairs the just amount of the service of these men, you would charge a greater amount rather than a less amount, so that enables the increasing of the just charge. The amount that you would have for repairs in emergencies would be reduced if you charged to repairs the fair amount of the services; but it is only by an unfair amount of adjustment of this service that you can make any elasticity in favor of the other items; is not that true?

Colonel LOCKWOOD. That is theoretically correct.

Captain SEBREE. For instance, when a ship, say, like the one that was lost, and the one that went ashore on the coast of Oregon, and we came in and asked for an urgent deficiency—of course, if I did not get it I would not be able to repair the ship. We would not charge any pay of crews of light-house tenders to the light-ship money. I didn't have enough as it was. I stopped paying crews of light-house tenders, say one month in three, and I paid them out of supplies, or buoyage—whatever I had.

Mr. SMITH. When they were working on one thing you charged them to another. Isn't that the fact?

Captain SEBREE. A tender was working nearly all of the month trying to get this light-ship off. I didn't have any money to pay them, so I paid some of it out of supplies. It could be paid under either one of these three items.

Mr. SMITH. But as a matter of fact they were not working under the item out of which you took the money to pay them?

Captain SEBREE. Supply money, or buoyage, I don't remember which I had the most of.

Mr. SMITH. In place of paying them out of the item that they were working under, you paid it out of whatever item was convenient?

Colonel LOCKWOOD. It is all connected with the Light-House Service.

Mr. SMITH. Why not make one appropriation, then, for the Light-House Service?

Colonel LOCKWOOD. That would be better.

Captain SEBREE. If you did that it would simplify matters very much.

#### REPAIRS OF LIGHT-HOUSES.

The CHAIRMAN. The next item is: "For the repairs of light-houses; for rebuilding, repairing, protecting, and improving light-houses and buildings; for improvements to grounds connected therewith; for establishing, rebuilding, and repairing day marks and pierhead and other beacon lights, including purchase of land for same; for illuminating apparatus and machinery to replace that already in use," etc. I observe that you have in your estimate for the next fiscal year used the word "rebuilding," which the current law does not include. What is the purpose of that?

Colonel LOCKWOOD. That was the way, I think, the law read formerly—I was under the impression that it did—but the idea of putting that word in is merely to give greater latitude in the way of repairs. We have an old light-house dwelling, for instance, and repairing it means rebuilding it. We have a number of cases of that kind, and we have to repair them and extend them. Formerly, under the old system before fog signals were put in to any extent, the keepers' dwellings would only be sufficient for one or two keepers. Now we have to have them for three or four, and to get new dwellings requires a special act of Congress. So the idea of putting that word in is to give greater freedom, particularly in the matter of keepers' dwellings.

The CHAIRMAN. How much expense is involved in the rebuilding of one of those old buildings at a light-house station?

Colonel LOCKWOOD. That is a complicated question, because in all cases it means not only rebuilding, but extending.

The CHAIRMAN. Enlarging?

Colonel LOCKWOOD. Enlarging; yes, sir.

The CHAIRMAN. Can you give an approximate idea of what the expense would be for the purpose of determining whether or not the discretion should be vested in the Light-House Board of expending an amount of money for the purpose of rebuilding that which Congress had previously authorized?

Colonel LOCKWOOD. It is hardly any greater than the discretion which is vested in the Board now with regard to the subject of repairs. Repairs can cover almost everything.

The CHAIRMAN. Can be construed to cover almost anything, but whether it ought to be or not is a different question.

Colonel LOCKWOOD. But it is one of the most tantalizing questions in connection with the subject of repairs to keep these old keepers' dwellings in a habitable condition so that the people are fairly comfortable.

The CHAIRMAN. What did these buildings originally cost?

Colonel LOCKWOOD. In old times when lumber and labor were cheap they cost comparatively little; and they were only intended in a majority of cases for not to exceed two keepers. Now we have quarters for three or four keepers where there is a fog signal.

The CHAIRMAN. Why do you have them?

Colonel LOCKWOOD. It is necessary. A double building will cost about \$7,500.

The CHAIRMAN. A dwelling for two families will cost about \$7,500, you say?

Colonel LOCKWOOD. In some localities \$6,000 would possibly be a fair average.

The CHAIRMAN. How are they built, by contract?

Colonel LOCKWOOD. Yes.

The CHAIRMAN. Did the Light-House Board ever experiment, with a view of reducing the cost of this building, by purchasing material and employing labor and constructing them under their own direction?

Colonel LOCKWOOD. That has been the constant fight on my part for the five years that I have been connected with the Board. We can build better houses and fully as cheap.

The CHAIRMAN. That is the policy of the Canadian government, is it not?

Colonel LOCKWOOD. I think so; yes, sir. Apropos of that, I will say that three or four years ago, during the hurricane in the Gulf of Mexico, every aid to navigation in the way of wood structures, beacons, and day marks that were put up by contract were blown down. I don't think there was one that was not blown down between Pensacola and the jetties, and nearly all of those built by day labor under the direction of the engineers stood it through.

The CHAIRMAN. When you contract for the construction of one of these dwellings for light-house keepers, do not your engineers supervise the construction?

Colonel LOCKWOOD. Oh, yes; we have inspectors.

The CHAIRMAN. Are these inspectors engineers?

Colonel LOCKWOOD. Well, they are builders generally—superintendents.

The CHAIRMAN. You think that when they are built by the Government under the supervision of the engineer that they are far better, and they withstand storms more effectively than if built by contract?

Colonel LOCKWOOD. Yes, sir.

The CHAIRMAN. Why should not the engineers supervise the construction of the buildings when built under contract the same as if the Government built them?

Colonel LOCKWOOD. You understand, Mr. Chairman, that the inspection and supervision of those structures when built by contract is placed in the hands of some man that is hired for that purpose.

The CHAIRMAN. That is in the discretion of the Board, is it not? They could send one of their own engineers instead of having a man hired who might be in collusion with the contractor.

Colonel LOCKWOOD. If you are building a structure away off in an isolated place you have to have men on the job during the whole time. We haven't fixed force enough for that, and they have to

hire men as inspectors and superintendents; and that is the result. They are not as good as those built by hired labor.

Captain SEBREE. It is the same way that we build a ship. A ship that is built by a low bidder, away down low, you have to hire men there to watch every rivet. If the bidder is only going to make a very little money it is difficult to get a good ship.

The CHAIRMAN. Have you now the authority to purchase material and employ labor for the construction of these dwelling houses for light-house keepers?

Colonel LOCKWOOD. The usual method when we do the work by hired labor is to purchase material by contract in the usual way, and the labor is paid from the appropriation by the engineer in charge.

The CHAIRMAN. You have authority to do that now?

Colonel LOCKWOOD. Oh, no.

The CHAIRMAN. You have not?

Colonel LOCKWOOD. Only in special cases. If, for instance, bids are invited for the construction of a house and they are not satisfactory, then the Secretary of Commerce and Labor may authorize the construction by hired labor, purchasing the material by contracts, as the law requires.

Mr. SULLIVAN. So you have had some experiences which afford comparisons.

Colonel LOCKWOOD. Any number of them.

Mr. SULLIVAN. And the result favors the building by hired labor under your supervision?

Colonel LOCKWOOD. Yes, sir. Now, in case of building light-houses by contract, we have built two or three and have always had trouble in furnishing copies of bonds to people suing the contractors and things of that kind. We don't get satisfactory work, and we did not get it until the Secretary of the Treasury authorized the construction of those remote light-houses by hired labor, and they will stand.

Mr. TAYLOR. What is the difference in cost? Is there any great difference in cost?

Colonel LOCKWOOD. In a good many cases there is a difference between the first-class work and the ordinary work. That, of course, would make the hired-labor work a little more expensive, but the percentage of profit that the contractor figures on would more than cut that out.

Mr. SULLIVAN. You mean the percentage of profit of the contractor would make the ultimate cost higher even when let by contract, or as high?

Colonel LOCKWOOD. As a general thing, where no extensive plant is required, work can be done by hired labor cheaper than by contract.

Mr. SULLIVAN. And better?

Colonel LOCKWOOD. Yes.

Mr. SMITH. If you get this word "rebuilding" in here, you will hereafter be free from requiring special acts from the Interstate Commerce Committee.

Colonel LOCKWOOD. Oh, no. This would only affect the present buildings.

Mr. SMITH. As I understand existing law, although I may be in error about it, under the rules of the House you have to go before the

Interstate Commerce Committee and get a bill out authorizing the rebuilding of buildings.

Colonel LOCKWOOD. The Light-House Board does not do that. It has to be left to the member of Congress in the district where the work is located.

Mr. SMITH. You have the country pretty well covered with light-houses?

Colonel LOCKWOOD. Pretty well.

Mr. SMITH. So that all you want in the future is rebuilding, not new installation.

Colonel LOCKWOOD. You understand that the light-houses themselves do not require much rebuilding. There are very few in any case that would be rebuilt. That applies more to dwellings and the accessories.

Mr. SMITH. What I am getting at this: In the future your applications to Congress with reference to light-houses would be more for rebuilding than for the installation of new light-houses, would they not? Has not the country been so generally covered with light-houses that in the future you will need more rebuilding than new installation?

Colonel LOCKWOOD. As I told you, the light-houses—the real light-houses that have been built—do not require rebuilding; they are permanent structures. That rebuilding is only with reference to dwellings, as a general thing.

Mr. SMITH. I asked you whether in the future there will not be more of that than there will be of building at new places?

Colonel LOCKWOOD. Oh, yes; undoubtedly.

Mr. SMITH. So that this would obviate getting any acts of Congress authorizing the erection of new buildings at old places.

Colonel LOCKWOOD. Not entirely, because the rebuilding would only apply to old structures that practically have to be rebuilt from the base up. You understand an old house that is rotten from the top to the bottom can not be repaired without building a house on the foundation. That is what I mean.

Captain SEBREE. It is like taking a doorpost and building a house around it and calling it repairs.

Mr. SMITH. Under this item that we have under consideration, you ask for an increase of \$160,000 this year.

Colonel LOCKWOOD. That is due mostly to the increased cost of material and labor that is coming up all the time, and to the fact that extraordinary calls are being made on the appropriation for repairs in connection with beacons, especially in the Sandwich Islands.

Mr. SMITH. Have we extensive light-house service in the Sandwich Islands?

Colonel LOCKWOOD. There are beacons scattered all through the islands. The engineer and inspector out there report something like 18 (?) beacons at different landings where lights are now being maintained by private parties; and they only exhibit those lights when vessels are due.

Mr. SMITH. Do you say that your investigation shows that this large amount additional would be required in one year—this \$160,000?

Colonel LOCKWOOD. I would say that that amount could be profitably expended. You understand that a good many of these repairs are not absolutely imperative each year; but if made, for instance, this year, they will save a good deal over what it will cost for improvements next year.

Mr. SMITH. You haven't had a deficiency appropriation in this item for a good many years?

Colonel LOCKWOOD. That is something we haven't had. When we got out of money we stopped work.

Mr. SMITH. What has been the growth of the Light-House Service, say, in the last ten years?

Captain SEBREE. I have tried to get that down in a statement, which I have here. I have taken it from 1895 to 1905; that is the period. I can give you the increase by percentages or numbers either. For instance, in 1895 there were 1,014 light-houses and beacons. In 1905 there were 1,464, being an increase of 47.37 per cent, about. I have not verified the percentages myself. In 1895 there were 41 light vessels in position, and ten years later there were 49. Since January there have been two more put in, which would give an increase of 19.51 per cent. Light vessels for relief, 4 in 1895 and 10 now. That is to keep them at different places; for instance, at New York we have two to go out in case the other breaks down. The only thing that we have not increased is the electric buoys. In 1895 we had some of those, but we did away with them, and put gas buoys in their place.

Mr. TAYLOR. Did you not have electric buoys in the Boston Harbor?

Captain SEBREE. I think not; only in the channel at New York. We have found that the gas buoys are better, so we abandoned the electric.

Mr. TAYLOR. Do you use acetylene or pintsch gas?

Captain SEBREE. Pintsch gas. We are experimenting with acetylene now in your State, Mr. Taylor.

Mr. TAYLOR. I am glad to hear that you are going to give us gas instead of oil down there. I have been trying for ten years to get rid of the oil.

Captain SEBREE. Yes; we have been trying to get a contract and we have finally done so.

We had twelve gas buoys in 1895 and we have 140 now. Those are expensive things, but we have constant urgent calls for them all over the country. We can not give them gas wherever they ask for it, because we haven't the money. They cost about \$1,800 apiece.

Fog signals—in 1895 we had 130 and in 1905 210. That is an increase of 61.53 per cent. The fog signals operated by machinery, that have clock work that rings a bell—a rather inferior kind of fog signal—have increased from 185 in 1895 to 233 in 1905, an increase of 25.94 per cent. Post lights have increased in number from 1,793 in 1895 to 1,829 in 1905, an increase of 2.78 per cent.

Mr. TAYLOR. What rivers are they on?

Captain SEBREE. Mainly on the Mississippi River and on the Ohio River and on the Columbia River.

Mr. SMITH. You will find them on page 70.

Captain SEBREE. We had 424 day or unlighted beacons in 1895 and 529 in 1905. That is an increase of 24.76 per cent. We had of

whistling buoys in position 66 in 1895 and 90 in 1905, an increase of 36.36 per cent. They are expensive buoys. They cost about \$500 apiece. Of bell buoys in position we had 96 in 1895 and 141 in 1905, an increase of 46.87 per cent. Of other buoys in position we had 4,547 in 1895 and 5,183 in 1905, or an increase of 13.98 per cent.

It is a little difficult, although I have tried to figure that down, to say what the total increase of percentage is. The increase in the number of light-houses and beacon lights is 44.37 per cent. The number of light vessels for relief has increased 150 per cent. The number of gas buoys has increased 1,066.67 per cent. I do not know exactly how to figure that down. I would say, roughly speaking, from 50 to 60 per cent increase altogether.

Mr. SULLIVAN. How do you figure that?

Mr. TAYLOR. That is beyond the realm of any mathematical or arithmetical accuracy in the world.

Mr. SULLIVAN. You could strike an average, but it would not mean anything.

Captain SEBREE. The increase of shipping, foreign and domestic, would be the best test. The increase is about 140 per cent—from two million some hundred tons to five million some hundred tons. The general appropriations for 1895 were \$2,500,000 and for 1905 they were \$3,700,000, or an increase of about 40 per cent and a fraction.

Mr. SMITH. What is the character of your present general equipment? Is it in a fairly good state?

Captain SEBREE. You mean all over the United States?

Mr. SMITH. I mean taken as a whole.

Captain SEBREE. When I say it is good or very good I do not mean excellent. I do not mean only just tolerable. I think it would come in fairly good; not as good as I would like to have it, but it does very good service.

Mr. SMITH. Are you familiar with the light-house services of other countries besides the United States?

Captain SEBREE. I may say I am not very familiar. Of course, I have seen a great many of them going about in a man-of-war in different countries; the French and English and German and Italian and out in China. They have very good ones out in China.

Mr. SMITH. Have you any information as to the cost of the light-house service of other countries besides the United States?

Captain SEBREE. I have something there; I tried to get myself primed on that, and I put it down. Take England, Scotland, and Ireland, or the British Isles; I have figured up here, up to 1904, what was the question of cost, sir.

Mr. SMITH. What is the annual cost?

Captain SEBREE. Two million nine hundred and sixty-nine thousand six hundred and ninety-nine dollars. Those were the figures I got. That is the total expense. The total coast line is 5,000 miles. The total number of lights is 1,016.

Mr. TAYLOR. The total coast line is how much—5,000?

Captain SEBREE. Yes; understand that is not following up into the little bays, but simply from headland to headland.

Mr. TAYLOR. What is your coast line—I mean ours? What was it from 1895 to 1905?

Captain SEBREE. The total number of miles of coast remains the same.

Mr. TAYLOR. But we have grown since 1895. We have taken in outlying possessions.

Captain SEBREE. Yes; I have got that down—the Hawaiian Islands and Guam Island, Midway Islands, and the Samoan Islands.

Mr. TAYLOR. Give us the coast line in 1895 and in 1905.

Captain SEBREE. I have got the statistics on the Atlantic coast, Gulf coast, and Pacific coast. The Atlantic coast is 1,773 miles, the Gulf coast is 1,607 miles, and the Pacific coast is 1,571 miles. That does not include Alaska.

Mr. TAYLOR. That is what I wanted to get in.

Captain SEBREE. That is 4,123 miles. That goes away up. Of course that was there in 1895. The northern lakes and rivers are 3,500 miles. Then if you want the western rivers, like the Mississippi, that is 3,800 miles.

Mr. TAYLOR. That kind of thing was not included in the statement of the coast line of the British Islands, was it?

Captain SEBREE. No, sir.

Mr. TAYLOR. We want our coast line, including our island possessions.

Captain SEBREE. Porto Rico has 269 miles of coast around that island.

Mr. TAYLOR. Only that?

Captain SEBREE. It is not a very big island.

Mr. TAYLOR. Go on next to Cuba.

Captain SEBREE. We do not own that; only a little patch of that. The Hawaiian Islands, 628 miles of coast; Guam, 80 miles; Midway Island, 20 miles; Samoan Islands, 83 miles. I have the thing totaled up here, but that includes Alaska and Porto Rico and all that.

Mr. TAYLOR. Have you not got the Philippines there?

Captain SEBREE. No, sir. I have got the total of the whole thing; not counting the Philippines, 17,000 miles. That includes Alaska and all the rivers.

Mr. TAYLOR. That is three and one-half times as much as the British.

Captain SEBREE. That includes the rivers. But it would be fair, in a comparison with the British islands, to take out the western rivers—say 4,000 miles. That would leave 13,000 miles, about.

Mr. SULLIVAN. You have not got the Philippines there, have you?

Captain SEBREE. No, sir; the Philippines do not come under the Light-House Board.

Mr. SMITH. The Philippine government attends to that?

Captain SEBREE. Yes, sir; it is a separate establishment altogether. We have nothing to do with it.

Mr. SMITH. Of course there is but little commerce in Alaska during a great portion of the year, I take it?

Captain SEBREE. Well, I think in the southeastern part of Alaska there is not practically much difference between summer and winter. Of course there are people going in, wanting to go into the passes. But the steamers run from Seattle up to Juneau and around there practically all the year.

Mr. SMITH. Do you keep the lights in operation, burning practically all the year round?

Captain SEBREE. Yes; we have but few lights up there; twenty

some. I have got it here. In Alaska altogether we have got 16 lights.

Mr. SMITH. Have you got any considerable light-house establishment in Porto Rico?

Captain SEBREE. In Porto Rico we have 24 lights.

Mr. SMITH. What have you got in Guam?

Captain SEBREE. None. We want to get some.

Mr. SMITH. What have you got in Midway Island?

Captain SEBREE. We have got one little beacon light there that we put up last year.

Mr. SMITH. What did you say you had in Hawaii?

Captain SEBREE. Twenty-three.

Mr. SMITH. So that while this vast coast line is shown as the total that you have to look after, as a matter of fact your funds are substantially expended in continental United States?

Captain SEBREE. Oh, yes.

Mr. TAYLOR. Could you give us the cost of maintaining the light-houses on the Atlantic coast and the Gulf coast and the Pacific coast?

Captain SEBREE. I could give it to you from the office.

Mr. SMITH. And the Great Lakes you would want?

Captain SEBREE. Yes.

Mr. TAYLOR. The Atlantic, Pacific, Gulf, and Great Lakes; that would be a fair comparison with Great Britain.

Captain SEBREE. I have figured out that, by leaving out these rivers, it comes to about \$1,250 a year per light. Unless I made a mistake in division, it takes Great Britain about \$2,000 per light and the Frenchman \$1,100.

Mr. SMITH. What have you as to the Germans?

Captain SEBREE. I have not got them here.

Colonel LOCKWOOD. They have not got a great many.

Mr. SMITH. They have a small coast line. Your judgment is that ours is neither the highest nor the lowest per light?

Captain SEBREE. Do you mean the costliest per light?

Mr. SMITH. Yes.

Captain SEBREE. I would have to figure on this. If we paid \$1,250 per light, leaving out these little coasts—

Mr. SMITH. I am talking about the coast line.

Captain SEBREE. Including beacon lights or smaller ones, I have figured it out to \$1,250, and by comparing it with the British Islands, the total lights are 1,016, and dividing it into the total cost, \$2,569,000, it comes out about \$2,000.

Of those which are not fixed we have a great many more; those beacon lights, which do not cost so much per light, in proportion to the British. The British do not seem to have to bother much about getting money. They have something which I do not think is a good thing to have—a tonnage tax on shipping for light dues. Every ship that comes in has to pay something, so that they are pretty well fixed, I imagine, for money.

Mr. SMITH. Your understanding is that France is a little lower than we are and England considerably higher, in your judgment?

Captain SEBREE. I would like to revise this some. I do not know whether I made a mistake in division or not. It is difficult to get at these figures. You do not know what books to go to to get the cost

of the British or the French. It seems the French cost, \$615,000. is small. The figures I have here are \$615,000. I do not know where my man found them. It seems to me that is small. They have excellent lights. Their labor, however, is very cheap over there. They do not have to pay much to their keepers.

Mr. TAYLOR. They have a small seacoast.

Captain SEBREE. France has 540 lights, mighty good ones. We get a good many of our lenses from France and England. They do not make good ones in this country.

Colonel LOCKWOOD. We do not make any. We get them from France.

Captain SEBREE. What duty do we pay?

Colonel LOCKWOOD. Forty-five per cent.

Mr. SULLIVAN. We do not make any?

Colonel LOCKWOOD. No. There is a lens of that kind made in this country. They can make them just as well in this country as abroad, but the demand is not sufficient to justify the establishment of works.

#### SALARIES OF KEEPERS OF LIGHT-HOUSES.

Mr. SMITH. On the next item of the bill you ask an increase of \$25,000 for salaries of keepers of light-houses: "For salaries, fuel, rations, rent of quarters where necessary, and all other necessary incidental expenses of not exceeding 1,650 light-house and fog-signal keepers and laborers attending other lights," etc. Now, you have got for 1905 \$828,000, and you got an increase in this item of \$22,000 last year.

Captain SEBREE. Thirteen thousand dollars, was it not, sir?

Mr. SMITH. No. You got \$815,000 and a deficiency of \$13,000, making \$828,000. Then you got an increase to \$850,000 for 1906. Now you ask another increase of \$25,000. Is not this item practically a stationary item as to the necessities under it?

Captain SEBREE. No, sir; every new light-house that we build takes new keepers. If we build one light-house it will take from one to three keepers. If we build more it will take more. We have built some new ones. I have held back building some of these small beacon lights until we found we would have enough to pay the keepers.

Mr. SMITH. How many light-houses have you added in two years?

Colonel LOCKWOOD. I can furnish you with that. One of the great items of increase is in connection with beacons that are being constantly established. Twenty-seven were established in the last year. They all require the attention of keepers. You remember we had to hold up half a dozen, I think, last year, because the salary fund got low.

Captain SEBREE. I find now by figuring up that we have got enough. We did not light them until after the first year. It will take a keeper, at \$15 or \$25 a month, to attend to them, and we have recently started some of them, because I found we would have enough money to pay the keepers.

This particular item for these salaries of light-house keepers, Mr. Chairman, is one that would suit the committee all right. This is tied up. We are absolutely bound on this.

We can not pay anything out of this appropriation except the actual keepers of light-houses, and in cases of isolated stations, where we give them a ration, it is paid out of that item for salaries. We do not pay any clerks or the crews or anybody out of that. We do pay for isolated stations where we give them rations, perhaps one light out of ten, and fuel we give to more. That is paid and that is authorized under the act to be paid out of salaries, but nothing else, so that it is almost possible in this, by knowing the number of lights we have, and the number that have been authorized, and the number that will probably be in operation before the end of the year for which we ask the appropriation, to figure that out. It is a mere matter of arithmetic. We take the number of keepers and multiply it by the amount of pay.

Mr. SMITH. Going back to 1894, you usually obtained about \$10,000 a year increase. You notice it ran to \$690,000 in 1896; \$695,000, with a \$10,000 deficiency, in 1897; \$710,000 for 1898; the next year, 1899, \$720,000, with a deficiency of \$25,000, and in 1900, \$740,000, with a \$10,000 deficiency. The increase seems to be larger than usual this year. Is the Light-House Service growing faster than usual?

Captain SEBREE. It is growing pretty fast, and demands are growing almost constantly on us for these smaller lights—these beacon lights which the Board is authorized by law to construct without an act of Congress—and the keepers have to be paid out of this appropriation, and we just have to say, "You can not have it." It is increasing, and then the new light-houses are coming along.

Mr. SMITH. The main point I wanted to get at was whether you think the service is growing faster now than in the past ten years?

Captain SEBREE. I think so. I think the original estimate we had was \$900,000. I called down the financial clerk, who has charge of the money, and went over the estimates with him, and I said, "Make that \$875,000;" so that I think that is what we need.

Mr. SULLIVAN. How do you get these beacon lights taken care of? You have no permanent keeper?

Captain SEBREE. We usually hire a man that lives near them, and we make an arrangement—the inspector does—before we put them up, and we estimate what it will cost per month. We pay anywhere from \$10 to \$25 a month, and then we go to the Secretary of the Department of Commerce and Labor and ask for authority to employ a man at \$25 or \$15 per month.

#### EXPENSES OF LIGHT VESSELS.

Mr. SMITH. The first item on page 68, Captain, is expenses of light vessels. In this item you ask an increase of \$90,000. I wish you would explain what creates the necessity for this quite considerable increase in this item.

Captain SEBREE. New light vessels have been put out. We have extensive repairs on one or two. That is why we had to get that \$50,000 deficiency. You see, to the appropriation of \$560,000 would be only fair to add that deficiency appropriation that we have already obtained at this Congress, and it is now a law. It would be only fair to add that to the appropriation for 1906, which would make \$560,000 plus \$50,000. That would make \$610,000.

Mr. SMITH. Was the deficiency for some emergency?

Captain SEBREE. Part of it was because of an emergency which we could not foresee. The sinking of one off Nantucket required extra expense to send one up there to take its place. The running of one ashore, blowing there, on the California coast, required an extra expense that we could not foresee of probably \$25,000 or \$30,000.

Now we have lost, through bad gales and things of that sort, a great deal of chain. It is very expensive, and we try to get the best in the United States, and that deficiency had to come, or else I could not go to the end of the year without taking off one or more light-ships or not repairing them.

We find one or more needing repairs. The expense is constant. Part of that increase is for supplies that we want to stock up with. I divided that between supplies and buoys and these light-ships. Part of these supplies are anchors and chains, that have to come out of the appropriation; and I want to say right now, that there is a case here where we have not got at the New York station a piece of chain. In case a light-ship breaks adrift I would have to go up to the navy-yard and borrow a piece. In California we have none. A part of that increase is to be paid from this appropriation, and a good part of it is for getting on hand a lot of chains and anchors. A light-ship broke adrift a month or two ago off Portland, Me. We had no chain there, and had to ship it from New York. It was the last piece of chain they had in New York.

Mr. SMITH. If we gave you this increase, it would be an increase of 160 per cent in ten years. Is not that out of proportion to the growth of your Service? You got only \$250,000 ten years ago, and this is a growth of 165 per cent in ten years on one item.

Captain SEBREE. The number will not quite show this, because we have very much bigger light-ships off Hatteras, and Nantucket, and Cape Mendocino, and Cape Flattery, which are required to be more powerful vessels and cost a great deal more money than the old ones that were put in on sounds, and not into such bad places. They cost more to run them—\$15,000 a year—whereas the old ones might cost \$7,000 or \$8,000 a year. The number of light vessels in position in 1895 was 41; in 1905, 49; an increase of 19½ per cent. The number of light vessels for relief was from four to ten.

Mr. SMITH. Now, even with your concession of 100 per cent of increase of cost per vessel and 19½ per cent in the number of vessels, still the expenses seem to be growing faster than the expenses of the operation of individual vessels, or any other item of increase.

Captain SEBREE. We are short on this particular stuff which we call "ground tackle," which is anchors and chains for these vessels. We are down low, and we would like to get stocked up. Of course, if that \$650,000 is not given, we do not get it.

Mr. SMITH. You have no other explanation of this apparent increase except what you have given us?

Captain SEBREE. No. We stock up this ground tackle. The price is going up all the time. I do not know when it is going to stop. There is no end to it. What we get one year costs more the next year. The same article goes up in price year by year.

The CHAIRMAN. I think it will continue, Captain, just so long as the revenue of the Government holds out.

## EXPENSES OF BUOYAGE.

The next item, Captain, is the expense of buoyage, including pay of officers and crews of light-house tenders and of clerks and employees in the offices of the light-house inspectors and light-house engineers and at light-house depots. I notice your current appropriation is \$550,000, and you ask for \$685,000 for the coming fiscal year. Please explain the necessity for this increase.

Captain SEBREE. Yes; the increase in the number of buoys is one thing, and the necessity for increasing the amount of buoys on hand is another. We lose a great many every year. The ice carries them away. They wear out. Of course they are made of steel, but they rust out. There are urgent demands upon us for bigger and better buoys, particularly for these gas buoys and whistling buoys. There is a constant demand for them. Just recently there was a very urgent demand from the steamship people in Boston, up on the Nantucket Shoals and what is called "Great Round Shoal Passage." They have two ordinary can buoys there, and this was urgent from a great many people to put two gas buoys there. The inspector at Boston had none to spare, and I wrote to the inspector at New York: "If you have not got two buoys, send one to the second district." The Board authorized them to put them down if they had the buoys. Those things are coming up all the time.

The CHAIRMAN. Do you aim to keep constantly on hand, when you have the money to pay for it, a stock of buoys?

Captain SEBREE. Yes, sir.

The CHAIRMAN. How many ought you to have in stock in order to meet the demands of the service?

Captain SEBREE. We ought to have really a supply for every place where there is a buoy. For every such place we ought to have a spare one, so that if the one goes away we will have another to put down. As a matter of fact, we do not have anything like it now. We have a spare one, possibly, for every 10 in position. That is a guess—whether it is 10 or 9 or 20 I can not say. There is an increase in the cost of this service, and the increase in the demands of commerce is for these better buoys—these gas buoys and whistling buoys—in places where they have gone on for years without them; and they are improving all the time, and the shipping is increasing all the time, and I think it is an urgent thing. With all the aids to navigation, the best we can get are none too good.

Mr. SULLIVAN. What is the life of a buoy?

Captain SEBREE. I should say one of these iron buoys would last anywhere from ten to twenty years. It would depend a good deal on the chances we had to change it, and get it up and paint it.

The CHAIRMAN. I do not suppose you have any figures here to show the total number of buoys in the service?

Captain SEBREE. Yes; I can give you that.

Colonel LOCKWOOD. It is 5,000.

Captain SEBREE. Five thousand five hundred and twenty-nine.

Colonel LOCKWOOD. Ninety whistling buoys, 141 bell buoys, and 5,083 other buoys.

Captain SEBREE. Look at gas buoys.

Colonel LOCKWOOD. Gas-lighted buoys, 140.

Captain SEBREE. The Lakes have a bigger proportion of them. there is such an urgent demand for them by the lake shipping.

The CHAIRMAN. How many did you purchase last year?

Captain SEBREE. I could not tell you. I just ordered two the other day.

The CHAIRMAN. How many do you estimate will be purchased during the coming fiscal year in the event the full amount of the estimate is allowed?

Captain SEBREE. That would be a very rough estimate on my part. We might purchase 20 gas buoys, and we might purchase 100.

The CHAIRMAN. Before submitting this estimate did you figure out how many you would purchase?

Captain SEBREE. No, sir; we do not figure until we know how much money we have got. The contract is let this way: We get bids, and we have 50 per cent—

The CHAIRMAN. Have you any data, Captain, upon which you frame an estimate of what you will need to have for stock and otherwise before submitting your estimate to Congress?

Captain SEBREE. I have those general figures, but I do not have the figures in detail—20 gas buoys, and 40 whistling buoys, and so many other buoys.

The CHAIRMAN. You do not catch my idea. You say there is an increased demand from steamship companies and those engaged in commerce for these buoys, and I simply wanted to know whether from that demand you had formed any approximate estimate of the number you would require for the coming fiscal year and based your estimate upon that?

Captain SEBREE. I can get that, sir; but, as a matter of fact, I do not figure out the number of gas buoys and all that. I know we have need to stock up for these that were lost and to supply this demand from the companies.

The CHAIRMAN. Is this the way you estimated for this amount of money, so that if you got all the amount you ask for you could no more than supply the demands for them that are coming in?

Captain SEBREE. I could no more than supply the demands for next year. No; I think I would have a few over. I think if I got all this I would have enough in stock there so as to supply deficiencies.

The CHAIRMAN. When you are requested to put in a buoy, do you or any of your employees first inquire into the necessity for the buoy?

Captain SEBREE. Oh, yes; we never give one unless we find upon inquiry that it is necessary. The way it is done is this: A petition will come in, or a request from some individual—we generally get it in the shape of a request from shipping people, from the owners or the masters. That is sent to the Board and to the district officers, and they are required to give their opinion as to the necessity for this buoy. If they report back that it is necessary, then if it is a gas buoy or a whistling buoy, it is taken up to the Board; and that is a special buoy. If it is an ordinary buoy, it is decided there by the executive officers of the Board. In fact I, as naval secretary, generally decide that.

The CHAIRMAN. The local authorities are not final?

Captain SEBREE. No, sir; I turn them down. Sometimes I go the other way. When they say that in their opinion they do not think one in a certain place is necessary, I have thought it was necessary.

notwithstanding their opinion that it was not. I have thought it was, and it was given. It was not a gas buoy, though; it was a small buoy.

The CHAIRMAN. What does a gas buoy cost?

Captain SEBREE. About \$1,800.

The CHAIRMAN. And a whistling buoy?

Captain SEBREE. Anywhere from \$500 to \$600.

#### EXPENSES OF FOG SIGNALS.

The CHAIRMAN. The next item, Captain, is expenses of fog signals; establishing, replacing, duplicating, and improving fog signals and buildings connected therewith, and for repairs, the purchase of land for sites for fog signals, and for all other necessary incidental expenses of the same," etc. You estimate an increase over the current appropriation of \$15,000.

Colonel LOCKWOOD. Yes, sir. That increase is due in a great measure to the possibility of establishing new signals—the submarine signal system—if the experiments which the Board is now making should turn out successfully.

The CHAIRMAN. That increase is based upon the result of those experiments or investigations which are now being made?

Colonel LOCKWOOD. Yes, sir. That increase of late years is due to the fact that some of the whistles and sirens are being put in place of the old-fashioned bell fog signals.

Mr. SMITH. Ten years ago were they using any other than steam whistles?

Colonel LOCKWOOD. They were using steam whistles and bells. Those things are called for constantly in different localities.

The CHAIRMAN. Do you find these modern appliances more efficient and of greater aid to commerce than the old fog signal?

Colonel LOCKWOOD. Oh, yes. The siren in use now is regarded as superior to any other fog signal—to any that the Board has ever put in.

The CHAIRMAN. How does the cost compare with the cost of the old fog signal?

Colonel LOCKWOOD. The siren and steam fog whistle would cost nearly the same. The siren would probably cost somewhat more—

Captain SEBREE. Very little.

Colonel LOCKWOOD. I would say the prices run from \$1,500 for the bell up to \$10,000, depending upon the locality, for a first-class siren station.

Mr. SULLIVAN. Are there any fewer wrecks now than there were ten years ago on the coasts of the United States?

Colonel LOCKWOOD. I do not know about that. The main call for these things is a commercial one, principally to save time. Some of the vessels are calling for these aids to navigation so that there will be no delay during fogs so far as fog signals are concerned.

The CHAIRMAN. Can either of you gentlemen state how much, if any, of the increases in these several items that we have been considering is due to any increase in the clerical force provided in each one of these items? Do you estimate that any of these increases would be necessary on account of increased clerical or administrative services for the coming fiscal year?

Captain SEBREE. I would say there would be a little of that, a very small amount. For instance, recently the Secretary authorized an additional clerk, at \$75 a month, at San Francisco, on account of the increased amount of work required. There was one other case in the last year, of an increase of a clerk at New Orleans. That would be a small amount anyway.

The CHAIRMAN. I am now speaking of the clerks and other employees in the offices of the light-house inspectors and light-house engineers, and so forth. You have not estimated here for any increase in clerical services during the coming fiscal year?

Captain SEBREE. No, sir. It would not amount to anything. We have had two. That is all in the last year. In fact, one of these has not taken place yet, because San Francisco went down.

#### LIGHTING OF RIVERS.

The CHAIRMAN. The next is lighting of rivers.

Captain SEBREE. Mr. Graff, of Illinois, ought to be here. I was out there, at Peoria, and I saw him out there, and they were anxious to have lights on the river above Peoria, and we did not have money for them.

The CHAIRMAN. I see you estimate for the coming fiscal year \$75,000 in excess of your current appropriation for this purpose.

Captain SEBREE. Yes, sir; my recollection is that about \$25,000 of that is in one lump, to make the lights on the Mississippi River, which come under this law, for the 100 miles between New Orleans and the sea. They have got these little old post lights, and there have been urgent calls from down there for better lights, and I have been down to see the situation myself. I think they ought to have better lighting. They ought to have the proper kind of lights there instead of lights on the limb of a tree or on a stake on the levee, with a little old lantern; not a light-house, but a tripod with a good lense lantern that can be seen, and it should be made to look as it should look, with seagoing vessels and foreign vessels coming into that great port. To make the proper lighting for that river there would take about \$24,000. It is not a great amount.

The CHAIRMAN. How many lights would that provide for?

Captain SEBREE. I think it is 22.

The CHAIRMAN. What is there in the construction of one of these lights that they would cost that amount apiece?

Captain SEBREE. They would have to build on the levee, or back of it, a three or four legged thing, up high.

The CHAIRMAN. About what height?

Captain SEBREE. About 25 feet. This estimate was taken exactly. Mr. Chairman, from the estimate of the local engineer, Colonel Craig-hill, for these things, including the cost of getting the lumber there. That would be a case where it would have to be done by hired labor rather than by contract. It reaches a hundred miles.

The CHAIRMAN. At what intervals are these lights?

Captain SEBREE. The distance is 100 miles, and there are 22 of those lights. I think that is the number. That would average them 4 or 5 miles apart.

The CHAIRMAN. What are the chief dangers to navigation on that part of the river?

Captain SEBREE. Oh, nothing, except to come up the river at night. The river is a third of a mile wide, with bends in it. If they did not have a light, they must tie up. If they have a light, they can come in.

The CHAIRMAN. The channel is the full width of the river there?

Captain SEBREE. Yes; but in coming up at night they can not see where the bend is, and they will not run.

The CHAIRMAN. Is that the place where the President, when he was down there last fall, put up?

Captain SEBREE. Yes. That is down there at Sixtymile Point—60 miles below New Orleans. They ran in there. It is probably a hundred and fifty feet deep. There would be a case of extraordinary cost, Mr. Chairman, that would come out of supplies. That vessel was run into. The local inspectors decided that our men were not in any way to blame; that the other vessel was to blame. We had to repair her. It cost from \$15,000 to \$18,000 to get her fixed. Of course we have a suit against the owners of this vessel for it.

The CHAIRMAN. But you had to meet the emergency?

Captain SEBREE. Yes. We had to take the money right then to get it, or else tie the vessel up and lose her service for a year. If that money is recovered, we will not get it in the Light-House Service. It goes right back into the great sea of the Treasury. It belongs to the Government, but it does not come to us.

The CHAIRMAN. Where did you intend to spend the other \$50,000, Captain?

Captain SEBREE. Two thousand dollars upon the Illinois River and \$24,000 there. That would make \$26,000. That would leave \$24,000, which would be for increase in the numbers that are constantly asked for, if we had the money to supply them.

The CHAIRMAN. Do you have to provide for the lights on the upper Mississippi?

Captain SEBREE. Oh, yes; from the Gulf or jetties to St. Paul, and up the Illinois River, and up the Ohio River, and up the Tennessee River.

Mr. SMITH. I do not think, in fairness to the Captain, that we should leave that in that shape. The increase is \$75,000, and he has explained only \$26,000. It leaves \$49,000 that you [addressing Captain Sebree] have not explained there.

The CHAIRMAN. I mentioned the \$50,000 which was left after you expended the \$25,000 from New Orleans to the Gulf.

#### LIGHTS IN ALASKAN AND HAWAIIAN WATERS.

Captain SEBREE. Two thousand dollars for the Illinois River. If they should put in lights, as we have asked permission to do in Alaskan and Hawaiian waters, which is new, that would help very much.

The CHAIRMAN. How much do you estimate will be the cost of putting the lights in Alaskan waters and in the Hawaiian waters?

Captain SEBREE. It would depend upon the number that we could put in.

The CHAIRMAN. Are you acquainted with the waters of southeastern Alaska—both American and Canadian?

Captain SEBREE. Yes, sir.

The CHAIRMAN. How do the lights in the American waters compare in number with the lights in the Canadian waters?

Captain SEBREE. I have not been up there since we had any. I know how many we have. I think that for our part of it, up as far as Juneau, which is where the steamers run, we have as many as the Canadians for the number of miles of coast.

The CHAIRMAN. No; we have not. I have made two trips up there. That is one of the great complaints of our steamship people.

Captain SEBREE. When were you up there, Mr. Chairman?

The CHAIRMAN. Last summer, and two years before that.

Captain SEBREE. I have not been up there for five years, and we had not any at that time.

The CHAIRMAN. Do you know the cost of the light-houses in Alaska?

Colonel LOCKWOOD. In general terms I can give that. The light-houses that were built at Unimak Pass, Scotch Cap, and Sarichef cost about \$80,000 apiece.

Captain SEBREE. What did Lincoln Rock cost?

Colonel LOCKWOOD. I think the contract for that was \$38,000.

The CHAIRMAN. Have we any light-houses in southeastern Alaska?

Colonel LOCKWOOD. Yes, sir. I was just giving the cost of one at Lincoln Rock. The contract for that was \$38,000. It cost a little more than that, because the contractor failed.

The CHAIRMAN. What does that include—the light and the keeper's dwelling, and so on?

Colonel LOCKWOOD. It included also a concrete base, upon which the light-house was constructed. Lincoln Rock was low down in the water, nearly washed at high tide, I think. I was up there three years ago when part of the lights were built. I think the light at Marys Island cost something more than that. I can give you the exact figures.

The CHAIRMAN. I do not care particularly about the exact figures. Do you know anything about the cost of the Canadian light-houses?

Colonel LOCKWOOD. They cost very much less.

The CHAIRMAN. Is that fact due to the policy of the Canadian government of purchasing the material and sending their employees and carpenters and mechanics with the vessels carrying the material and going right there and constructing the light-houses? That is their policy, is it not?

Colonel LOCKWOOD. I believe so. In a measure it might be due to that, but they do not build the same kind of structures that we do.

The CHAIRMAN. I understand they do not, but their structures answer the purpose very well.

Colonel LOCKWOOD. Along in those lower straits the country is thickly populated as compared with southeastern Alaska, and they do not give the Indians that they employ to look after those lights suitable houses to live in. They are chiefly rough structures.

The CHAIRMAN. We have plenty of natives up there, and natives who are as good if not better sailors than the American sailors are, who might be utilized in the same way.

Colonel LOCKWOOD. I have never seen any of them, when I was up there, in charge of an important light.

Captain SEBREE. I do not think they are reliable.

The CHAIRMAN. I am told by captains of vessels that they frequently are obliged to employ native pilots, because they are superior in ability, but when they do it they violate the law, for the reason that they are not allowed to employ anybody but American citizens.

Captain SEBREE. They are not American citizens, and I believe they would not be allowed to be employed as light keepers.

The CHAIRMAN. I know; but at the same time their services are availed of by captains, in many instances, up there in Alaska, because of their superior ability with respect to the navigation at certain points.

Colonel LOCKWOOD. In that part of Alaska a man to run a light does not need to be a man of very much ability. It is his fidelity and reliability that are of value.

The CHAIRMAN. I understand that it does not require a great deal of mental capacity.

Captain SEBREE. On this subject of lighting rivers, if this law could be extended to include Alaskan waters, as was done with respect to Puget Sound and Washington waters some years ago, we could at a great many places put up those post lights and hire an Indian here and there to take care of them; and if we should put up a dozen or two dozen, the conditions would be very much improved.

The CHAIRMAN. Particular attention was called last summer by a number of the men on board our vessel, with other members of Congress in the party, to the fact that our waters in southeastern Alaska were not lighted well in comparison with the Canadian waters. I observed that, and my attention was called to it, and I could not help but notice it. That is the reason I asked the question.

Captain SEBREE. I have not been up there since we had any.

The CHAIRMAN. In the Hawaiian waters does the same necessity exist there?

Captain SEBREE. That is the same thing. Instead of putting up a light-house, or even a beacon light, if this were made applicable there we could put up a post, and put a lantern on it, and hire a man anywhere from \$6 to \$15 a month to attend to it; and as in Alaska and on the rivers, you do not need to see them more than 2 or 3 miles, and they would answer the purpose. Under the law we could not pay a cent for keeping or constructing a light out of that appropriation. That was asked for last year, and was ruled out. If we get that in that will be where the increase in the number of lights will come in.

The CHAIRMAN. Some of the channels—that is, the interisland channels, as you may call them—in Hawaiian waters are very rough.

Captain SEBREE. Yes; between the islands. I have been to Honolulu two or three times, and across to the eastern islands.

The CHAIRMAN. Have you been down to the island of Hawaii?

Captain SEBREE. No, sir; I have never been that far.

Mr. SMITH. You have no post lights at all there in Alaska or the Hawaiian Islands?

Captain SEBREE. No, sir. In the Hawaiian Islands we have a larger light than a post light could be. We call it a "beacon light." We have a few of those.

The CHAIRMAN. Did we erect them?

Captain SEBREE. Yes; two or three. They can not be paid for out of lighting rivers. The keeper has to be paid for out of the sala-

ries, and the structure—whatever it is, that the beacon light is established on—is paid for by the engineers, and is paid out of the appropriation for repairs to light-houses.

Mr. SMITH. How is the lighting done?

Colonel LOCKWOOD. From repairs.

Captain SEBREE. It has to be paid for out of that appropriation. We do not have to get an act of Congress for that. We have a bigger lantern, as a rule, than we would use for river lights.

#### SURVEY OF LIGHT-HOUSE SITES.

The CHAIRMAN. The next item, Captain, is for survey of light-house sites. That is the same estimate that you have for the current year?

Colonel LOCKWOOD. Yes, sir.

The CHAIRMAN. Have you any balance left of the appropriation for the fiscal year 1905?

Colonel LOCKWOOD. I could not be sure of that, sir. It is a very small amount.

Captain SEBREE. It would not continue.

The CHAIRMAN. Do you know whether any amount of that appropriation was expended in the last fiscal year?

Colonel LOCKWOOD. I could not tell you now. That is an appropriation that would lapse at the end of the year, and would be returned if it was not expended.

The CHAIRMAN. So I understand.

Colonel LOCKWOOD. I had a list of most of the balances made up, but that does not seem to have been included.

The CHAIRMAN. Have you a list there of the balances of all these appropriations that we have been considering?

Colonel LOCKWOOD. Yes, sir.

Captain SEBREE. What is that up to?

Colonel LOCKWOOD. February 28, 1906.

The CHAIRMAN. I mean a list of balances at the close of the last fiscal year?

Colonel LOCKWOOD. Yes, sir.

Captain SEBREE. Just enumerate them.

Colonel LOCKWOOD. Under repairs, \$58,698.

The CHAIRMAN. The balance at the end of this last fiscal year?

Captain SEBREE. Yes, sir. Fog signals, \$39,967; supplies, \$4,317; salaries, \$7,657; light vessels, \$8,635; buoyage, \$16,456; rivers, \$3,422.

The CHAIRMAN. Do you know whether at the close of the fiscal year there were outstanding obligations in those appropriations to absorb any part of that balance?

Colonel LOCKWOOD. The balance of the appropriation for repairs on February 28 had been reduced from \$58,000 to \$34,000.

The CHAIRMAN. On account of balances existing at the close of the fiscal year, chargeable to that appropriation?

Captain SEBREE. They are chargeable, sir.

Colonel LOCKWOOD. All the repairs to light-house tenders are payable from that appropriation for two years after the time has expired, and then any balance is returned to the Treasury.

The CHAIRMAN. But do you pay out of that appropriation any obli-

gation other than the obligation that stands against the appropriation at the close of the fiscal year?

Colonel LOCKWOOD. Yes, sir; in repairs to light-house tenders, the balance remains for that purpose for two years before it is covered into the Treasury.

The CHAIRMAN. Not unless the contract is made prior to the close of the fiscal year?

Colonel LOCKWOOD. Oh, yes; that is an act.

Captain SEBREE. If the disbursing officer can certify on the voucher that the deterioration occurred this year, as in the case, for example, of a light-house tender at Key West, it can be paid out of repairs. We have one there now, and her boiler is in bad condition. If we get those boilers repaired, the inspector certifies that the deterioration occurred during the year 1906. We will say, then, that voucher would be properly payable out of repairs, or buoys, or supplies, or light vessels.

The CHAIRMAN. For 1905?

Captain SEBREE. For 1905 or 1906. It depends on whether he will certify.

The CHAIRMAN. These appropriations are not made for repairs alone, then, for 1905, but under your construction of the law they are made for repairs the necessity for which may arise subsequent to the close of the fiscal year, and at any time during the two years following that?

Colonel LOCKWOOD. Yes; but only in connection with tenders.

Captain SEBREE. He must certify on the face of it that the deterioration of those boilers, for instance, has occurred in that year. For example, in 1906 this boiler is all the time getting worse; we are patching it along, but it will have to have extensive repairs. Suppose they would cost \$4,000 or \$5,000, and he certifies that this deterioration of these boilers requiring these repairs occurred in the fiscal year 1906; then that could be paid out of it.

The CHAIRMAN. Could be paid out of what?

Captain SEBREE. Out of supplies for 1906.

The CHAIRMAN. Would it be paid out of the appropriation for repairs of the fiscal year 1905 under the circumstances you name?

Captain SEBREE. Yes, sir.

Colonel LOCKWOOD. The captain overlooked one point. He would certify that the deterioration occurred in that year.

The CHAIRMAN. In 1905?

Captain SEBREE. Yes; if he paid it out of 1905.

Mr. SMITH. Even though he did the work in 1906 or 1907?

The CHAIRMAN. And contracted for the work in 1906 and 1907? If the necessity for the repairs existed or arose in 1905, those repairs, then, under that contract would be paid out of the appropriation for 1905?

Captain SEBREE. Yes.

Mr. SMITH. Or any subsequent year?

Captain SEBREE. Up to two years.

Mr. SMITH. That is to say, you certify that the deterioration took place in the fiscal year 1905?

Captain SEBREE. Yes.

Mr. SMITH. You can pay it out of an appropriation for that year, but if no appropriation for that year is available, for the year in

which the repairs are made, then they can be paid out of any subsequent year in which the repairs were made?

Captain SEBREE. Yes; you can see why that should be. It will not do to stop that vessel right now. She will hobble along in very important work. It is necessary to repair her. At the end of the year we find we have some money left under that; and under the law, if he certifies that that deterioration did take place during that year, it can be paid for out of that year.

The CHAIRMAN. Is this under express authority of law, or is it a construction which the Board has placed upon the law?

Captain SEBREE. It is under authority of law, and it is a construction which the Comptroller of the Treasury has placed upon it.

The CHAIRMAN. Will you indicate to the committee where we will find that law?

Captain SEBREE. I will make a note of it and send it to you. It is a curious thing, the way the decision of the Comptroller is made on that very subject. Take a light-ship that is being repaired, that will come in now, say, in May from Cape Flattery. That needs extensive repairs; it needs them now; the deterioration is going on now. She comes in in July. I can repair her under the decision of the Comptroller out of supplies—no, I can not repair the light-ship, but I can repair a light-house tender out of light-ship money that is left over, but I can not repair a light-ship. There is a vessel off Cape Flattery that has got to come in, and under the decision of the Comptroller, she comes in and needs repairing now, and I bring her in on the 1st of June; I can not pay any of this back appropriation out of light-ship for the repair of a light-ship, but I can pay it to repair a light-house tender.

Colonel LOCKWOOD. That is the way the law reads.

The CHAIRMAN. I would like to have the Comptroller's decision, if you can furnish it, and also a citation of the law upon which the decision rests.

Now, Captain, I want to ask you this: Do you, in making up your estimates for the coming fiscal year, take into consideration the balances you have then available of previous appropriations for repairs and supplies?

DEPARTMENT OF COMMERCE AND LABOR.

LIGHT-HOUSE BOARD.

Washington, April 27, 1906.

The CHAIRMAN OF THE COMMITTEE ON APPROPRIATIONS,

*House of Representatives.*

SIR: Referring to the questions asked me when recently before the House of Representatives Committee on Appropriations, I have the honor to state that the law under which repairs to light-house vessels can be made from back appropriations appears in the deficiency act approved on March 3, 1879 (see vol. 20 U. S. Stat., p. 379), and stands as follows:

"The expense of maintaining the vessels of the Light-House Establishment may be paid from any surplus of the appropriation for the works, general or special, on which the respective vessels are, for the time being, employed, and the cost of repairs to such vessels may be paid from the appropriation under which they respectively were employed when they were injured or became deteriorated to such an extent as to render the repairs necessary, or, if such appropriation be exhausted, then from the appropriation under which they are respectively to be next employed."

The decision of the commissioner of customs, who then had certain of the powers of the present Comptroller, that while light-house tenders could be repaired from back appropriations light vessels could not be is given in the in-

closed copies of letters from the commissioner of customs, one dated June 19, 1886, to the inspector of the second light-house district, and the other, dated May 16, 1887, and addressed to the inspector of the fourth light-house district.

Respectfully,

U. SEBREE.

*Captain, U. S. Navy, Naval Secretary.*

OFFICE OF THE COMMISSIONER OF CUSTOMS,  
TREASURY DEPARTMENT,

*June 19, 1886.*

Commander G. H. WADLEIGH, U. S. Navy.

*Inspector Second Light-House District, Boston, Mass.*

SIR: Your letter of the 17th ultimo, relating to the adjustment of your account for expenses of light vessels, 1885, has been carefully considered, and you are respectfully informed that the reasons stated therein do not appear sufficient for changing the decision made in the settlement of your account.

As construed by this Office, the clause in the act of March 3, 1879, to which you refer, makes provision for repairs to the light-house tenders employed upon various works and for which no specific provision is otherwise made, but not for the repair of light-ships which are not so employed and for which provision is specifically made by the regular annual appropriations for expenses of light vessels. \* \* \*

Very respectfully,

JOHN S. MCCALMONT,  
*Commissioner of Customs.*

TREASURY DEPARTMENT,  
OFFICE OF THE COMMISSIONER OF CUSTOMS.

*May 16, 1887.*

Capt. G. B. WHITE, U. S. Navy,

*Inspector Fourth Light-House District, Philadelphia, Pa.*

SIR: Your letter of the 12th instant, relating to a disallowance which was made in the adjustment of your account for expenses of light vessels, 1886, has been carefully considered. I am unable to concur in your opinion that the act of March 3, 1879, to which you refer, authorizes the payment for repairs to Northeast End light vessel, for the fiscal year 1886.

It is true the act makes provision in general terms for "Maintaining the light vessels of the Light-House Establishment" and for "repairs to such vessels," and if it were to be construed by the language above there would be no question about it. It would apply to all the vessels of the Light-House Establishment, and, of course, include light-ships. But upon careful consideration of the context of the act, I am of the opinion that such a construction is not admissible. The first of the provisions referred to is as follows: "The expenses of maintaining the vessels of the Light-House Establishment may be paid from any surplus of the appropriations for the works general or special on which the respective vessels are for the time being employed." The language is clearly inapplicable to light-ships. The use of the surplus of the appropriation referred to for maintaining the light-ships would be manifestly inconsistent with the fact that the annual appropriations are regularly made for that purpose, the whole of which appropriations are applicable thereto, and not merely the surplus. In fact, with such use of those appropriations no surplus could arise; and when the surplus was in existence there would be no need of it for such a purpose.

Moreover, the surplus appropriations are for works upon which the vessels for which provision is made are for the time being employed.

This language necessarily implies that the vessels referred to are vessels which are employed at different times upon various works. Such is not the case with light-ships, which are not employed upon any works in the sense in which the language of the provision appears to be used. The implication of the provision for repairs to such vessels is of like force. When, however, the language of the act is considered as referring to light vessels, known as tenders, it is found to be specifically applicable and particularly appropriate. These vessels are employed at different times upon various works and under various appropriations, and no other provision is made for defraying the expenses of their maintenance and repair.

Prior to the passage of this act a practice had grown up to pay such expenses from the appropriations under which the tenders were at the time employed, but this practice not being specifically authorized by law, doubt frequently arose as to the applicability of particular appropriations to certain of those expenditures. The passage of the act gave legislative sanction to the practice, modifying it, however, in some particulars.

Such a practice did not exist in respect to the expenses of maintaining and repairing light-ships, those expenses being adequately provided for by the annual appropriations. In view of the very different character of the employment of these two classes of vessels, of the need of legislative provision for one of these classes, of the absence of such need for the other, and of the particular language employed in the act, I think the act can be fairly and consistently construed as providing for the maintenance and repairs of tenders only.

Very respectfully,

JOHN S. MCCALMONT,  
*Commissioner of Customs.*

Captain SEBREE. Yes, sir; those are taken into consideration. We use that. We know about how much we have got. In fact we know about how much we have got when these estimates are made up. We get estimates of the repairs in, you know, at the end of June, and then take them into consideration in making the estimates.

The CHAIRMAN. Then your estimate for the coming fiscal year includes not only what you estimate here in the estimates, but also the balance left over—the unexpended balances that are left over for the expenses?

Captain SEBREE. Yes. Some of them are not.

The CHAIRMAN. None of these appropriations are available for the payment of salaries except in the current fiscal year for which they are intended, are they?

Captain SEBREE. No, sir; and the particular appropriation for salaries of light keepers is not available for anything else but the salaries of light keepers, and only for the year in which it actually happens.

The CHAIRMAN. Does that statement that you read from a moment ago contain the balance on hand for the remainder of these appropriations for 1905?

Colonel LOCKWOOD. They go down to February 28, 1906.

The CHAIRMAN. Will you give the statement to the stenographer and let him insert it in his minutes.

Colonel LOCKWOOD. There is one item there that I will correct.

The CHAIRMAN. Make your corrections and hand it to the stenographer. If you will also include the balance of this appropriation for survey of light-house sites we would be glad.

Colonel LOCKWOOD. Yes.

DEPARTMENT OF COMMERCE AND LABOR,  
LIGHT-HOUSE BOARD, Washington, April 26, 1906.

The CHAIRMAN OF THE COMMITTEE ON APPROPRIATIONS,  
*House of Representatives.*

SIR: In compliance with the request made at the recent hearing the Light-House Board has the honor to state that the acts of Congress under which light-house tenders can be repaired from unexpended balances of certain general appropriations up to two years after the expiration of the year for which the appropriations were made are as follows: The act approved on March 3, 1879, volume 20, United States Statutes, page 379, and section 3691 of the Revised Statutes.

The actual balances on June 30, 1905, of the general appropriations made

for the fiscal year ending on that date, outside of outstanding liabilities, were as follows :

Repairs, 1905.....	\$145,054.46
Fog signals, 1905.....	49,302.89
Supplies, 1905.....	48,000.19
Salaries, 1905.....	8,919.99
Light vessels, 1905.....	30,133.54
Buoyage, 1905.....	70,594.22
Rivers, 1905.....	24,788.56

On February 26, 1906, these balances appear as follows from the books of the Board, and they are being reduced practically all the time, except in the case of salaries :

Repairs .....	\$67,033.62
Fog signals .....	21,684.68
Supplies .....	9,030.33
Salaries .....	6,147.14
Light vessels.....	12,251.87
Buoyage .....	14,682.01
Rivers .....	5,198.34

It has always been the policy of the Board to have available a sufficient balance from the appropriations for repairs, fog signals, supplies, light vessels, buoyage, and rivers, to meet an unexpected call upon them, due to any great loss, such as might result from a hurricane or the like. It is known, for instance, that considerable damage has been done to the light stations on the Pacific coast by the recent earthquake. Lenses have been broken, buildings, etc., have doubtless, in a number of cases, been injured, although the extent of such injuries has not as yet been determined.

In the opinion of the Board, there should always be a sufficient balance to meet any extraordinary losses in cases where Congress is not in session to afford the necessary relief. This is particularly true in regard to the appropriation for repairs, because that is the only appropriation under the control of the Board which is available for the repair of light stations which may be damaged by the action of the elements or otherwise, and it is considered absolutely necessary to have a fund upon which to draw in cases of emergency.

No part of the appropriation for survey of light-house sites, \$1,000, for the fiscal year ending June 30, 1905, was used.

Respectfully,

U. SEBREE,

*Captain, U. S. Navy, Naval Secretary.*

#### MAINTENANCE OF LIGHTS ON CHANNELS OF GREAT LAKES.

The CHAIRMAN. What other items come under your exclusive jurisdiction, Captain Sebree—maintenance of lights in the channels of the Great Lakes?

Captain SEBREE. Yes, sir.

The CHAIRMAN. You ask for no increase there at all?

Captain SEBREE. No, sir. We ask for the same thing year after year. We advertise and get only one bid.

#### POINTE AU PEELE LIGHT VESSEL, LAKE ERIE.

The CHAIRMAN. "Light vessel at Southeast Shoal, Point au Pelee Passage, Lake Erie, \$4,000."

Captain SEBREE. We let that out by contract. The Lake Carriers' Association pays for that.

The CHAIRMAN. Do you think that is a reasonable contract?

Captain SEBREE. Yes, sir; it is reasonable, and we can not maintain the light vessel ourselves. It is in Canadian waters, and it is for the benefit of our shipping.

## GUANTANAMO, CUBA, NAVAL STATION LIGHT-HOUSE SERVICE.

The CHAIRMAN. The next is, "Guantanamo, Cuba, naval station light-house service: For maintaining existing aids to navigation, to establish and maintain additional lights," etc. Does that come under your jurisdiction?

Captain SEBREE. Yes, sir.

Colonel LOCKWOOD. That is merely for maintenance—principally for buoyage.

The CHAIRMAN. I see you have inserted here, however, the language—

and for all other necessary incidental expenses, including the pay of officers and crews of light-house tenders and of clerks and other employees in the offices of the light-house inspectors and light-house engineers at light-house depots.

Why do you include that?

Captain SEBREE. That is to make that appropriation pay part of it. I send a tender over from Key West to fix the buoys and supply the light-house. While she is gone on that service it seems only proper that we ought to be able to charge the expenses of the vessel while she is doing that.

The CHAIRMAN. You have also inserted the words, "continuing the" in connection with the item for the building of a light-house depot, etc.

Colonel LOCKWOOD. That is new language in a former act, appropriating \$25,000 for the maintenance. That is more pro forma than anything else. I do not know why they put it in that shape.

The CHAIRMAN. Twenty-five thousand dollars has been appropriated for the building of the depot, storage shed, etc.

Colonel LOCKWOOD. Yes; that is more a matter of form than anything else.

## LIBERTY ENLIGHTENING THE WORLD.

The CHAIRMAN. Do you know anything about the bill that was introduced by Mr. Goulden to light and maintain the Statue of Liberty in New York Harbor, \$25,000?

Captain SEBREE. No, sir; it has not come before us yet.

Colonel LOCKWOOD. That is a retransfer from the War Department. The Light-House Board had that for a long time, and asked to be relieved from it because it cut no figure as an aid to navigation. The War Department took the matter up, and I believe Congress failed to make any appropriation for lighting it. The War Department took it up, and I believe they have continued it ever since.

The CHAIRMAN. So that it does not come under your jurisdiction?

Colonel LOCKWOOD. No, sir—

Captain SEBREE. And we do not want it, either.

Mr. SMITH. Who has the custody of Bedloe Island?

Colonel LOCKWOOD. The War Department.

Mr. SMITH. And it has the custody of the statue, so that if anything were to happen to it the War Department would look after it!

Colonel LOCKWOOD. There was a great deal of correspondence about it, but it was transferred. The Board stated it had no funds for continuing the lighting, and the War Department took it up and

have continued lighting it for the last few years. The War Department has the custody of the island and the statue. The Light-House Board has nothing whatever to do with it.

Mr. TAYLOR. Why did you get rid of it, Colonel?

Colonel LOCKWOOD. It was not an aid to navigation in any sense and was not a part of the scheme of lighting New York Harbor.

Mr. TAYLOR. What purpose does it subserve in the harbor?

Colonel LOCKWOOD. Only a sentimental one.

Captain SEBREE. It is a big statue and it is lighted up, but it is of no use as an aid to navigation.

Mr. SMITH. Do you know, when you had charge of it, what it cost to light it?

Colonel LOCKWOOD. I think the estimate was \$5,000 a year.

Captain SEBREE. We can furnish you with a statement of what it cost.

Mr. SMITH. I think, if we are paying for sentiment, that it would be well to know what it costs.

Captain SEBREE. We would rather have somebody other than the Light-House Board attend to it, if it is sentiment. It is a fight all the time to tell people that they can not have things and to refuse people all the time, but when it comes up here it is the other fellow that is in trouble. The boot is on the other foot.

DEPARTMENT OF COMMERCE AND LABOR.

LIGHT-HOUSE BOARD.

Washington, April 27, 1906.

The CHAIRMAN OF THE COMMITTEE ON APPROPRIATIONS.

House of Representatives.

SIR: In reply to one of the questions asked me when I was recently before your committee, I have the honor to state that it cost nearly \$10,000 a year to maintain as a light-house the statue "Liberty enlightening the world."

Inclosed is sent for your further information a copy of the letter, dated November 5, 1901, from the Secretary of the Treasury to the Secretary of War.

Respectfully,

U. SEBREE.

Captain, U. S. Navy, Naval Secretary.

TREASURY DEPARTMENT.

OFFICE OF THE SECRETARY.

Washington, November 5, 1901.

The SECRETARY OF WAR.

SIR: This Department, at the instance of the Light-House Board, has the honor to state that the letter from your Department of July 10, 1901, submitting for consideration the relinquishment by this Department to the War Department of the buildings and lights on Bedloes Island, New York Harbor, set apart for light-house purposes, was referred to the proper officer for examination.

From the report of that officer it appears, in pursuance of a joint resolution of Congress, approved March 3, 1877, that the President was "authorized to cause suitable regulations to be made for the maintenance of the statue of 'Liberty enlightening the world,' located on Bedloes Island, in the harbor of New York, as a beacon," and that the President, by an order dated November 16, 1886, and addressed to the then Secretary of the Treasury, directed "that said statue be at once placed under the care and superintendence of the Light-House Board, and that it be from henceforth maintained, lighted, and tended in accordance with such rules as now exist applicable thereto \* \* \*."

Attention is invited to the fact that the joint resolution authorized the President to have the statue of Liberty maintained as a beacon and not as a lighted beacon.

Inclosed is a copy of the letter of February 9, 1894, from this Department, asking Congressional sanction for the extinguishment of the beacon for specified reasons, among which are the statements that it costs nearly \$10,000 a year to maintain it as a lighted beacon, whereas it could be maintained as a beacon at very much less cost; that it has no value as a light to the Light-House Establishment, and that the money expended in maintaining it as a light is taken from the general appropriations for the support of the Light-House Establishment, from which it can be spared with great difficulty.

As no action was taken by Congress upon this letter, this Department assumes that it is held that the President does not need legislative authority to enable him to permit the extinguishment of the light on the beacon, inasmuch as the beacon and not the light was authorized by legislative action.

This Department therefore asks the cooperation of the War Department in inducing the President to so modify the order of November 16, 1886, that the statue may hereafter be maintained as a beacon, but not as a lighted beacon; and also to so modify the order that the care of the statue be transferred from the Treasury Department to the War Department, in accordance with the desires and recommendations of both Departments.

Respectfully,

L. J. GAGE, *Secretary*.

#### OIL HOUSES FOR LIGHT STATIONS.

The CHAIRMAN. "Oil houses for light stations." Can you give us the reason for the increase of \$30,000 on that estimate?

Colonel LOCKWOOD. Under the old system of lighting lard oil could be used, and that could be quartered safely in the keeper's dwelling or cellar; but now it is necessary, with the oil that is used, to provide a fireproof building, a small one. The cost is limited by Congress to \$550 for each light station. For several years an appropriation of \$10,000 has been made for this purpose, and it has been the opinion of the Board that if a larger appropriation could be made we would clear the subject up so much more quickly and put a great many light-houses in a safe condition which are not safe now with the storage of oil near the premises.

The CHAIRMAN. Have you had any accidents on account of not having these oil houses since you commenced using mineral oil?

Colonel LOCKWOOD. They have had some accidents from something like spontaneous combustion, or something of that sort, which is due in great measure, possibly, to the carelessness of the keeper in leaving waste around.

Captain SEBREE. We have not had many accidents. We watch it very closely, and they have very stringent orders about it. If the oil is put down at the foot of a tower, as some of it is, they have more stringent orders about keeping up ventilation.

Colonel LOCKWOOD. These are little houses with an iron roof, and shelving on which to put the oil cans.

The CHAIRMAN. What would you estimate would complete this whole system of oil houses?

Colonel LOCKWOOD. Forty thousand dollars would not do it.

The CHAIRMAN. Are you building any of them from this estimate?

Colonel LOCKWOOD. Yes, sir. Sometimes they will build them for \$250 or \$300, but on the Pacific coast the estimates come in for \$1,500 for a house out on some isolated point. We can not build them along that coast, because that exceeds the limitation of cost.

## CLAIMS FOR REIMBURSEMENT ARISING OUT OF COLLISION.

Captain SEBREE. I hope you will take up this matter of the reimbursement of these people.

The CHAIRMAN. Those are all claims, and this committee has not jurisdiction of claims.

Captain SEBREE. It seems to be perfectly unjust. Take that one, reimbursement of the owners of the Burlee Dry Dock Company. The tender *Larkspur* went in through the error of the captain of the tender. He smashed into this dry dock to the extent of \$29 worth. The dock was ordered repaired, and the bill was sent in. If they had smashed into us we would have sent a bill and got it, but a Government agent did it, and we can not pay it. If we attempt to the Comptroller will check it against the officer who made it, no matter whether it was a perfectly proper thing or not.

The CHAIRMAN. That is a thing that grew out of our system of government with respect to the payment of claims. The House of Representatives has a Committee on Claims, and these people will have to submit their claims in the form of a bill. It would then go to the Committee on Claims, and if the claim is a just one it is reported favorably and passed. But this committee has no jurisdiction over claims.

Captain SEBREE. They crowd us every year with letters and say, "Why do you not pay this?" I tell them it is not possible to pay them.

The CHAIRMAN. Tell them to have their Member of Congress introduce a bill and have it referred to the Committee on Claims, of which Mr. Miller, of Kansas, is the chairman.

---

WEDNESDAY, April 25, 1906.

## COAST AND GEODETIC SURVEY.

## STATEMENT OF MR. OTTO H. TITTMANN, SUPERINTENDENT.

(See also page 336.)

The CHAIRMAN. The first item, Doctor, under the head of the Coast and Geodetic Survey is on page 76 of the bill. Can you in a general way briefly explain this service under this first item here, "For every expenditure requisite for and incident to the survey of the coasts of the United States and of coasts under the jurisdiction of the United States?" I suppose that is a general provision?

Mr. TITTMANN. Yes, sir. That is a general provision.

The CHAIRMAN. It defines the service in general?

Mr. TITTMANN. Our principal business is to make surveys of the coasts that are specified in this and subsequent paragraphs, and to publish the results in the shape of charts for the use of navigators.

The introduction here contemplates also current observations—tidal observations and magnetic observations, all of which go to the making of a chart. Of current observations the Coast Survey has made very few, because ever since its existence the demands of commerce have been very urgent for particular surveys and particular things, and the Survey has always endeavored to meet the most

pressing demands. That is, for instance, if a part of a coast is unsurveyed, our first business is to make a survey that will produce a navigable chart of that coast. Then if the demands become greater we make resurveys. These are largely due, for instance, to the greater draft of ships.

I could illustrate that by speaking of the coast in the vicinity of Key West and the southern border, where formerly we made surveys by the lead and when ships drew at the maximum about 18 feet. Then the surveys were apparently all sufficient. But since that time our ships draw very much more. Our battle ships particularly draw much more, and instead of relying on the lead we have now to sweep the bottom practically in available channels and anchorages. I do not want to be too discursive, but—

#### LIMITED DUPLICATION OF WORK.

The CHAIRMAN. To what extent, if at all, does the work of the Hydrographic Office of the Navy Department duplicate the work you are doing?

Mr. TITTMANN. In the way of surveys there is no duplication whatever. There is some duplication in the publication of charts, but I think, perhaps, that is more apparent than real. That is, they republish some general coast charts of the United States of the Atlantic coast on a very small scale to preserve a sequence of charts. There was an agreement, I think, effected between the Hydrographic Office and the Survey in Superintendent Patterson's time, about twenty-five years ago. Then when the Coast Survey was charged with the survey of Porto Rico and coasts under the jurisdiction of the United States the Hydrographic Office had been republishing such Spanish surveys of the coast of Porto Rico as existed, but when our more accurate surveys took the place of those the Hydrographic Office withdrew them and does not publish them any longer, so that that fell entirely into our hands, because it would have been an unjustifiable duplication simply to reprint what we were printing.

In the Philippines the condition was somewhat similar. The surveys there, of course, were very inaccurate, although they had been carried on by the Spanish for a century or more. They were quite unfit for the use of mariners, and we began to publish our own surveys as well as to compile the surveys from all authorities we could get. There the Hydrographic Office has apparently not withdrawn from the field of publishing maps, but reprints and engravings, not exactly in the same form, but in a different form. But I think that is about the only duplication. I do not know what their policy will be ultimately—whether they will withdraw as our surveys progress or not.

Mr. TAYLOR. Can you give the cost of that duplication?

Mr. TITTMANN. I can not. I do not think it is very great. It involves chiefly the reduction for engraving of the surveys we have made to a somewhat smaller scale.

The CHAIRMAN. They accept your data, your surveys, and produce a smaller map?

Mr. TITTMANN. In most cases.

The CHAIRMAN. From the plates you have?

Mr. TITTMANN. Yes; they correct their copperplates.

Mr. TAYLOR. It is not a mere duplication?

Mr. TITTMANN. I do not mean they merely rephotograph ours and publish them just as they are. It is generally in a modified form—that is, for instance, where they have a general chart of the Philippines, as our surveys progress, when we get new data we of course publish them, and they immediately put the results on their charts, because they must keep up their charts.

#### MAINTENANCE OF CHARTS.

I would like, Mr. Chairman, if you will permit me in that connection, to say that the maintenance of charts is like the maintenance of a building—an expensive and difficult thing. We have about 17 engravers; about two-thirds of those engravers are constantly employed in simply maintaining our charts, not producing new work. That is bound to be the case. The larger the output of charts the more difficulty there is in that.

Mr. TAYLOR. What causes that?

Mr. TITTMANN. The continual changes that take place.

#### COORDINATION OF WORK WITH OTHER DEPARTMENTS.

There are several things that are important, and I would like to have them understood. We are not the only ones who survey. The engineers of the Army, wherever they make improvements, make surveys. We keep away from that. They immediately furnish us the results. We publish them. They give them to us, so that there will be no duplication, and we make no surveys there. For instance, at Charleston, if they are building jetties there, they make surveys every month to show the progress. The blueprints are immediately forwarded to our office for publication. We do not publish them just as they appear. We reduce them, and fit them to the charts. They also connect their work with our triangulation, which correlates their work with ours. If their surveys were unconnected, we could not put the work on our charts. In order that no work may be wasted, they cooperate immediately.

In the same way we cooperate with the Geological Survey. Our triangulation, our leveling data, which is the framework of all the surveys, are furnished freely to the Geological Survey, and they do not duplicate. They simply make use of the data that we give them, which are an essential basis for their work, so that in that case, too, there is no duplication, but perfect cooperation.

I had a few days ago a letter from my principal assistant in the Philippines, transmitting to me correspondence between a naval officer who had made a survey of one of the principal rivers in the Philippines, in Mindanao, and Admiral Train, stating that he had completed the survey of the river and asking what to do with the records; and Admiral Train ordered him to turn them over to the Coast Survey office in Manila for publication. That was the proper thing to do, because that is the only way of meeting the demands over there.

I think it is an excellent sign. I am glad to see it. Whenever we get any information of dangers to navigation, new reports, we send them over to the Hydrographic Office, and they do the same

thing with us; and we try all the way through to cooperate and prevent any duplication. I am quite sure we strive not to duplicate. We ourselves have duplicated the printing of some maps of Hawaii and Guam, for instance, which are not our original surveys, but that was to complete our series of charts. But that was a small matter. It was just publishing a particular chart.

FIELD EXPENSES, ATLANTIC AND GULF COASTS.

The CHAIRMAN. The next item is on page 77, a specific item for field expenses for surveys and necessary resurveys of the Atlantic and Gulf coasts of the United States, including the coasts of outlying islands under the jurisdiction of the United States. I observe that your estimate for the next fiscal year is the same as the amount of the current appropriation—\$70,000—for this service.

Mr. TITTMANN. Yes, sir. You are speaking of the Pacific coast appropriations?

The CHAIRMAN. No; the Atlantic coast appropriation, on page 77. You have an unexpended balance of \$76,299 in excess of the amount appropriated.

Mr. TITTMANN. On the Atlantic coast?

The CHAIRMAN. Yes, sir.

Mr. TITTMANN. I supposed that was shown by the last report which we made to you, Mr. Chairman. I do not recollect that.

The CHAIRMAN. It is shown in House Document 472, page 14. The document is dated January 25, 1906, and the letter of the Secretary transmitting it is dated January 25, 1906, showing at that time a balance of \$76,299.22, which makes your available appropriation for the remaining six months of the fiscal year, or less than six months, greater than the amount appropriated for the entire year.

Mr. TITTMANN. On what page is that?

The CHAIRMAN. On page 14 of the document.

Mr. TITTMANN. That is, you find that there is an unexpended balance there of the difference between \$141,288.25 and \$65,389.03.

The CHAIRMAN. According to this document, you had on the 26th of January, or about the 1st of February, an unexpended balance of \$76,299.22.

Mr. TITTMANN. Yes. That was the balance June 30, 1905. That was the appropriation for 1906 and the balance of \$6,000 brought over from 1905.

The CHAIRMAN. No; there was more than that brought over. You had a balance, according to the statement, on hand, report of 1904, \$71,665.33. Then your appropriation for the current fiscal year, made March 3, 1905, was \$70,000, and there was \$22.92 disallowed by the Auditor; and that gave you at the beginning of the fiscal year 1905 \$141,688.25, instead of \$70,000 as appropriated.

Mr. TITTMANN. No, sir; I do not think that is the condition.

The CHAIRMAN. Then you expended during the fiscal year \$65,389.03, leaving an unexpended balance of \$76,299.22.

Mr. TITTMANN. There was a balance of about \$6,000, not \$141,000. You reckon in that \$70,000 which had just been appropriated, which had not been used. You see the unexpended balance June 30, 1905, was \$76,299.22.

Mr. SMITH. What do you mean as to the date of that? Do you mean the date of this [Doc. No. 472, Expenditures Coast and Geodetic Survey]?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. That is January 25, 1906. It is a balance on account of 1905, which comes over to you and is available during the year 1906.

Mr. TITTMANN. I will tell you in general terms, because I do not know about the interpretation of these figures. We about expend every year the appropriation for the Atlantic coast. On the Pacific coast it is different. On the Atlantic coast we have, within a few thousand dollars, expended the whole appropriation every year.

Mr. SMITH. But that small balance has been accumulating for many years.

Mr. TITTMANN. It has been on the Pacific coast, not on the Atlantic. I would hesitate about interpreting this.

The CHAIRMAN. If this statement is correct, you had on the 25th of January \$76,299.22 available for this fiscal year.

Mr. TITTMANN. Yes, sir; on June 30, 1905.

The CHAIRMAN. You had \$76,299.22 available on the 25th of January for the remainder of this fiscal year, which was less than six months?

Mr. TITTMANN. Yes; for the whole of the fiscal year 1906.

The CHAIRMAN. While your annual appropriation for the entire fiscal year was only \$70,000.

Mr. TITTMANN. Of course this account is cut off, and simply represents the vouchers that have been settled and paid for.

Mr. SMITH. May I ask you whether your expenditures have risen or fallen in recent years?

Mr. TITTMANN. It depends upon how far back you go.

Mr. SMITH. In the last six or seven years have they been rising or falling?

Mr. TITTMANN. No; they have been about the same.

Mr. SMITH. If your expenses last year were \$65,389.03, as shown by this report, and you have been getting that for the last five years, you have been piling up a surplus.

Mr. TITTMANN. We have not any such surplus on the Atlantic coast. I am sure of that. I am sure that on the Atlantic coast we have not a surplus of more than \$6,000.

Mr. SMITH. You mean every year?

Mr. TITTMANN. No; altogether.

Mr. SMITH. These figures would indicate you had \$30,000 or \$40,000.

Mr. TITTMANN. As I say, I do not go into the details beyond these essential facts to know how much money I have on hand at a particular time. Now, I know, and I am quite positive, that I have been expending the Atlantic coast appropriation quite up to the amount appropriated, within a few thousand dollars; we always must have a margin, because we dare not incur a deficit.

The CHAIRMAN. The expenditure of this appropriation is exclusively under your jurisdiction?

Mr. TITTMANN. Entirely.

The CHAIRMAN. Do you not keep advised as to balances on hand from time to time?

Mr. TITTMANN. Yes, sir. Whenever we make an allotment for work I go over the balances on hand, and that is why I am so positive in my statement that we have been expending the Atlantic coast appropriation almost completely. In regard to the details of this report, I am quite sure, also, that with the proper interpretation you will find that while we may have a balance of \$6,000 we have no more than that on the Atlantic coast, and at the end of this fiscal year we will have no more than that.

The CHAIRMAN. Does the fact that this appropriation continues available until expended—and it is made immediately available—induce you to pay less attention to expenditures than you otherwise would?

Mr. TITTMANN. No, sir. On the contrary, we pay very close attention to it, and all the time, and there are three of us who go over this matter time and time again. I have been over it in the last month; only, as a rule, after having gone over the details to the final results—I only carry the latter in my mind—I do not carry the detailed arrangement of the account in my mind; but I do know that the statement I make now is correct.

The CHAIRMAN. This is what I can not understand, Mr. Tittmann: Your annual appropriation for this service on the Atlantic coast is \$70,000.

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. That, presumably, is to defray the expense for the entire fiscal year?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. On the 25th of January you had unexpended out of this and previous appropriations, out of the current \$70,000 appropriation and previous appropriations, \$76,299.22.

Mr. TITTMANN. Yes, sir; that certainly is correct. The date January 25 applies to the letter of transmittal only.

The CHAIRMAN. If \$70,000 is sufficient to defray the expenses of this service for the entire year, would you not have quite a considerable balance at the end of this fiscal year? You have apparently a greater amount for the last half than you had for the entire year.

Mr. TITTMANN. I can answer that, if you will allow me to answer it at a subsequent time, because I want to compare my allotments. The way we do is to plan the work about a year ahead, and then we make estimates for each party and allot the money that we have available; and whenever we do that, or undertake new work, then the disbursing agent and my principal assistant and I go over the amount of the balance on hand and know whether we can do the work. Now, I know within a year or so, we have borrowed from the Pacific coast, under that clause which allows us to transfer from one appropriation to the other.

Mr. SMITH. Mr. Chairman, I am inclined to think that the Superintendent is correct in his interpretation of these matters. I notice that the letter of transmittal states that this is a report for the year ending June 30, 1905; and while this, I suppose, incidentally refers to the date, it refers, I think, not to the date of this transmission to Congress, but to June 30, 1905, which would apparently correspond to the Superintendent's contention about it—that the balance was only \$6,000 on the 30th of June. I think that is the explanation of the discrepancy.

Mr. TITTMANN. I think that is so.

The CHAIRMAN. Do you make up these estimates yourself, Mr. Tittmann?

Mr. TITTMANN. No, sir. The estimates are made up in this way: I order, for instance, that one of the vessels shall go to Porto Rico to make a survey on the northern coast, specifying the class of work. That, of course, has been decided upon after consultation with others. Then the officer to whom this work is assigned has to submit estimates in detail for every class of expenditure and for the entire work. Those estimates then go to the inspector of hydrography and topography, who has direct supervision over the vessels, and then they go to my principal assistant, and he makes such suggestions as he deems necessary. Then they come to me, with a statement of the balance available and whether that money can properly be allotted; and it is in connection with all those estimates that we keep going over this all the time, so that I can say to you that in regard to estimates it is just as it is in regard to other matters: I go over the subject with the individuals concerned, and then charge my mind with the outcome of the discussion, but I do not attempt to keep the details in mind further than that. To do that would be impossible.

The CHAIRMAN. You say you plan your work a year in advance?

Mr. TITTMANN. Yes, sir; we try to.

The CHAIRMAN. We have submitted to us here the estimate of the cost of your service for the fiscal year 1907, beginning on the 1st of next July. Have you your work planned for that year?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. Do you, in submitting the estimated amount, make your plans for the next year and estimate what the cost of that service will be for the next year, or do you simply take the cost of the current year and simply ask for an amount on such a basis that your service will not necessarily be increased? I am speaking now of the estimate of the appropriation necessary for the coming year and not the estimate for the specific line of work. If you have your work planned a year in advance, as you must necessarily have it, do you base your estimate for the amount necessary to defray that service on the amount necessary for the cost of the service you have planned for the coming fiscal year?

Mr. TITTMANN. I can answer that by saying that the amount of work ahead of us is practically unlimited. We are constrained, then, to plan on the supposition that the Appropriations Committee will give us what they gave us the year before. This year I went to the Department and told them that the demands were very great, and the people at the Department, of course, were aware of that, and I was directed not to submit any increases. That is true not only of this year, but it generally happens that I have been told that I must not submit increases; so that I have made the estimates not to what I think should be done or could be done, but simply to what the Appropriations Committee has been willing to give me before. If we attempted to meet all the demands, our appropriations would have to be increased very, very much.

Pardon me, I do not know whom I am addressing, but in regard to the question before, as to whether the survey had increased in the seventies, our appropriation was larger than it is now, certainly quite

as large. It does not appear so when you look at the Book of Estimates, but that is due to the fact that about \$210,000 of it was paid by the Navy. They furnished the crews and the officers, so that if you deduct that \$210,000 from this appropriation that we get now and compare the present appropriations with the appropriations that we got in the seventies—and at that time we did not have Porto Rico and the Philippines—you will find they are perhaps less now than they were at that time. It is true we did have the work in Alaska then, but it was not at that time nearly so urgent as it is now.

Mr. SULLIVAN. So that your expenditures were really greater than they are now?

Mr. TITTMANN. Yes; for several years.

Mr. SULLIVAN. You do not expect to have any balance at the end of this fiscal year?

Mr. TITTMANN. Yes, sir; we hope to have it. Under this appropriation for the Pacific coast, at the rate at which we are going now, we will have nothing to keep up the work after 1907. If you give us the appropriation which the War Department has asked for, through us, we can get along until the end of the fiscal year 1907.

The CHAIRMAN. Are there any other questions on this item?

Mr. SMITH. On the Atlantic coast I have none.

The CHAIRMAN. Will you submit a statement in regard to the balance on this item, and the estimated amount of that balance at the close of this fiscal year?

Mr. TITTMANN. You mean for the Atlantic coast?

The CHAIRMAN. Yes, sir.

Mr. TITTMANN. Certainly, sir. I can tell you beforehand what the outcome will be, and I would like to put myself on record to show that I really know.

#### SURVEYS OF THE PACIFIC COAST, INCLUDING HAWAII AND ALASKA.

The CHAIRMAN. The next item is for surveys and necessary resurveys of the Pacific coast, including the Hawaiian Islands and Alaska and other coasts on the Pacific Ocean under the jurisdiction of the United States. Your estimate for the coming fiscal year is the same as the current appropriation?

Mr. TITTMANN. Yes; except that since that time two additional estimates have been submitted.

The CHAIRMAN. Since those estimates were submitted you have submitted a supplemental estimate of \$38,650 for party expenses and pay of officers and men and vessels incident to surveys and necessary resurveys of the Pacific coast, and a further increase of \$15,000, in addition to the other, to cover expenses now met by the Philippine government, making the total for this item \$161,150.

Mr. TITTMANN. And still another supplemental estimate, which I think you have just received, of \$50,000, which has just come in since then at the request of the Seattle Chamber of Commerce, at the request of Senator Piles. I think it has all been printed.

The CHAIRMAN. It has not come to this committee yet.

Mr. SMITH. You will have \$116,000 of this fund left from the appropriation of last July, will you not?

Mr. TITTMANN. No, sir; we will have about \$50,000 left. We had a balance of \$100,000 ahead of our appropriation, which we had been accumulating during the last five years.

The CHAIRMAN. I have a letter here from the Secretary of the Department of Commerce and Labor, dated April 12, on this subject, in which he says: "I would respectfully call your attention to the item of party expenses on page 19 of this report, which shows a balance of \$315,737.60." The Secretary then goes on to say: "From this should be deducted the appropriation for the year 1906, \$189,500, leaving a real balance of \$126,236.60."

Mr. TITTMANN. Yes; that was the item.

Mr. SMITH. We are now on the Pacific coast?

Mr. TITTMANN. Yes; this is that item. We had a balance of \$100,000 on that.

Mr. SMITH. Why, then, do you need any appropriation for that?

Mr. TITTMANN. Because, as is explained in that letter, we have enlarged the scope of our work in the Philippines very much, and are spending at a much greater rate than hitherto in order to meet the demands that are very urgent. They come from everybody; and we will spend that money, if you will permit us to, by the end of the next fiscal year.

The CHAIRMAN. The end of the fiscal year 1907?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. When did you make this big increase, not in contemplated expenses, but in actual expenses?

Mr. TITTMANN. Oh, I should think we began about four or five months ago. That is, we sent additional men over there, and started and took over—

Mr. SMITH. Where?

Mr. TITTMANN. To the Philippines.

Mr. SMITH. Is that being paid now out of this Pacific coast appropriation, or this Philippine appropriation of \$87,500?

Mr. TITTMANN. It is being paid out of both, but the increase of expenditures is being paid out of the Pacific coast appropriations.

Mr. SMITH. How much will it amount to in a year?

Mr. TITTMANN. To about \$50,000 in round numbers, I think.

Mr. SMITH. You say you sent four men over there?

Mr. TITTMANN. No, sir; I said more men.

Mr. SMITH. The only increased expense you have actually entered upon is in the Philippines?

Mr. TITTMANN. Well, in the Philippines and in Alaska.

Mr. SMITH. I mean in the last fiscal year, since the 30th of June last?

Mr. TITTMANN. We are just starting out some very large parties in Alaska also, larger than usual; but the expense to which I referred more particularly is the increased expense in the Philippines.

Mr. SMITH. Let us leave the Philippines out entirely. You are asking a separate appropriation of \$87,500 for the Philippines. You sent us an estimate here for \$107,000 just as usual?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. As a matter of fact, without the increase in Alaska you would have had a balance at the end of this fiscal year of appropriations already made of \$116,000?

Mr. TITTMANN. Yes, sir; there is \$40,000 or \$50,000 unallotted.

Mr. SMITH. What earthly use have you of any appropriations, then, aside from the Philippine appropriation on this item?

Mr. TITTMANN. Do you mean if we did or had done no work in the Philippines?

Mr. SMITH. Ignore the Philippines for the present. You are asking for another estimate outside of this estimate for the Philippines. What was this estimate of \$107,000 made for, then?

Mr. TITTMANN. That is made to cover the cost of the surveys that are actually going on now, and for the parties that are at work. If you will pardon me, I will point out to you that what we have been doing is to save about \$20,000 a year out of the Pacific coast appropriation. We have done that not so much from choice, but from necessity, for lack of coordination between the amounts we had available for "manning and equipping" and "party expenses." Of course we could have sent more officers over there.

Mr. SMITH. You are getting back to the Philippines, I am afraid. I am not talking about the Philippines. I say, ignore the Philippines. You did not have the Philippines in when you sent this estimate of \$107,000 up?

Mr. TITTMANN. Oh no; pardon me; we had the Philippines in. This new estimate of \$87,500 is—

The CHAIRMAN. The new estimate of \$87,000 is the result, is it not, of the fact that the Philippine government will no longer cooperate with the Federal Government in making these surveys, and this \$87,000 is to include the work, or defray the expense of the work, which the Philippine government will no longer pay?

Mr. TITTMANN. Yes, sir; that is it.

Mr. SMITH. I understood that. Now, as a matter of fact, you accumulated your appropriations under this item until, in November last, counting all expenses up to the 30th day of last June, you had between \$207,000 and \$208,000 available under this item?

Mr. TITTMANN. Yes, sir; that is right.

Mr. SMITH. Now, your entire expenses under this item have been running along about \$90,000 a year?

Mr. TITTMANN. Yes, sir; until the fiscal year 1906.

Mr. SMITH. So that you were \$116,000 more than a whole year ahead?

Mr. TITTMANN. Yes, sir; had we not extended our activities during the current year.

Mr. SMITH. So that if you had continued your expenses for this fiscal year to the 30th of June, as you had them, without any new appropriation, you would have had about \$116,000 left, or several thousand dollars more than the whole annual appropriation?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. Now, in the cooperation with the Philippines, whatever was spent in that up to very recently was included in the \$91,000 of last year's expenses, was it not?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. So that if you got the \$87,500, that ought to cover the increase on the Philippines, ought it not?

Mr. TITTMANN. Yes, sir; if we did no more than we have been doing prior to the current fiscal year.

Mr. SMITH. But that would include all you had been doing and all the Philippine government had been doing, both?

Mr. TITTMANN. Yes, sir; to June 30, 1905.

Mr. SMITH. So that, unless it be in Alaska, if you got the \$87,500

you would not need any appropriation at all for the next year, would you?

Mr. TITTMANN. Why, yes. You are assuming now, I believe, that we are not spending any more money in the Philippines that we had been spending.

Mr. SMITH. Then you and the Philippine government both have been spending.

Mr. TITTMANN. I am afraid we are talking at cross purposes.

#### EXPENDITURES IN THE PHILIPPINES.

Mr. SMITH. I say, if we gave you the money which you apply for for the Philippines and the money you apply for for Seattle, then you have more money left than your ordinary expenses under this survey, under this head, have you not?

Mr. TITTMANN. No.

Mr. SMITH. Why not?

Mr. TITTMANN. Because we are spending now in the Philippines at the rate of about \$5,000 a month more than we have been doing.

Mr. SMITH. And more than you estimate?

Mr. TITTMANN. No, sir; not more than we have estimated. But we are expending that much more out of our surplus.

The CHAIRMAN. More than you originally allotted for this work?

Mr. TITTMANN. Yes. We are expending about \$5,000 a month more over there, with the increase of men there.

Mr. SULLIVAN. The chairman asks more than what? That is what I would like to know. Not more than was appropriated, not more than was estimated, but more than you allotted yourself? Is that the idea?

The CHAIRMAN. He said he allotted a certain amount for certain services. Now, at the beginning, we will say, of this fiscal year, so much was allotted for the Philippine service out of this appropriation, on the basis of cooperation with the Philippine government. That cooperation has ceased, and what I want to know is whether this additional \$5,000 a month is in addition to the amount originally allotted for the doing of that work in the fiscal year, made necessary by the failure of the Philippine government to cooperate?

Mr. SULLIVAN. If I can get an answer to that, that is what I want, too.

Mr. TITTMANN. No; not by reason of that, but by reason of the fact that we have increased our force there and are making more surveys.

Mr. TAYLOR. You are doing additional work?

Mr. TITTMANN. Yes; because of this accumulation of surplus, we are doing additional work.

Mr. SMITH. Now, when you were expending as usual \$91,000 on this head, how much of that was going into cooperation with the Philippine government in the Philippines?

Mr. TITTMANN. Our expenditures in the Philippines since we have been at work there have amounted to about \$400,000 or \$420,000.

Mr. SMITH. In about how many years?

Mr. TITTMANN. It has not been on the average. I am speaking only up to this date, or to 1905—five years.

Mr. SMITH. How much do you say it was in the fiscal year ended June 30, 1905?

Mr. TITTMANN. I think I can give you that pretty closely. It is

not a perfectly accurate statement, but enough to satisfy myself of what we are doing.

Mr. SMITH. I only want your general idea.

Mr. TITTMANN. I have not got that itemized, but we have in that time spent between \$400,000 and \$420,000; in the last five years.

Mr. SMITH. What I want to know is what we have spent each year. You know whether it has been growing rapidly or not. I do not. If you give a total, I do not know anything about it. I just want the years separately.

Mr. TITTMANN. It has been growing.

Mr. SMITH. Has it been \$10,000?

Mr. TITTMANN. I could not give it to you now. If you will allow me to call over to the office while we go ahead with something else, I can get those figures. Those figures are over there on my desk.

Mr. TAYLOR. I am badly confused about this, and I would like to get the figures.

Mr. SULLIVAN. You ought to have a starting point.

Mr. SMITH. The assistant clerk will telephone for you, Mr. Superintendent, if you wish. I would like to know what your expenditures in the Philippines were in 1905 under every head of this bill.

Mr. TITTMANN. Yes; exactly.

The CHAIRMAN. Under all the different appropriations or items for your service.

Mr. TITTMANN. Including the salaries of assistants and all that?

Mr. SMITH. Everything carried in this bill. We want to know how much out of that item has gone to the Philippines for 1905.

The CHAIRMAN. And for each year.

Mr. TITTMANN. You know, of course, that our appropriations are specific. Shall I show the salaries paid to the assistants where specifically provided for, or do you just want the party expenses?

Mr. SMITH. We want the expenditures made in the Philippines, especially for the year 1905, under every heading of this bill.

Mr. TITTMANN. All right, sir.

The CHAIRMAN. He wants to know whether you want the salaries.

Mr. SMITH. I do not care for the personnel of any item, but the aggregate of each item—

The CHAIRMAN. The aggregate of each item in the Philippines.

Mr. SMITH. You say also in the last four months you have greatly increased the expenditures in the Philippines?

Mr. TITTMANN. Yes.

Mr. SMITH. I would like to know what that increase is in these items.

Mr. TITTMANN. It may take me a little time to get the data in shape for you, but I will come back just as soon as I can get back.

---

THURSDAY, April 26, 1906.

## COAST AND GEODETIC SURVEY—Continued.

### STATEMENT OF MR. OTTO H. TITTMANN, SUPERINTENDENT.

Mr. SMITH. Under what system has this cooperation between your Bureau and the Philippine government been conducted; have they paid money directly to you?

Mr. TITTMANN. No; they have not. It has not been turned over to us. It has been expended, however, under the direction of Mr. Putnam, one of my assistants, who is the representative of the Survey over there. They audit those accounts. We had a general agreement in this form: With the authority of the Secretary of the Treasury, at that time my chief, we submitted a plan for cooperation with the Philippine government, and they agreed to bear a certain portion of the expenses, as nearly as they could; we were to furnish the technically trained men and to spend as much as our appropriation allowed.

They furnish us office room in Manila. It is very essential to have an office there, so that information can be promptly published. There is now quite a large force of Filipino draftsmen, whom we trained, in our office in Manila. They are able to do very fine pen work, but they are not really cartographers. They can prepare charts under the direction of our officers. For a while we published our charts there, but we had to give that up. A great deal of general information that comes to our office in Manila is immediately published for the benefit of commerce, such as sailing directions and notices to mariners relating to dangers to navigation and to lights and buoys. These are published frequently at the expense of the Philippine government.

Mr. SMITH. In this way the Philippine government has contributed about \$80,000 a year.

Mr. TITTMANN. The appropriation for the current year is \$87,500, and as in our own case the appropriation the first year was smaller. The appropriations which they have made have grown. They have turned over to us, and did right at the start, a small vessel called the *Research*. They also built a surveying ship, at a cost of \$65,000, called the *Fathomer*, which they turned over to us. We furnished the officers, but not the crew. They had to pay the crew and running expenses; and they have this year turned over to us two of the coast-guard vessels which are about the same size as our vessels here. Of course when anything happens over there, whenever a transport goes ashore, and that happens frequently, or a merchant ship is lost, they prod us and say that the Coast Survey is not going ahead, that we are going too slowly. As a matter of fact, no survey has ever been conducted so economically or so rapidly as that survey.

You will remember that the *Charleston*, the cruiser, was lost by running on an uncharted rock off the northern coast of Luzon; and transports have gone ashore, as well as commercial ships. The principal surveys that existed before we took hold were the surveys made by the Spaniards and by the British. The surveys were unsatisfactory. The Spaniards surveyed for a great many years, but in a desultory fashion. Most of their time was given up to suppressing piracy, I think, although they maintained surveying ships. The importance of those surveys is not purely local; it is really international.

Mr. SMITH. You intimated yesterday, as I understood you, at least, that the Philippine government had refused to further contribute. It has not done that, has it?

Mr. TITTMANN. No, sir; I don't know that I said that. I certainly did not intend to say more than to repeat what appeared in

the letter of the Secretary of War. He states that the Philippine government desired this Government to bear the expenditures which they are bearing. They notified me last spring that they could not continue the appropriations or would refuse to do it, but they did actually make an appropriation.

Mr. SMITH. Without doing so?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. Now, suppose we take over this service; are we going to buy all of these vessels that you have been talking about?

Mr. TITTMANN. No; but if we were to buy them we would try to buy them for \$1 simply for the sake of form. We can not buy them; we haven't money enough. I think they would be perfectly willing to let us have them. As it stands under the law we can not repair any of those vessels because they are not our vessels. I mean even if we had the appropriation we could not repair them, and would not. Now, if we were to take them over, we might have to ask for an enabling clause to repair them, unless the Philippine government was willing to bear the expense.

The CHAIRMAN. If you acquire them by purchase; otherwise if your appropriation was large enough you could repair them.

Mr. TITTMANN. Yes; if we acquired them by purchase formally.

Mr. SMITH. Now, you spoke of the extent of this service and its being of utility to commerce everywhere. Would your publications be furnished to the Philippine government without expense to them?

Mr. TITTMANN. Well, the Philippine government is not especially interested. We publish the charts and the mariners buy them. That is the way we work.

Mr. SMITH. I ask whether you would furnish them gratuitously to the Philippine government, and, if so, to what extent?

Mr. TITTMANN. I suppose we would; yes. I see no reason why we should not within the law. We furnish charts to the Army and Navy. All Government authorities are entitled to them free of charge. I have not considered the question specially. I think they would be entitled to them.

Mr. SMITH. You don't furnish them to other branches of the Government for distribution?

Mr. TITTMANN. Not for distribution; no. We furnish a limited quota to Congress for distribution under the law. Each Congressman is entitled to ten charts—not ten copies of all charts, but ten charts for distribution.

The CHAIRMAN. Do the Congressmen avail themselves of that privilege?

Mr. TITTMANN. A great many of them do, and oftentimes those who are not specially interested in them and have no calls for them turn over their quota either to me or to others. I like to have some charts for distribution in that way, because we use them really for exchange—that is, for instance, on the Pacific coast the Alaska Packers' Association furnish us data all the time when they get information of reported rocks and other dangers, and if I send them a chart they indicate on it what the changes are. I generally send them two, and they keep the other. But still I have none for gratuitous distribution in any other way than I have just stated.

Mr. SMITH. Now, on yesterday you were asked what had been the contribution of the National Treasury to the survey in the Philippine Islands.

Mr. TITTMANN. Yes, sir; I can give you that, although I thought the question referred only to last year.

Mr. SMITH. I think I asked for both, but that is not material.

Mr. TITTMANN. I have this statement here. I submit it, however, with this remark—our accounts are kept by appropriations and not by localities, so that we made this up yesterday. I told the disbursing officer to assume that the officers who were on duty over there were there all the time, for if I did not tell him that he would have been compelled to find out how many days these men are in the Philippines—when they were ordered away—and it would have taken a long time to get the details. But that is a very small matter, and I think the object was to give it to you within \$10,000, but I gave it much closer, though I don't think the variation is material. This shows that last year the expenditure of the national service in the Philippines was \$141,191. This is an account that I made out last night, and it shows that the Philippine government, during the five years that we have been working there, has contributed about \$255,000, and the United States has contributed about \$432,000. You understand that these are approximations.

Mr. SMITH. What were the expenses under this whole item for Pacific surveys for the year ending June 30, 1905?

Mr. TITTMANN. Ninety-one thousand and fifty-eight dollars. That is out of that particular item—the Pacific coast item.

Mr. SMITH. I wish you would kindly tell me, out of this statement of expenditures in the Philippine Islands during the fiscal year 1905, how much was charged to that account.

Mr. TITTMANN. These two items—\$50,000.

Mr. SMITH. So that during the fiscal year ending June 30, 1905, you spent considerably over half of all the money spent out of this item in the Philippine Islands.

Mr. TITTMANN. Fifty thousand dollars. The total item is \$107,000.

Mr. SMITH. The total expenditures were \$91,000.

Mr. TITTMANN. Oh, yes.

Mr. SMITH. You spent five-ninths of all the money spent out of this item in the Philippines.

Mr. TITTMANN. Yes.

Mr. SMITH. And the Government of the United States is now spending in the Philippines close to two-thirds of the total expense, and the Philippine government in the neighborhood of one-third.

Mr. TITTMANN. According to the statement that I gave you, the expenditure was—I didn't give you the expense of the Philippine government. Last year it was \$113,000 and ours was \$142,000.

Mr. SMITH. And the Philippine government prior to that had never expended half of it.

Mr. TITTMANN. No.

Mr. SMITH. It more than doubled its expenditures last year.

Mr. TITTMANN. Yes.

Mr. SMITH. Last year all the Philippine government gave was \$59,000 in place of \$112,000.

Mr. TITTMANN. Last year; no, they gave \$113,000.

The CHAIRMAN. Was that in cash, or part in cash?

Mr. TITTMANN. We got no cash at all.

The CHAIRMAN. I didn't mean that they paid it to you in cash, but did they pay out any cash for services, or did their contributions consist entirely of property—like vessels and such?

Mr. TITTMANN. No, sir; they paid for the maintenance of vessels. They furnished the *Research* and the *Fathomer*, and they paid for the men in the field, too. We furnished the *Pathfinder*. That is our principal item of expense. That is a very large expense. Then we had other shore parties and some men in the Manila office to conduct the work. I did not want to anticipate your questions, Mr. Smith, but I want to answer the question you put to me yesterday in regard to this balance of \$100,000. I call that a balance, but it is a surplus, an unexpended balance.

Mr. SMITH. Where did you get the figures \$100,000?

Mr. TITTMANN. I am taking now this printed statement on page 15, Document No. 472. You will find a present unexpended balance of \$207,768. This includes the new appropriation of \$107,500. The difference between this and that shows a balance of \$100,268. That is the amount we have saved.

Mr. SULLIVAN. You are speaking of 1905 now?

Mr. TITTMANN. Yes. I want to tell you as nearly as I can what the condition will be on June 30, 1906.

Mr. TAYLOR. Before you leave that, I want to understand how you make that balance. This statement is made up as of June 30, 1905?

Mr. TITTMANN. Yes, sir.

Mr. TAYLOR. And this balance of \$207,768.83 includes the appropriation for the coming year as of June 30, 1905?

Mr. TITTMANN. Yes; because it is made immediately available and it is included in this statement.

Mr. TAYLOR. So that you did not have really an unexpended balance unconnected with the appropriation of \$107,500 for the then incoming fiscal year, but in making up that unexpended balance you included the new appropriation for that fiscal year?

Mr. TITTMANN. Yes, sir; that is included with this statement of \$207,000.

Mr. TAYLOR. So that your balance, in the sense of a balance, was \$100,268?

Mr. TITTMANN. Yes, sir. Now, to come to what I thought Mr. Smith desired to know, and what I presume you all desire to know, we expect to have on June 30 of this year, 1906, an unexpended balance of about \$50,000. I base that statement on my allotment, and I did hope that we will save here and there—that is, that \$100,000 will be decreased to \$50,000 on June 30, with the parties all out.

Mr. TAYLOR. About sixty days from now?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. Have you seen this letter from the Secretary of Commerce and Labor, in which he says that this surplus was purposely built up?

Mr. TITTMANN. Yes, sir; this is a copy of the letter:

DEPARTMENT OF COMMERCE AND LABOR,  
COAST AND GEODETIC SURVEY,  
Washington, April 12, 1906.

HON. J. A. TAWNEY,  
Chairman Committee on Appropriations,  
House of Representatives, Washington, D. C.

SIR: Replying to your letter of the 6th instant, in which you request "a detailed statement of the expenditures for the fiscal year ending June 30, 1905, in the lump-sum appropriations carried in the sundry civil appropriation bill under the several heads and under the title 'Coast and Geodetic Survey;' also

a statement in cases where, under the head 'Coast and Geodetic Survey,' appropriations are made 'immediately available and to continue available until expended,' and the amount, if any, of the Treasury balances and the amount of the available balances in each case," I respectfully call your attention to the attached copy of a "Statement of the expenditures in the Coast and Geodetic Survey for the fiscal year ended June 30, 1905," which I transmitted to the honorable Speaker of the House of Representatives on January 25, 1906, and which document, I believe, conveys in quite full detail all of the information asked for.

I respectfully call your attention to the item of "Party expenses," on page 19 of this report, which shows an—

Apparent balance of.....	\$315, 737. 60
From this should be deducted the appropriation for the year 1906..	189, 500. 00

Leaving real balance of.....	126, 237. 60
------------------------------	--------------

This balance of \$126,237.60 is not the result of chance or oversight, but has been carefully husbanded and accumulated during the last five years out of the item for "Pacific coast," for the following reasons: The survey work in Alaska has been pressed during all these years as rapidly as the supply of ships and skilled men and short seasons would permit. Next to Alaska the most urgent demand on the Pacific coast item is made by the Philippines, the navigable waters of those islands being practically uncharted.

Facing the problem of the enormous work required in the Philippines, this Department naturally turned to the insular government for such aid as it could give. Such aid was granted by the Philippine government to the extent of about \$80,000 a year. The condition of the Philippine treasury warned this Department that this aid might cease to be forthcoming at almost any time; hence prudence suggested that the Pacific coast item of the Coast and Geodetic appropriation be carefully strengthened by a reasonable accumulation of money to meet the probable breakdown of Philippine aid without allowing such loss to make shipwreck of the work under its charge in the Philippines or compel the incurring of a deficiency to prevent such a disaster. That this course was a wise business precaution is proven by the fact that the Philippine government has finally been compelled to consider the withdrawal of this aid, and the appropriation named has now enough reserve strength to meet this sudden strain without curtailing its work or calling for a deficiency.

All of the present accumulation will be necessarily expended within one year. In this connection I will further state that apart from the feature of economy, which is apparent, it is absolutely necessary that the items for the survey of the Atlantic coast and Pacific coast remain continuing appropriations for the reason that the great bulk of these moneys are paid out in the most remote points in Alaska and in the Philippines. This is accomplished in the most economical way by the disbursing agent of the Coast Survey advancing the required amount of funds to the (bonded) chief of party in charge of each ship or field working party. Some of this money is expended in regions so remote that return credits are not received back in Washington until six months after the money was sent out. This condition ties up a large amount of money on account of the time which necessarily elapses between the date the actual cash leaves the Treasury and the date when it returns in the form of vouchers, representing its expenditure at the remote points mentioned.

This condition requires a considerable appropriation which is immediately available and continuing to bridge over the close of each fiscal year and still leave enough available cash in the hands of each ship captain and chief of party, making surveys in remote regions, to meet current expenses. There are now 76 of such bonded chiefs of party, and the appropriations now "immediately available and available until expended" are none too large to meet the conditions named. The necessity for making these funds immediately available is due also to the circumstance that the ships, outfitting for distant points, such as Alaska, generally in May, must be furnished with coal, provisions, and other supplies for the whole working season, which extends four or five months into the following fiscal year.

Respectfully, yours,

V. H. METCALF, *Secretary.*

Mr. SMITH. Do you understand that in making up your estimates to Congress that you have any right to estimate more than you expect to use during the ensuing year in order to build up a bank account?

Mr. TITTMANN. No, sir; I do not. The condition I think was like this: I thought that I covered the ground yesterday when I answered the chairman's question which led up to that also. My answer is this, that the amount of work ahead of us, the amount of work we have to do, would justify our asking for an enormously larger appropriation than we are asking for, legitimate, perfectly legitimate appropriation: and I have oftentimes when these matters have come up with my chiefs said, "We want to ask for larger appropriations," and they have said, "No, the committee will doubtless be willing to give you what you had before," and we, by great economy—because we knew that this circumstance might arise at any time—by great economy we tried to provide for that in a measure; and at the same time inasmuch as the terms of the appropriations permitted it, it seemed very reasonable and proper that we should so adjust our work as to get the most out of the appropriation that was possible.

Mr. SMITH. But you do not seem to grasp what I think is the fallacy of the whole proposition. You are required to make an estimate to Congress as to the needs of your service for the next fiscal year. Now, with the full knowledge that you had a surplus built up here, practically sufficient to cover the expense for the next fiscal year, you each time send in an estimate in excess of what this expense would be, as avowed by the Secretary of Commerce and Labor, not to spend the money, but for the purpose of building up a surplus without the knowledge of Congress.

Mr. TITTMANN. Was it without the knowledge of Congress? We rendered this printed account every year in detail. Certainly this surplus was shown every season.

Mr. SMITH. It may have been shown in some documents that nobody investigated, but the question is, How can you reconcile with your duty the filing of an estimate of what you will need for your service when you know you will not need it, and when you are simply trying to build up a bank account for a contingency?

Mr. TITTMANN. I could go before Congress ever year and ask with perfect fairness for twice the sum we have asked for.

Mr. SMITH. You could never ask, in my judgment—and I don't mean it in any offensive sense—for more than you have to spend the next year. I don't understand that any Department has a right to build up a bank account, a continuing appropriation. Of course, in the War Department, where they have to take two years to complete a gun, they may have to get an appropriation first and hold it over for that length of time to finish the gun, but I don't understand that any branch of the Government service has a right to make an estimate to Congress for more than they will need the next year.

Mr. TITTMANN. But there were more circumstances that contributed to that. The fact that we did fear that at any time they might withdraw their support, for we only had the agreement which I referred to, made it, I think, imperative to provide for an emergency of that kind.

Mr. SMITH. Why not provide for it by avowing it to Congress and have Congress knowingly attend to it?

Mr. TITTMANN. Knowingly, of course.

Mr. SMITH. Was it ever explained to Congress that you were trying to build up a service for this emergency?

Mr. TITTMANN. No; not in those words, but right straight along

we have been unable to get the men that we might have gotten in any year, and we have not been able to get them because we can not pay them sufficiently.

Mr. SMITH. Don't you think that when an emergency comes you ought to submit it to Congress and not take it out of the hands of Congress?

Mr. TITTMANN. Yes.

Mr. SMITH. I understand there has been a very large growth in the Philippine service.

Mr. TITTMANN. Yes, sir.

Mr. SMITH. In 1901, which was three years after we took possession of the islands, as I remember, the total expense of both the Philippine government and the United States Government seems to have been between twenty-nine and thirty thousand dollars, of which the Philippines paid the greater proportion.

Mr. TITTMANN. Yes.

Mr. SMITH. I notice that the next year this suddenly arose to more than \$96,000, of which the Philippine government paid a little over \$25,000 and the United States between seventy-one and seventy-two thousand dollars; that in 1903 the Philippine government gave \$47,778 and we \$95,000. In 1904 the Philippine government gave \$51,000 and the United States Government \$109,000. In 1905 the Philippine government gave \$113,000 and the United States \$141,000. Isn't this an extraordinary growth of this service?

Mr. TITTMANN. Not at all, because we could not go full-fledged into a country like that. That would be necessarily so because it takes years to organize.

Mr. SMITH. What is the coast line of the Philippines?

Mr. TITTMANN. About 11,000 miles.

Mr. SMITH. Isn't that a good deal more than the Light-House Board gave?

Mr. TITTMANN. Yes, possibly; for there are two ways of estimating the coast line; one is what we call the "general coast line," and the other counting all of the intricacies, and the line with the intricacies really ought to be counted in order to compare it with the coast line of the United States and Alaska, which is about 90,000 miles, as compared with the Philippines 11,000 miles, on the same scale.

Mr. SULLIVAN. That is, with the shore indentations?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. So that we are between eight and nine times as great here as they are?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. What are the total expenses of your branch of the Coast and Geodetic Survey for the year 1905?

Mr. TITTMANN. The appropriation, I think, is about \$850,000, including salaries and everything else.

Mr. SMITH. And the Philippine expenses have already run up to \$254,000 a year, at the end of last year?

Mr. TITTMANN. One hundred and forty-one thousand dollars is what we spent last year.

Mr. SMITH. Yes; but the Philippine government spent \$113,000.

Mr. TITTMANN. You mean including theirs; yes.

Mr. SMITH. So that you have already given the expense at the end of last year in the Philippines up to about one-third of the United States coast line, which is between eight and nine times as great.

Mr. TITTMANN. But the element of time enters there.

Mr. SMITH. Since then you have also greatly increased the expense in the Philippines.

Mr. TITTMANN. Yes.

Mr. SMITH. Have you got any figures that would indicate the increase per annum for the present fiscal year?

Mr. TITTMANN. Yes; I said that the balance on June 30, 1906, would be about \$50,000, and that would indicate during this fiscal year that we spent \$50,000 more than last year.

Mr. SMITH. Out of this one item; but I mean how much has the whole expense risen in the Philippines?

Mr. TITTMANN. Not in that proportion. The additional people that we have sent over there would probably be six or seven officers.

Mr. SMITH. You expressed the opinion, as I recall it, on yesterday, that you had increased the expenses in the Philippines four or five thousand dollars a month. Did you say that?

Mr. TITTMANN. I did; yes.

Mr. SMITH. If that be true, the expense in the Philippines for the fiscal year 1906 will be, in round numbers, \$300,000. Is that correct?

Mr. TITTMANN. I would have to figure on that; I don't like to give it.

Mr. SMITH. I don't want you to give it unless you realize that it is correct. You spent \$255,000 there in the year 1905.

Mr. TITTMANN. Do you include the Philippines? I thought you were speaking of our expenditures?

Mr. SMITH. You are proposing to assume it.

Mr. TITTMANN. Oh, yes. Then you are about right.

Mr. SMITH. More than \$300,000 a year, then, for the Coast and Geodetic Survey for the Philippines. Is there any reason for this disproportion between these expenses here and there, save the fact that the survey of the United States is in a more advanced state than in the Philippines?

Mr. TITTMANN. That is not exactly the reason. The reason is that the commercial demands are equally pressing in about all localities. In the Philippines we can work all the year round. On the Alaskan coast—and that is our principal work on the west coast, where the commercial demands are also very pressing—we can work only about half the year. We have plenty of additional work of a little different kind on the Pacific coast, but we have not been able to do that, because we haven't had the money for that.

Mr. SMITH. Why is the money so free for the Philippines and not for the United States? I can not understand why this work is growing so out of proportion in the Philippines to the growth in the United States.

Mr. TITTMANN. We have a certain number of vessels on the Pacific coast. In order to do work in Alaska we have to keep those vessels in condition. We have money enough under another item—not under this item, but under the item under which we can man the ships. \$210,000 a year—to keep those ships going for only a portion of the time.

Mr. SMITH. Yes; but I am not talking about a comparison of expenses between the Philippines and the Pacific coast. You tell me that the total expenditure both there and here was about \$800,000 a year.

Mr. TITTMANN. No; both there and here, unless you are speaking only of the United States appropriations.

Mr. SMITH. I am speaking of the United States appropriations for the purposes of this question, and it will be all United States appropriation if your wish is carried out. There are a great many portions of the United States outside of Alaska. I want to know why it is that, with 90,000 miles of coast line in the United States and 11,000 miles in the Philippines, you are spending between one-third and a half of all your appropriation in the Philippines.

Mr. TITTMANN. Oh, yes. The answer, of course, to that is that out of that appropriation we spend all the money we have for the Atlantic coast under that item.

Mr. SMITH. What I am trying to get at—

Mr. TITTMANN. Then the answer is because practically you have entirely unsurveyed territory over there.

Mr. SMITH. That is the first question I asked you, whether the reason for this was because of the undeveloped state of the survey in the Philippines as compared with the United States proper.

Mr. TITTMANN. I didn't see the bearing of your question.

Mr. SMITH. That was the first question I asked. If that be the reason, how long are these enormous appropriations for the Philippines to keep up?

Mr. TITTMANN. That would depend upon the speed with which you desire to have the work done.

Mr. SMITH. You know the speed at which you are putting this work in there, at the rate of \$300,000 a year.

Mr. TITTMANN. I can tell you what you have accomplished, about, in percentage of total work to be done. We have done about 11 per cent of it, as nearly as we can estimate.

Mr. SMITH. So that according to your estimate it will take several years yet of these large appropriations?

Mr. TITTMANN. Yes; if you want the work to go on at that rate.

Mr. SMITH. The expense having been rapidly rising, I assume that most of your work has been done in the last year?

Mr. TITTMANN. We have made very good progress during the past year—much faster.

Mr. SMITH. A third of all the money you have ever spent there you have spent in the last year?

Mr. TITTMANN. Yes.

Mr. SMITH. Have you done one-third of the work in the last year?

Mr. TITTMANN. I think so, barring the fact that our principal vessel was caught in a typhoon and was laid up on that account. She was badly injured, and had to be brought to Manila for repairs.

Mr. SMITH. You spoke about the United States being quite as much interested as the Philippines, and about its being a question of commerce and merchant marine rather than directly connected with the islands. As we have practically no merchant marine in the United States, then your theory is that the Coast and Geodetic Survey is of no value at home to us?

Mr. TITTMANN. Far from that. I think the matter of surveying is really an international duty, and all nations so consider it, and all nations are doing it.

Mr. SMITH. Now, as a matter of fact, even though the Filipinos don't own a ship, the Filipino people have no means of communication with the rest of the world excepting by water, and that communication only being safe by reason of the Coast and Geodetic Survey, they have the same interest in the survey of their coast that we have here in the survey of ours?

Mr. TITTMANN. They certainly have.

Mr. SMITH. Then what is the reason they should not contribute to the expense of this survey?

Mr. TITTMANN. My theory was that they should contribute, and that is why we tried to make the arrangement that they should.

Mr. TAYLOR. According to your statement, the Philippine government have fallen down and failed to respect your requests; and after failing, you desire to continue the survey on our own account.

Mr. TITTMANN. I think that is a proper attitude. I think that having charge of the Philippines we ought to make those surveys. Formerly, under the Spanish régime, the British came in and made some surveys. There must have been some very good reasons for it or they would not have sent ships there. The reason the Spaniards did not succeed is because they did not succeed in anything of that kind. We went to Porto Rico, and we have made the surveys around there which certainly justify their having been made.

Mr. TAYLOR. Could not the Philippine government as at present organize and carry on such a survey as is necessary there?

Mr. TITTMANN. Independently? No.

Mr. TAYLOR. You think it could only be done by cooperation between you and them, as has been in the past?

Mr. TITTMANN. Yes.

Mr. TAYLOR. You didn't want to say refuse, but they have failed, and notified you that they would not be able to continue the cooperation.

Mr. TITTMANN. The only form of notification under the present conditions that I have at all in the matter is that letter of the Secretary of War in which he asks this Government to take over the whole cost. I stated before what had been intimated to us before, but as this is subsequent action I think we should base it upon that statement.

Mr. SMITH. You say "intimated before;" both orally and in writing?

Mr. TITTMANN. No; it was a dispatch from Mr. Putnam. It was in writing too. A question came up in a dispatch that was shown me by the War Department asking the Government to arrange so that the Government could take over these surveys.

Mr. SMITH. How long ago was that?

Mr. TITTMANN. I think that was last summer, just about the time when Secretary Taft started for the Philippines and before he had gotten there.

Mr. SMITH. Now, after that was done, the Philippine government appropriated \$87,500 to continue the cooperation in this service, or so many pesos; so that from the time they made the last appropriation of \$87,500, or its equivalent in pesos, you never have heard a

word excepting what you may infer from this document sent you by the Secretary of War.

Mr. TITTMANN. Quite right.

Mr. TAYLOR. Under that I would draw the conclusion that you think that the whole of this proposition comes from the War Department through the Secretary of War—that is, as to the United States taking over the whole cost.

Mr. TITTMANN. From the Philippine Commission, so the Secretary of War states.

Mr. TAYLOR. He approves it.

Mr. TITTMANN. He approves, and he asks Mr. Metcalf, the Secretary, to ask for this appropriation.

Mr. SMITH. Do you claim that you know of no correspondence between the Secretary of War and the Philippine Commission, or the Secretary of War and the Secretary of Commerce and Labor, with reference to this subject, except what is embraced in this document before Congress?

Mr. TITTMANN. No, sir.

Mr. SMITH. So if these things you think are in there, as indicated in your testimony are in there, you don't know anything about such things existing.

Mr. TITTMANN. Are you referring to the statement which you say I made yesterday—that they had withdrawn the appropriation?

Mr. SMITH. I claim that there is not anything in this document to intimate that the Philippine government has declined or failed to pay, or done anything in that direction.

Mr. TITTMANN. Of course I don't want to create any impression that was entirely different from what was in the document before you.

Mr. SMITH. I want to know whether you had any information outside of the document?

Mr. TITTMANN. Of course I know that those people are hard up, but I have no official correspondence on that subject. But I didn't suppose you wanted to know about that.

#### CONTINUING RESEARCHES IN PHYSICAL HYDROGRAPHY.

The CHAIRMAN. The next item is for continuing researches in physical hydrography. You estimate for the coming fiscal year \$6,400, which is the same as the amount of the current appropriation. I observe that this item is not made immediately available, and does not continue available until expended. Is there a balance of this left over?

Mr. TITTMANN. I think not. Certainly not any material balance. We generally try to keep a little balance left over. We practically expend that balance. On page 8 you will find the total expense \$6,121. Those are nearly all fixed charges. We continue right along for tidal observations.

#### OFFSHORE SOUNDINGS AND EXAMINATION OF REPORTED DANGERS.

The CHAIRMAN. The next item is for offshore soundings and examination of reported dangers on the coasts of the United States and of coasts under the jurisdiction of the United States, and to continue the compilation of the Coast Pilot, and to make special hydrographic examinations, and so forth, \$15,000. Do you, in using that language, intend to include the Philippine Islands and Porto Rico?

Mr. TITTMANN. Yes; they are included in that. That has been so ever since they were acquired.

The CHAIRMAN. And your appropriation there is the same?

Mr. TITTMANN. Yes.

The CHAIRMAN. There is a small balance left over at the close of the last fiscal year in that item of about \$2,400.

Mr. TITTMANN. Those items vary. It depends upon how much we do under that.

The CHAIRMAN. And that item is not immediately available?

Mr. TITTMANN. No, sir.

#### CONTINUING MAGNETIC OBSERVATIONS AND ESTABLISHING MERIDIAN LINES.

The CHAIRMAN. The next item is for continuing magnetic observations, and to establish meridian lines, and so forth. How much was disbursed during the fiscal year out of that appropriation?

Mr. TITTMANN. I can only tell you offhand.

The CHAIRMAN. Will your expenditures in the next fiscal year under both of these heads be as great as those during the present fiscal year and the last fiscal year?

Mr. TITTMANN. Yes, sir; those are very narrow margins.

The CHAIRMAN. Is this work under the head of "Offshore soundings and continuing magnetic observations" included in your general plan for the coming, or the next fiscal year?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. Including the plan of work laid out?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. As a necessary part of it?

Mr. TITTMANN. A very essential part of it.

#### SPECIAL SURVEYS REQUIRED BY THE LIGHT-HOUSE BOARD.

The CHAIRMAN. The next item is "For any special surveys that may be required by the Light-House Board or other proper authority, and contingent expenses incident thereto, to be immediately available." What other authority that the Light-House Board can call upon you for special services?

Mr. TITTMANN. The State Department, for instance.

Mr. SULLIVAN. For what purpose?

Mr. TITTMANN. Perhaps I could illustrate best by stating upon what I base that. Not only on tradition and fact, but upon this, that some years ago the State Department was engaging with the British Government for re-marking the boundary along the forty-ninth parallel, and the matter was brought to the attention of Congress. We were asked to do it—that is, my instruction was that, and Congress gave an increased appropriation for that purpose, simply putting it in there, and said, "You can do it under that." Now, recently we have done the same thing along the Vermont boundary—that is, the surveyors we have are working for the Government, and when the question of negotiation comes up the question is asked us: "What is the condition of that boundary"—that is, how can our State Department meet the British, who have knowledge of the same boundary? We sent an officer up there to go over the territory, and

the conditions have been reported. Of course those things don't happen every year, but it is an exceedingly useful and important part of our business. After that, when the State Department comes before you and asks for an appropriation for a boundary, this item is no longer available for that.

The CHAIRMAN. How frequently are you called upon by the Light-House Board to make surveys?

Mr. TITTMANN. Not very frequently. We are called upon in out-of-the-way places; for instance, we were called upon to make some special surveys through Unamak Pass a few years ago, and they wanted surveys at Resurrection Bay. They may call upon me at any time for something of that kind. Of course if we have the data there is no expense under this paragraph, but it gives us some leeway to have the item.

The CHAIRMAN. At the beginning of the fiscal year 1905 you had available \$30,484 in addition to the appropriation of \$12,000, making for the current year an appropriation of \$42,484.

Mr. TITTMANN. We spent that, I think.

The CHAIRMAN. And you expended during the fiscal year 1905, \$10,822, leaving a balance at the beginning of this fiscal year of \$31,661, which, with the appropriation for the current year, would make \$43,661. That is on page 16.

Mr. TITTMANN. Now, in regard to that, we last year went on the boundary from Lake Champlain to the head of the St. Croix River, and completed that reconnaissance for the State Department.

Mr. SULLIVAN. That was the Vermont boundary you spoke of?

Mr. TITTMANN. Yes.

Mr. SULLIVAN. You did not survey a land boundary?

Mr. TITTMANN. No; this was an international boundary.

The CHAIRMAN. International land boundary?

Mr. TITTMANN. Yes; but a water boundary where it strikes the water. Then, I think, we also charged to that a call that we got from the War Department for making special soundings for the laying of a cable. They had an appropriation for laying a cable between Valdez and the Resurrection Bay, and called upon us for charts which did not exist; and while we could not make the charts—that was too slow a process—we charged the special survey, the sounding for the cable, I think, to that appropriation.

The CHAIRMAN. What is the necessity for appropriating anything for this Service for the coming fiscal year? We expended from this appropriation \$10,529.64 during the last fiscal year, and do you think you will expend any more during the current fiscal year than you did during the last fiscal year?

Mr. TITTMANN. During the current fiscal year I think we have expended more. I am sorry I can not give you that exactly, but I think we have used up that appropriation. I can tell you that later on, because I think those special services were made in connection with cable laying.

The CHAIRMAN. Do you mean your expenditures during the current fiscal year are greater than they were during the last fiscal year?

Mr. TITTMANN. They were, if we charged that cable laying to it, and the boundary business.

The CHAIRMAN. Have you performed any special service this year since last July?

Mr. TITTMANN. Yes.

The CHAIRMAN. What service have you been performing since last year; what special service?

Mr. TITTMANN. I just mentioned, I think, one; we made the Vermont boundary survey.

The CHAIRMAN. Since last July?

Mr. TITTMANN. Yes.

The CHAIRMAN. Do you think of any other?

Mr. TITTMANN. I think the cable was laid before. I think that is probably all.

Mr. SMITH. You might furnish us that information to date—the balance up to date under that item.

URGENT OBJECTS NOT HEREINBEFORE NAMED.

The CHAIRMAN. The next is for objects not hereinbefore named that may be deemed urgent, and so forth, \$4,000.

Mr. TITTMANN. In regard to that I have a note here that refers to the latter part of it. It says the expense of attendance of the American delegate at the meetings of the International Geodetic Association, not to exceed \$550. It is not my purpose to ask for any increased appropriation there, but to ask you whether you would permit a change in the wording. It says here "the American delegate." The laws says "The President is authorized to appoint delegates who shall be officers of the Coast and Geodetic Survey." My desire is that in order to make that accounting possible that this be made to conform to the law, and make it "delegates" instead of "delegate."

The CHAIRMAN. Plural instead of singular?

Mr. TITTMANN. Yes.

The CHAIRMAN. Do you know whether there is any balance of this appropriation?

Mr. TITTMANN. I think very likely there is, although I will give you that, if you want to know what it is, up to date.

The CHAIRMAN. How frequently does this association meet?

Mr. TITTMANN. About every two years. We are to have a meeting this year.

The CHAIRMAN. What time this year?

Mr. TITTMANN. Probably in September.

The CHAIRMAN. Then it will come out of the next fiscal year?

Mr. TITTMANN. Yes.

Mr. SULLIVAN. What "objects not hereinbefore named" have you ascertained occur regularly from year to year? Take the fiscal year 1905; what was the \$4,000 applied to excepting for the purpose of delegate meetings, your field force temporarily ordered to Washington for consultation, and the preliminary plans and specifications of vessels? Besides those three, what other objects are there in that item in 1905?

Mr. TITTMANN. I really don't know of any just now, but here is the reason for the item: It is a small appropriation, as you see, and our appropriations are specific. If we have an appropriation for a particular thing, of course we can not purchase out of any other appropriation anything of that kind. Oftentimes where a paragraph things are named, it imposes a restriction on other expendi-

tures. Where things are not named, and those things occur—but I think I can give you one instance right now. Some months ago the Treasury Department put us out of the Appraisers' building. We had no appropriation to pay rent, to provide quarters for our people in San Francisco, where we have a suboffice; but having this appropriation for "objects not hereinbefore named that may be deemed urgent" we were able to hire our present quarters in San Francisco. I am glad to say that our records, our instruments, and everything in those quarters are saved.

The CHAIRMAN. Was the building destroyed?

Mr. TITTMANN. No; it was not destroyed. I took rooms in the Columbus Bank building, and we paid seventy-five or one hundred dollars a month.

Mr. SULLIVAN. Then this is in reality a contingent fund?

Mr. TITTMANN. It is in one sense, but it is not a good plan to call it a contingent fund. There are a thousand and one rulings of the Comptroller in regard to contingent funds.

The CHAIRMAN. An expenditure for any other purpose out of this appropriation than one of the purposes named in this paragraph would not be approved by the Auditor or Comptroller?

Mr. TITTMANN. No object specified in this appropriation by law could be paid out of this paragraph, but when an emergency arises we have a little latitude. Our money is carefully husbanded. It is for objects that may be deemed urgent.

The CHAIRMAN. Then you go on and specify those objects which are included.

Mr. TITTMANN. That is in order to make it permissive. Of course, the form of this appropriation is based upon long experience and on difficulties that have arisen from time to time. We are an old institution; we have been running for nearly a hundred years.

The CHAIRMAN. My interpretation would be that everything else is excluded.

Mr. SULLIVAN. But he says no—in other words, he is authorized to expend out of this \$4,000 money for the three objects specifically mentioned here, and also for any others which are not mentioned and which are not also mentioned in the previous paragraph.

Mr. TITTMANN. I will tell you why we are justified in thinking that. Probably this paragraph originally read: "For objects not hereinbefore named that may be deemed urgent." Now, when we found we had no provision, for instance, for paying for plans and specifications for a ship, we were absolutely helpless. If we needed a ship we had no money to get a basis for an estimate of cost, and we put in this appropriation "Including the preparation or purchase of preliminary plans;" and it was not at all to limit the authority we had before. That was really intended as additional.

Mr. TAYLOR. And the Comptroller did not regard specifications and plans as coming under the term "urgent."

Mr. TITTMANN. No.

Mr. TAYLOR. So you had to get something to justify you in that expenditure?

Mr. TITTMANN. Yes; we are not lawyers. As a rule we draw up these things and submit them to you; and at that time the object is perfectly well understood, because the talk before the committee is just as free as it has been here to-day.

The CHAIRMAN. Have you ever experienced any difficulty in having your payments out of this appropriation allowed, where the payment was for any object other than the objects specified?

Mr. TITTMANN. We have not so far.

The CHAIRMAN. Have you made any payments out of this appropriation for objects other than those following the word "including?"

Mr. TITTMANN. I think I can say we have. I can not state the cases just now, but I know we have.

The CHAIRMAN. The next item is the 10 per cent interchangeable proviso. Have you exercised that authority in respect to any of the preceding items; and if so, which ones, and to what extent?

Mr. TITTMANN. We always, of course, exercise it within the extent permitted by the law.

The CHAIRMAN. Have you found this to be necessary in your experience?

Mr. TITTMANN. Oh, yes; very necessary. We have borrowed, I know, especially for that appropriation for tides. We only borrowed from one of the other appropriations for that. Of course the total appropriation is, I believe, \$6,400, and we could only borrow \$640 to give us a little leeway. We have borrowed from the Pacific coast for the Atlantic coast. We did not do it last year, but we may do it this year, and I think I stated before according to the allotment I will have a balance in June on the Atlantic coast appropriation of about \$880. We may spend more or less, but we have that margin.

The CHAIRMAN. You don't borrow in the sense that you pay back the amount.

Mr. TITTMANN. Of course not. I simply mean that we transfer that 10 per cent.

The CHAIRMAN. Ten per cent from one item to another?

Mr. TITTMANN. Yes.

Mr. SMITH. You transferred, as I remember it, \$15,000 on the off-shore soundings last year to the State surveys.

Mr. TITTMANN. I don't remember that. We do do it; it is very important, because, you see, these specific items are very rigid.

Mr. SMITH. This reference to Document No. 604 refers to the amount added for the Philippine service, does it?

Mr. TITTMANN. Yes, sir.

#### NUMBER OF VESSELS.

Mr. SMITH. How many vessels, all told, have you got in the Coast and Geodetic Survey, outside of the Philippines?

Mr. TITTMANN. Let me name them over and count them on my fingers, if you please. On the Atlantic we have the *Bache*, the *Explorer*, the *Endeavor*, and the *Hydrographer*, which are steamers. The *Matchless* and the *Transit* are small schooners. On the Pacific coast we have the *Patterson* and the *Gedney* and the *McArthur* and the *Yukon* and the *Taku* and the *Cosmos*. In the Philippines we have the *Pathfinder*.

That makes up our regular list of vessels, I believe.

Mr. SULLIVAN. That makes 13. You have 6 on the Pacific coast?

Mr. TITTMANN. Yes, sir.

Mr. SULLIVAN. There are 13, then—6 on the Atlantic and 1 in the Philippines?

Mr. SMITH. Is this *Pathfinder* one of the four you referred to this morning? How many vessels have you got in the Philippines?

Mr. TITTMANN. The only Coast Survey vessel is the *Pathfinder*. The other vessels are furnished by the Philippine government. The *Pathfinder* is the one I referred to.

Mr. SMITH. You have four others that are furnished by the Philippine government?

Mr. TITTMANN. Yes; the *Research*, the *Fathomer*, the *Marinduque*, and the *Romblon*.

#### COST OF THE VESSELS.

Mr. SMITH. Can you give us any estimate at all of the cost of the whole fleet that belongs to the United States? What has been expended on the whole fleet in original construction?

Mr. TITTMANN. No; I would have to go back to find out what it cost, but I can tell you later.

Mr. SULLIVAN. Approximately?

Mr. TITTMANN. Yes; the *Endeavor*, one of the steamers on this coast, was originally a Confederate gunboat.

Mr. SULLIVAN. He is only inquiring as to the cost now.

Mr. TITTMANN. The *Hydrographer* cost us about \$30,000. I should say that the *Bache* and the *Explorer* together cost \$160,000 or \$170,000. I do not know exactly. Those schooners I could not tell you about.

Mr. SMITH. To come right to the point I am trying to get at, I want to know about what is the percentage of the value of these vessels that you ask for repairs?

Mr. TITTMANN. Well, suppose we go ahead on that, and then, if you will allow me to supply the information later, it can, if you desire, be inserted in the hearing in place of the rough estimate which I can make now.

DEPARTMENT OF COMMERCE AND LABOR,  
COAST AND GEODETIC SURVEY,  
Washington, April 27, 1906.

SIR: As requested by the committee at the hearing yesterday, I transmit herewith a statement of the cost of Coast and Geodetic Survey vessels, and of vessels belonging to the Philippine government temporarily transferred to this Service and employed on Coast Survey duty. The total cost of the former (naked hulls, machinery, spars, and rigging, and exclusive of outfit, etc.) is \$662,218.62. The annual appropriation for repairs to Coast Survey vessels is \$29,500, or 4.6 per cent of the above amount. As your committee is aware, this is not adequate for the purpose of keeping the vessels in condition, and during the last five years the deficiency asked for and granted for this purpose has averaged \$17,589.56 per year.

The total cost of the vessels owned by the Philippine government and transferred to and in use by this Service is \$228,346.28.

I also inclose a statement of the balance under "Special surveys" and "Objects not named," both for the close of the last fiscal year and for this date. In this connection it should be borne in mind that the active season is just now opening, particularly on the western coast of the United States, and consequently these amounts will be materially reduced during the two coming months.

Very respectfully,

O. H. TITTMANN,  
Superintendent.

The CHAIRMAN OF THE COMMITTEE ON APPROPRIATIONS,  
House of Representatives, Washington, D. C.

APRIL 27, 1906.

*Cost of Coast and Geodetic Survey vessels.*

<i>Bache</i> (rebuilt).....	\$69,404.58
<i>Endeavor</i> .....	20,400.00
<i>Explorer</i> .....	100,543.29
<i>Gedney</i> .....	63,400.00
<i>Hydrographer</i> .....	20,000.00
<i>Matchless</i> (transferred to the Survey) (estimated).....	50,000.00
<i>McArthur</i> .....	55,000.00
<i>Patterson</i> .....	79,400.00
<i>Pathfinder</i> .....	170,000.00
<i>Transit</i> .....	3,300.00
<i>Taku</i> .....	11,844.35
<i>Yukon</i> .....	10,926.40
<i>Cosmos</i> .....	8,000.00
<b>Total</b> .....	<b>662,218.62</b>

*Cost of vessels belonging to the Philippine government and used by the Coast and Geodetic Survey, including original outfit.*

<i>Fathomer</i> .....	\$74,930.00
<i>Romblon</i> .....	67,673.64
<i>Marinduque</i> .....	67,673.64
<i>Research</i> .....	18,069.00
<b>Total</b> .....	<b>228,346.28</b>

## SPECIAL SURVEYS.

June 30, 1905 (including \$12,000 for current year).....	\$31,669.55
April 27, 1906.....	10,090.18

## OBJECTS NOT NAMED.

June 30, 1905.....	\$3,029.58
April 27, 1906.....	2,549.63

## REPAIRS OF VESSELS.

Mr. SMITH. Were these estimates revised after you sent them in?

Mr. TITTMANN. You mean by the Department?

Mr. SMITH. Yes.

Mr. TITTMANN. Yes, sir.

Mr. SMITH. Did you have a deficiency this last year?

Mr. TITTMANN. Yes; \$25,000 which you granted.

Mr. SMITH. That has gone into the urgent deficiency?

Mr. TITTMANN. Yes; that has gone into the urgent deficiency.

Mr. SMITH. That is the largest appropriation, then, for the last fiscal year that you have ever had by far under this heading—the one for 1906 and the deficiency?

Mr. TITTMANN. No; we have had deficiencies frequently.

Mr. SMITH. But you practically had \$30,000, and if you got \$25,000 deficiency that gave you \$55,000.

Mr. TITTMANN. That will practically be expended on the one ship, you know. That was a ship injured in a tornado, and that was for repairing her.

Mr. SMITH. That was for a specific ship in the estimates?

Mr. TITTMANN. No; we made the estimate for the fleet, because we had enough money to repair that ship, but it would have utterly deprived us of any money for getting the other ships ready.

Mr. SMITH. It was practically all consumed on that ship?

Mr. TITTMANN. Yes, sir.

May I be permitted to say one thing about that? If you will take vessels of the same kind in the Navy, you will find that to keep them in repair, on the average for a ship like the *Pathfinder*, it will cost about \$20,000 a year. We do not put our ships in quite so high a degree of efficiency as the naval ships, and yet our vessels are steaming all the time and working all the time, so that this is an exceedingly small appropriation. I am quite sure that everybody who is familiar with vessels must know that this is entirely inadequate, and experience has shown it. The committee has always been ready, when an accident has happened, to accept our statement and give us a deficiency. But after all that does not meet the need for repairs.

Mr. SMITH. Let me ask you: Has not your application for the increase of \$16,000 on this item been based on the taking over of the Philippine vessels? Is not that a very large amount for these small craft which you are going to take over there?

Mr. TITTMANN. No, sir; it is not. They are not so small. These two coast guard ships are as large as our two crack Atlantic vessels. Those are of about 250 tons.\*

Mr. SMITH. Did I understand you to say this morning that they were in bad repair?

Mr. TITTMANN. No, sir; I did not mean to convey that impression.

Mr. SMITH. How have they been kept up—by the Philippine government?

Mr. TITTMANN. Yes, sir; entirely. We have no money to pay on those.

Mr. SMITH. Have they been well kept up by the Philippine government?

Mr. TITTMANN. I do not know as to details, because they were not built under our direction. I think those coast guard ships cost between \$60,000 and \$70,000. They were built in Japan.

Mr. SMITH. Sixteen thousand dollars for them would be out of proportion to the amount you have been getting for the others?

Mr. TITTMANN. No, sir. We ought to have about \$4,000 a year for each vessel of that size for repairs.

Mr. SMITH. You have been getting \$30,000 a year, in round numbers, for twelve vessels. That is \$2,500 a year for each on the average.

Mr. TITTMANN. Yes; but you will add in deficiencies we have been getting.

Mr. SMITH. Adding in the deficiencies, it would be only about \$3,000 for each, the highest point you have reached. Now, you ask for \$16,000 for these vessels in the Philippines, so that that would be much more relatively than you have been getting for your own fleet here.

Mr. TITTMANN. You mean those one or two or three or four ships?

Mr. SMITH. Yes. You never got over \$3,000 apiece for your vessels here at home?

Mr. TITTMANN. We sometimes do not repair them, and when they get so bad that we can not do anything with them we try to get rid of them.

Mr. SMITH. Is it not more, relatively, than you have been getting for home ships?

Mr. TITTMANN. No, sir.

Mr. SMITH. Where have you been getting it if not from this appropriation?

Mr. TITTMANN. I know that we have figured on the average cost of repairs of vessels. We certainly did not spend this year as much as I am saying now. You are quite right. That would go on for a few years, and then would come a big appropriation of \$20,000 or \$25,000 to make up for the past year.

Mr. SMITH. You have never had as big an appropriation as \$20,000 or \$25,000, except this year.

Mr. TITTMANN. You will notice that we have been expending very much more than appears here, if you count in the deficiencies.

Mr. SMITH. I have all the deficiencies here for fourteen years. You had \$25,000 most of the time for the early years, and then one year you got \$44,000; but that would not make you average \$30,000.

Mr. TITTMANN. I think that the proposed \$16,000 for these vessels that are working all the time is very little money. I will put it that way.

Mr. SMITH. It is certainly more, so far as I can see, than you have been getting for vessels here at home.

Mr. TITTMANN. I want to be on the safe side. We had to divide up the appropriation in order to submit it to you in proper form, and, I think, as you did not want us to incur deficiencies and come before Congress with any deficiency, we ought to get an adequate allowance for the repairs of vessels. I have always said—and have been before this committee time and time again—that this amount that we have been getting is entirely inadequate. I have recently had a newspaper clipping that was sent to me from Seattle, calling attention to what they call “the three old-timers,” and blaming me for allowing people to go to sea in them. It is said that the men who went to Alaska in them never knew if they were coming back again. That is the sort of talk we hear from critical people.

Mr. BROWNLOW. Your regular estimate, Mr. Tittmann, is \$30,000?

Mr. TITTMANN. Yes, sir.

Mr. BROWNLOW. Now, House Document No. 604 comes in for \$16,000 for repairs?

Mr. TITTMANN. Yes, sir.

Mr. BROWNLOW. That is \$46,000. Is this \$16,000 for this year only on a regular appropriation?

Mr. TITTMANN. That would be a regular appropriation. If we take over those vessels we would need that probably every year. I think there is no doubt about that.

Mr. SMITH. That is the allowance for these four extra vessels?

Mr. SULLIVAN. Does the cost of these four vessels in the Philippines average about the same as the others?

Mr. TITTMANN. I think so. I am not able to tell you that exactly. I think of those coast-guard ships, the two that have been turned over to us cost between \$60,000 and \$70,000.

Mr. SULLIVAN. You can find out all the cost of these vessels, so that you can put an exact statement into this record?

Mr. TITTMANN. Yes, sir; I think so.

## OFFICERS AND MEN, VESSELS.

Mr. SMITH. Now we will pass to "Officers and men, vessels, Coast and Geodetic Survey." On this you have had the same appropriation for many years, and ask the same now unless the Philippine matter be added, which we will omit for the present. What was your balance for 1905?

Mr. TITTMANN. I think we had several thousand dollars. It is all given here in this document, gentlemen.

Mr. SMITH. We want it in the hearings, if you please.

Mr. TITTMANN. Perhaps you have looked that up and can help me out.

Mr. SMITH. The statements there made are not arranged in accordance with the items of this bill, so that it is hard to follow them. If every heading in that was in accordance with the headings in this bill there would be no trouble in following them.

Mr. TITTMANN. I think I can find that in a moment, if you will bear with me. It ought to be under "Manning and equipment."

Mr. TAYLOR. Look on the last page. There is a general recapitulation there. I do not know whether you will find it anywhere else in the document.

Mr. TITTMANN. The unexpended balance last year was \$8,077.18. That is on page 13 of the document.

Mr. SMITH. This item, so long as your fleet is not increased, is practically uniform, is it, in the amount of expense?

Mr. TITTMANN. The condition is like this: If we had all our vessels manned—and that is the economical way—I would have an annual deficiency of \$35,000; that is to say, if we had the complement and officers that go with the ships. But when the vessels come back from Alaska, for instance—the vessels on the Pacific coast—we discharge as many of the crew as we can and lay them up for the winter, because we can not work them in Alaska, and it is not economical to work them during the winter where surveys are needed, and, in fact, we have not money enough to keep them going. That has this great disadvantage: That the petty officers and the seamen who are trained to special work, like the leadmen, for example, have to be discharged, so that we do not start in with the full effective force—effective through training—at the next season. Besides that, when we discharge the crews some time is always consumed in that and in hiring men again. Time is consumed, so that we gain or save only a part of the money which would apparently be gained if we could cut off immediately all the pay of the crews.

Now, this year, for instance, I have arranged so that the *Endeavor* and another vessel shall have their crews discharged in order that I may have enough money to start the vessels on their Alaska trip. In every one of these appropriations you will find a balance, because those ships are very expensive, and we must have some margin. I dare not keep them going till the last moment, you know, and must keep a balance, so that the margin is there; but it does not mean that we do not need it.

## SALARIES.

Mr. SMITH. Under the next head of "Salaries, Coast and Geodetic Survey," the first change you propose to make is on page 84, to raise six aids from \$900 to \$1,100 a year. What is the necessity for that?

Mr. TITTMANN. My original proposition was—and that I have desired the Department to do—was not to keep any \$720 men at all, but to give them all \$900. The reason is that we can not keep our men. They come and go, so that we have not been able to retain the men that we secure. The pay is too small and I thought it very much better to start in at \$900. These men are all men who have passed through our universities and colleges. They have had expensive educations. We require that before they can enter the Survey they must pass a Civil Service examination, and they can do better outside—that is all there is to it; very much better.

Mr. SMITH. Would not that be practically true even at these increased salaries? That is, if the college man is of any account he is going to be worth more than \$900 in a short time?

Mr. TITTMANN. Yes; but if a man is told that he is going to get \$720 or is told that he is going to get \$900 he would rather take the \$900, and I think that might help us over some particular difficulty. We ought really to have a much larger force of trained assistants than we have.

Mr. SMITH. What is the distinction between an assistant and an aid?

Mr. TITTMANN. Nothing, except that the assistant is an aid who has served a number of years. Of course, a college-bred man does not know this business. He has only got the foundation for it.

Mr. SMITH. How many years does a man have to serve as an aid before he becomes an assistant?

Mr. TITTMANN. He must be promoted to it. Sometimes we promote them after two or three years' service. But their chances are very slight under this system of having specific appropriations. They must wait until somebody dies or resigns; and the trouble is that very good men resign, so that I have tried this as a remedy.

I thought this might help us. It is shabby pay, you know, even under any circumstances. Just think what these men have to do. They have no abiding place. They come here to-day, and I send them to the Philippines or Alaska; and the work in Alaska is terrific, you know. A good man, if he loves the work—for there is no financial future in it—will stay. But if we keep losing these men it is very expensive to the Government. We train them, and then they become valuable to other people, and they go. Of course we can not prevent that entirely.

Mr. SMITH. If this is an education during the period a man is an aid—an education for a calling—the fact that the compensation is small would not necessarily drive men away from it.

Mr. TITTMANN. It is very special, but the truth is, of course, that if a person has achieved any sort of rank in the Coast Survey he is looked upon as available for a great many other things. It is a high recommendation wherever he goes.

Mr. SMITH. Well, now, what do you say as to the necessity in your service of the number of employees that you have under this head?

Mr. TITTMANN. I say under that that we ought to have about a half dozen more assistants at about \$1,200 each.

Mr. SMITH. What amount did this aggregate last year? Did it consume the appropriation?

Mr. TITTMANN. It consumed the appropriation, except that when men are sick beyond the thirty days allowed them, or when they resign, or sometimes when they take a furlough without pay, or when there

is a vacancy that we do not fill immediately because we take time to pick the best man, a little money may be left over. Otherwise it is all consumed.

PAY OF OFFICE FORCE.

Mr. SMITH. Passing to the pay of office force, I notice that you insert the word "special" here in the paragraph covering the disbursing agent, as further defining that officer.

Mr. TITTMANN. That is not my action. Of course it is mine in one sense, but only in the sense that it is the Department's action. I do not know why they propose the change. I do not know anything about it at all.

Mr. SMITH. You have only one disbursing officer?

Mr. TITTMANN. Yes, sir; only one, and I think he has been otherwise designated right along. I do not know why this has been put in. It is probably in accordance with a general policy of which I am not informed and am not familiar with.

Mr. SMITH. There seems to be no other change in this until you ask for an additional chart corrector.

Mr. TITTMANN. Pardon me for one moment. There is an estimate for topographic and hydrographic draftsmen.

Mr. SMITH. Yes; I missed that heading. You ask for one additional at \$1,400, and then you ask for another additional at \$1,200?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. What are the necessities for these additions to the force?

Mr. TITTMANN. It is in regard to these just as it is in regard to our engravers. Our force is very small.

Mr. SMITH. What is the necessity for this increase of two?

Mr. TITTMANN. To increase the output and to keep our trained men.

Mr. TAYLOR. Is not that simply promotions?

Mr. TITTMANN. One of them is a promotion.

Mr. SMITH. The other is an entirely new place. Then you strike out one at \$700.

Mr. TITTMANN. That is because we can not get anybody at that rate.

Mr. SMITH. It means one new man and one increase of salary. That is what it amounts to, is it not.

Mr. TITTMANN. Yes, sir.

Mr. SMITH. For astronomical, geodetic, tidal, and miscellaneous computers, you ask for two in place of one?

Mr. TITTMANN. Yes; that is intended for a promotion. It is intended to pay something like an adequate salary to one very able man that we have there.

Mr. SMITH. You make an increase of three and a reduction of one?

Mr. TITTMANN. No; that is in another item. Then you come to copperplate engravers.

Mr. SMITH. There is only one change in computers?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. So that that is the only change in the computers?

Mr. TITTMANN. Yes.

Mr. SMITH. What is a computer?

Mr. TITTMANN. We have a great many computers in the office. They compute the work that is done in the field and sent in, and they put it into shape and compute it. For instance, a party goes out and makes a trigonometric survey, or a survey of any kind—a hydrographic

survey—and the survey is compiled in the office; the results are computed and correlated with the rest of the work.

Mr. SMITH. What I want to know is, what has he to know about the Coast and Geodetic Survey, aside from being a mathematician?

Mr. TITTMANN. This man for promotion was formerly a field officer. He was a youngster then, and went into the computing division because he had a great many children and had to look after them. I am only mentioning that to show that he has been in this profession a long time and has had a good deal of experience in the field, and he rendered very distinguished service.

I may mention the fact that when the Alaska Tribunal was preparing for its sessions in London, Mr. David K. Watson, one of the principal counsel of the United States, asked me to send a man over to Pennsylvania who could go over the technical part with him, and I sent this computer, and he was with him for several weeks; and later on Mr. Watson came down to Washington and came to see me, and said, "Is it true, Mr. Tittmann, that this man gets only \$1,400 a year?" I said, "Yes." He asked, "Why don't you give him more?" I said, "Because the salaries provided for are specific." He said, "This is a shame." I said, "I agree with you, but I can not help it." I simply want to show you that those are abilities acknowledged by other people; it is not merely that I think so.

Mr. SMITH. Now, passing to the copper-plate engravers, you ask for two at \$1,400 instead of one, and three at \$1,000 each instead of two, and drop out one at \$700.

Mr. TITTMANN. Yes; that is, again, because you can not keep copper-plate engravers at \$700.

Mr. SMITH. One is a promotion and the other two are new men?

Mr. TITTMANN. Yes, sir.

Mr. SMITH. How do these copper-plate engravers' salaries compare with what is ordinarily paid to copper-plate engravers outside the Government service?

Mr. TITTMANN. I think this pay probably corresponds very well with what is paid outside and in other offices. There is so much difference, of course, between individuals that it is difficult to answer that.

Mr. SMITH. Now, under the head of electrotypers, you have an additional man there?

Mr. TITTMANN. That is a promotion. I would like to speak about that, if you will permit me. That means that one \$1,800 man would get the \$2,000 place. That is the chief mechanic in the office.

Mr. BROWNLOW. You reduce one at \$1,800 and create a place at \$2,000?

Mr. TAYLOR. He takes one from the \$1,800 place and promotes him to the \$2,000.

Mr. BROWNLOW. It is only really an increased appropriation of \$200.

Mr. TITTMANN. That is what it amounts to.

Now, I would like to say in regard to this man that I know that he is in great demand. But apart from that, of course, when one of my subordinates comes to me and says, "I am offered more money outside," I say, "I am very sorry, but of course you ought to go." This man is very much devoted to his duties. He has done very remarkable things and I would like very much to recognize his ability and services in some way. It is difficult to do that. The only way I can do it

is to come to you gentlemen, and tell you. It is the only way, but it ought to be done.

Mr. SMITH. Is there any portion of this force under this general heading that can be eliminated?

Mr. TITTMANN. No, sir; we need more.

Mr. SMITH. What was your expense under this heading last year?

Mr. TITTMANN. It was just about the same amount. I can look it up here and tell you.

Mr. TAYLOR. \$48,345.89, leaving a balance of \$2,154.07.

Mr. SMITH. Generally speaking, have your appropriations increased greatly for the Coast and Geodetic Survey as a whole for the last six or seven years?

Mr. TITTMANN. No, sir; they have not.

Mr. SMITH. How do you explain, then, the fact that for so long a time you got along with this item of \$32,000 and below, and now you require over 50 per cent more?

Mr. TITTMANN. Because we have a very much greater output of work. That is the main reason. And I have put in, you see there, a lithographic establishment, which accounts for a portion of it.

Before you dismiss me, may I call your attention to one of the difficulties that I have?

Mr. TAYLOR. We want to ask you a question on that before you speak. You see the words there on page 88, "miscellaneous expenses?" Who proposed the amendment there, "miscellaneous expenses?" Please explain that, and say if you really desire it. What is the necessity for that additional language?

Mr. SMITH. Is it not contingencies of all kinds?

Mr. TITTMANN. Let me say that my recollection of this wording, "miscellaneous expenses," is that it was in some older appropriation bills, and some years ago, when the appropriation bill was made up, we could not see any particular reason for it and struck it out; then we ran up against rulings of the Comptroller which made distinctions between miscellaneous expenses and contingencies, or made no distinction—I do not remember what the exact facts are—but I know we decided that we would very much rather have it in there, because it would make it more flexible.

Mr. TAYLOR. More elastic?

Mr. TITTMANN. Yes; and it would differentiate it, anyway. For instance, contingent expenses would go up to the Department and be managed there, while miscellaneous expenses might be managed by us. I am sure that is about my recollection.

The CHAIRMAN. What do you mean by saying that one would go to the Department and the other would be managed by your Bureau? Do you mean expended?

Mr. TITTMANN. Yes.

The CHAIRMAN. You disburse all these appropriations in your Department, do you not?

Mr. TITTMANN. We do, except that certain contingencies are taken up by the Department, such as postage and small matters of that kind, which are handled entirely by the Department. We send foreign letters up to the Department unsealed, and they put stamps on them and send them.

The CHAIRMAN. Might it not be true that the presence of these words, "miscellaneous expenses," here in this estimate is due to the

same cause that we find the presence of similar words elsewhere is due to, namely, that some clerk in the Department, in writing up the estimates, took an old appropriation bill instead of a current one?

Mr. TITTMANN. No, sir; not in this case. I am correct in my statement. This was the wording years ago.

The CHAIRMAN. So you had an object in putting this in? It was not an accident? It is not there by accident?

Mr. TITTMANN. No, sir; it is not an accident. We put that in ourselves. It only recurs to an old form. The person who writes out the items said he struck it out because he did not see the use of it, and let it go, but we found that there is use for it.

#### OFFICE EXPENSES—LIMITATION AS TO SUBSISTENCE.

The CHAIRMAN. The next item, Mr. Tittmann, provides "That no part of the money herein appropriated for the Coast and Geodetic Survey shall be available to civilian or other officers for subsistence while on duty at Washington (except as hereinbefore provided for officers of the field force ordered to Washington for short periods of consultation with the Superintendent), except as now provided by law." Now, under that exception what do you include?

Mr. TITTMANN. If, for instance, I order a man here from the Pacific coast for a week or two weeks without assigning him to the office, but simply to get his views on the best policy to be pursued, he gets his commutation. Nobody else does.

The CHAIRMAN. If you order him here and give him a position in the office, he gets nothing?

Mr. TITTMANN. He gets nothing; he is supposed then to have finished his travel. That is about the way.

The CHAIRMAN. Suppose you order an officer from the Pacific coast here to the city of Washington. What part of his expenses is borne by the Government in coming on here if he remains here for several weeks?

Mr. TITTMANN. Actual expenses. That is, his transportation; and of course I include in that the sleeping-car fare and meals.

The CHAIRMAN. I understood he did not get his meals.

Mr. TITTMANN. Oh, yes; he does.

Mr. SULLIVAN. Does he when he gets here to Washington?

Mr. TITTMANN. No, sir.

Mr. TAYLOR. That is what we want to know. Does he get his meals and board after he arrives in Washington?

Mr. TITTMANN. No, sir. It ceases immediately after he goes on duty in Washington.

The CHAIRMAN. It seems to me that when an officer is ordered in here, unless he comes to remain here permanently, or for a year, this language ought to be sufficiently broad to enable you to compensate him for his expenses.

Mr. TITTMANN. No. You see, this is for short periods of consultation with the superintendent. What we used to do was this: When an officer came here we would allow him two days for hotel expenses; that is, if he knew he was to stay here. That was part of the travel. A man comes here, and he has to go to a hotel, and comes to see me to find out what his duties are. I may send him right off or I may say, "You have to stay here at the office now." From that day when

he arrives his hotel expenses must be borne by him, and he hunts around for a boarding place and a cheaper place of living.

The Auditors and Comptroller have ruled that we can not do that any more. But it seems a fair and proper thing. These are not regulations that I may make. The regulations get to be modified by Auditors and the Comptroller; and yet these men, especially the men that are particularly valuable and the ones that we have to get here and order off, we punish by involving on them additional expenses. The better a man is the more he has to pay. He has to give heavy bonds. All these men are bonded. We have about 76 officers, each one of whom gives from \$2,000 to \$5,000 bond.

The CHAIRMAN. Is Captain Dickens a bonded officer?

Mr. TITTMANN. Yes, sir.

The CHAIRMAN. What is his compensation?

Mr. TITTMANN. Two thousand two hundred dollars or \$2,500. It was increased when he was here last time. He was promoted by \$200, or something like that. I really do not know what it is exactly.

#### COMPENSATION TO OFFICERS.

If you will allow me, gentlemen, I want to make a remark in regard to that question of compensation to officers. I have one man here, for instance, who is getting \$3,000 a year. That seems like fair pay and good pay, but about two years ago the president of the Institute of Technology at Boston, who was formerly Superintendent of the Coast and Geodetic Survey and knew a good deal about him, came to me and said, "I am going to offer this man \$4,000. I must have him." I said, "Do not do it. The Survey can not spare him. He is too able. We must have him." He said, "I must have him." So he went and offered him \$4,000. The man came to me and said, "What ought I to do? I have a big family, and I owe it to them and to myself to accept that offer." My answer was, "I can not argue against that. We have some \$4,000 places. If any one incumbent dies or resigns you shall have one of those places if I am Superintendent at that time." I said, "Do not accept that. Say to him that if he offers you \$6,000 you will consider the offer. You are competent to earn that."

Mr. TAYLOR. Did he get the \$6,000?

Mr. TITTMANN. No, sir; I have got him still.

Mr. TAYLOR. He will get it?

Mr. TITTMANN. Yes, he will get \$10,000 before long. Of course we can not keep him, because he is one of a thousand.

Mr. TAYLOR. He is a \$10,000 man?

Mr. TITTMANN. Yes.

Then I have another man here whom up to a short time I paid \$2,500 a year. When the opportunity offered I moved him up to \$3,000. I have on my desk, now, his resignation, notwithstanding the fact that I have increased him, because he has been offered \$5,000. He said, "I will cooperate with you, and give you all the advice you want." I said, "No; under the laws of Congress I can not take any gratuitous advice." That is our difficulty.

The CHAIRMAN. Now, such men as Captain Dickens—do the officers of his class, as a rule, rank up with him in ability and capacity?

Mr. TITTMANN. Yes, sir. Captain Dickens is a very good man, not only because of his ability to do his technical work; there are so many

other things—faithfulness and reliability, and accuracy in rendering accounts, and ability in the management of men—things which you can not determine by a civil-service examination. You find that out in the course of years. When you get those men you like to keep them, and the Government ought to keep them. I think there is no service like ours under the Government.

The CHAIRMAN. They are not only competent from a technical standpoint, but they are also competent commanders of vessels, too—outside of the scientific part of the work, I mean?

Mr. TITTMANN. Yes; good navigators; command ships and manage men. It makes a bureau officer helpless, you know, when he can not encourage these men.

---

APRIL 26, 1906.

## BUREAU OF FISHERIES.

### STATEMENT OF MR. GEORGE M. BOWERS, COMMISSIONER.

#### OFFICE OF COMMISSIONER.

The CHAIRMAN. The first item of the Bureau of Fisheries, on page 89 of the bill, is for Commissioner, \$5,000. Your estimate for the next fiscal year for the salaries of these people enumerated here I see are the same as the current appropriation. You contemplate no increase, and I do not suppose you contemplate a decrease in the force in your office, do you?

Mr. BOWERS. I did ask for an additional clerk, but the Secretary in submitting the estimate cut that out.

Mr. SMITH. Has there been an increase or a decrease in the business of the Bureau within the last year?

Mr. BOWERS. Of course we increase each year. The number of fish planted is much greater than several years ago, and the number of applications increased each year. But I can get along with the present office force in the office of the Commissioner.

#### OFFICE OF ACCOUNTS.

The CHAIRMAN. Now, as to the office of accounts: Disbursing agent, \$2,000; examiner of accounts, \$1,600; property clerk, \$600, and one clerk of class 1, bookkeeper, \$1,200; total estimate, \$7,800. This is carried in the current appropriation bill; but I see there is no estimate made for it.

Mr. BOWERS. The Secretary submitted an estimate, a letter, on January 30, 1906. I have here a press copy of a letter of the Secretary, which I sent for.

The CHAIRMAN. No regular estimate has reached the committee through the office of the Secretary of the Treasury. Is it a supplemental estimate?

Mr. BOWERS. Yes, sir.

The CHAIRMAN. I think you had better take this up with the Secretary of the Treasury.

Mr. BOWERS. I will simply quote his language (reads):

In the estimate for the same Bureau I omitted an estimate for the office of accounts in the Bureau of Fisheries, believing that the work of that office could be done in the disbursing office of the Department at a greatly reduced cost. In order that the Commissioner of Fisheries may have a competent assistant to look after the accounts, before they are sent to the Department for payment, I request that the estimate for salaries for the Bureau of Fisheries for the fiscal year ending June 30, 1907, be amended by adding a provision for one accountant at \$2,150 per annum.

It is our idea to retain our present disbursing agent as one of those examiners at a salary of \$2,150.

The CHAIRMAN. What is the necessity for this if the disbursements are not to be in your office as heretofore.

Mr. BOWERS. I don't see that any provision has been made for these people in the Department.

The CHAIRMAN. In consequence of that, would their services cease on the 1st of July?

Mr. BOWERS. Yes; there is no provision for these people.

The CHAIRMAN. Is it to provide for the people in the service?

Mr. BOWERS. Of course it is for the service. Now, to give you an estimate: I find that we paid 8,310 vouchers last year from twenty-nine appropriations, and the number of checks was slightly under 13,000. In order to comply with the requirements of the law it is necessary to enter each voucher four times.

Of course it would still be necessary to do that in our office. That is in the daybook. We are keeping an account of each appropriation in an abstract book, showing under a subhead the appropriation as required by Congress, and account current, to enable the disbursing officer to properly record them. An analysis book, in order to render a statement in compliance with the act of Congress showing the expenditures under all the appropriations during the fiscal year. And it will be absolutely necessary for the Bureau, to my mind, to have at least one bookkeeper and one examiner. Each one of these items must be checked, each voucher must be approved before I can approve it or send it to the Department of Commerce and Labor to the disbursing office for payment. Personally, for the best interests of the Bureau of Fisheries, it is absolutely essential that we should retain a bookkeeper at \$1,200, and one of these examiners, say a \$1,600 man.

The CHAIRMAN. Does not the disbursing officer make these examinations for disbursing the funds in addition to your examination?

Mr. BOWERS. The disbursing officer—if a couple of people could be detailed from the office—

The CHAIRMAN. Hasn't he got a force of clerks under him?

Mr. BOWERS. He has a force, but this means the abolishment of my force.

The CHAIRMAN. Does not his force do the work, the same work, that your force has been doing?

Mr. BOWERS. I would not suppose so, not when the examinations are made. The disbursing office simply approves the result of the examiners—the work of the examiners.

The CHAIRMAN. What is there about these vouchers to be examined?

Mr. BOWERS. Every single item under the law must be O. K.'ed, checked off, and added up to see that it is proper, that there can be no mistake. For instance, you might have a voucher and a payment that

probably would only amount to \$100, but that might contain sixty items, and those items are checked off singly by one of those examiners.

The CHAIRMAN. How are they checked?

Mr. BOWERS. Looked over to see that they are correct.

The CHAIRMAN. What information other than the voucher itself does the present check have to determine as to whether they are correct or not?

Mr. BOWERS. Very frequently discrepancies are found; in other words, some individual in the field at some station may submit an account that is not proper. If it is not correct he may have an idea that he is entitled to make a certain expenditure, which will be disapproved by the disbursing agent, or by the Comptroller, and that examiner is sufficiently familiar with those questions to pass upon them.

The CHAIRMAN. Then they must be passed upon again in the disbursing office?

Mr. BOWERS. The disbursing officer simply, I presume, signs the check for their payment after they have been examined. But I am compelled to approve them. There is no necessity, understand, of having them examined twice if I examine them; in other words, if I approve for payment, as Commissioner, there is no necessity of having them examined the second time in the Department of Commerce and Labor.

The CHAIRMAN. If we give you an accountant, that will be the result. will it not—that is, there will be a double examination?

Mr. BOWERS. No; I don't understand that there will be a double examination. He simply O. K.'s each of those items and they are forwarded to me for approval, and I transmit them to the Department of Commerce and Labor.

The CHAIRMAN. Your approval is simply perfunctory, is it not—that is, you approve because he O. K.'s, but do you ever attempt to make any investigation yourself?

Mr. BOWERS. I approve the requisitions before they are sent out, authorizing the expenditure, and then my approval of the voucher is simply perfunctory.

The CHAIRMAN. Does the requisition come back with the voucher?

Mr. BOWERS. Yes, sir.

The CHAIRMAN. Then a new comparison is made between the requisition and the voucher.

Mr. BOWERS. Yes, sir. The requisition may be for a larger amount, understand, than the voucher. The requisition is simply an estimate submitted by the superintendent of one of the stations.

The CHAIRMAN. And the voucher can not exceed the requisition. can it?

Mr. BOWERS. Not unless good reasons are given; or if that be the case, it becomes necessary to approve another requisition.

The CHAIRMAN. Does your requisition go with the voucher to the disbursing officer in the Department of Commerce and Labor?

Mr. BOWERS. Yes, sir.

The CHAIRMAN. And then they must of necessity make the same comparison there before the disbursement is made.

Mr. BOWERS. The position I take is this: I don't care, you understand, to approve a voucher that I don't know is absolutely correct. This examiner, you will understand, the final examiner which they

have given me—one individual can not perform those duties in our office with the present growth of the Bureau of Fisheries.

Mr. BROWNLOW. If this force is taken away from you, then it is physically impossible for you to examine these accounts with your present force?

Mr. BOWERS. It is simply impossible to do it.

Mr. BROWNLOW. And you could not O. K., indorse, or sign those vouchers, or approve them, without an additional force, if this is taken away?

Mr. BOWERS. Unless the present disbursing officer of the Department of Commerce and Labor has sufficient force by which some of their people might be detailed to my office—

Mr. SULLIVAN. If some one detailed from that office makes the same examination which your examiner in your department made, you would not then feel at liberty to O. K. the voucher just as readily as if your own examiner had made it?

Mr. BOWERS. Yes; certainly.

Mr. SULLIVAN. So if we provide a system which affords you one examiner, wherever stationed, that will be sufficient for your purposes?

Mr. BOWERS. One examiner could hardly do it. I would then, in that case, if one examiner only be given, suggest certainly then the bookkeeper. The bookkeeper should be retained under all circumstances.

Mr. SMITH. Don't you understand by this accountant as referred to here, that it is meant a bookkeeper?

Mr. BOWERS. That accountant evidently is the examiner.

Mr. SMITH. I want to ask you if it is not a fact that under your system, Mr. Bowers, these matters all went through this disbursing office, the present disbursing office; then they went over to the Department of Commerce and Labor, and they are examined there again, are they not?

Mr. BOWERS. I am not sufficiently familiar. I presume to some extent there a perfunctory examination was given.

Mr. SMITH. Then they went to the Auditor for the Treasury?

Mr. BOWERS. Presumably so.

Mr. SMITH. As a matter of fact, these things are checked through three different offices. It cost \$7,000 a year to check them in your office.

Mr. BOWERS. Yes; not only to check them—that includes the whole work of the office, you understand. We eliminate the disbursing feature of the office in the future, and all vouchers will be paid direct by the disbursing agent of the Department of Commerce and Labor. The object of the Secretary is with a view to eventually consolidate all of the disbursing officers into one department or probably into one building later on.

Mr. SMITH. If it cost as much to do this work in the other two places as it did this, it would take about 3 per cent of the whole appropriation for auditing and disbursing.

Mr. BOWERS. Heretofore, until that became a part of the Department of Commerce and Labor, our vouchers and recommendations were forwarded direct to the Treasury Department, and under a capable and efficient disbursing officer there has never been any question about them.

Mr. SMITH. Does not every account that is paid by the Government go through the hands of the auditor of the proper department?

Mr. BOWERS. Yes, sir.

Mr. SMITH. So under your old system this would go to the Auditor of the Treasury?

Mr. BOWERS. Yes; and then to the Comptroller for final adjudication.

Mr. SMITH. Do you understand that it goes through four places now; that it goes through your office, and is examined in the Department of Commerce and Labor after it goes there, and then to the Auditor of the Treasury having charge of the Department of Commerce and Labor accounts.

Mr. BOWERS. I am not sufficiently familiar with the work of the disbursing officer outside of my Bureau, but I imagine that you are correct in your version.

Mr. SMITH. That it goes through about four times. Of course, we want to be careful about these matters.

Mr. BOWERS. I understand. I hope that the disbursing officer will remain and more fully explain this item.

Mr. SMITH. You say that even though disbursing takes place in the Department of Commerce and Labor you will need three out of four men that you have in this branch.

Mr. BOWERS. I need two examiners and a bookkeeper.

The CHAIRMAN. What did you mean a moment ago when you said you wanted an accountant?

Mr. BOWERS. He would virtually be one of the examiners. The accountant and the examiner is one and the same thing. It is simply the term of the Secretary used to designate the man.

Mr. SMITH. Isn't this an exorbitant salary for a mere examiner? When he got \$2,200 he was a responsible disbursing agent.

Mr. BOWERS. He got \$2,200 and gave a bond for \$20,000, which cost him \$50 a year.

Mr. SMITH. Actually made the disbursement—made the checks and all that?

Mr. BOWERS. That work was done by the clerks in the office.

Mr. SMITH. He would have no duties of that kind.

Mr. BOWERS. His duties, to my mind, will be more burdensome in the future than in the past. As an examiner of accounts he works harder, but has not as much responsibility.

Mr. SMITH. But it does not take the same-priced man to examine accounts, if somebody else is going to examine them again before they are paid, as it does to have charge of the disbursement of \$800,000 a year.

Mr. BOWERS. This man is a very efficient and capable man. He has been in the service probably fifteen or twenty years.

Mr. SMITH. To make the matter plain, your examiner there before got \$1,600. Does any examiner anywhere get \$2,150 in the Government service?

Mr. BOWERS. I am not at all familiar outside of this one provision. The other clerks in the same grade in their bureaus are paid higher than in the Bureau of Fisheries.

Mr. SMITH. Two thousand one hundred and fifty dollars is more than a chief of a division gets under the Government.

Mr. BOWERS. No.

Mr. SMITH. Two thousand dollars is the ordinary salary of a chief of a division.

Mr. BOWERS. In some cases \$3,000, \$3,500, and even \$4,000.

Mr. SMITH. But the general amount is \$2,000 for a chief of division.

Mr. BOWERS. The chief of my division of fish culture gets \$2,700. The chief of the scientific division gets \$2,700.

Mr. SMITH. Those are supposed to be scientific men, are they not?

Mr. BOWERS. My own impression is they are poorly paid.

Mr. SMITH. I am not talking about the scientific men, but chiefs of clerical divisions. This man is clerically employed, examiner of accounts.

Mr. BOWERS. He is the poorest paid disbursing officer in the Government service.

Mr. SMITH. We are talking about him after he gets to be disbursing officer. Of course, I realize your sympathy for him, but I am raising the question as to whether an examiner ought to receive \$2,150. Do you know of any case where any such salary is paid?

Mr. BOWERS. I am not familiar enough to say that I do know.

Mr. SMITH. This proposition would pay him just what he got when he was disbursing officer, less the cost of his bond.

Mr. SULLIVAN. That is what it amounts to.

Mr. SMITH. And to pay him the same salary as before, and relieve him from giving a bond.

Mr. SULLIVAN. Now, if the Secretary's recommendation is adopted by the committee, and they simply add \$2,150 to this first head, what you would do would be to have the man who is now acting as disbursing clerk become the accountant at \$50 less salary?

Mr. BOWERS. Yes.

Mr. SULLIVAN. And he would no longer be a disbursing agent, as formerly, but would be, in reality, an examiner of accounts.

Mr. BOWERS. He would be an accountant; he would virtually have control of the accounts of the Bureau of Fisheries.

Mr. SULLIVAN. Would he do anything more than the examiners of accounts do now?

Mr. BOWERS. In this way, for instance, questions are frequently arising as to whether it is legal to make an expenditure. Now, under the language of some of our appropriations, those questions constantly arise. With this man's experience in the office it makes him an exceedingly valuable individual.

Mr. SULLIVAN. To decide the legality of certain expenditures?

Mr. BOWERS. Yes.

Mr. SULLIVAN. Suppose he decides against one, the disbursing officer of the Department of Commerce and Labor would have to decide the matter again after he has finished with it.

Mr. BOWERS. Probably so, but it would not be necessary for the Bureau of Fisheries, which is located a mile and a half from the Department of Commerce and Labor, to be from time to time carrying questions of that character to the head disbursing officer of the Department.

Mr. SULLIVAN. But I don't understand that it would be necessary for him to carry it over. It seems to me it would not be necessary for him to decide the question at all, because that question would be ultimately decided by the disbursing officer at the Department of Com-

merce and Labor. Why could not one of the men who is now examiner of accounts at \$1,600 perform this work?

Mr. BOWERS. One man could not do it.

Mr. SULLIVAN. Why not?

Mr. BOWERS. Simply because the duties are too arduous.

Mr. SULLIVAN. You propose to have one man do it, don't you?

Mr. BOWERS. I suggested to the Secretary—

Mr. SULLIVAN. But I am asking a question with reference to another matter of information, namely, on the supposition that the committee adopts the recommendation of the Secretary and adds one man and his salary to this present appropriation.

Mr. BOWERS. You would be compelled, then, to ask the Secretary to detail some one from his office to aid me.

Mr. SULLIVAN. What is there in the new office that a disbursing agent may do, or can do, that an examiner of accounts could not do?

Mr. BOWERS. As I suggested, a man occupying a position of this character is familiar with the statutes, and it is naturally presumed that a disbursing agent should be familiar with the statutes.

Mr. SULLIVAN. Suppose he decides a question which seems to him to be entirely outside of his jurisdiction; suppose he does decide a legal question, and suppose he decided it wrong, would not the disbursing officer at the Department of Commerce and Labor have to decide it afterwards and overrule him?

Mr. BOWERS. Eventually the Comptroller will decide it.

Mr. SULLIVAN. Won't the disbursing officer decide it?

Mr. BOWERS. Probably so.

Mr. SULLIVAN. Of what value is the decision of this question and of what value is his legal knowledge, if another man has to exercise the very same knowledge in the same way?

Mr. SMITH. At the time the requisition is made, is there any determination then of whether it is legitimately chargeable to various items of appropriation?

Mr. BOWERS. Yes; that is referred to the disbursing agent. Three requisitions are signed by the head of the Bureau, one copy is forwarded to the individual who makes a requisition, the other copy is sent to the disbursing agent, and the third copy is filed in the office of the head of the Bureau.

Mr. SMITH. As you understand it, if this disbursing office was transferred to the Department proper—eventually that will be done—you understand that these would have to go up there before they could be filled?

Mr. BOWERS. No; I would transmit my requisitions directly to the disbursing officer of the Department.

Mr. SMITH. And that would have to be done before it could be filled?

Mr. BOWERS. That is done at the moment it is approved by me. One requisition is forwarded to the disbursing agent, and the other—of course, they are simply duplicates.

Mr. SMITH. What I am trying to get at, you sign a requisition. Now, is the requisition filled before the disbursing officer sees it?

Mr. BOWERS. No, sir.

Mr. SMITH. Does he in any way approve the requisition before it is filled?

Mr. BOWERS. It is simply filed in his office, and then the original requisition comes back with the voucher for the expenditure.

## OFFICE OF ARCHITECT AND ENGINEER.

The CHAIRMAN. The next item is with regard to the office of architect and engineer.

Mr. BOWERS. Here is a letter of the Secretary on that, a letter which is dated January 30, 1906, the latter part of which I read in connection with the estimate for the office of accounts. I will read that portion relating to this subject. [Reads:]

The attention of the Committee on Appropriations is especially invited to the estimate for appropriations for the Bureau of Fisheries of this Department for the fiscal year ending June 30, 1907. When the estimates were prepared the facts then in hand indicated that the work performed in the office of the architect and engineer of that Bureau, for which an appropriation of \$6,620 was made for salaries during the current fiscal year, could be done in the office of the Architect of the Treasury without an appropriation for salaries, and for that reason no estimate for salaries for the office of architect and engineer of the Bureau of Fisheries was submitted to Congress.

A doubt now exists as to the right of the Architect of the Treasury to do this work without special legislation, and in addition to this the Commissioner of Fisheries, with whom I have had several conferences in relation to this subject, insists that under no circumstances can he maintain the present efficiency of the several stations of his Bureau without the services of the skilled officers and employees of that office. Therefore I have to request that an appropriation of \$6,620 be made for the fiscal year ending June 30, 1907, for the office of the architect and engineer, Bureau of Fisheries, Department of Commerce and Labor, to be itemized as follows: Architect and engineer, \$2,200; assistant architect, \$1,600; draftsman, \$1,200; draftsman, \$400; clerk, \$720; total, \$6,620.

Mr. SMITH. Do you know whether when he says the Architect of the Treasury that he means the Supervising Architect of the Treasury Department?

Mr. BOWERS. Yes; he means him.

Mr. SMITH. Is there any reason why if we put a clause in this bill imposing upon him these duties, that it will not work?

Mr. BOWERS. I don't think it is possible. These men are efficient in this work, and principally this work alone.

Mr. TAYLOR. Why do you say "and this work alone?"

Mr. BOWERS. In the construction of a fish-culture station and the construction of hatcheries and the ponds and piping.

Mr. TAYLOR. Then it requires a technical and expert knowledge of those conditions, not obtainable in a general architect and a general engineer?

Mr. BOWERS. Yes.

The CHAIRMAN. That simply involves the maintenance of an organization there, not only the architect—and let me ask you if this will not accomplish the same result; assuming what you have said is true, which I do not question at all. Suppose the architect who is drawing these plans, and is familiar with the technique of the business, is transferred to the Supervising Architect's office. Would that not obviate the necessity of maintaining all these other provisions in connection with this office?

Mr. BOWERS. Assuming that the two draftsmen who have been associated with him—in the construction of a hatchery we very frequently detail one or the other of those draftsmen, virtually place him in charge as superintendent of construction.

Mr. SMITH. What is the average amount of construction a year under your Bureau?

Mr. BOWERS. At present we are building a hatchery in Alaska, and we have only recently completed one at Boothbay Harbor, Maine.

Mr. SMITH. I wanted to know the annual expenditure for new construction in your Bureau.

Mr. BOWERS. Offhand I can hardly give it to you, because, for instance, our improvements at these stations are made from this fund for propagation—a fund which carries \$250,000.

The CHAIRMAN. That is improvements, not new hatcheries.

Mr. BOWERS. To increase the capacity or build an addition, it can be done directly from that appropriation, and the establishment of a sub-station; for instance, at some place the catch of salmon might become depleted; it might be necessary to transfer the stations 30 or 40 miles from there.

Mr. SMITH. What I want to get at is, what is the percentage you are paying upon plans? I notice the expense is \$6,620. Would that not be a great deal more money than you ordinarily spend for such purposes?

Mr. BOWERS. Very frequently these people are superintendent of construction, rather than pay them direct from the lump appropriation.

Mr. SMITH. But the ordinary architect and superintendent charges 5 per cent of the amount for drawing plans and superintending construction. If that be true, you would have to do about \$132,000 worth of building in a year. Do you do that?

Mr. BOWERS. No, sir.

Mr. SMITH. So that we are paying a good deal more for this architectural work than the regular price, computing by this method.

Mr. BOWERS. I don't think they are.

Mr. SMITH. Do you know any place where 5 per cent is not the regular price?

Mr. BOWERS. Probably in some instances we save \$125 a month by placing the service of architect on one of the draftsmen, who acts also as superintendent.

Mr. SMITH. As I understand it, the plans only cost 5 per cent in the United States.

Mr. BOWERS. Out of these special appropriations some years ago it had been the custom for the Commissioner of Fisheries to appoint a superintendent of construction and pay him from the appropriation. I have not done that at all. I have compelled my men, in addition to the other service, to do that work.

Mr. SMITH. After paying for that, the \$6,620 exceeds what anybody else pays for architectural work.

Mr. BOWERS. It is not a question of architectural work so much as it is a knowledge of pumps, piping, and construction of ponds. It is a different class of work from that which can be gotten from any other architects in the country. I know of no architects who are familiar with work of this character. If it was simply the construction of a residence, the Superintendent's residence, a foreman's cottage—that is a different proposition; but in the construction of ponds and the necessary piping their technical knowledge, as well as their knowledge to some extent of fish culture, makes these people exceedingly valuable. To give you a further idea about that, at all of

these expositions—we built at St. Louis, if you will remember, the Fish Commission building there. That was designed by our office. All those plans and specifications—the aquarium and the electric engineering—everything of that character was virtually done in this office.

The CHAIRMAN. Have you kept these six men employed all the time as architects and draftsmen?

Mr. BOWERS. Personally, in my estimates to the Secretary I asked for additional assistance, but he has not seen fit to recommend it. There is no question in the world about keeping them employed. They are not only busy to-day, but very busy.

The CHAIRMAN. What class of work are they engaged on now?

Mr. BOWERS. He came back from Woods Hole, Mass., where he made, on request of the War Department, an estimate for the construction of a wharf that had been recently damaged by a storm.

The CHAIRMAN. What have you got to do with the wharf?

Mr. BOWERS. It is an especial appropriation that was made a year ago for the construction and repair and relief of buildings for the fishery station at Woods Hole, Mass. You will observe in your estimates quite a number of special items. In fact, last year, if I remember correctly, about \$100,000 in special items for the Fish Commission—\$2,500—were incorporated. All that work was in addition to the stations, and is being done under the supervision of this architect and engineer. On page 112 of the bill—this, you understand, is work in addition to the regular work of the Commission. These expenditures are simply the authorization of one year. We are building a hatchery at Yes Bay, Alaska. I detailed the superintendent of the Clackamas, Oreg., station, as superintendent of construction in this case, and sent a field superintendent to Clackamas to take his place. All this work was done virtually under the supervision of our architect, and every expenditure of that character is approved and recommended by him. In other words, it is recommended by him and approved by me, and I hold him responsible.

#### DIVISION OF FISH CULTURE.

The CHAIRMAN. The next item is for division of fish culture, and the estimate is the same as the current appropriation.

Mr. BOWERS. No change there at all.

The CHAIRMAN. Are those salaries fixed by statute, or by you?

Mr. BOWERS. These were fixed by statute.

The CHAIRMAN. What is the purpose of your inserting this new language, "One for central station, one for aquaria?"

Mr. BOWERS. I don't see that that makes any difference. They are both virtually one and the same place.

The CHAIRMAN. Do you recommend it?

Mr. BOWERS. It is not an increase at all. I simply designate one to be utilized for the central station and one for the aquaria.

The CHAIRMAN. There are two skilled laborers, and this new language would designate the particular place at which they are to be employed.

Mr. SMITH. And you can use both at one place?

Mr. BOWERS. I can not see that that makes any difference.

The CHAIRMAN. Did you recommend this?

Mr. BOWERS. Yes.

## FISH PONDS, WASHINGTON, D. C.

The CHAIRMAN. The next item is for fish ponds. Washington.

Mr. BOWERS. I recommend the abandonment of those ponds.

The CHAIRMAN. From there, on page 93 to page 103, inclusive, the appropriations are for stations.

Mr. BOWERS. Except at Battery Island, Maryland. The Secretary informed me that at Battery station, Maryland, there is a light-house keeper, and he is of the impression that the light-house keepers can act as custodian, not only for the Fish Commission property, but attend to the light-house duties as well, and this being the case I can see no special reason for the employment of two people. Of course I should want it understood that he must perform such duties as might be required by the Bureau of Fisheries. We have a station—a shad station—there, and the work of course only lasts about sixty days in a year. But we have some valuable apparatus there—a small launch and all our paraphernalia and equipment. I don't really know whether he intends to strike out the custodian or the light-house keeper, but I can hardly see the necessity of the employment of both people.

The CHAIRMAN. With the exception, then, of Battery Island, from page 93 to 102, inclusive, the appropriations are and estimates are all for stations. At different places you have made no recommendations different from the current appropriations, either as to amounts or language.

Mr. BOWERS. No, sir.

The CHAIRMAN. Are these amounts expended annually, or do you have a surplus left over at the end of the fiscal year?

Mr. BOWERS. I can make a statement at the end of the hearing with reference to that. These are amounts expended annually, because they are really for the personnel of the station, and from those sources last year I permitted to be turned back into the Treasury \$6,144 of unexpended salaries. They were simply vacancies existing, and I did not care to fill them, there being no necessity for filling them. I permitted them to continue until there was reason why they should be filled.

The CHAIRMAN. At the bottom of page 103 there is a new item for Yes Bay, Alaska, hatchery. Superintendent, \$1,500; fish culturist, \$900, and so forth. That provides for the personnel.

Mr. BOWERS. A new hatchery, which is about completed now, just goes in effect the 1st of July.

The CHAIRMAN. Was this new hatchery paid for out of taxes from fish that were put up in Alaska?

Mr. BOWERS. No, this hatchery you will observe, that part of this establishment is paid out of the specific appropriation made last year. the \$50,000 for the establishment of one or more hatcheries in Alaska. But I have been able to complete one of those hatcheries within the limit of \$25,000.

The CHAIRMAN. Are not the taxes derived from the salmon that are packed in Alaska available for this purpose?

Mr. BOWERS. No, sir; but there is turned in to the General Government about \$100,000 a year as a tax from the output of those salmon canneries in Alaska. But that goes into the General Treasury, and if the Fish Commission utilizes any of that fund it must be done by special authority. That is one of the arguments we have used from

time to time that the Alaska hatcheries and the expenditure for fish culture work in that country were being more than paid for by that tax.

The CHAIRMAN. And a very unjust tax, too.

Mr. SMITH. As this is a new force—there are only two of your stations in the United States, I believe, that have as large a pay roll as this—and a new item, I suggest that you make an explanation of the necessity for so much force, if you will.

Mr. BOWERS. It is hoped to do more salmon work probably at that hatchery than any other hatchery the Commission owns. You will find that the allotments for the Clackamas, Oregon, and the Baird, California, stations amount to in one case \$18,000 a year, and in the other fourteen or fifteen thousand dollars. But I find in most instances that money is expended for spawn takers and for laborers, because this is an out-of-the-way place, no habitation being within probably 25 or 30 miles.

The CHAIRMAN. Where is Yes Bay?

Mr. BOWERS. Cleveland Peninsula, southeast Alaska. It is probably 40 miles from Loring.

The CHAIRMAN. How far from Juneau, or Wrangel?

Mr. BOWERS. That is much higher up. I don't know the distance between Loring and Juneau. This is in extreme southeast Alaska.

The CHAIRMAN. In the vicinity of Ketchikan? That is the first American port in southeast Alaska.

Mr. BOWERS. It is my purpose to go up there this summer, and I am not very familiar with it now. I sent an expert to make an examination, and it is necessary to cut out roadways, tramways, and to build a tremendous flume, and everything of that kind in connection with this hatchery.

Mr. SMITH. I simply referred to the salary list.

Mr. BOWERS. You will observe I recommended the payment of \$65 a month for skilled laborers, and \$60 a month for ordinary laborers. That is exceedingly reasonable when you take into consideration the excessive cost of living there.

Mr. SMITH. I do not regard the salaries as high, but I was referring to this simply because you seemed to be starting with a larger force than you have at most of the stations.

Mr. BOWERS. As the chairman is aware, we have a great territory there from which we can make collections. From time to time the hatchery can probably be enlarged until we can handle an almost unlimited number of salmon eggs.

The CHAIRMAN. Are you not mistaken about the amount of taxes the Government realizes?

Mr. BOWERS. One hundred and four thousand dollars last year, and it will probably be greater this year because the salmon catch has been enormous. It has averaged from \$80,000 to probably \$116,000 or \$117,000 at different times.

#### EMPLOYEES AT LARGE.

The CHAIRMAN. Now, the next item is employees at large: Two field-station superintendents at \$1,800 each and one field superintendent at \$1,800.

Mr. BOWERS. That is an additional field superintendent?

Mr. TAYLOR. One is called field-station superintendent and the other field superintendent. What is the difference between them?

Mr. BOWERS. I don't see the necessity—in fact, I never before noticed that designation as field-station superintendent. I have always referred to them as “field superintendents,” because they are men whose service can be utilized at any place in the country.

The CHAIRMAN. They are not located at any particular place—none of them are?

Mr. BOWERS. One of them is in Illinois. I utilize him at dozens of places, however, in making collections.

The CHAIRMAN. What is the necessity for this additional one?

Mr. BOWERS. It becomes necessary to have an additional superintendent for the reason that the growth of the service—and then from time to time, I can not personally give attention to each one of these stations. We have stations in Maine, in Oregon, and we have stations in Alaska and in Texas. I must have some individual that I can send from time to time to these stations to get reports, confidential and otherwise.

The CHAIRMAN. How many stations do you have?

Mr. BOWERS. Thirty-five.

The CHAIRMAN. That are visited by these men; and the business of these two field superintendents is to visit the same during the year?

Mr. BOWERS. You must understand that some of these stations have not been visited for a couple of years, and I am the only individual in the Commission that has virtually been to each one of these stations. But I can not leave the office to such an extent, and I must have someone on whom to absolutely rely and have confidence.

The CHAIRMAN. What do they do?

Mr. BOWERS. In addition to this annual inspection that I require of these superintendents, any temporary substation that might be established; for instance, in regard to salmon work on the Pacific, at Clackamas, Oreg., and at Baird, Cal.; those stations are designated as stations of the Commission, and we frequently have other stations where we detail the station superintendent or some other employee of the Commission to look after.

The CHAIRMAN. Why should his judgment be more reliable or his information more reliable, respecting any additional work at any of these stations, than the judgment and the information given you by the superintendent?

Mr. BOWERS. Personally I have implicit confidence in my superintendents, and I rely very largely upon their recommendations before I approve them.

The CHAIRMAN. Their recommendations are always accompanied by full detailed information, are they not?

Mr. BOWERS. Usually so.

The CHAIRMAN. And if they are not you have the authority to require them to give it. If you have visited nearly all of these stations yourself, you are acquainted with the location and surroundings and the needs, to some extent at least. The question in my mind was whether the superintendent was not as competent to fill that position, and his judgment would be as reliable as the judgment of a man who was sent there.

Mr. BOWERS. His services could be utilized in some instances in connection with our field stations.

## DISTRIBUTION OF EMPLOYEES.

The CHAIRMAN. The next item I see there is no change, the estimate being the same as the appropriation for the current year.

## DIVISION OF INQUIRY RESPECTING FOOD FISHES.

The CHAIRMAN. The next item, division of inquiry respecting food fishes, I see there is no change there.

## BIOLOGICAL STATION, BEAUFORT, N. C.

Mr. BOWERS. On page 105, biological station at Beaufort, N. C. Heretofore the language has been "custodian." I will be glad to have you add the words "and collector."

The CHAIRMAN. That word is in the current law, and it is recommended to be stricken out.

Mr. BOWERS. I would be glad to have him retained as superintendent. He is there for the whole season, and evidently it means the establishment of a superintendent. It is an important post.

The CHAIRMAN. If you call him "superintendent," would that mean eventually giving him the salary of a superintendent?

Mr. BOWERS. I hope so, because he is a scientific man, and it is not possible to get a first-class man to have charge of a laboratory for a salary of \$60 a month.

Mr. SMITH. Does the law fix the salary of the superintendent?

Mr. BOWERS. It does not at present, but later on we hope it will in this case.

Mr. SMITH. But every superintendent in fact gets \$1,500 everywhere.

Mr. BOWERS. Some years ago they received as much as \$2,000, but the Dockery Act gave them \$1,500.

The CHAIRMAN. This is the statutory salary of superintendents?

Mr. BOWERS. That is the statutory salary for Fish Commission superintendent.

The CHAIRMAN. Then the minute we named him "superintendent" he would be entitled to \$1,500?

Mr. BOWERS. No; \$720.

The CHAIRMAN. That is all we might appropriate, but the minute we created him superintendent he would get \$1,500. As between custodian and collector and custodian alone, you would prefer the word "collector" left in?

Mr. BOWERS. I certainly would, because he is a collector, pure and simple.

The CHAIRMAN. In what respect does this station differ from the others?

Mr. BOWERS. It is a biological station—a scientific station.

Mr. TAYLOR. Is it similar to Woods Hole?

Mr. BOWERS. Yes; it is even a better building; a more modern laboratory than at the Woods Hole station.

The CHAIRMAN. Have you a superintendent there?

Mr. BOWERS. I have a superintendent at Woods Hole, but not at the North Carolina station.

Mr. TAYLOR. Is the North Carolina station as valuable to your Commission as the one at Woods Hole?

Mr. BOWERS. Hardly so at present, but a great many students are going to that station each year. It is the only laboratory the Commission owns in the South.

#### STEAMER FISH HAWK.

The CHAIRMAN. The next item is for steamer *Fish Hawk*. One cabin boy, \$480.

Mr. BOWERS. It is recommended that we omit that language and insert \$420. That is my recommendation. The cabin boy of the *Fish Hawk* is the only individual on that boat specifically provided for by the Fish Commission. The *Fish Hawk* is officered and manned by the Navy and detailed to the Commission.

The CHAIRMAN. How old a boy is he?

Mr. BOWERS. The boy is 30. At \$300 he has been there for twelve years, and out of that he is expected to pay his mess.

The CHAIRMAN. Does he give his whole time to the Government?

Mr. BOWERS. His whole time; never leaves the vessel for a single minute unless sent away by an officer.

Mr. TAYLOR. Is he white or colored?

Mr. BOWERS. A colored boy, 28 or 30, as faithful as any messenger I have in my Bureau, and as competent as any; and he stays with the vessel. I hope that little item will be included, because it is fair, equitable, and just.

#### EXPENSES OF ADMINISTRATION.

The CHAIRMAN. We will now go to the item of page 108, the top of the page. There is a change recommended excluding this language, which is now carried in the current appropriation act: "Including purchase, maintenance, and driving of horse and vehicle for official use of Commissioner, when, in writing, ordered by the Secretary of Commerce and Labor."

Mr. BOWERS. I don't object to that at all. I don't object to striking it out. This was done last year. That, of course, I can explain. We have ponds beyond the Monument. The nearest point to which a street car reaches those ponds is the corner of Fifteenth and Pennsylvania avenue—practically a half or three quarters of a mile away—and our cars are constantly being loaded either at the Fish Commission building, so it becomes necessary from time to time to go to these places.

#### MAINTENANCE OF VESSELS.

The CHAIRMAN. On page 109, under the item for maintenance of vessels, the words "Hire of vessels" in the first item is recommended to be omitted.

Mr. BOWERS. Do you understand that that vessel can be hired if this is stricken out?

The CHAIRMAN. No, sir; it can not be hired if it is stricken out.

Mr. BOWERS. Then I shall oppose the striking of it out. It becomes absolutely necessary.

The CHAIRMAN. You did not recommend it?

Mr. BOWERS. That is not included in my recommendation.

The CHAIRMAN. I see that your estimate for the coming fiscal year is \$5,000 in excess of your current appropriation under this item.

Mr. BOWERS. Yes, sir; that becomes necessary for this reason: For instance, the extra work in Alaska will necessitate the purchase of coal and probably equipment for vessels. We can not purchase at present an oar if it is not chargeable to that fund. Everything that relates and pertains to vessels, under the decision of the Comptroller, is chargeable to the fund for maintenance of vessels.

The CHAIRMAN. I want to ask you in that connection how long those men stationed at Alaska, at Yes Bay, remain during the year.

Mr. BOWERS. Twelve months. The salmon work alone will take from eight to ten months.

#### PROPAGATION OF FOOD FISHES.

The CHAIRMAN. Your estimate for the next fiscal year under the head of "Propagation of food fishes" I observe is \$20,000 in excess of the current appropriation. Please state the reason.

Mr. BOWERS. That is because of the operations of the Alaska hatchery and the additional work the Fish Commission is doing. Of course, the operation of the Alaska hatchery will be properly charged to the propagation of food fishes. Now, I have a statement here showing the work of the Fish Commission from 1885 to 1905.

The CHAIRMAN. You may hand that to the clerk.

#### *Summarized statement of food fishes hatched and distributed by the Bureau of Fisheries, 1885-1905.*

	Number.		Number.
1885 .....	173, 666, 083	1898 .....	857, 309, 546

Mr. BOWERS. In that connection I will state that I have planted more fish in five years than my predecessors did since the organization of the Fish Commission. I have reduced the cost from \$436 a million in 1890 to \$223 a million to-day. That is an average cost per million of hatching food fishes. I simply submit that as a business proposition.

In reference to this item for propagation of fishes, I recommended to the Secretary that \$270,000 be asked for. Now our present appropriation is \$250,000. That was cut down to \$260,000.

The CHAIRMAN. The present appropriation was \$240,000.

Mr. BOWERS. Well, my estimates of last year were \$260,000, and I asked this year for \$260,000, and I base that upon the average cost, you understand, of those salmon stations in the west, which are from \$14,000 to \$20,000. Of course this entire amount will be expended almost exclusively at the Alaska hatchery, and we receive about \$100,000 back from that section alone in taxes to the Government, so it is certainly fair that those people should have the benefit of that.

The CHAIRMAN. If this bill that has been reported by the Committee on the Territories becomes a law, do you contemplate that that will result in the establishment of private hatcheries?

Mr. BOWERS. To some extent, some of the larger canneries will probably operate private hatcheries.

The CHAIRMAN. Is there any cannery there in Alaska excepting the Alaska packers that will be able to maintain a hatchery?

Mr. BOWERS. I am not sufficiently familiar to make a statement in regard to that.

The CHAIRMAN. How many hatcheries has the Government up there now?

Mr. BOWERS. The Government has but one hatchery, at Yes Bay.

The CHAIRMAN. Is there not a private hatchery maintained in Alaskan waters at present?

Mr. BOWERS. None that I am aware of, excepting those of the Alaska Packers' Association.

The CHAIRMAN. Have you any information as to whether or not the supply of salmon is becoming depleted in southeastern Alaska?

Mr. BOWERS. The evidence of the catch for the past year does not indicate that the salmon is becoming very seriously depleted. There is a possibility of the extinction of the red salmon, the sockeye salmon, unless something is done to propagate it and protect it. It is my intention to personally visit that section during this coming summer.

The CHAIRMAN. Can you state whether or not that is due to the fact that there are very few places in southeastern Alaska where the red salmon is spawned, namely, the fresh-water lakes? They spawn primarily, if not almost entirely, in fresh-water lakes, do they not?

Mr. BOWERS. The salmon spawn in fresh water, and die afterwards, both the male and the female.

The CHAIRMAN. The habit of the red salmon is to return to the lake in which it spawns?

Mr. BOWERS. I don't think so; I don't think salmon return to the particular stream where planted.

The CHAIRMAN. That is what I was told.

Mr. BOWERS. That seems to be the opinion of people who are not conversant with the subject, but I don't think for a moment that they return to the particular stream.

#### INQUIRY RESPECTING FOOD FISHES.

The CHAIRMAN. At the bottom of page 109, "Inquiry respecting food fishes," I observe here that you again, or somebody, has recommended the omission of some language which is carried in the current law, namely, "Field and contingent."

Mr. BOWERS. Well, I do not see any objection to that, I think that is perfectly proper.

The CHAIRMAN. That would take the words "In the interests of fish culture for the investigation grounds of" also out of the paragraph.

Mr. BOWERS. That is true. A little later that is added. It says further on "In the interests of fish culture and the commercial fisheries."

The CHAIRMAN. There is no increase.

Mr. BOWERS. The same amount is asked for; no increase at all.

#### STATISTICAL INQUIRY.

The CHAIRMAN. The next item is on page 110, "Statistical inquiry." I observe that it is recommended that we omit the language "Necessary traveling and contingent."

Mr. BOWERS. The word "Expenses" covers all of that.

Mr. TAYLOR. In regard to that 10 per cent provision, can you not get along without that and take 5?

Mr. BOWERS. Do not do that. It does not interfere with the total appropriation at all; does not increase the appropriation 10 per cent, but simply makes a transfer.

The CHAIRMAN. How frequently have you exercised your authority to transfer, under this 10 per cent clause, from one appropriation to another?

Mr. BOWERS. That occurs quite frequently. As to the unexpended balance for the last year, there was turned back from salaries \$6,44.706 and of the appropriation for expenses of administration \$12,501. There was expended \$11,399.19 and turned back into the Treasury from that source \$1,100.81. From propagation there was turned back \$10,318.47; from vessels, \$1,535.40; from scientific inquiry, \$2,382.95.

The CHAIRMAN. Under this clause?

Mr. BOWERS. Under this clause and from all sources. Notwithstanding this transfer, I turned back into the Treasury \$17,997.09. You will observe that you investigated the conditions the year before, and that that is a very much larger amount than was turned in before.

#### FISH HATCHERY AT BATTERY ISLAND, MD.

The CHAIRMAN. You estimate for the fish hatchery at Battery Island, Maryland, for the protection of the station against storms and high tides, \$7,000. What protection have you there now?

Mr. BOWERS. It is a shad station.

The CHAIRMAN. What protection have you at present against storms and high tides?

Mr. BOWERS. Of course it is an island, and the walls by reason of a heavy collection of ice against the sides a year or so ago virtually destroyed to a considerable extent some of our property there, and I had an architect and engineer examine it; and to prevent the further destruction by storm and high water I have made this recommendation of \$7,000.

The CHAIRMAN. In what way would that money be used?

Mr. BOWERS. It would simply be used more for the purpose of protecting property than anything else.

The CHAIRMAN. By rebuilding the wall?

Mr. BOWERS. Make it larger and stronger; make it probably out of stone rather than wood.

The CHAIRMAN. What does it consist of now?

Mr. BOWERS. Principally wood. Quite a considerable portion of it has washed away. It is a valuable station.

The CHAIRMAN. How much of a wall would you construct?

Mr. BOWERS. I can not give you the exact details, because I simply accepted the recommendation that was submitted by the architect and engineer whom I had to examine the conditions there. If I remember correctly his estimate was \$9,700, but I cut it to \$7,000.

The CHAIRMAN. Did he submit a detailed estimate of the cost?

Mr. BOWERS. That is my impression. There are so many of these items from time to time that it is hard to recall them.

The CHAIRMAN. Don't you usually require a detailed estimate as to the cost of making improvements of this kind, so that you can form an intelligent judgment as to whether it is reasonable or not?

Mr. BOWERS. I very frequently cut them down. I visited that station a couple of years ago, and I am somewhat familiar with the conditions, and I am confident that by utilizing occasionally some of our field force—

The CHAIRMAN. What property have we there?

Mr. BOWERS. We have an island purchased some years ago at a cost of \$15,000.

The CHAIRMAN. How large is it?

Mr. BOWERS. I don't remember. It comprises 4 or 5 acres.

The CHAIRMAN. How high above tide water?

Mr. BOWERS. It is virtually the Susquehanna River, and the tides do not interfere to any considerable extent.

The CHAIRMAN. How far is it above the normal water level?

Mr. BOWERS. If I remember, and as near as I can recall, probably 6 or 7 feet.

The CHAIRMAN. Does it overflow?

Mr. BOWERS. Only during flood times. It has overflowed in cases of extremely high water. We have a hatchery there, engines, pumps, and a fairly good superintendent's residence, which is occupied by a custodian.

#### FISH HATCHERY, WYTHEVILLE, VA.

The CHAIRMAN. The next item is for fish hatchery at Wytheville, Va. For purchase of land and construction and repair of buildings and ponds, \$5,000.

Mr. BOWERS. This appropriation contemplates the extension of our work there. The output of the station is unequal to the demand, namely the propagation of the black bass, and especially the small-mouthed species. There is a piece of land adjoining the Wytheville Station through which flows a creek that can be utilized advantageously for the propagation of the small-mouthed black bass, an additional water supply being taken from the same creek. The present pond system was constructed with a wooden lining, which needs renewing. If sufficient funds are allowed the ponds should be more permanently built by substituting concrete for wood. There are no quarters for employees at the station, and they are obliged to live in town 4 miles away. This is a great disadvantage to the operation of the station.

The CHAIRMAN. How many employees have you there?

Mr. BOWERS. Probably five, the customary number.

The CHAIRMAN. Where are those employees housed now?

Mr. BOWERS. There are a couple of small rooms over the hatchery where two of the employees sleep, and one permanent employee owns a small house near the hatchery. If he would leave the service we would virtually be without a place for those people to live in.

#### MANCHESTER, IOWA.

The CHAIRMAN. The next item is the fish hatchery at Manchester, Iowa.

Mr. BOWERS. This station is 9 years old and needs repairs to ponds, buildings, and waterways.

What I would like to say about this whole matter is that these special items this year, in the aggregate, amount probably to \$52,000, while those special items last year amounted to \$92,000. There is a saving on these items alone of something over \$40,000.

Mr. TAYLOR. Why do you call that a saving?

Mr. BOWERS. I mean by that I have only included the buildings and improvements that are actually needed in order to keep up the property and keep up the work, and I have made these estimates with a view to economy and to bring about good results.

## BAIRD, CAL.—INCREASE OF SALMON IN THE SACRAMENTO RIVER.

By the way, I would like to make a statement, Mr. Chairman, concerning the operations at Baird, Cal.

The CHAIRMAN. I was going to ask you to give us some information as to the necessity of that.

Mr. BOWERS. We have taken more salmon eggs at that station this year than the year before, and as a result of our work at that station there is no question but that we have been able to replenish the Sacramento River. To-day our present station there is overcrowded with eggs, and there was an appropriation for construction at Battle Creek last year, if I remember correctly, that was inadequate. Our collections at Mill Creek, another substation there, ran up to 40,000,000 eggs in the last two years. Those eggs were handled in out-of-door troughs, with a roof shelter overhead. It might be well to provide for the purchase of a site for that property at Mill Creek.

This year we have planted 130,000,000 more salmon from Baird alone at small stations in the Sacramento River, and in the McCloud and the Pitt which empty into the Sacramento.

Mr. TAYLOR. How does that compare with the destruction of fish in the course of a year—the catch and use of salmon? I understood you to say you planted 130,000,000 salmon. How does that compare with the use or catch of salmon within the same time?

Mr. BOWERS. The catch of salmon is much greater there now. It had formerly become depleted.

Mr. TAYLOR. What I mean, Mr. Bowers, is whether you are furnishing enough salmon to live to outnumber those that are caught or used in the year? Do they use more than 130,000,000 salmon in a year, or less than that number?

Mr. BOWERS. Of course these are small when they are planted. No man can tell how many of them come back.

Mr. TAYLOR. If you planted 132,000,000 and they caught 200,000,000, it would not do any good, would it? You are supplying enough to replenish the river, are you?

Mr. BOWERS. Yes, sir; and we think the replenishment of that river is entirely due to the efforts of the United States Fish Commission. Of course a great many million salmon naturally propagate, but these are artificially propagated. Every salmon planted by the Fish Commission is simply one more salmon than would otherwise be produced. If they are caught and sold, the eggs will not be taken from them, and of course those eggs can not be planted.

Mr. TAYLOR. Have you any idea of the number that are hatched naturally as compared with those hatched artificially?

Mr. BOWERS. The supposition is that the natural spawn is only about 2 per cent.

## REPAIRS TO THE SCHOONER GRAMPUS.

(See also pages 386, 389.)

The CHAIRMAN. The next item on this page is "Repairs to the schooner *Grampus*, \$7,500." Mr. Gardner was here and made a statement this morning in support of this recommendation. Have you anything that you desire to say on the subject?

Mr. SMITH. May I suggest that he give special attention in his statement to the question whether this vessel is worth putting this amount of repairs on?

Mr. BOWERS. The vessel is a schooner, and it is our idea to make it a worthy sea-going vessel—that is, to put on a motor or engine, whatever is necessary to make it possible to do good and efficient work.

The CHAIRMAN. Is her hull or other parts of her in such a condition as to justify the expenditure of \$7,500 for the purpose of putting in machinery and a motor?

Mr. BOWERS. I think so. It is an exceptionally good vessel. The estimate for the motor is \$3,000, and the other items of the estimate are these [reads]:

Cutting well for propeller, altering stern, boring for shaft, and bedplate for motor .....	\$1,400
Plank shear, waterways, timber under chain plates .....	800
New deck .....	800
New rail .....	400
Deck beams and hatch combings .....	250
Rearrangement of laboratory and midship section, made necessary by installation of motor and to afford necessary facilities for stores, etc. ....	500
New floor beams and floors and resetting ballast .....	250
Cutting and resetting masts .....	200
Re-building well .....	400
	<hr/>
	8,000

The vessel has a well in it, in which we can carry live fish and live lobsters and things of that kind. This vessel, you know, was fitted up especially for the Fish Commission.

Mr. TAYLOR. What is the size of the vessel?

Mr. BOWERS. Eighty-five tons.

Mr. TAYLOR. And what was the cost of that vessel?

Mr. BOWERS. Fourteen thousand dollars.

The CHAIRMAN. How long has she been used?

Mr. BOWERS. Eighteen years. [Reads:]

The prices are estimated and are as close and conservative as can be given with the data at hand, though they can not be regarded as exact. The reason for the motor is fully set forth in Captain Hanson's letter of May 15; the other work is necessary because the vessel is 19 years old and has simply worn out from age. No special appropriations have ever been made for her nor any expensive repairs been undertaken as far as we are aware. With the above she will be practically renewed and be in condition for service probably for an indefinite time to come; without them her usefulness is ended now, as she is not seaworthy and it is not safe to operate her where she will be exposed to the weather that may be expected at sea at any time, except in the summer months.

The work recommended is what is in sight and obvious, and experience has proved that it invariably happens that where an old vessel is stripped for repairs many defects will be found which could not be discovered in advance, and to cover such contingencies at least 10 per cent should be added. We accordingly recommend that a special appropriation of \$9,000 be asked for; \$10,000 would be better. If this is granted, it does not necessarily follow that it will all be required, but there should be enough for all emergencies.

This is from the committee which I appointed to make a thorough investigation of this vessel. The committee consisted of the captain and my chief clerk and the representative of the Government at Newfoundland last year. He was selected by the State Department and the Department of Commerce and Labor, and my chief clerk accompanied this expedition to Newfoundland. They asked, in this connection, for an appropriation of \$9,000. Then they wind up and ask for \$10,000, which they say will be better under all conditions. I went carefully over that situation and reduced the recommendations to \$7,500. I had occasion to have a boat builder examine this vessel at Gloucester, Mass.

## STEAM LAUNCH FOR ALASKA.

The CHAIRMAN. The next item on this subject is a launch, a steam launch, for Alaska.

Mr. BOWERS. It is utterly impossible to do anything up in Alaska unless you have a boat.

The CHAIRMAN. I appreciate that. There is no means of transportation except by water.

Mr. BOWERS. None in the world, and \$10,000, I think, will give us a boat of sufficient size. A couple of years ago there were opportunities of buying a very good vessel up there for \$10,000.

The CHAIRMAN. So much the better. That was because of the failure of so many fish canneries.

Mr. BOWERS. That is the language: "For the purchase or construction of a steam launch for use in the propagation of salmon in Alaska. \$10,000."

Allow me to call your attention to the importance of increasing the vessel fund. If that is limited to \$10,000 the entire cost of crew and everything of that kind must be defrayed from that fund.

## THE SCHOONER GRAMPUS (AGAIN).

(See page 389.)

The CHAIRMAN. That recalls to me something I wanted to ask you concerning the schooner *Grampus*. If that appropriation is allowed, when will the repairs be made; this summer?

Mr. BOWERS. Yes, sir.

The CHAIRMAN. She will be taken right out of commission, and how long will be required to make the repairs?

Mr. BOWERS. I will utilize a vessel that has heretofore done the work of the *Grampus* when she was commissioned elsewhere. The vessel of the scientific people, the *Phalarope*, will probably be detailed to do the work.

The CHAIRMAN. What will become of the crew?

Mr. BOWERS. They will be transferred to other vessels or stations.

The CHAIRMAN. Have you other vessels?

Mr. BOWERS. We have a dozen launches, you know. For instance, at Havre de Grace, Md., we have some.

The CHAIRMAN. Will this vessel be manned with a crew from the vessel out of commission?

Mr. BOWERS. Yes. We have a vessel called the *Blue Wing*, a vessel of 60 or 75 tons, at Woods Hole. The crew of that vessel is either taken from the station force or, as conditions exist to-day, is employed at Boothbay Harbor, Me. The engineer is selected from the immediate locality for two or three or four months, and during the period in which construction work is going on or these improvements made I will simply detail these officials to one of the smaller launches, and thereby save the Government the amount of money we are paying from the temporary fund.

## STEAM LAUNCH FOR ALASKA.

The CHAIRMAN. How much tonnage will this launch have if you get the \$10,000 to buy it?

Mr. BOWERS. That depends on whether we purchase it or buy it

already built. As you see, it frequently happens that you can get a splendid vessel for \$10,000. I have a vessel in the use of the Commission at Woods Hole, Mass., that a prominent gentleman in Boston interested in the work of the Fish Commission sold to the Government for \$6,700, and that cost \$35,000 to build.

#### STEAM LAUNCH FOR BOOTHBAY HARBOR, ME.

The CHAIRMAN. The next item is the steam launch at Boothbay Harbor, Me.

Mr. BOWERS. That to-day is the principal lobster hatchery of the Commission, and with all due respect to our other stations, it is the most successful station of the Commission. It is a station that has been recently constructed. We have this afternoon something over 20,000,000 lobster eggs at this hatchery in process of hatching. In addition to that, we have 40,000,000 cod eggs.

The CHAIRMAN. Notwithstanding that fact, the price of lobsters still continues to increase.

Mr. BOWERS. That is because they are so good and there is such a demand for them.

Mr. TAYLOR. Where did you come from?

Mr. BOWERS. I am a West Virginian.

#### PROPAGATION OF LOBSTERS.

The CHAIRMAN. What real success have you had, Mr. Bowers, in the matter of propagating lobsters?

Mr. BOWERS. Of course, so far as our ability to obtain eggs at this new hatchery is concerned, it has only been in operation for two years past, and the ultimate result of our work in that line is hard to determine, because it will take a lobster three or four years to reach a marketable size.

The CHAIRMAN. Three or four years, the same as a salmon?

Mr. BOWERS. Yes; it takes the salmon about the same length of time. But the conditions existing there lead me to believe that it is possible to save the lobster. Our ability under the natural conditions, you understand, to get these eggs in a proper locality convinces me that there is a fair chance of rehabilitating the lobster.

I can give you some other reasons, if necessary, why that boat at Boothbay Harbor should be got. The brood lobsters must be maintained in their natural habitat. To-day we have something more than 20,000,000 lobsters. In the next three weeks I am confident that that number will be increased to 130,000,000.

Mr. TAYLOR. How do you propagate the lobster?

Mr. BOWERS. It is a salt-water species, and our water supply at these stations is gotten entirely from the sea by immense pumps. The lobsters are propagated in jars, and when they are brought to life after two or three days they are planted and carried along the coast for miles and miles, and we endeavor to find what we believe to be their natural spawning grounds and plant them as near as possible where the conditions exist naturally for their planting and development.

## AGENTS AT SALMON FISHERIES IN ALASKA.

The CHAIRMAN. I see in the next item your estimate is \$2,500 less than the current appropriation.

Mr. TAYLOR. The Secretary did that.

Mr. BOWERS. My understanding in this case is that the expense of these salmon agents is to be defrayed from the contingent fund of the Department of Commerce and Labor. I do not object to that.

Mr. TAYLOR. Is that under your supervision?

Mr. BOWERS. Yes; my impression about the purchase of supplies for those islands is that the necessities of life should be included there. As it stands now, it is simply for food and clothing.

## ST. JOHNSBURY, VT., HATCHERY.

UNITED STATES SENATE,  
*Washington, D. C., April 26, 1906.*

DEAR MR. TAWNEY: Some years ago there was an appropriation of \$20,000 for an increased supply of water at the fish hatchery at St. Johnsbury, Vt. Upon a very careful investigation both the Fish Commissioner and myself were agreed that it was not for the interest of the Government to spend the money for this purpose. We also found that it was an appropriation that would not lapse, and thought it better to experiment in different parts of the State to see if there was a good location for an auxiliary for raising trout from fry to fingerlings. A very satisfactory trial has been made at one place, and it will be continued this summer. Several other locations have been examined. I have myself examined several, as I am a good deal of a crank in the way of fishing.

The present station at St. Johnsbury is all right for hatching trout, but the water gets too warm in the summer for raising them to fingerlings. It is, however, first rate for small-mouthed bass, and there is a much greater call for them, I understand, than the present hatcheries can supply. Commissioner Bowers understands this perfectly, and I am sure that if this appropriation is made available for an auxiliary station for the purpose of raising fry, hatched at St. Johnsbury, to fingerlings, using the pond at the present station for raising small-mouthed bass, it would give most excellent results.

If the appropriation can be made available for this purpose, I would be personally responsible, with Commissioner Bowers, for its being economically and wisely used. I trust such an amendment may be adopted at this session.

Very respectfully, yours,

REDFIELD PROCTOR.

Hon. JAMES A. TAWNEY,

*Chairman Committee on Appropriations,  
House of Representatives.*

THURSDAY, April 26, 1906.

## REPAIRS TO SCHOONER GRAMPUS.

STATEMENT OF HON. AUGUSTUS P. GARDNER, REPRESENTATIVE  
FROM THE STATE OF MASSACHUSETTS.

The CHAIRMAN. I understand, Mr. Gardner, that you wish to be heard in regard to the repairs to the schooner *Grampus*, \$7,500.

Mr. GARDNER. I will tell you the situation exactly. The *Grampus* is the cheapest enforcement of the treaty of 1818 that we have got. We have a great deal of trouble in Newfoundland with our fisheries, which you probably know, and for international reasons we do not send a cruiser up there. Now, Newfoundland always has a cruiser on the ground, Canada usually has a cruiser on the ground, France usually has a cruiser on the ground, and Great Britain also very often has a cruiser on the ground.

All the time disputes are arising, which if they are not harmonized are liable to lead to friction, the destruction of each others hatcheries, and every sort of mischief. There is a great deal of doubt always as to the interpretation of any treaty; for instance, you will find it hard to say where a bay ends and a harbor begins, or where an inlet ends and a bay begins; and we have found that when we had an American schooner on the ground it was just as good as a cruiser, because they had officials of the Fish Commission on board who would go aboard the British cruiser in the evening and discuss matters with officials of Newfoundland and of the various cruisers, and then they would keep the State Department posted as to the facts, and also the Fish Commission here.

In spite of the fact that Newfoundland is very angry with us because of complications in regard to the treaty, and in spite of the fact that there never was a time when there was such friction, yet there never was a time when we got our treaty rights before, and I don't know whether we could get our full treaty rights without some vessel of that sort on hand.

Now, as a matter of fact, the *Albatross*, which is one of the Fish Commission's vessels, is on the Pacific coast, and the *Grampus* is about the only thing that we have to depend upon to keep the peace at Newfoundland.

The CHAIRMAN. What are these waters?

Mr. GARDNER. The treaty coast of Newfoundland. Generally she cruises around and finds where the mackerel is going, and studies the course of the fishes. Under the treaty of 1818 we have a right to fish within a 3-mile limit on certain parts of the coast of Newfoundland. The legislature there will pass a law with the evident intent of making it possible to break away from the right under the treaty of 1818; but if we have somebody on the spot we can get the facts and produce them at once, and the British Government will never support an action like that where the circumstances are clear. We had last year a great deal of trouble because they tried to prevent American registered vessels fishing down there, claiming that unless they had a license they could not fish inside of the 3-mile limit. As soon as we ascertained the

facts by the aid of the *Grampus* and produced them for the British Government they stopped that at once, and we went ahead fishing.

As I say, the *Grampus* is the cheapest enforcer of the treaty that we have. Of course if she goes on the ways for repairs, we shall not have her next summer, and we will have to borrow some kind of an ocean-going tug from the Department of Commerce and Labor; but the *Grampus* is a sailing vessel, and it is very useful. In the long run it serves more purposes generally than an ocean-going tug, and as we have no other vessel that is proper for this purpose to be used by the Fish Commission, and as the State Department does not think it advisable to send an armored vessel of any description up there, you could not make a better investment than to put that schooner in shape.

The CHAIRMAN. All these other countries that you have mentioned maintain or keep in the waters there a vessel all the time during the fishing season?

Mr. GARDNER. It depends upon the situation. Just at present the only one is the *Fiona*, which is the Newfoundland cruiser. The Canadians have two cruisers that are generally cruising somewhere around the Gulf of St. Lawrence. Great Britain had the *Latona* last summer, and during a part of the year France had a cruiser out there around the Banks. Somewhere along in 1880 we sent a cruiser down there, and that was about the time that Great Britain paid £12,000 for what Newfoundland did to us in destroying our nets; and I think that is the last time we sent a vessel down there. It is not necessary at all if we have a vessel like the *Grampus* there.

Mr. SULLIVAN. Do you happen to know the value of the catch of American vessels along this treaty coast?

Mr. GARDNER. The last time was about \$750,000 for herring, which was about the usual amount. That is where the dispute came in last year. The dispute this year is on cod, and next year it will be on mackerel. That is the way it goes.

Mr. SMITH. How expensive a vessel is the *Grampus*?

Mr. GARDNER. They want to put in a gasoline auxiliary. That is what makes the expense. I think she is a vessel of about 150 tons, but I could only guess.

Mr. SMITH. Could you not give me some idea of the value of the vessel?

Mr. GARDNER. I could only make a guess. Mr. Bowers will be here and he will probably know the exact value. I may be all wrong about her tonnage.

Mr. SMITH. What I wanted to get at is whether we would appropriate enough money to build such a vessel.

Mr. GARDNER. No; you are not appropriating enough money to build such a vessel with a gasoline auxiliary.

Mr. SMITH. I notice it says "Installation of auxiliary motor, with all necessary machinery and accessories."

Mr. GARDNER. In a dead calm you can not get about in a sailing vessel. Of course, she performs other functions during the rest of the year. When she is not out she collects spawn and fry; but whatever it is, it is a great function for a vessel to perform for the Fish Commission, besides following the course of the fishes.

Mr. SMITH. How old a vessel is it?

Mr. GARDNER. She is very old. I have known of her ever since I can remember. Mr. Bowers can of course tell you the practical side

very much better than I can. It may be that I have underestimated her tonnage; and he can probably tell you whether it would pay better to repair her and put in an auxiliary engine, or whether it would pay better to build a new one with an auxiliary engine in it. This boat is as good a boat to-day for fishing purposes as is necessary, and a great deal faster than many.

---

FRIDAY, *April 27, 1906.*

## MISCELLANEOUS OBJECTS, DEPARTMENT OF COMMERCE AND LABOR.

### ALASKAN SEAL FISHERIES.

**STATEMENTS OF EDWIN W. SIMS, SOLICITOR, ACCOMPANIED BY MR. WILLIAM L. SOLEAU, DISBURSING CLERK, DEPARTMENT OF COMMERCE AND LABOR, AND MR. W. I. LEMBKEY, AGENT IN CHARGE OF FISHERIES, PRIBILOF ISLANDS, ALASKA.**

MR. SMITH. You appear for the Department of Commerce and Labor?

MR. SIMS. Yes; in the matter of the estimates for the Alaskan seal fisheries.

MR. SMITH. What position do you hold in the Department of Commerce and Labor?

### ALASKA, SUPPORT OF NATIVE INHABITANTS OF.

MR. SIMS. Solicitor for the Department of Commerce and Labor.

I suppose the one thing that the committee would like to hear us on is the matter of the addition of the words "and other necessities of life" in the language of the item "supplies for native inhabitants" on page 115. That, as a matter of fact, is about the only extension or change in the language of the appropriation other than the small item for janitor service on page 114. We ask to have added to the language of the appropriation the words "and other necessities of life" so that the Department may purchase from it articles other than "food, fuel, and clothing." The Comptroller recently held that the appropriation as it was worded last year was available only for food, fuel, and clothing. It is not available to purchase soap or matches, or coal oil or powder or anything of that kind. I will give the committee an illustration of the advantage which may be gained by broadening the language of the appropriation. A dollar will purchase 4 or 5 pounds of meat on the island, we will say; a dollar's worth of powder in the hands of the natives will enable them to shoot birds and get 100 pounds of meat. We can not purchase powder from the appropriation as it now stands.

The natives depend for their livelihood entirely upon their earnings from taking sealskins. They are allowed, and they have been paid up to this year, at the rate of 50 cents a skin. When the number of skins taken by the lessee of the islands was 100,000, the amount the natives earned was sufficient to support them; but now that the number of skins has diminished, owing to the decrease in the herd, the amount they earn at 50 to 75 cents a skin is insufficient to support them. The first of these appropriations providing for the support of the native

inhabitants of the Pribilof Islands, as you doubtless know, originated in 1892. That was about the time of the *modus vivendi*, when the Government stepped in and reduced the number of seals which the company was allowed to take; that, of course, reduced the natives' earnings.

The CHAIRMAN. What was the date of that *modus vivendi*?

Mr. SIMS. The first year of the *modus vivendi* was 1891. No other business of any description is transacted on these islands other than that of capturing and killing seals and shipping the skins, and under its contract with the Government the North American Commercial Company has the exclusive right to transact this business. Only those persons who are connected with the company or with the Government are allowed to land on the islands. As a result of this the only work or business the natives can do is that of catching and killing seals. So far as I have been able to learn, the Government never made any regular appropriation for the support of the native inhabitants of these islands until 1892. Previous to 1890 the company took from 60,000 to 100,000 skins annually, and the amount which the natives received for taking these skins at 50 cents per skin was evidently sufficient to support them.

In 1891, however, the Government reduced the number of skins which it permitted the company to take to 7,500. The result of this was to reduce the natives' earnings, and it was at that time that Congress made its first appropriation for food, fuel, and clothing. Since that time the company has never been allowed to take 100,000 skins as provided for in the contract, and the natives have, for that reason, never been able to earn enough money to wholly support themselves. Last year the total number of skins shipped from the islands was only 14,368. The appropriation for supplies for the native inhabitants of these islands has been made each year from 1893 down to the present time.

Mr. SULLIVAN. Was that the result of cutting off the revenue from the sealskins?

Mr. SIMS. Yes; the company paid the natives 50 cents a skin, and when it was allowed to take only a small number of skins the earnings of the natives were cut down in proportion. The Department has succeeded, however, in getting the company to increase the pay of the natives to 75 cents per skin this year. The Department requires the company to bear all those expenses which it should bear under the terms of its contract.

Mr. SULLIVAN. What is this company?

Mr. SIMS. It is called the North American Commercial Company. That company is the lessee of the islands under a lease executed by the Secretary of the Treasury in 1890, and which runs for a period of twenty years from that year.

Mr. SMITH. Do you think that the Auditor will allow an expenditure for powder for hunting purposes as a "necessary of life?"

Mr. SIMS. It is a good business proposition.

Mr. SMITH. I am not speaking of it as a business proposition but a legal proposition. Is powder with which a man could earn his livelihood any more a necessary of life than a store here?

Mr. SIMS. It is a means of earning a livelihood. If left to themselves the natives of the islands would no doubt earn a livelihood through the sale of furs and skins. The Government stepped in, however, and in

the exercise of its sovereign power leased to the company the exclusive right to take furs. It has thereby taken from the natives the means of supporting themselves. Under these circumstances it is no more than just that the Government, having taken away from the natives their source of livelihood, should provide for their support.

Mr. SMITH. Of course, I fully understand the merits of your proposition to furnish the powder, but I was in doubt as to whether gunpowder would be within a legal definition of necessities of life, so that he could draw the gunpowder after you got the appropriation.

Mr. SIMS. I believe it would, under those circumstances. I don't know what the Comptroller would hold, but that would be my opinion.

Mr. SMITH. If that is the chief object.

Mr. SIMS. That is merely one object. In addition to that there are candles, soap, coal oil, etc.

Mr. SMITH. Those, I should think, would be necessities of life.

Mr. SIMS. Matches, cooking utensils, sometimes funeral expenses, nails, paint—little things like that.

The CHAIRMAN. Does not this commercial company bear the funeral expenses of the natives?

Mr. SIMS. It does not, other than in the cases of the old, indigent, and poor. Under its contract it is required to take care of people who can not take care of themselves; that is, those who are not able-bodied.

The CHAIRMAN. How many people are on this island?

Mr. SIMS. About 255 on both islands.

The CHAIRMAN. Which island has the larger population?

Mr. SIMS. St. Paul Island has the larger population.

The CHAIRMAN. Almost all of the natives are on St. Paul Island, are they not?

Mr. SIMS. Mr. Lembkey, the Government agent in charge on the islands, tells me that about two-thirds are on that island. Mr. Lembkey is here, and will be glad to speak as to the local conditions if the committee desires to hear him.

Referring again to the language of the item now under consideration. I would like to call the attention of the committee to the fact that up to date this fund has been used for the purchase of these necessities of life. It is owing to a recent ruling of the Comptroller, holding that the appropriation as worded was limited to food, fuel, and clothing, that we desire the change made. If the change is not made, the natives will be deprived of things they have been accustomed to receive from the Government for a number of years past. We have made an estimate of these other necessities of life, and they average \$99.03 a family.

The earnings of a first-class native sealer on St. George Island last year were only \$86.25. The others received less wages even than this. It can be seen therefore that the earnings of not a single man on St. George Island are sufficient to get the necessities of life for the native sealer and his family. On St. Paul Island the same condition exists, excepting that they earn more. The first-class men there earned \$197 and the second-class men \$158. These men probably would be able to provide themselves with the necessities of life out of their earnings, but the third, fourth, and special class men receive less than enough to meet their needs, as shown by this estimate.

The CHAIRMAN. How many men are employed in the Bureau in Washington in the administration of this service?

Mr. SIMS. None. The only men employed in the administration of the service are four agents who alternate at the islands. They stay there eighteen or twenty months at a time and then are here in Washington for a few months every other year. Secretary Metcalf exercises direct supervision over this service through the Solicitor of the Department. I handle the seal fishery matters in connection with my other duties. There is absolutely no expense of administration here in Washington. The total receipts from those islands since 1870 have been \$8,667,206.14. The total amount expended for supervision and for supplies for the natives has been \$572,066.38. In other words, the Government has received from these islands in the last thirty-six years more than it paid for all Alaska, and the cost of administration has, in my opinion, been proportionately less than that of any other branch of the Government service.

The CHAIRMAN. Do you know to what extent the herd has been depleted since we obtained possession of the islands?

Mr. SIMS. Well, the herd has been materially depleted. The decrease in the size of the herd has been particularly marked in recent years. At this time there are about 225,000 seals in the Pribilof herd. In 1870 the herd was estimated to contain two or three million seals.

The CHAIRMAN. Two million four hundred thousand, I think.

Mr. SIMS. There were various estimates on that. Some scientists said 3,000,000 and some as high as 4,000,000, and some even as high as 6,000,000. I believe a conservative estimate would be between two and three millions.

The CHAIRMAN. Do you know when Russia prohibited the killing of seals there; how long before we acquired possession of the islands?

Mr. SIMS. It is stated that in 1835 the herd had decreased to 4,500 seals. In that year the Russian Government established a closed season, which continued for several years. As a result of the restrictive measures adopted by the Russian Government the herd rapidly increased in numbers, until at the time of the purchase of Alaska by this Government it is estimated that it contained between 2,000,000 and 3,000,000 seals.

The CHAIRMAN. And that closed season continued from 1835 to something like 1864 or 1867.

Mr. SIMS. I believe it did, although the killing of a limited number of seals for food was permitted. There is no doubt that the herd can be increased to an unlimited size under proper regulations. The cause of the present decrease is pelagic sealing. I have gone carefully over the reports made during the last ten years concerning the fur-seal fisheries, and I believe that the administration of these fisheries has been as good as any administration in any branch of the Government service.

The CHAIRMAN. Do you mean in ten years, or the latter part of the last ten years?

Mr. SIMS. Well, I have only gone carefully over the reports for the last ten years.

The CHAIRMAN. What are the restrictions on the company in respect to killing?

Mr. SIMS. The Department canvasses the situation each year and fixes a maximum amount which the company may take.

The CHAIRMAN. Who fixes that?

Mr. SIMS. The Secretary of Commerce and Labor, on the report of the agent as to the size and condition of the herd.

The CHAIRMAN. How does he ascertain the number which shall be killed in any one season?

Mr. SIMS. He takes into consideration the size and condition of the herd, the decrease from the previous year, and other matters. Last year the company was not able—

The CHAIRMAN. Does the increase or decrease in pelagic sealing have any influence in determining the number of seals to be killed on the island?

Mr. SIMS. Yes; in so far as it decreases the number of seals on the island.

The CHAIRMAN. Has pelagic sealing increased in recent years?

Mr. SIMS. I believe in the last few years they have gone at it with renewed activity; haven't they, Mr. Lembkey?

Mr. LEMBKEY. Yes, sir.

Mr. SIMS. There is little doubt that the decrease in seal life on the Pribilof Islands is directly attributable to pelagic sealing. This practice is especially fatal, owing to the fact that pelagic sealers kill mother seals at sea. Those mother seals killed in Bering Sea, in addition to being pregnant, have a nursing pup on shore, which, on the death of its mother, dies from starvation. In addition to this it is estimated by competent authorities that 50 per cent of all seals killed at sea sink and are not recoverable. Experts state that the skin of every mother seal secured by pelagic sealers represents the destruction of at least four lives from the herd.

The CHAIRMAN. There is a mother on the land, with a pup, and she is pregnant. The pup is starved by reason of the failure of the mother to return, and then the one that the mother seal carries and the mother seal herself makes three.

Mr. SIMS. Yes; and about 50 per cent sink; at least 50 per cent sink. In my opinion a strong effort should be made to put an absolute stop to pelagic sealing for all time.

The CHAIRMAN. I would like to ask of Mr. Lembkey at what age is the commercial company allowed to kill seals.

Mr. LEMBKEY. They are allowed to kill 2 and 3 year old seals.

The CHAIRMAN. How long has it been since they commenced 2-year killing?

Mr. LEMBKEY. I understand they have killed the larger 2-year olds during the greater portion of their lease, with the exception, perhaps, of 1890. In 1900, I believe, they commenced taking practically all of the 2-year class they could find.

The CHAIRMAN. Do they kill yearlings?

Mr. LEMBKEY. I do not believe so.

The CHAIRMAN. Do not their reports to some journal published in London in regard to the seal catch and the price which is paid for seal skins indicate that they are killing below the 2-year olds?

Mr. LEMBKEY. An analysis of that publication—I presume you refer to the catalogues of C. M. Lamson & Co.—would show that out of the entire catch of seals from the islands there would probably not be over two or three hundred seals in the doubtful class. Those skins probably appear in the catch as much from the fact that they were exhausted during the drives or hit accidentally in clubbing, or something of that kind, as that they had been killed intentionally; their

skins were then taken off by the natives and brought to the village and put in the salt house with the other skins. I can say positively that I have not seen a yearling killed intentionally on the islands, except two which I killed myself for the purpose of determining the weight of the skins.

The CHAIRMAN. While you are there, to what extent do you supervise and have opportunity to see whether or not the restrictions in regard to the age of seals killed by the Commercial Company are carried out?

Mr. LEMBKEY. I was present at every killing on the island on which I was stationed. Before each killing I called the attention of the clubbers to the regulations which the Department required me to enforce; I also examined the seals after they were knocked down, and if I discovered the presence of any which I thought were inside of the prohibited class I would bring that to the attention of the representative of the company. After the skins had been taken off the carcasses they were weighed by the assistant agent and myself, the weights recorded, and if any appeared which were in the exempted class, that was also made the subject of a protest to the company. In spite of all our efforts a few of the skins from seals which the Department had restricted from killing were taken by the lessee. That was due to the reasons already stated and to the further fact that it is absolutely impossible for the men to judge in every case the weight of a skin on a live seal to within a fraction of a pound.

The CHAIRMAN. To what extent, if at all, are they allowed to kill female seals?

Mr. LEMBKEY. Not at all, sir.

The CHAIRMAN. On the islands?

Mr. LEMBKEY. Not at all.

The CHAIRMAN. So the killing is confined to the males?

Mr. LEMBKEY. Entirely so.

The CHAIRMAN. And they are allowed under the regulations now to kill how many a year?

Mr. LEMBKEY. Fifteen thousand; but previous to killing these we take out 2,000 choice males a year for breeding purposes. We reserve these before the company is allowed to kill any.

The CHAIRMAN. How old are those males?

Mr. LEMBKEY. Two and three years old.

The CHAIRMAN. Do they go on the breeding grounds before they are 4 years old?

Mr. LEMBKEY. They do not get onto the breeding grounds until they are at least 6 years old. Seven years is the full term for a bull. Of course, they are able to serve cows before they are 7 years of age, but before that time they lack the courage necessary to maintain a place on the breeding grounds.

The CHAIRMAN. What does the commercial company pay for the skins?

Mr. LEMBKEY. \$10.22½; that includes every payment to the Government. It does not include, however, the 75 cents which they pay for each skin to the native laborers for taking that skin, nor the cost of preparing it for shipment.

The CHAIRMAN. What does the skin cost them, including the amount paid to the natives and the Government contract.

Mr. LEMBKEY. Under the Government contract it costs \$10.22½ royalty, and, in addition, 75 cents per skin to the natives. It is estimated, I believe, that the expense of taking that skin to London amounts to about 10 per cent of the selling price, which is now on the average about \$37 a skin. That would be \$3.75. I should say, on a rough estimate, that each skin costs them in the neighborhood of \$15.

The CHAIRMAN. The average selling price in London is how much?

Mr. LEMBKEY. The latest market quotation was about \$37 or \$38 per skin?

The CHAIRMAN. This contract continues how much longer?

Mr. LEMBKEY. Four years; until 1910.

The CHAIRMAN. At the rate which the killing is going on now, will there be any considerable number of seal left on the islands at the expiration of the contract?

Mr. LEMBKEY. Yes. There will be a splendid breeding nucleus. The commercial value of the herd would be much less in 1910, of course, than now.

The CHAIRMAN. If the Government were to cease killing on land entirely, without the British Government prohibiting pelagic sealing, the Government of the United States would ultimately lose the entire herd, would it not?

Mr. LEMBKEY. I don't believe that they would lose the entire herd. Probably there would always remain a few seals; and if they were undisturbed at sea as well as on land they would sooner or later rehabilitate the rookeries. It is almost impossible to totally wipe out the species. The history of a number of seal rookeries other than those on the Pribilof islands shows that. After these rookeries had been raided until apparently not an animal was left, at the expiration of fifteen or twenty years of rest, thriving rookeries were found.

The CHAIRMAN. Is there any pelagic sealing inside of the 60-mile zone?

Mr. LEMBKEY. I do not believe that there is on the part of the British vessels, but there is, so far as the Japanese are concerned; and we had one schooner up there last year under the Mexican flag that hung off shore the whole summer.

The CHAIRMAN. Have you any means of knowing the number of seals killed by pelagic sealing?

Mr. LEMBKEY. We have not, except by scrutiny of the reports of the British Government. They send a report of the catch each year to our Government, and our figures are based upon theirs.

The CHAIRMAN. What proportion of the total number of killed do you estimate to be killed by the pelagic sealer annually?

Mr. LEMBKEY. The British Government reports the pelagic catch to be about 10,000 from our herd, but the London trade sales show that probably 25,000 skins were marketed. Now these 25,000 skins represent over 10 per cent of our herd. Whether all those skins actually came from our herd or not I do not know. The fact remains that there is a great discrepancy between the report of the British Government and the report of the London trade sales.

The CHAIRMAN. How do you ascertain the number to be killed by the Commercial Company on the islands each season?

Mr. LEMBKEY. That, as Mr. Sims has said, is fixed by the Department. The present policy of the Department is to save from killing

an adequate number of young male seals for breeding purposes; and with certain other restrictions on the killing as regards the weight of skins, etc., the company is allowed to take all they can get up to a certain maximum number.

The CHAIRMAN. From your observation, has pelagic sealing increased in the last two years?

Mr. LEMBKEY. It has not as regards numbers, but I believe the effect of pelagic sealing on the herd is greater now than it was years ago, because they are now preying on a diminished herd.

The CHAIRMAN. Do you know whether the Department has taken any steps toward negotiations with Great Britain for the purpose of arriving at a convention of some kind whereby pelagic sealing may be stopped?

Mr. LEMBKEY. I do not actually know of anything of that character. Mr. Sims may know.

Mr. SIMS. It has. Secretary Metcalf, in his last annual report, urgently recommended that a strong effort be made to secure international regulations which would stop pelagic sealing. I believe that the State Department took the matter up immediately after this report was made, and that they have been at work since that time securing data and figures with reference to the subject. I understand, informally, that the State Department intends to take steps some time this year looking toward an international agreement which will put a stop to pelagic sealing.

The CHAIRMAN. This contract with the Commercial company can be terminated at any time by the Government, can it not?

Mr. SIMS. No, sir; I believe not; but the Supreme Court of the United States has sustained the right of the Government to reduce the number of seals which may be taken under it.

The CHAIRMAN. It can be, in effect, terminated.

Mr. SIMS. I do not know what the court would do in case the Government attempted to absolutely terminate the contract. While the Supreme Court sustained the right of the Government to reduce the number of seals from 100,000—which the law permits the company to take—to 7,500, it is difficult to say whether or not, with the contract in existence, it would sustain the action of the Government in absolutely prohibiting the company from taking any seals whatever.

The CHAIRMAN. As to the amount paid to the natives. Is that fixed by the contract?

Mr. SIMS. No, sir; it is fixed each year by the Secretary of Commerce and Labor, under a clause in the contract whereby the company agrees to employ the native inhabitants of the islands to perform such labor as they are fitted to perform, and to pay therefor a fair and just compensation, such as may be fixed by the Secretary of Commerce and Labor. Strictly speaking, therefore, the amount paid the natives is fixed by the regulations which the Secretary issues each year.

The CHAIRMAN. The amount which is to be paid by the Commercial Company to the natives is fixed by the Department annually.

Mr. SIMS. By the Department; yes, sir. It has been 50 cents a skin up to this year, and Secretary Metcalf succeeded in raising it to 75 cents a skin.

The CHAIRMAN. Inasmuch as the Commercial Company is making over 100 per cent net profit out of the transaction, why is it that the

Department does not insist upon their paying these people a little more, or at least enough to maintain them?

Mr. SIMS. In my opinion the Government is getting proportionately a great deal more from the company under the present lease than it received under the previous lease.

The CHAIRMAN. And they are getting a great deal more out of the contract than before.

Mr. SIMS. Not more than the other company. So far as I am aware the company is receiving only that which it is entitled to receive under the terms of its contract. From what I have been able to learn from the reports of the dealings of the Government with this company during the past few years, I believe that the Government has forced the company to concede to it everything which it could fairly expect to receive under the contract. Without expressing an opinion as to whether or not the terms of the existing contract are the most advantageous which could be secured to the Government, I firmly believe from my knowledge of the situation that the Government is at present requiring the company to do all that it could fairly require under its terms. I presume that if the Department was unreasonable and attempted to require the company to do things not provided for in the contract, it would refuse and the Government would be involved in a law suit. The Department now requires the company to live up to the terms of the contract, and if the terms of the contract are not advantageous they should be changed when the Government enters into a new contract three or four years from now, providing it enters into such contract.

The CHAIRMAN. They would not be likely to refuse to do anything, because if they did they would forfeit their contract, and they would not be likely to forfeit a contract of that kind.

Mr. SIMS. The company claims that it does not make very much under existing conditions.

The CHAIRMAN. Do you know how the present price of sealskins in the London market compares to-day with the price paid at the time this contract was made?

Mr. LEMBKEY. I understand the price received for the skins in 1890 was \$36.50 for every skin the company sold, on the average, as against \$37 at the present time.

Mr. SIMS. Referring to your suggestion, Mr. Chairman, as I say, in drafting the regulations this year we went as far as we thought we could justly go. Of course, the Department might say to the company, "You must do this or quit," but it seems to me that would be inadvisable.

The CHAIRMAN. Of course it would not be good administration to impose upon them conditions that would be actually a hardship; but in view of the enormously increased profit which they are now realizing out of the contract, a profit which they received for several years subsequent to the making of that contract, when the price that they were to pay to the natives was fixed, it seems entirely reasonable to expect from them a little more money for the purpose of defraying the expense of the natives who are employed upon the islands. How much have you increased it this year over the amount paid last year?

Mr. SIMS. We have increased it from 50 to 75 cents a skin, that is equivalent to a 50 per cent increase.

The CHAIRMAN. This year?

Mr. SIMS. Yes, sir.

The CHAIRMAN. Will that increase the income of the natives so that your appropriation will not have to be as much as heretofore when they were receiving only 50 cents?

Mr. SIMS. No, sir; we required the company to make that increase for the reason that it had raised the price of provisions.

The CHAIRMAN. Does the Government buy provisions from the commercial company?

Mr. SIMS. I believe the natives get their provisions from the company on orders from the Government agent. The Government maintains a Government house on each island, and the natives go to the agent and get their orders.

The CHAIRMAN. Then we are obliged to pay the amount charged by the commercial company for the supplies that are furnished to the natives upon the order of our agents?

Mr. SIMS. Yes; but the commercial company has always maintained—and we have endeavored to find out whether they were correct—that they have charged no more than the actual cost, plus the cost of transportation, for these provisions; in other words, they state that they make no profit out of the provisions they sell to the natives.

The CHAIRMAN. Did your investigations determine the truth of that?

Mr. SIMS. The figures that they gave us on what they were required to pay for provisions in San Francisco did, I believe, show that they were getting them as low as possible in large quantities. Of course the matter of transportation was a guess, but it was nominal, and we thought it was only a fair charge. You see there are so many relations between the natives and the company and the Government and the company that you would have to go right down the line if you broke with them. We have asked for no more for supplies for native inhabitants this year than has been allowed for a number of years past.

The CHAIRMAN. This \$19,000 is the amount which the Government is paying for the maintenance of the natives?

Mr. SIMS. Yes, sir.

The CHAIRMAN. In addition to what they receive from the commercial company.

Mr. SIMS. That is it exactly, and we ask now to have it changed, so that we can purchase other necessities of life. As a matter of fact, we have been purchasing these other necessities of life from this identical appropriation for a number of years.

The CHAIRMAN. Do you know whether there is any balance left over in the fiscal year 1905 from this appropriation?

Mr. SIMS. The disbursing officer informs me that it is practically all used.

Mr. SMITH. About what is the length of the sealing season in which the natives are employed?

Mr. SIMS. The months of June and July.

Mr. SMITH. About what is the earning capacity of a man per day at 75 cents a skin?

Mr. LEMBKEY. Of course, that depends. If the men could kill all the seals they could handle they could probably kill 3,000 a day, but

they have to devote a day to sealing from each different rookery, and from those we may get 600 skins, or we may only get 75 or 80.

Mr. SMITH. What I wanted to get at is whether these men get liberal pay for the two months they work. What would the average earnings of a man be for a month up there?

Mr. LEMBKEY. During the months of June and July, 1905, there were twenty-one first-class workmen on St. Paul, and they each received the sum of \$197.05. That would be on an average of \$86 a month.

Mr. SMITH. Are these men of any skill in any line—these natives?

Mr. LEMBKEY. Yes, sir; they have been trained for generations to this one particular work.

Mr. SMITH. Does it require any training to recognize the male from the female seal?

Mr. LEMBKEY. It requires considerable experience to recognize the males from the females. The seals which we kill, however, are young males which are forced by the adult males to keep away from the females, and consequently, to haul up by themselves away from the breeding herd. When thus hauled up it is not a question of distinguishing them from the females, because when these young males are driven there are no females near them. If, however, these young males or "bachelors" should become mixed with the cows it would be a hard matter to tell the difference.

Mr. SMITH. Are these men liberally paid for the class of work they do for the company?

Mr. LEMBKEY. The work performed by these men is of quite an expert nature, and requires considerable experience. In addition to this knowledge as a skinner the native workman must work rapidly to take the skin off the carcass before it stiffens. The skin of the seal is grown fast to the blubber and is not loose as it is on a fox. In working rapidly the skinner must still be expert enough to avoid cutting the skin, thereby seriously affecting its value. An expert skinner will take off fifteen or twenty skins in an hour.

Mr. SMITH. Whatever skill there is is in the skinning, and not in the selection nor in the killing?

Mr. LEMBKEY. The killing also requires expert knowledge, but that is done by a separate class of men called the "clubbers." The clubbers do the killing, and another gang, mostly young fellows, does the sticking; that is to say, after the seals are knocked down the young men come with knives and stick them and bleed them. After them comes another gang a little more expert, who draw their knives around the head forward of the ears, and also around the flippers; they also rip them up the belly, leaving the carcass in condition for the skimmers who are coming behind to take off the skins.

Mr. SMITH. How are these men paid?

Mr. LEMBKEY. By participation in the community fund, in which all have a share.

Mr. SMITH. So, as I understand it, the 75 cents for the skin covers everything from the clubbing to the removal of the skins, and that they do by arrangement among themselves.

Mr. LEMBKEY. That is the point exactly.

Mr. SMITH. You think these workmen average about \$80 a month during the season?

Mr. LEMBKEY. On St. Paul Island, yes. On St. George the first class average only \$43 a month, or did last year. The first-class men on St. Paul got \$86 a month during the last season.

The CHAIRMAN. The only meat they have is from the seal?

Mr. LEMBKEY. With the exception of the little canned meat they are able to buy at the store. But their preference, of course, is for the seal meat if they can get it. They don't eat the canned meat if they can get seal meat.

The CHAIRMAN. They are allowed so many carcasses.

Mr. LEMBKEY. During the summer there is an abundance of seal meat. In the fall we kill a few for food, but only enough to keep them going. These seals killed in the fall are carefully divided among the several families.

Mr. TAYLOR. Do they put the meat away and preserve it as we do pork?

Mr. LEMBKEY. In the summer time, because of the rush of work, all the men are required on the sealing field and have little or no time to preserve meat. It is almost impossible for them to save much of this food during the summer. They take what they want for their present needs, but they have no means of preserving it, except by salting, even if they had the time. They have no refrigerating apparatus.

Mr. TAYLOR. What becomes of it?

Mr. LEMBKEY. It rots. But after the sealing season is over, or during the fall and winter, when seals are killed for food, every scrap of this meat—even the internal organs—is carefully preserved and salted if not eaten at once.

Mr. TAYLOR. For winter use?

Mr. LEMBKEY. For winter use. At that time the season is so cool that they can preserve the meat fresh for an indefinite time. But during the summer time it will not last over a week without becoming tainted.

Mr. TAYLOR. Does anybody eat the seal meat excepting the natives?

Mr. LEMBKEY. I have eaten a lot of it and am very glad to get it.

Mr. TAYLOR. Is it a matter of merchandise anywhere else?

Mr. LEMBKEY. No, sir.

Mr. TAYLOR. Not after being preserved or dried by whatever process you use?

Mr. LEMBKEY. We can not sell it. I presume if we were able to put it on the market, and had enough of it, we could find sale for it among the Aleutian natives. The trouble about the matter is, however, that those natives are so impoverished that they could not pay for anything except, perhaps, in kind.

The CHAIRMAN. You can not dry this meat on the islands in the summer time?

Mr. LEMBKEY. The climate is so damp that I don't think it possible to do that. There were attempts made once or twice to smoke it with pine wood, but it was so strong after they got through that the natives could not, or would not, eat it.

The CHAIRMAN. Do they ever attempt to pickle it?

Mr. LEMBKEY. They salt quite a lot of it; yes, sir.

The CHAIRMAN. Can they preserve it in that way?

Mr. LEMBKEY. They preserve it for winter use in that manner.

Mr. TAYLOR. Beyond these two months' work in the sealing time, what other work does the native do?

Mr. LEMBKEY. They do very little work which brings any revenue with the exception of laboring for the company in the shape of such odd chores as they have for them to do.

The CHAIRMAN. What does the Commercial Company furnish to these natives in addition to the amount of money they pay for the skins?

Mr. SIMS. They furnish salt salmon under the contract, which says, "That it (the company) will furnish to the native inhabitants of said islands of St. George and St. Paul annually such quantity or number of dried salmon and such quantity of salt and such number of salt barrels for preserving their necessary supply of meat as the Secretary of the Treasury shall, from time to time, determine." As a matter of fact the company furnishes those articles in unlimited quantities. It furnishes all the dried salmon the natives will eat. No question has ever arisen under that clause.

The CHAIRMAN. All they can consume?

Mr. SIMS. Yes. And the contract also requires the company to furnish them 80 tons of coal per annum.

The CHAIRMAN. Are there any other supplies besides coal and fish? The only reason I ask these questions is that this language "And other necessities of life," might cause the question to arise as to whether or not the Commercial Company would not claim that they were not bound to furnish these things because Congress had appropriated for all the necessities of life.

Mr. SIMS. No, the policy of the Secretary has always been to require the company to adhere strictly to the terms of its contract and furnish everything that was required; and also where the matter was indefinite, as in the matter of paying the natives, he requires the company to do everything that can be reasonably required under the contract. It is required to provide comfortable dwellings, and keep them in repair, and also to provide suitable schoolhouses for the education of the children.

The CHAIRMAN. Has that condition been complied with?

Mr. SIMS. It has, yes, sir; fully. I have seen some of the samples of writing and work that the pupils in these schools have done, and they show a marked degree of advancement.

Mr. LEMBKEY. They maintain their schools very faithfully through eight months of the year under competent teachers.

Mr. TAYLOR. What kind of teachers?

Mr. LEMBKEY. We have one teacher on St. Paul Island who is a native who was taken down by the Alaska Commercial Company, given a college education at San Francisco, and brought back to teach in the school. The other teachers come from the States. They have on St. George a young man from Vermont who has been teaching school all his life and is a very competent teacher.

The CHAIRMAN. Have they churches there?

Mr. SIMS. They have a church.

Mr. LEMBKEY. The natives have built their own churches from a fund which they contributed in years past. The company has never been to the expense of maintaining houses of worship.

Mr. TAYLOR. What religion is it?

Mr. LEMBKEY. The Greek Catholic Church—a survival of the Russian possession.

Mr. SIMS. This contract also requires them to provide a competent physician or physicians, and necessary and proper medicines and medical supplies; also the necessities of life for the widows and orphans and aged and infirm inhabitants of the islands who are unable to provide for themselves. Those are about the only things they are required to provide, and we have checked those up carefully each year.

The CHAIRMAN. What are the morals of the people up there?

Mr. LEMBKEY. They are consistent church members, and go to church whenever they have a chance. Their morals, I presume, are as good as they are in any locality where education is a secondary matter, and where the public standard of morality is elemental. There has been in the past more or less illegitimacy; there are few cases of that kind there now.

Mr. SULLIVAN. How many people are there up there?

Mr. LEMBKEY. About 253 on both islands.

The CHAIRMAN. Do they utilize all the money they receive for work performed for the commercial company in maintaining themselves, in addition to what the Government gives them; have they an accumulated fund?

Mr. LEMBKEY. Some of them have funds saved that are deposited with the lessee as bank accounts. All these bank accounts were accumulated under the old lease at the time when the community was receiving about \$40,000 per annum from the taking of sealskins. During that period some of the more thrifty natives accumulated considerable money, which they deposited with the lessee and on which they receive interest at the rate of 4 per cent. A few of these bank accounts still survive, but they are gradually being expended.

Mr. TAYLOR. Are the islands increasing in population?

Mr. LEMBKEY. The population is decreasing and has been for a number of years. In fact, it has only been kept up by importations, from time to time, from various other islands in the Territory. Their death rate exceeds their birth rate almost constantly.

Mr. SIMS. I call the attention of the committee to the addition on page 114 of the words "janitor service at the Government buildings, at the Pribilof Islands, not exceeding \$480 per annum." Under an order of the Treasury Department, issued, I believe, about 1891, they have been paying at the rate of \$20 a month for one native janitor in each Government house. This has never been included in the appropriation as a separate item, and the Department felt this year that it should be included. It does not call for an additional expenditure.

The CHAIRMAN. I observe that your estimate under that head is less than last year.

Mr. SIMS. That is due to the fact that the traveling expenses and stationery are to be paid from the Department contingent fund. That fund, however, is not increased.

The CHAIRMAN. What is the necessity for janitor service?

Mr. SIMS. There is a Government house on each island.

The CHAIRMAN. Who occupies this Government house?

Mr. SIMS. About all of the natives on the island are in and out of those houses every day, and there must necessarily be somebody there to clean up. They are a sort of headquarters for the natives.

The CHAIRMAN. The only reason I ask the question is because the term "janitor service" may provoke some inquiry on the floor of the House as to what the assistance really is. I thought there might be some other name that could be applied.

Mr. SIMS. It is in a Government house. The natives come there for orders for supplies, to have the agent settle their disputes, for advice, and for many other purposes. The Government agents, operating through the chiefs of the tribe, maintain order on the islands.

The CHAIRMAN. Then you want somebody to keep the house clean?

Mr. SOLEAU. While it appears here as a new item, it is not in fact a new item. When the service was operated through the Treasury Department the Secretary paid the expense out of the fund for custodians and janitors of public buildings. We did not know about that until last fall, when the bill of the commercial company came in for money to reimburse this man; and Congress has already appropriated a deficiency for last year in the urgent deficiency bill.

The CHAIRMAN. I observe here that somebody has recommended the omission of this language, which is carried in the current law, "Necessary traveling expenses of agents actually incurred in going to and returning from Alaska, not to exceed \$500 each per annum; and the expense of transporting the same to the Pribilof Islands, Alaska."

Mr. SIMS. That is because it is proposed by the Department to pay those expenses out of the contingent fund, and the contingent fund has not been increased.

Mr. TAYLOR. Then you want those words to go out.

Mr. SIMS. Yes, sir. And on page 113 the words "and traveling expenses" should go out.

#### SHIPPING COMMISSIONERS, CONTINGENT EXPENSES.

Mr. SOLEAU. Until two years ago there was no allowance made for such expense, and every two or three years the shipping commissioners were required to sue in the Court of Claims for contingent expenses, and it came to Congress for appropriation. Two years ago this committee agreed to allow \$7,000 for contingent expenses, which consist of rent, fuel, telephone and telegraph service, and similar items.

The CHAIRMAN. I also observe that you have a new item here on page 117, "Rent of office quarters for the United States shipping commissioner at San Francisco, California, not exceeding \$2,100."

Mr. SOLEAU. Until about three months ago the shipping commissioner at San Francisco was quartered in the public building, but he was crowded out on account of the needs, I believe, of the Treasury Department. It then became necessary to quarter him in rented quarters until the new Government building could be completed. The urgent deficiency bill carried an appropriation for that rent for this year.

The CHAIRMAN. Is this an annual rental?

Mr. SOLEAU. That will be an annual rental until we can get this man back in the Government building at San Francisco.

The CHAIRMAN. How many people are under his employ?

Mr. SOLEAU. I can not say. There are two or three clerks besides himself. He has to have a good deal of space, because he settles all disputes between sailors and masters, and he makes contracts for the sailors before they go to sea. He also takes care of them, as required

by the Revised Statutes. It was said to be the best arrangement that could be made at San Francisco before the destruction of that city.

The CHAIRMAN. Has the office been destroyed?

Mr. SOLEAU. I can not say, but I think it has.

The CHAIRMAN. Have you communicated with the Department in regard to it?

Mr. SOLEAU. We have not heard from him directly, up to two or three days ago. We heard that the steamboat-inspection service quarters could not be occupied any more and temporary quarters have been established in Oakland, and I imagine the shipping commissioner has been required to go there until things are straightened out.

Mr. SMITH. Ought this to be limited to San Francisco? You say you may have to remove it to Oakland.

Mr. SOLEAU. I imagine it will go back in a short time. I don't believe there will be much quibbling so long as it is impossible to get quarters in San Francisco; I do not believe the Comptroller will make any objection to that.

Mr. SMITH. I did not know but what you might not be able to get money for the rental of an office in Oakland.

Mr. SOLEAU. I don't believe there will be any trouble about this when the circumstances are shown.

---

FRIDAY, April 27, 1906.

## ENFORCEMENT OF THE CHINESE-EXCLUSION ACT.

### STATEMENT OF MR. F. M. P. SARGENT, COMMISSIONER-GENERAL OF IMMIGRATION.

The CHAIRMAN. Mr. Sargent, you are Commissioner of Immigration?

Mr. SARGENT. I try to be.

The CHAIRMAN. You succeed reasonably well in being it, do you not?

In the item here on page 115 of this bill, for the enforcement of the Chinese-exclusion act, you estimate for the coming fiscal year \$100,000 less than your current appropriation?

Mr. SARGENT. Yes, sir.

The CHAIRMAN. And you also recommend that we omit the language now carried in the present law, "*Provided*, That the annual subscriptions for publications for use in the immigration service at large may be paid in advance." Have you any balance left over of this appropriation of \$600,000 for the fiscal year ending June 30, 1905?

Mr. SARGENT. Yes, sir.

The CHAIRMAN. How much?

Mr. SARGENT. From July, 1904, to February, 1905, we expended \$351,493.68. From July, 1905, to February, 1906, we expended \$263,484.88.

The CHAIRMAN. What is the total for the two fiscal years that you have expended?

Mr. SARGENT. I have it here by months.

The CHAIRMAN. You have given only a fraction of the fiscal year 1905.

Mr. SARGENT. Yes, sir. I have not the figures here for the whole year. If you want them I can give you them very quickly to-morrow morning.

The CHAIRMAN. The year ending June 30, 1905, beginning July 1, 1904, is the fiscal year I want, for which you had an appropriation of \$500,000.

Mr. SARGENT. You want the figures on that?

The CHAIRMAN. I want the amount expended out of that appropriation and the amount of balance returned to the Treasury last September. Is your estimate for the coming fiscal year of \$500,000, which is \$100,000 less than the current appropriation, based upon the fact that you are not expending more than that amount and do not intend to expend more than that amount for this fiscal year?

Mr. SARGENT. Yes, sir; and upon my belief that, with an appropriation of \$500,000, I would have somewhat of a balance left. It depends largely, Mr. Chairman, upon how far we go in the enforcement of the Chinese-exclusion laws as to the money we will spend.

Comparing the month of February, 1905, with the month of February, 1906, in 1905 our expenditures were \$62,609.10; in February, 1906, \$25,683.12. Now, in February, 1905, we had a large deportation, while now we are not deporting scarcely any, so that our expenditures at the present moment are what might be termed merely the running expenses, maintaining the service, paying the salaries and incidental expenses of the Chinese service, with very few returning to China, for which, of course, the larger amount of the fund is used.

Now, if we should have a large deportation this next month, of course that would increase the monthly expenditures. But when I made the estimate for this year, taking the work of last year and anticipating that the laws would be enforced as they have been in the past so far as the keeping out of the excluded classes and the returning of those found in the country unlawfully here is concerned, I thought that with an appropriation of \$500,000 we would be safe, and of course have something left over at the end of the year.

Now, the difference in the expenditures between the corresponding months of this year and those of the previous year is shown by this exhibit. [Reads:]

*Comparative statement of expenditures from appropriation "Enforcement of the Chinese-exclusion act," during periods July, 1904, to February, 1905, and July, 1905, to February, 1906.*

July, 1904	\$35,281.82	
August, 1904	40,308.81	
September, 1904	39,139.37	
October, 1904	37,311.50	
November, 1904	45,210.62	
December, 1904	44,428.26	
January, 1905	47,204.20	
February, 1905	62,609.10	
		\$351,493.68
July, 1905	31,740.08	
August, 1905	31,002.43	
September, 1905	34,581.39	
October, 1905	33,483.30	
November, 1905	32,577.44	
December, 1905	35,367.11	
January, 1906	36,050.01	
February, 1906	28,683.12	
		263,484.88
Difference		88,008.80

As you will see, February shows a good deal less expenditure in 1906 as compared with 1905, because we are returning few Chinese to China.

Mr. TAYLOR. That is, they are not violating the law as much as before?

Mr. SARGENT. No, sir; we were instructed not to make arrests of the Chinese found unlawfully in the country.

Mr. TAYLOR. The law is not enforced so rigidly?

Mr. SARGENT. We are not doing so active a business as we were a few months before.

Mr. SULLIVAN. From whom did you receive the instructions not to enforce the law?

Mr. SARGENT. I received the instructions from the head of my Department, the Secretary of the Department of Commerce and Labor. He said that during this agitation about the boycott in China he thought it would be unwise to make the arrests as we had been previously doing of Chinamen found unlawfully in this country, and of course I always obey instructions. We were expected under the law to take into custody those who had been here unlawfully, and that was what I was doing.

Mr. TAYLOR. I was in hopes that the vigorous execution of the law had enforced a respect for it on the part of the Chinese themselves.

Mr. SARGENT. I think a vigorous enforcement of the law has caused a great deal of dissatisfaction to be created among those who have in times gone by made a good deal of money by the lax enforcement of the law. If you will note the appropriations, I do not know but that some of you gentlemen were on the committee when I said, some years ago, that if you wanted the laws enforced you should give me the money and we would enforce them. We asked for the increase of the appropriation, and the next year we asked for a little more, until we finally got the amount up to \$600,000. Then I found that we had quite a margin left, and that is why this year I suggested \$100,000 less, with the belief that it was the desire of Congress to have the laws enforced. The large expenditure of money in the enforcement of the Chinese exclusion laws is incurred incident to the deportation to China of those who are unlawfully here.

Mr. TAYLOR. That is, of those who violated the law?

Mr. SARGENT. Yes.

The CHAIRMAN. The Government defrays the expense of deportation?

Mr. SARGENT. Yes, sir.

Mr. SMITH. What objection, Mr. Sargent, would there be, if any, to providing that this appropriation should be paid out of the head tax?

Mr. SARGENT. I do not think there would be any serious objection, providing you had sufficient head tax to meet it. But we must bear in mind that we have a very large service in immigration, which is very expensive, and while at the present time we have a good surplus on hand and our receipts are exceedingly heavy, owing to the large number of arrivals, yet if we should have a falling off in immigration our receipts would necessarily fall off, and there might come a time when we could not carry on the entire expense of the immigration service and the Chinese service out of the earnings of the head tax, and then we would be in a very awkward position, because we are not permitted, you know, to make any deficiency, and I would not have

one if I had anything to do with it. When I found I was coming up to the limit of the appropriation I would stop doing business.

Mr. SMITH. Is there any possibility of not doing business in the next fiscal year if this were paid out of the head tax? If no immigrants came in next year you would still have more money than you would need?

The CHAIRMAN. The surplus of the head tax is now \$1,266,000.

Mr. SARGENT. Where did you get your figures?

The CHAIRMAN. From the Secretary of the Treasury.

Mr. SMITH. Could there be any possible embarrassment for one year in doing that, and taking this question up with you every year, Mr. Sargent?

Mr. SARGENT. I would not say there would be. I do not know that there would. But I always like to have the satisfaction of knowing that there is plenty of money to carry on the business, as long as it is carried on economically, and we think we have been administering the Chinese-exclusion laws as economically as it has been possible to do it, and the same is true in connection with the immigration laws. No doubt, to-day, if you should decide to have the expenses of the enforcement of the Chinese laws paid out of the immigrant fund, we would have plenty of money.

Mr. SMITH. I think you misunderstood me. I did not propose to put a clause in here that the expenses of the Chinese-exclusion law should be paid out of the immigrant fund, but to provide what you ask for, and to provide for this year that it should be paid out of the immigration fund. If a new appropriation came up and there was not sufficient balance to pay for it, that limitation need not be put on. Is there any objection to us putting that on this year?

Mr. SARGENT. There is no objection to that on my part—no objection to what you gentlemen will do. You give me every year certain sums of money, and we expend certain sums, and on the basis of what you gave me last year we recommended that you give us \$100,000 less for the coming year. As to how that money shall be appropriated, I am wedded to no particular plan. The only thing I want to impress upon your minds is the immense business that is done in the immigration and in the Chinese-exclusion service. We must of necessity maintain a high degree of efficiency, and if we should have a famine in immigration of course our receipts would fall off.

The CHAIRMAN. Your expense would be materially reduced, would it not? Perhaps not in proportion?

Mr. SARGENT. To a certain extent, Mr. Chairman; but at all times we must keep up a complete service clear around the country, because you have always got to have your sentinels on guard.

The CHAIRMAN. I have a statement from the Secretary of the Treasury stating that on April 1, 1906, the surplus in your fund for regulating immigration was \$1,266,833.86.

Mr. SARGENT. Yes; I think we will have a little better showing at the end of this month. We have taken in a little over \$100,000 at one port during this last week; 55,000 people.

#### PAY FOR EXAMINATION OF IMMIGRANTS.

Mr. SMITH. There is another question I would like to ask you, but not on this item: You pay to the Marine-Hospital Service for their examination of immigrants, I believe?

Mr. SARGENT. We pay whatever expense is incurred by the Marine-Hospital Service out of the immigrant fund.

Mr. SMITH. Would there be any reason why it would not be wise to give them some amount out of that fund that would approximately correspond with the amount that they thus represent, and avoid all this keeping of separate accounts of their charges against you, and of having them wait for reimbursement and transact all that business? It has been suggested that for this year, for instance, at the rate per month you are now paying them, the reimbursements would come to about \$105,000, and probably next year it would be a little more, as it has been gradually rising. Would there be any objection, and would it not be economy of administration, to have them every year keep track themselves of what they spend for this service, and then allow them a gross sum out of your immigrant fund, payable annually, instead of having all these settlements to make between your two Bureaus?

Mr. SARGENT. I have always believed that all money paid out of a fund—for instance, a fund created like this is, for immigration purposes alone, should be used for no other purpose; that the responsible officer having charge of that fund should have the accounts properly presented and approved by him before the money leaves the Treasury or the fund. Of course, I can appreciate that there have been serious objections raised to our officers at these different ports of entry approving or O. K.'ing the marine-hospital surgeons' bills. They take some exception to their having to submit their accounts to the Commissioner of Immigration. For instance, in New York, where our largest expenditures are, we require that the Commissioner of Immigration shall O. K. every expenditure at that port, no matter what it is for. We think it is no more than right that we should do that. The Marine-Hospital Service has objected to the submitting of their accounts for the O. K.'ing or approval of the Commissioner who has charge of that service at Ellis Island. Why, I do not know.

Mr. SMITH. They do not make objection to us.

The CHAIRMAN. The only objection was to the delay in refunding the amount which they had to pay. They presented it this way to us: Out of their general appropriation for that service they pay to these surgeons who are employed in the Marine-Hospital Service all the bills contracted by them legitimately in the performance of their duties; then the amount thus paid out of their general appropriation must be presented to the Treasury Department and the immigration service, and that amount is refunded to them. They say that in refunding there is so much delay that it seriously embarrasses their administration on account of their not knowing exactly when they will have the amount that is due them. It is not available to meet the expenses of their service, and that is the reason for their objection.

Mr. SARGENT. Of course, if you gentlemen feel that it is safe to do that, and it is the proper thing to do, I am raising no objection.

The CHAIRMAN. Here is what occurred to me, at least, as a member of this committee: That inasmuch as these payments were statutory payments that would have to be made by the Marine-Hospital Service to the surgeons and made out of their regular appropriation, unless the amount thus paid out of the Marine-Hospital Service was promptly refunded, the Marine-Hospital Service would not readily know what amount they had available for expenditures in the carrying on of their

service; whereas, taking the experience of this year as a basis, where they are paying out of their regular appropriations \$105,000 for services performed for your Bureau, if next year they anticipated on the basis of increase the payment of at least \$110,000 out of their appropriation, instead of delaying the refunding of this money, as it has been delayed in the past, if we should provide that so much and \$110,000 of that amount be taken from the immigration fund and be credited to the Marine-Hospital Service, then they could go on and draw on that fund to that extent instead of drawing on their regular Marine-Hospital Service fund. It would obviate the necessity of all the work of supervising accounts, and so forth; and inasmuch as these payments are largely statutory, we fail to see where there would be any opportunity for the payment of exorbitant charges, or anything of that kind. Their accounts would have to be audited just the same as if audited out of their own appropriation. The question was whether it would not be better administration.

Mr. SMITH. We have to give them more money under appropriations, as they claim, under existing law, because when the end of the fiscal year comes they have not got these reimbursements back. It is a question with us whether, without injury to the service, we could cut down the appropriation.

Mr. SARGENT. Of course I am prepared to comply with any good business proposition. All I want to know is that every dollar of money that comes into our Bureau is accounted for and disbursed in accordance with law. We have our monthly records of expenditures, and at the close of every month, as soon as the returns come in, I make up my expense account, and show just exactly every dollar on hand and where every dollar has gone; and each month I hand such a financial statement to the head of the Department.

The CHAIRMAN. This would be merely a matter of bookkeeping. The Treasury Department would then credit the Marine-Hospital Service with \$110,000 from the immigration fund, out of which they would pay for all their services in this regard throughout the year. They would have no more. That would pay for the service which they render for the Immigration Bureau during that time.

Mr. SMITH. In other words, fix \$9,000 a month as the limit.

Mr. SARGENT. Suppose that \$9,000 did not meet the requirements of the service?

Mr. SMITH. They would have to do it anyhow.

Mr. SARGENT. Would they not be disposed to slight our service because they had got only \$9,000 a month?

The CHAIRMAN. They make an estimate of that on the basis of last year. Seventy-three thousand dollars is all the service amounted to during the last fiscal year.

Mr. SMITH. I think this ought to be readjusted each year, if it is done in accordance with what their books show they are actually paying out for you.

Mr. SARGENT. Whatever arrangement you make, do not provide any way whereby the Marine-Hospital Service, in connection with the duties devolved upon it in connection with the Immigration Bureau, can become independent of the Commissioner-General or the commissioner at the port, because the moment that is done we are going to have trouble. It must be fixed in some way that we may understand each other.

The CHAIRMAN. The law at the present time requires that they shall render that service.

Mr. SARGENT. Unless there is some understanding they will immediately try to be an independent service. That is to say, the Marine-Hospital Service, as you know, is independent of the Bureau of Immigration, and yet upon the Marine-Hospital Service we have got to depend, in passing upon the physical condition of aliens who come to this country, for the successful administration of the immigration laws. The Commissioner-General of Immigration must, of necessity, have some control over all employees connected with the immigration service. There can not be two bosses. You catch the point?

Mr. SMITH. Yes.

Mr. SARGENT. So far as the payment of the money is concerned, so far as the appropriations are concerned I am not particular about that; but when it comes to the matter of control of the service, you know that the Commissioner-General of Immigration and the commissioner at the port should have absolute control over the personnel and discipline of the service; that the Marine-Hospital Service should not be an independent branch of the service and allowed to do and act as they please.

The CHAIRMAN. Under present conditions, where do you get authority to call upon the Marine-Hospital Service?

Mr. SARGENT. By a regulation which has been adopted, and which is in effect in the regulations; that where they are assigned to our service they are subject to the orders of the Commissioner-General and of the commissioner at the port. See Bul. 26, page 8, Immigration Laws and Regulations.

The CHAIRMAN. If we made a provision for the payment of that service it would not affect the existing law or that regulation; it would remain just as it is.

Mr. SMITH. If we provided that they receive \$3,000 a month in lieu of reimbursement—

Mr. SARGENT. I understand you are going to set aside a certain amount of money for the use of the United States Marine-Hospital Service in connection with the immigration service—that is to say, to perform the medical duties of our service?

Mr. SMITH. No; our thought was this: To appropriate just what they said they thought they would need for the whole service, and provide that \$9,000 should be paid from the immigration fund per month.

The CHAIRMAN. It did not originate with those people?

Mr. SARGENT. I did not understand that it did. It has only been within the last few months that we settled this proposition required by the Auditor, which provided that their accounts must be approved by our officer before they could be passed. We had a controversy over it, and it was finally approved by the Secretary. They had objections to it. All I want is to have a thorough understanding. There is a different method of accounting in the two Departments—Treasury and Commerce and Labor.

The CHAIRMAN. This is all designed to reduce instead of causing friction?

Mr. SARGENT. Time will develop that.

The CHAIRMAN. You would be setting aside from your fund at the beginning of the fiscal year \$110,000 to pay for services which you

have the right to call upon the Marine-Hospital Service to render. If they do not render service to that amount of course it remains in your fund.

Mr. SMITH. Not under the language we talked about.

Mr. SARGENT. Who is going to fix the salaries of the surgeons who are assigned to the United States immigration service?

The CHAIRMAN. Just as they are fixed now. The Surgeon-General fixes them now.

Mr. SARGENT. He does, upon the recommendation of the head of the immigration service. We have to pay the bills, you know, so that we always have something to say about what they shall get. But under this proposed plan which you suggest we would be freed from that.

The CHAIRMAN. Who fixes the salaries now?

Mr. SARGENT. I recommend them to the Surgeon-General for those that are in our service. We are paying for it.

The CHAIRMAN. You fix the compensation of the officers of the Marine-Hospital Service who are employed in doing the work incident to the immigration service?

Mr. SARGENT. We make the recommendations to the Surgeon-General as to what we think they ought to pay.

The CHAIRMAN. Are these salaries of surgeons employed in connection with the immigration service higher or lower than those of surgeons employed generally in the Marine-Hospital Service proper?

Mr. SARGENT. I can not answer that question, my dear sir. I know when a Marine-Hospital Service surgeon in the service of the Bureau of Immigration thinks he ought to get a little more money he generally finds me and talks to me, and if I think he ought to have it I do not fail to suggest it to the Surgeon-General, and, as a general rule, my suggestions are quite generally considered.

The CHAIRMAN. The Surgeon-General acts upon your recommendation?

Mr. SARGENT. He does where it applies to our service. For instance, I had a case this morning where a recommendation was made by one of our officers to increase a surgeon, and I approved the recommendation to the Surgeon-General. But if this arrangement which you suggest is considered best by you, all right. I am not opposing it in any way. I am merely setting forth my views, based upon our experience in the service.

CLAIMS OF HENRY JOHN WRIGHT, M'KAY STEAMSHIP LINE, AND OSCAR KLOCKER.

(See also page —.)

Mr. SMITH. Look at those items on page 116, Mr. Sargent.

Mr. SARGENT. That first was where evidence was given by an alien, where the Department of Justice convicted a person of violation of the law and the man who gave evidence is allowed, as I believe, under some regulation, a certain percentage of that fine. This is to give him that sum.

Mr. SMITH. Of whom should we inquire as to this? Is it under you or the Department of Justice?

Mr. SARGENT. The Department of Justice. This Key West case was an erroneous collection of a fine under section 15, act of March 3, 1903. It was covered into the Treasury, and could not be returned

except by Congress. There is no question about the justice of the claim by the company, and we are asking authority to refund that money.

The same thing applies to the case of Mr. Klocker, the British vice-consul. We had two or three claims like that last year. It is money turned into the Treasury, and it can only be returned by act of Congress. There is no question but that it was erroneously collected. Their claims are justified. Of course, there is a provision now which permits of our returning the money. At the time these claims were created there was no such provision.

Mr. SULLIVAN. There is a provision now which permits you to return it?

Mr. SARGENT. Yes; but not after it has been covered into the Treasury. This came about and was paid in. We had no means of remitting it at the time.

Mr. SULLIVAN. Are you likely to discover these errors now before the money is paid into the Treasury?

Mr. SARGENT. Yes.

## DEPARTMENT OF THE INTERIOR.

### REPAIR OF BUILDINGS.

#### STATEMENT OF MR. EDWARD M. DAWSON, CHIEF CLERK, AND MR. WILLIAM B. ACKER, CHIEF OF PATENTS AND MISCELLANEOUS DIVISION, DEPARTMENT OF THE INTERIOR.

The CHAIRMAN. You are chief clerk of the Department of the Interior, Mr. Dawson?

Mr. DAWSON. Yes, sir.

The CHAIRMAN. You have under your jurisdiction and supervision the repairs to public buildings of the Interior Department?

Mr. DAWSON. Yes, sir; I am superintendent of buildings of the Interior Department.

The CHAIRMAN. Superintendent of all the buildings in the city of Washington?

Mr. DAWSON. Yes, sir; of the Interior Department.

The CHAIRMAN. I see your estimate under the head of repairs to buildings, Interior Department, for the coming fiscal year is the same as the current appropriation.

Mr. DAWSON. We found that that is about the amount required to carry us through.

The CHAIRMAN. Are there any specific repairs that you have in contemplation that will consume the appropriation?

Mr. DAWSON. The estimate is for ordinary, general repairs of the Patent Office building, the old Post-Office building occupied by the General Land Office and Indian Office, and the Pension building—three large buildings. The repairs to those buildings have to be paid for out of this appropriation.

The CHAIRMAN. Do you pay out of this appropriation the regular force of men that you keep constantly employed in the making of these repairs, or do you employ them temporarily?

Mr. DAWSON. Only temporarily, excepting four men who are regularly employed. There is one man whose time is occupied in repair-

ing the roofs of buildings. Another man is employed as plasterer, bricklayer, and tile setter, he being one of those men who can do most anything in that line. Another is a carpenter, and the fourth one is a helper to the mechanics.

The CHAIRMAN. That is the only permanent force you have?

Mr. DAWSON. They are the only ones carried regularly and paid from that appropriation.

The CHAIRMAN. The next item is for preservation and repairs of steam heating and electric-lighting plants and elevators, buildings, \$5,000, which is your current appropriation?

Mr. DAWSON. Yes, sir. Out of that we pay, as indicated, for maintenance of the heating and lighting apparatus. We light the old Post-Office Department building, the Patent Office building, and the Pension building from our lighting plant, which is located in the old Post-Office building, and we heat the old Post-Office building and the Patent Office building from the same plant.

The CHAIRMAN. This item is only for repairs.

Mr. DAWSON. Maintenance and repair of the heating and lighting apparatus.

The CHAIRMAN. How many men have you employed in that service?

Mr. DAWSON. None payable out of this fund. They are all in the legislative bill, engineers and firemen.

The CHAIRMAN. You have an appropriation here of \$5,000. Is that for material, or how much of it is for labor?

Mr. DAWSON. Some of the repairs we put out by contract. We get informal bids if our own force can not do the work. The appropriation covers expense of both material and labor.

The CHAIRMAN. Have you had this appropriation of \$5,000 for this purpose any year prior to the current fiscal year?

Mr. DAWSON. Yes, sir; last year.

The CHAIRMAN. That is, the current fiscal year?

Mr. DAWSON. Yes, sir; and the year before, ending June 30, 1905.

The CHAIRMAN. Are you sure you had it for the fiscal year 1905?

Mr. DAWSON. Quite sure.

Mr. SMITH. Up to the time you got this appropriation, whether it was a year or two years ago, you paid this amount out of the previous items, did you not?

Mr. DAWSON. We installed this plant only about four years ago, and up to that time it had not required any material repairs.

Mr. SMITH. You must have had some plant for heating and lighting.

Mr. DAWSON. We had a small plant in the Patent Office building, electric lighting plant; we had gas in the other buildings, the Pension building and the old Post-Office building. And the maintenance of that small plant was paid for out of the appropriation for repairs of buildings.

Mr. SMITH. This record shows that you only had one appropriation of \$5,000 under this head, namely, for the year ending June 30, 1905.

Mr. DAWSON. I am quite sure we had it the year before, but I may be mistaken.

Mr. SMITH. Of course the record may be wrong, but this is the record made up for us. Was there a showing made when you got

this first item of a rather unusual condition there in the way of lack of repairs?

Mr. DAWSON. Only the additional heating and lighting apparatus had been put in at large expense, costing nearly \$200,000. That was an additional charge on the appropriation for repairs to buildings, and we asked for this appropriation of \$5,000 for that specific purpose.

Mr. SMITH. This was then in reality practically an increase of this amount under the first heading?

Mr. DAWSON. We would just as leave have it under one heading of repairs of buildings, but under the decision of the Comptroller we can not pay for repairs of buildings and repairs of heating and lighting apparatus out of one fund, if we have this special appropriation for the latter purpose.

Mr. SMITH. Is this apparatus in as bad condition as it was a year ago; do you need every year a permanent and standing item?

Mr. DAWSON. We ought to have. A plant like that needs constant attention for repairs to keep it going. I will say we only have now in the last item, \$38 left on the 21st of April.

Mr. SMITH. Of course that might be true, as this was the first year you had it, and yet you might not need it every year.

Mr. DAWSON. I think the depreciation of the plant would make it just as necessary next year as this year. Considerable of that money is needed to keep the elevators going. It is very expensive to provide steel ropes for elevators. We run no risk of breaks, and if a rope gets stranded we put a new one in.

The CHAIRMAN. The life of a steel rope or cable is a number of years, is it not?

Mr. DAWSON. Oh, no; a number of months only. Of course, it depends upon the use of the elevator.

---

MONDAY, April 30, 1906.

## EXPENSES OF THE COLLECTION OF REVENUE FROM SALES OF PUBLIC LANDS.

### STATEMENT OF MR. W. A. RICHARDS, COMMISSIONER, GENERAL LAND OFFICE.

The CHAIRMAN. Mr. Commissioner, you are the Commissioner of the General Land Office?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. The committee would like some information concerning the estimates of your department.

#### SALARIES AND COMMISSIONS OF REGISTERS AND RECEIVERS.

The first item on page 123 of the bill before you is for salaries and commissions of registers and receivers, \$573,000 for the next fiscal year. In view of your recommendation and report, which I take it is the basis of the recommendation of the President in his annual

message for the abolition of the office of receivers of the district land offices, will you state to the committee just what the work of receivers and registers of the land offices is, so that we may get an idea of what their duties are?

Mr. RICHARDS. Mr. Chairman, in this report, where that matter is treated of, it is fully explained, and I do not know that I could do any better than to quote from that.

The CHAIRMAN. You can do that, Mr. Richards, in your own way. The committee would like to know and have in the record here your statement as to their duties, so that we may determine and act upon the recommendation you make with respect to the abolition of the office of receivers.

Mr. RICHARDS. In the first instance, only a register was appointed in the beginning of our land business.

The CHAIRMAN. When was that done, and how long did that continue?

Mr. RICHARDS. The office of receiver of public moneys was created by the act of May 10, 1800 (2 Stat. L., 73), whereby four land offices were established, each to be under the direction of an officer to be called a "register of the land office." Certain lands were, by the terms of the act, to be sold, and all the payments therefor were to be made either to the Treasurer of the United States or to such person or officer as should be appointed by the President of the United States, with the advice and consent of the Senate, receiver of public moneys.

By that act the duties of receivers were, generally speaking, to receive and receipt for moneys paid for the purchase of lands and duly pay over and account for the same. Subsequently, as other land offices were created, the several acts establishing the same made the same provisions for the appointment of a register and receiver at each, and this is a requirement of the law as it now stands. (See R. S., sec. 2234.)

The apparent object in appointing receivers was, perhaps, mainly for the convenience of purchasers of public lands, who were thereby relieved of the necessity of making payments directly to the Treasurer of the United States, and given an officer to whom, and a place where, payments in purchase of lands might be made with a minimum of inconvenience. In those days the transmission of money from the frontier to the Treasury was attended with much trouble, cost, and danger of loss.

The duty of the register, as his name implies, was largely that of a recording officer.

Under the act referred to neither the register nor receiver was clothed with any judicial function, nor were they required to act jointly in any particular. The judicial or quasijudicial function appears to have been first conferred by the act of March 3, 1819, which provided that the register and receiver would hear testimony relative to mistakes and report the same with their opinion to the Treasurer of the United States.

By the act of May 24, 1824 (4 Stat. L., 31), the register and receiver, or either of them, might administer an oath.

By the act of May 29, 1830 (4 Stat. L., 420), proof of settlement and improvements should be made to the satisfaction of the register and receiver.

By the act of June 1, 1840 (5 Stat. L., 382), a preemptor was required to make satisfactory proof of his or her residence before the register and receiver.

By the act of September 4, 1841 (5 Stat. L., 456), questions as to the rights of preemption, arising between different settlers, were to be settled by the register and receiver, subject to appeal and revision by the Secretary of the Treasury, which appellate jurisdiction was transferred to the General Land Office by section 10 of the act of June 12, 1858 (11 Stat. L., 326).

The substance of the two last-mentioned acts is expressed in section 2273, Revised Statutes. Indeed, in every instance the judicial or quasi-judicial function has been conferred jointly upon the register and receiver, except where abandonment is, by the terms of section 2297, Revised Statutes, required to be proven to "the satisfaction of the register of the land office." Yet by the rules of practice, even in cases of abandonment, as in the trial of all other issues before the local office, both register and receiver must pass in judgment thereon. It is now firmly established that the office is one, while its body is dual. A vacancy in either office disqualifies the remaining incumbent for the performance of the duties of his own office.

From a consideration of the foregoing it appears that the duties of the receiver have been gradually extended from those of merely receiving and accounting for public moneys to those of an officer vested with judicial functions, joint and coordinate with that of the register.

It is believed that existing conditions are such as to warrant and suggest the abolition of the office of the receiver, and the vesting in the register of the functions now performed by the receiver, for the following reasons:

1. The volume of work now transacted and receipts of money at many, if not all, of the local offices is not such as to require the services of both officers.

The following table, covering all the land offices, shows the number of clerks, the number of entries, the total receipts, and the total expense of each office; and also shows the compensation of each receiver (the register and receiver each receive the same compensation) for the fiscal year ended June 30, 1905:

Land office.	Number of—		Total receipts.	Expense of maintaining office.	Compensation of receivers.
	Clerks.	Entries.			
Huntsville, Ala.		637	\$5,532.05	\$3,421.54	\$1,257.69
Montgomery, Ala.	2	1,489	22,662.70	6,762.62	2,408.21

Of the foregoing offices, the following have recently been abolished: Huntsville, Ala.; Prescott, Ariz.; Marysville, Cal.; Akron, Colo.; Wakeeney, Kans.; Booneville and Ironton, Mo.; McCook, Nebr., and Ashland and Eau Claire, Wis.

II. The existence of the dual responsibility is the occasion of frequent and chronic disagreement between the register and receiver, to the consequent prejudice of the local office, its conduct, and all who are affected thereby. Each charges the other with responsibility for any neglect or misfeasance which may be found to exist therein.

This friction develops at times into a recrimination and antagonism which precludes that prompt and cordial cooperation necessary to an effective administration of the joint duties of the dual office, and has been the cause of much complaint from the public affected and the expenditure of much time and labor by this office and its inspectors in the effort to compose such differences and harmonize the officers at issue, so as to restore them as a working unit to the condition of normal efficiency. It is obvious that a sole responsibility for the conduct of the local office would necessarily tend to a stimulation in the discharge of duty, consequent upon the certain knowledge on the part of the officer responsible that there could be no successful attempt on his part to evade the consequences of neglect or misfeasance by attributing it, as is now frequently done, to his joint associate. The entire clerical force of the office would be under one control and one influence. Exactness of method, certitude of information given out, uniformity of conduct, harmony of decision, and indisputable responsibility for error or misfeasance would take the place of the opposite conditions which are too often prevalent in the local offices.

III. The convenience of frequent access to and inspection of the local offices is now such as to enable this office to keep itself at all times reasonably informed of the method and efficiency of their conduct, as it could not do in former times, owing to the lack of railroads and telegraphic communication between this office and many of its subordinate officials and the absence of the thorough and efficient system of frequent inspection now in force.

The absence of the present system and facilities for communication and inspection may have been one reason which suggested, in the creation of the land offices, the desirability of having two officers who would operate as a check each upon the other. That necessity, for the reasons just stated, no longer exists.

IV. We are now brought to the consideration of the receiver's function as a joint officer.

As hereinbefore pointed out, he is required to act with the register in the performance of every judicial or quasi-judicial function, and the death, removal, or disqualification of either the register or receiver disqualifies the other, and results in practically closing the office, a condition which often occurs.

Such a condition results in great inconvenience and injury to the public and to all those who have or desire to transact business at the local offices, and creates a congestion of business often difficult to work off. All such results as now ensue from the death, removal, resignation, or disqualification of the receiver would be avoided were the register clothed solely with the authority now jointly vested in both officers, and suitable provision made for the appointment of a chief clerk to act in the absence of the register.

V. It is believed that the relief from the undesirable conditions hereinbefore pointed out by the abolition of the office of receiver outweighs the problematical benefit ensuing from the exercise of his joint function with the register. It is not clear why he was so jointly vested. Be the reason what it may, now, when the principles which govern the due inception of claims made under the public-land laws are well established, and the local offices are under constant instruction and frequent inspection, and the right of appeal freely given with opportunity for its expeditious exercise and its prompt disposition, with every decision coming under the notice of this office closely scanned for the detection and correction of error therein, it is believed that the desirability for the continuance of the concurrent action by two officers, instead of one, is far less than the necessity for that increased efficiency and economy which may be accomplished by the abolition of the office of receiver.

VI. It is estimated that the abolition of the office of receiver of public moneys will result in a saving to the Government of over \$250,000 per annum.

The following table will show the compensation which has been paid to the several receivers of public moneys for each year for the past five years:

Fiscal year ended June 30—

1901 .....	\$292, 480. 56
1902 .....	300, 757. 38
1903 .....	296, 803. 79
1904 .....	295, 339. 32
1905 .....	285, 835. 22

Total for the past five years..... 1, 471, 216. 57

At the present time the following duplicate records are kept in all local land offices, viz: Register of mineral receipts; register of homestead receipts; register of final homestead receipts; register of final receipts, desert lands; register of cash receipts, in which is also kept account of coal-land receipts; homestead contest docket.

The apparent reason for keeping these duplicate sets of records is for the purpose of having one officer a check upon the other. But under the present method of handling business in local land offices there is little danger of defalcation or misappropriation of funds, as the General Land Office keeps a record of all disposals of public land and requires the local offices to properly and promptly account for the moneys they should receive therefor. Therefore if the office of receiver

were abolished the practice of keeping duplicate sets of books would be discontinued and a great saving made in clerical labor in the local land offices, which, it is believed, would offset the loss of the services of the various receivers. There would also be a consequent saving of the cost of furnishing all such duplicate books or records.

After careful consideration of the matter, it is my opinion that should the office of receiver be abolished, with the consequent keeping of the aforementioned records and general simplifying of the work, there would be no necessity for an increase in the clerical force in the various offices where clerks are now employed. It would undoubtedly be necessary to place a clerk in each of the 25 offices where none are now employed, and this would require an increase of \$25,000 in the appropriation for contingent expenses of land offices.

Mr. SMITH. Was it contemplated to raise the salary of the register at all if the office of receiver was abolished?

Mr. RICHARDS. No, not in the maximum offices. A maximum office is one in which the fees and commissions make a salary of \$3,000 to each one of the officers. In such cases they receive no salary in addition to that. The only cases in which the abolition of the office of the receiver would increase the salary of the register under my recommendation here would be in a case where neither officer received at the present time \$3,000. For instance, if they received \$2,500 each, the recommendation is that the register receive the fee until they amount to \$3,000, so that in that event the saving on that particular office would be \$2,000 instead of \$2,500. That has been taken into account.

Mr. SMITH. How much would need to be appropriated under this item if we struck out "receivers" and put in a clause requiring registers to perform all functions of receivers?

Mr. RICHARDS. The estimate here for salaries and commissions of registers and receivers is \$573,000. If the office of receiver should be abolished the item should then be reduced to \$295,000, and the difference between \$573,000 and \$295,000 would be saved.

Mr. TAYLOR. The difference is \$278,000, is it not?

Mr. RICHARDS. That would be the reduction that would be made at that point. Then it is contemplated that there should be a clerk or chief clerk, who would be styled a deputy to the register, and he would have authority to act in the absence or sickness of the register. Now, there are some offices in which there are no clerks at all, and in those offices, when the receiver is removed, it would be necessary to put in a clerk, so that it would require an appropriation of \$25,000 on some other bill, or in some other place, so that it would not be a saving of \$278,000, but about \$250,000.

Mr. SMITH. So that you ought to add \$25,000 to the very next item, which is for clerk hire, rent, and so forth, in the district land offices?

Mr. RICHARDS. Yes, sir.

Mr. SULLIVAN. These men are to act as deputies, as I understand it?

The CHAIRMAN. Yes, and must be clothed with power to act in the absence of the register. Is the register a bonded officer?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. Being familiar with the administration of the land laws and these offices, will you kindly prepare a substitute for this paragraph, and so change the next paragraph on page 124 as to provide for only the office of register? There will have to be some

changes made with respect to that office, I suppose, if this change is made.

Mr. RICHARDS. I shall be glad to do that, Mr. Chairman.

Mr. SMITH. You have no power under existing law to appoint a deputy or acting register?

Mr. RICHARDS. Not at all. That is one of the great inconveniences in the land offices. If one of the officers is sick or absent the office can do nothing. It is absolutely closed up, so far as doing an official act is concerned. It can receive papers and hold them, but it can take no action upon them. It requires the joint action of both register and receiver.

The CHAIRMAN. If this change were made, would it injure in any way the service of the General Land Office or these local land offices?

Mr. RICHARDS. I can not conceive how it could.

The CHAIRMAN. Will it in any way inconvenience the people who are contemplating the purchase of land from the Government at these local land offices?

Mr. RICHARDS. I do not see how it could.

The CHAIRMAN. Would there be any likelihood of there being more work for the General Land Office resulting from the decisions of the register alone than is now done by reason of the joint judgment of the two officers?

Mr. RICHARDS. That could not be possible, because we review every act of the local office anyway.

The CHAIRMAN. Every act of these local offices?

Mr. RICHARDS. Yes, in regard to anything like a contest, or anything that they would have to pass a joint decision upon.

The CHAIRMAN. Would it tend to increase the number of contests, do you think?

Mr. RICHARDS. I do not see how it could.

The CHAIRMAN. In your judgment would it then tend to improve the public service in these local land offices and your Office, in addition to the saving that it would result in?

Mr. RICHARDS. I have no doubt of it.

The CHAIRMAN. You have not?

Mr. RICHARDS. No, sir.

The CHAIRMAN. The tendency would be to increase the efficiency of the service by this action?

Mr. RICHARDS. Yes, sir. That is one of the very strong reasons in favor of it in our Office.

The CHAIRMAN. State to the committee briefly how that would be accomplished.

Mr. RICHARDS. I can do that best by referring to the statement read from my annual report, which was prepared with a great deal of care.

#### CONTINGENT EXPENSES OF LAND OFFICES.

(See also p. 434.)

The CHAIRMAN. Now, in that event, Mr. Commissioner, on page 124 the next item as you will see is for contingent expenses of land offices. Does that carry the expenses for clerk hire in the local offices—clerk hire, rent, and other incidental expenses?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. Would you reduce the clerical force to any extent?

Mr. RICHARDS. No; that force has to be increased a little.

The CHAIRMAN. I understood from the reading of your report, there, that with the abolition of the office of receiver the necessity for keeping a duplicate set of books and entries would result in decreased necessity for clerical force in the offices.

Mr. RICHARDS. No; that just about represents the amount of work that the receiver does in that or some other connection.

Mr. TAYLOR. The register would require the same clerical force that the register and receiver now require—

Mr. SMITH. And some additional—

Mr. TAYLOR. And some additional in the matter of giving special authority as deputy register?

Mr. RICHARDS. Yes. The only difference would be to put a clerk in an office where there is no clerk now; where there is only a register and receiver. But in order to have a deputy register there should be one clerk, who in an office of that size could be hired for a thousand dollars a year, because in an office that does not have a clerk now it would not be of sufficient importance to hire more than one clerk, and he would not be a high-priced clerk.

Now, there is one thing that I would like to suggest here, whether this action is taken or not. The estimate submitted is \$573,000. That can be reduced to \$565,000 in any event, owing to a number of offices having been abolished since the estimate was prepared. If there is nothing done about the receiver that can be done, anyway.

The CHAIRMAN. Reduced to \$565,000?

Mr. RICHARDS. Yes; it can be reduced to \$565,000. If I understand you, Mr. Chairman, you would like to have me submit whatever changes are necessary if this should be done?

The CHAIRMAN. Yes; I would like to have you prepare the necessary language, on the theory of this change being recommended to the House by the committee. You will see on page 123 of the bill that the first paragraph provides for the salaries and commissions of registers and receivers.

If we do it we will simply provide for the salaries and commissions of the registers, and put a proviso on this next paragraph to the effect that there should be a clerk with authority to act as deputy register; and we would have to put a proviso on this first paragraph also, if by reason of this change the register will have to perform the duties which he does not now perform.

Mr. RICHARDS. You would like to have whatever new legislation is necessary embodied in this bill?

The CHAIRMAN. Yes; not to put it all in one paragraph, but to put it in two.

#### EXPENSES OF DEPOSITING PUBLIC MONEYS.

The next item is expenses of depositing public moneys, on page 125 of the bill. Your estimate for the next fiscal year is the same as your current appropriation, \$3,000. What do these expenses consist of, Mr. Commissioner?

Mr. RICHARDS. The receipts of the local land offices in towns where there are no United States depositories are sent to designated depositories, under contract with the express company. The Treasury

Department requires that actual money shall be deposited. They do not allow checks or drafts or anything of the kind. They have to use money, and this is simply to pay the express charges.

The CHAIRMAN. This \$3,000 is to pay the express charges?

Mr. RICHARDS. Yes, sir. It would be necessary either to pay the express charges or to require the receiver to make a journey in person to the town where the depository was and deposit the money there.

The CHAIRMAN. This is to pay express charges and transport the money from the place where the land office is located to the Government depository?

Mr. RICHARDS. Yes. The rates allowed to the United States Express Company, with which all this business is done east of the Rocky Mountains, are these: They take gold for 50 cents a thousand, silver for a dollar a thousand, and currency from 20 cents to a dollar per thousand.

Mr. TAYLOR. What saving could be made, Governor, if it was done by bank exchange?

Mr. RICHARDS. Just this \$3,000.

Mr. TAYLOR. Why should not that be done?

Mr. RICHARDS. That is a question. You would have to ask the Treasury Department about that.

Mr. TAYLOR. You do not see any reason?

Mr. RICHARDS. It is a question of safety. If this was not done, it would be necessary in many cases to use drafts taken from banks which are not United States depositories, or possibly a bank that was not a national bank, or a check, with the danger incident to that.

The CHAIRMAN. Are those amounts very large?

Mr. RICHARDS. They are generally in excess of a thousand dollars. The receiver is allowed to retain money until it amounts to a thousand dollars. He can be personally responsible for that much. After that, or over that, he has to deposit it. He has to deposit it at certain intervals anyway, and he can not retain more than a thousand dollars.

Mr. TAYLOR. Where is he authorized to deposit it—only in a national depository?

Mr. RICHARDS. Yes; only in Government depositories.

Mr. TAYLOR. Where there is no Government depository, what does he do?

The CHAIRMAN. He sends it to one. That is what this is for. If he got a thousand dollars and were allowed to go to a local bank and buy a draft there would be no necessity for this?

Mr. RICHARDS. No; but if the local bank should happen to fail in the meantime the Government would be out a thousand dollars, or would have to prorate with the rest of the creditors of the bank. It is a question of safety.

The CHAIRMAN. How would it do to send it by registered mail to the depository?

Mr. RICHARDS. If somebody stole it we would be that much out.

The CHAIRMAN. Could you not insure it? The banks transmit their money that way.

Mr. RICHARDS. These questions you will have to discuss with the Treasury Department.

Mr. SULLIVAN. Why could we not give the Government a lien on the assets of the bank?

Mr. RICHARDS. The receiver does his business with the Treasury of the United States mostly—that is, as far as his money is concerned. He has to satisfy them.

Mr. SULLIVAN. May I ask you how much these remittances sent to depositories would average in a year?

Mr. RICHARDS. It takes about all of this \$3,000 to pay for it. Of course we can not tell exactly. In a great many places where there are large land offices there is a national depository in those towns.

Mr. SMITH. Why is there this variance of from 20 cents to \$1 a thousand for currency?

Mr. RICHARDS. It depends on locality. I know of several localities where I would not like to transmit money for a dollar a thousand, while in other places I would take it for 20 cents a thousand. Take, for instance, Vernal, in Utah, about 120 miles from the railroad.

The CHAIRMAN. Is it carried in stages?

Mr. RICHARDS. Yes; and I would not like to take money out there. 120 miles, for a dollar per thousand.

Mr. SMITH. I notice you say the rate is 50 cents on gold and a dollar on silver, and a dollar on paper; which is least bulky?

Mr. RICHARDS. I do not pretend to say why that difference is made. This is a contract made by the Treasury Department with the express company.

#### PROTECTING PUBLIC LANDS, ETC.

The CHAIRMAN. The next item is "Depredations on public timber, protecting public lands, and settlement of claims for swamp land and swamp-land indemnity: To meet the expenses of protecting timber on the public lands, and for the more efficient execution of the law and rules relating to the cutting thereof; of protecting public lands from illegal and fraudulent entry or appropriation, and of adjusting claims for swamp lands, and indemnity for swamp lands, \$250,000."

Did you have any balance left over from that fund for the fiscal year 1905, when the appropriation was the same as the current appropriation, and the same as you estimate for the next fiscal year?

Mr. RICHARDS. I think not, Mr. Chairman, I can speak with a good deal of positiveness about the appropriation for 1906, because we have had to furlough a number of our agents in order to keep within the bounds of the appropriation.

Mr. TAYLOR. The depredations do not seem to diminish at all, do they?

Mr. RICHARDS. Oh, yes, sir; I think they do.

The CHAIRMAN. How many agents have you employed under this item?

Mr. RICHARDS. Seventy-six.

The CHAIRMAN. What is their average compensation?

Mr. RICHARDS. The average cost of the agents to the Government is \$3,000.

The CHAIRMAN. That includes what?

Mr. RICHARDS. That includes their salary, their per diem in lieu of subsistence, and their railroad transportation.

The CHAIRMAN. The average expense of an agent is \$3,000 annually?

Mr. RICHARDS. Yes, sir; their salary and all their expenses.

The CHAIRMAN. What other expenses are paid out of this appropriation except the salary and traveling expenses and subsistence of agents?

Mr. RICHARDS. I do not recall any, unless it might be this: It might be necessary for the special agent to hire certain assistants.

The CHAIRMAN. Is any part of this money expended in payment of witness fees in the trial of contests?

Mr. RICHARDS. No, sir.

The CHAIRMAN. In these cases that are prosecuted by your department, the evidence against the party having been collected by your department, do you defray the expenses of witnesses out of any of your appropriations, or does the Department of Justice pay all the expenses of witnesses?

Mr. RICHARDS. The Department of Justice does that.

Mr. SMITH. Are any of the Treasury Department Secret Service men employed under this fund?

Mr. RICHARDS. There are men who have been obtained from the Secret Service and are employed and paid out of this fund; but they are borrowed, you might say, from that service. Their pay is stopped in that service and they are paid in our service.

Mr. SMITH. How many men, about, in a year do you have from the Secret Service in that way, Governor?

Mr. RICHARDS. We never had any until this Oregon trouble came up. Then there was one man obtained from the Secret Service.

Mr. SMITH. That one man is all you have ever had?

Mr. RICHARDS. Yes, sir. Those cases seemed to be so badly involved that we had no men, no special agents, that possessed just the right qualifications to ferret the matter out. Mr. Wilkie was called on to furnish us a man who had the proper qualifications, and he did so. That man is employed yet, and so far as I know there is no other man out of the Secret Service. This man has been allowed, however, to employ men to assist him, but they have not been men who are in the Secret Service.

The CHAIRMAN. They are men connected with detective agencies outside?

Mr. RICHARDS. No; I do not think they were connected with agencies. They were men he knew, and he thought they were competent to perform the service he wanted performed.

Mr. TAYLOR. Was the man competent, and did he accomplish the service?

Mr. RICHARDS. Yes; he accomplished the service he was employed to do.

The CHAIRMAN. Prior to the appointment of this man, the Department has never employed Secret Service men in connection with depredations?

Mr. RICHARDS. Not that I know of. These investigations have been made through the Secretary's Office, and this man from the Secret Service reports to the Secretary and not to my Office. I have had no connection whatever with his investigations. All we do is to pay the bills.

Mr. SMITH. It is paid out of this appropriation, is it, Governor?

Mr. RICHARDS. Yes, sir.

Mr. SMITH. And the help he had?

Mr. RICHARDS. Yes; all the expenses. I would just incidentally say that those unusual expenses are what caused us to furlough some of our men. You asked me a while ago what we expended in 1905. I have it right here. You appropriated \$250,000, and we spent \$249,085.

EXPENSES OF HEARINGS IN LAND ENTRIES.

Mr. SMITH. In the next item you ask a decrease of \$3,000.

Mr. RICHARDS. Which is that?

Mr. SMITH. The expense of hearing in land entries.

Mr. RICHARDS. Yes.

Mr. SMITH. You only asked \$9,000 and received \$12,000 last year. I assume, therefore, you found \$12,000 more than adequate?

Mr. RICHARDS. Yes; in 1904 we had \$14,000 and expended \$6,000. In 1905 we had \$9,000 and expended \$4,000. This year we have \$12,000 and have advanced to receivers \$7,699 to December 31, 1905.

Mr. TAYLOR. You had a deficiency in 1904 of \$5,000 for that. Look on page 127. You asked for a deficiency of \$5,000 and obtained it, making \$14,000 for that year. The next year you asked for \$9,000 and were allowed that amount, and the next year you asked for \$12,000 and were allowed \$12,000. This year you ask for \$9,000. Is that due, Governor, to a falling off of these contests, or to what is it due?

Mr. RICHARDS. In 1904 we had \$9,000—

Mr. SMITH. \$14,000, counting the deficiency of \$5,000. How much did you say you expended?

Mr. RICHARDS. We spent \$6,894.

Mr. SMITH. I do not see how you came to apply for \$5,000 deficiency, as you would have had quite a surplus without it.

Mr. RICHARDS. For 1905 it was \$9,000 and we expended \$4,000.

Mr. TAYLOR. Yet in 1906 you asked for \$12,000 and got it.

Mr. RICHARDS. Yes; and we have spent \$7,699. We have expended more than we did last year. The investigations are not decreasing. There has been a law passed within recent years permitting the Government to pay the expenses of witnesses in attendance upon these trials. That we did not have before.

Mr. TAYLOR. This note says, "The expenses to be borne by the United States are those of its own witnesses, and the taking of testimony to establish the fraudulent or illegal character of the entry."

Mr. RICHARDS. Before that, before we had this legislation, we could not do that. We could not compel the attendance of witnesses. Their attendance was voluntary.

Mr. SMITH. It is hard to understand how you came to apply for this deficiency in 1904 when your expenses were only about half the amount of the appropriation.

Mr. RICHARDS. At the time the deficiency was asked for the original appropriation of \$9,000 had become exhausted on account of advances made to local land officers to meet expenses ordered to that time. In several cases, however, the hearings were postponed and the money repaid to the appropriation after the said deficiency had been secured.

## • REPRODUCING PLATS OF SURVEYS.

The CHAIRMAN. The next item, on page 127, is reproducing plats of surveys, \$3,500, which was the current appropriation. Has this work continued during the present fiscal year as heretofore?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. So as to necessitate another appropriation?

Mr. RICHARDS. This is controlled only by the amount of the appropriations. The plan is to reproduce, by photolithographic process, plats of surveyed townships, and we furnish them to the land offices where they are needed, and we sell them, and we get a large part of the appropriation back in that way. The Government is reimbursed.

Now, in 1906 the appropriation is \$3,500. The contract was let to the firm of E. P. & L. Restein & Co., of Philadelphia, at the rate of \$3 per set of 15 copies. We get 15 copies for \$3. We sell them for 25 cents apiece, and there is quite a demand for them.

The CHAIRMAN. Have you a laboratory for this purpose connected with the General Land Office?

Mr. RICHARDS. No; we have no way of doing it.

The CHAIRMAN. Could it not be done in the laboratory of the Geological Survey?

Mr. RICHARDS. I do not know whether they could do that work or not. They photograph some maps.

The CHAIRMAN. This work is done under contract?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. On competitive bids?

Mr. RICHARDS. Yes, sir. In 1906 it was done by E. P. & L. Restein & Co., of Philadelphia, and in 1905 by the Brett Company, of New York, and in 1904 by Andrew B. Graham, of this city.

## DESTRUCTION OF RECORDS AT SAN FRANCISCO, CAL.

I may state, Mr. Chairman, that in the recent earthquake and fire in San Francisco the records of the Land Office and the records of the surveyor-general's office were destroyed.

The CHAIRMAN. You say that the Land Office is entirely destroyed in San Francisco, and the surveyor-general's office, with the records?

Mr. RICHARDS. Yes.

The CHAIRMAN. Have you the originals of those records in your office?

Mr. RICHARDS. Yes.

The CHAIRMAN. You propose to reproduce the originals in the future for the use of the surveyor's office in San Francisco?

Mr. RICHARDS. Yes; there are in California 4,853 townships which were surveyed, the plats of which were burned. I estimate that those plats can be reproduced by us right under this item in this manner of photolithography, and we can reproduce the plats of those townships under the same terms as the present contract.

For this work an addition to this item would be required of \$14,559. That would give us those 15 copies of each township. There would be no particular economy in getting a less number, because when you get prints made you can make as many of them as you want, and it would cost about the same thing any way. We have the originals for 2,138 of those townships in such shape that they can be used in making these photolithographs.

It will be necessary to make tracings of 2,715, and those tracings will cost \$10,860. But that does not come under this item. That is an appropriation that will have to be made for clerical work.

The CHAIRMAN. Clerical work in your office?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. That should be in the legislative bill.

Mr. RICHARDS. Yes; I will see the Senate committee, if it is proper for me to do that.

The CHAIRMAN. Certainly.

Mr. RICHARDS. So far as this item is concerned here, the reproduction of these plats, my Office is thoroughly convinced that the proper place and the best way to do that is to have it done under this item right here.

The CHAIRMAN. With the force you have down there, Governor, would it not be possible for you to have these tracings made without any additional appropriation for clerical service?

Mr. RICHARDS. We have just as much work as we can do, and the surveyor-general's office is entirely out of business at San Francisco until it gets these plats.

The CHAIRMAN. I mean the tracings.

Mr. RICHARDS. Our tracings have to be made before we can make any plats to go to the surveyor-general's office. This work must be done first. I can put this in a different shape and have it come up here as an estimate from the Interior Department, through the Treasury Department, if you desire it.

The CHAIRMAN. In view of the fact that the law requires all estimates to be submitted in that manner, you had better submit a supplemental estimate. We will not commence to mark up this bill for several days.

Mr. RICHARDS. I would prefer to do it that way.

The CHAIRMAN. And then, if you think an additional appropriation is actually necessary, or that your present force can not do the work in connection with these tracings, you had better put that into the legislative bill at the other end of the Capitol, where they are considering the legislative bill now. To meet the necessities of the service growing out of the destruction of those records in San Francisco the appropriation should be immediately available, and it would perhaps be better for you to submit these estimates to us through the proper channel, so that they can be inserted in a deficiency bill.

Mr. SMITH. They ought to be available both this year and next year.

The CHAIRMAN. Have you submitted an estimate to the Senate committee for an additional clerical force?

Mr. RICHARDS. No.

The CHAIRMAN. It would be necessary, if it should go into the legislative bill, that it be specifically provided that it should be immediately available. The appropriations in that bill will not become available until July 1, whereas the general deficiency bill will become a law as early as this one, and not much later than the legislative bill.

Mr. RICHARDS. We think a special deficiency bill would be better. Both offices are absolutely closed up, the land office and the surveyor-general's office.

## EXAMINATIONS OF DESERT LANDS.

The CHAIRMAN. The next item is the examinations of desert lands. I see you make no estimate there.

Mr. RICHARDS. That is expended by the Secretary's Office. They did not expend any last year, and only asked that the old appropriation be made available until expended.

## ADVERTISING RESTORATION OF PUBLIC LANDS IN FOREST RESERVES TO ENTRY.

Mr. SMITH. A bill has been introduced, No. 14411, to appropriate \$5,000, from which payment may be made by the Secretary of the Interior for advertising the restoration of public lands in forest reserves, or lands temporarily withdrawn for forestry purposes. Has it ever been called to your attention?

Mr. RICHARDS. I do not remember that particular item, but I know all about the expenditures.

Mr. SMITH. You have not estimated for that \$5,000?

Mr. RICHARDS. There has been a question between our office and the Bureau of Forestry as to who ought to pay that. They have the forestry service, you know, and we thought they ought to pay some of this advertising of restorations, etc. This item is probably all right. It probably comes from the Secretary's office. That is where those things are paid.

The CHAIRMAN. I guess we had better send this bill to the Secretary and get his opinion on it. The language of the bill is in substance that \$5,000, or so much thereof as may be necessary, etc., shall be appropriated to enable the Secretary of the Interior to meet the expense of advertising the restoration of lands to the public domain, etc. That is the idea.

Mr. RICHARDS. You see, sometimes land is cut out of forest reserves and made subject to entry, and under the rules of the Department it is advertised for thirty days, and no entry of that land is allowed during that time, although a settlement may be made. The object of this action was to prevent lands from being cut out of forest reserves for some particular purpose, and somebody's going on and putting some kind of scrip on, and getting a piece of timber land cut out and filing scrip on it. In this way nobody but an actual settler can acquire any rights there for ninety days after its restoration, and it is advertised for thirty days so that everybody will know that the land is to be put back into the market. The same is true of any land withdrawn from entry and subsequently restored. When forest reserves are finally created the remainders are advertised as being put back into the public domain, so that everybody can have a knowledge of it.

The CHAIRMAN. This is for the expense of those advertisements?

Mr. RICHARDS. Yes, sir.

Mr. SMITH. I would like to ask one question of verbiage as to that, in case this question comes up later. Does land put into forest reserves, or held temporarily for forest-reserve purposes, cease to be a part of the public domain?

Mr. RICHARDS. Practically no entry or disposition can be made of it.

Mr. SMITH. You regard land as part of the public domain that is not surveyed?

Mr. RICHARDS. Yes, sir.

Mr. SMITH. Would not this be construed as being part of the public domain?

Mr. RICHARDS. If it is owned by the Government, yes.

Mr. SMITH. It struck me, in case this matter was put in, perhaps the language ought to read, "advertising the restoration to entry upon the public domain," or something like that.

Mr. RICHARDS. Yes; perhaps that would be better, or you could use both forms.

Mr. SMITH. It occurred to me that lands in forest reserves was land still under the public domain, but I did not know about the verbiage in your office.

Mr. RICHARDS. We only consider land that is unreserved and subject to entry as really being land open to the public.

Mr. SMITH. I was not familiar with the verbiage of your office.

Mr. RICHARDS. This would accomplish the purpose just as well, to add the words "and made subject to entry."

The CHAIRMAN. The jurisdiction of forest reserves has been transferred to the Department of Agriculture, has it not?

Mr. RICHARDS. Yes, sir; except as to matters pertaining to titles, which remain in the Land Office.

#### TRANSCRIPTS OF RECORDS AND PLATS.

The CHAIRMAN. The next item, Governor, is transcripts and records of plats, General Land Office. Your estimate for the fiscal year 1907 is \$18,720, which is the same as the current appropriation.

Mr. RICHARDS. That permits of the employment of 31 people at \$2 a day.

The CHAIRMAN. I see the receipts of your office covered into the Treasury by you on account of transcripts of records and plats furnished to individuals under the act of Congress of April 2, 1888. during the fiscal year 1905 amounted to \$24,202, or a net surplus of \$6,404 above the appropriation. What do you charge for these plats and records?

Mr. RICHARDS. I believe that is regulated by law.

The CHAIRMAN. By statute.

Mr. RICHARDS. Yes, sir; by statute. The largest part of this work is certified copies of patents. For an uncertified copy of a patent we charge 60 cents, and for a certified copy \$1.60, the \$1 being for the seal and certification. The greater proportion of it is that kind of work.

We made an investigation a short time ago and found that there were more than 500,000 patents lying in local land offices undelivered. The owners have never called for them. When a purchaser of land wants to get an abstract, he finds no title from the Government on record in the local recorder's office. Then for \$1.60 we give him a certified copy of the patent.

Mr. SMITH. You would give them the original if practicable?

Mr. RICHARDS. We would if we could find it.

Mr. SMITH. I have a great many originals from the Land Office myself.

Mr. RICHARDS. Other matters here are copying parts of the record, for which a charge of 15 cents a hundred words is made.

The CHAIRMAN. Is the work of issuing patents kept up current now?

Mr. RICHARDS. No; it is hardly current. We are about one month behind. We have issued more patents during the past year than ever before.

The CHAIRMAN. Is the work of issuing patents delayed on account of the signature of the President?

Mr. RICHARDS. No; the secretary to sign land patents signs the patents for the President.

The CHAIRMAN. The secretary is a woman?

Mr. RICHARDS. Yes.

The CHAIRMAN. Does she sign the patents, or does somebody else sign them for her?

Mr. RICHARDS. She signs them.

Mr. TAYLOR. How long has she held the office, Governor?

Mr. RICHARDS. Since July 1, 1897.

#### EXPENSES OF OPENING TO ENTRY AND SETTLEMENT OF INDIAN RESERVATIONS.

(See also page —.)

The CHAIRMAN. The next item is expenses of opening to entry and settlement of Indian reservation; reimbursable, \$25,000.

Mr. RICHARDS. That is a new item.

The CHAIRMAN. Then there is \$25,000 for transportation and necessary sleeping-car fare and expenses of the clerks of the office detailed.

Mr. RICHARDS. That is the same thing.

Mr. SMITH. There is only one item there of \$25,000.

Mr. RICHARDS. It ought to be the same thing.

The CHAIRMAN. It says [reads]:

To meet the expenses of opening to entry and settlement during the fiscal years nineteen hundred and six and nineteen hundred and seven the ceded lands of the Flathead Indian Reservation in State of Montana, under act of April twenty-third, nineteen hundred and four (Thirty-third Statutes at Large, page three hundred and two); the Crow Indian Reservation in State of Montana, under act of April twenty-seventh, nineteen hundred and four (Thirty-third Statutes at Large, page three hundred and fifty-two); the Yakima Indian Reservation in State of Washington, under act of December twenty-first, nineteen hundred and four (Thirty-third Statutes at Large, page five hundred and ninety-five); the Shoshone Indian Reservation in State of Wyoming, under act of March third, nineteen hundred and five (Thirty-third Statutes at Large, page ten hundred and sixteen), and such other Indian reservations that may be open to entry and settlement during the fiscal year nineteen hundred and seven, the sum of twenty-five thousand dollars, or so much thereof as may be necessary; *Provided*, That the expenses pertaining to the opening of each of said reservations and paid for out of this appropriation shall be reimbursed to the United States from the money received from the sale of the lands embraced in said reservations, respectively: *Provided further*, That clerks detailed to assist in the opening of said reservations, while on such duty, shall be allowed per diem, in lieu of subsistence, at a rate not exceeding three dollars per day each, and actual necessary expenses for transportation, including necessary sleeping-car fares, twenty-five thousand dollars.

Mr. RICHARDS. I will tell you, Mr. Chairman, if you desire me to, what there is about this item. So far as the explanation of per diem and so forth is concerned, that is the expense we have been incurring for a long time, only this has been paid from contingent expenses of land offices. As to the opening of the Indian lands, we have had no provision for paying these expenses. They are paid out of the contingent expenses of land offices.

The amounts expended for this purpose in 1905 and 1906 were as follows: In 1905, \$13,921; in 1906, \$5,914. We opened in 1905 and 1906 the Rosebud Reservation in South Dakota, the Red Lake Reservation in Minnesota, the Devil's Lake Reservation in North Dakota, and the Uintah Reservation in Utah.

That money was appropriated for the contingent expenses of the Land Office, and used for the purpose of opening these Indian reservations, and the Indians took all the money. We did not get a cent of it. There are two reservations to open this year, one the Shoshone Reservation in Wyoming, and the other the Crow Reservation in Montana. Then there is another that will come on next year under this appropriation, the Flathead.

The object of this appropriation is simply to save the contingent fund for land offices and let the Indians pay for the expense of opening their land. They do not do it now. It will come back into the Treasury within a year.

The CHAIRMAN. Do you think that Congress ought, if it deems it necessary, to put some provision in here to reimburse the Treasury for the amount expended in opening these reservations, the benefit of which has gone to funds belonging to the Indians?

Mr. RICHARDS. That would be a question of policy.

The CHAIRMAN. Why should they not bear the expense?

Mr. RICHARDS. There is not any reason why they should not.

The CHAIRMAN. What is the aggregate of that amount paid?

Mr. RICHARDS. About \$20,000. If you wanted to go back on that thing a little further, go back to the Kiowa and Comanche opening, there was a good deal more, that was paid the same way. We simply had to do it.

The CHAIRMAN. Can you furnish us a statement of this expense—that the Government has paid out of the Treasury for the opening of reservations for the benefit of the Indians?

Mr. RICHARDS. Yes, sir.

Mr. SMITH. In that connection, may I suggest that you indicate in the statement, in each instance, whether any of the funds was left out of which it could be made reimbursable?

Mr. RICHARDS. Oh, there were plenty of funds. The Indians have plenty of money. Their receipts from the sale of these lands have been very large.

Mr. SMITH. I knew they had been, but I did not know to what extent they had been reimbursed.

The CHAIRMAN. Make a memorandum also, and send us a provision that could be incorporated in the bill that will enable Congress to require this money to be reimbursed out of these particular funds.

#### CONTINGENT EXPENSES OF LAND OFFICES (AGAIN).

Mr. RICHARDS. I want to call the attention of the committee to the contingent expenses of the Land Office—the condition of the fund.

We have appropriated this year \$225,000 for contingent expenses of the Land Office. The expenditure of all that money has been authorized now, so that we have left in that fund at this time \$60, to last until the 1st of July. Of course we will make it do, but we have authorized the expenditure for incidental expenses, clerk hire, and things of that kind, and now we simply quit. If we see a chance we may be able to relieve an office of a clerk where one can be spared. Last year we had \$265,000. We thought we could get along with a little less, but it would be a little more comfortable for us if we had the \$25,000 for opening Indian reservations in the manner in which it is suggested.

The CHAIRMAN. Or increase this amount with a proviso reimbursing the Treasury.

Mr. RICHARDS. That would be the same thing.

#### TOLL ROADS IN NATIONAL PARKS.

Mr. SMITH. Mr. Richards, a matter came up the other day which is purely a matter of law, and it is this: There is a Federal law authorizing the local authorities to establish highways over public lands, is there not—an old statute?

Mr. RICHARDS. I am not familiar with it.

Mr. SMITH. It appears here before the committee that there was an establishment of toll roads over what is now the Yosemite National Park, at a time when it was simply a part of the public domain, and not set apart as a national park; and I wanted to ask you if you know of any law of the United States by which either State or local authorities can establish toll roads over the public lands?

Mr. RICHARDS. No; I don't recall any such. Might it not be possible for them to do it under the local statutes—the State statutes?

Mr. SMITH. I don't know of any authority that they would have to establish anything excepting highways over public lands.

#### SURVEYING THE PUBLIC LANDS.

The CHAIRMAN. On page 132, the next item is for surveying the public lands. For surveys and resurveys of public lands, your estimate for the next fiscal year is \$425,000, as against \$400,000, the current appropriation, an increase of \$25,000. We have already appropriated in the urgent deficiency appropriation bill for the resurvey of certain lands in California. Will that appropriation enable you to reduce the estimate asked for the next fiscal year?

Mr. RICHARDS. No; that is a separate proposition, a new matter. There were some surveys made down in the extreme southern part of California fifty years ago, running right down to the Mexican boundary. It is absolutely a desert country; the surveys eventually disappeared, and only occasionally could a corner be found. Then a big irrigation scheme was proposed in there, called the Imperial Land and Irrigation Company. They could not find any corners, so they went to work and made a new survey themselves at their own expense, but in doing that they got a wrong start, with the result that they subsequently found that they were about a mile and a quarter out on the whole proposition, and that every man who had filed, had filed

upon another piece of land than that upon which he resided. A resurvey of those lands was ordered by an act of Congress four years ago, to be paid for out of the regular appropriation, and that all of those who had made entries prior to that date should be recognized in place, right where they were, and they would survey around them and call those tracts lots.

But in some way the entries were not stopped. There was no order issued withdrawing that land from entry during the period in which it should be resurveyed, and they went right along making entries, and there was quite a boom given to that section of the country, as has been the case with all irrigation matters of late. There were several hundred other entries made. These people came in and said that in this resurvey they ought to be surveyed out, too. To do so would take a considerable amount of money, in addition to what had been provided heretofore, because it makes much additional work for the surveyor.

The CHAIRMAN. I didn't know but the appropriation which has already been made for that purpose during this session would in that way reduce the amount for the next fiscal year.

Mr. RICHARDS. No; that was a special survey for a special place.

The CHAIRMAN. In view of the fact that our public domain is decreasing so rapidly by reason of its passing into the possession of private parties and private ownership, why is it necessary to keep increasing this appropriation from year to year, as we have been doing for the last twenty years?

Mr. RICHARDS. Of course the appropriation of the public domain does not reduce the unsurveyed lands any. We only dispose of lands which are surveyed. A large part of these appropriations are being used for resurveys which are ordered by act of Congress. We had by act of Congress of March 3, 1905, 22 townships ordered resurveyed in Wyoming, and I think there is another bill under which there are more added. I have it noted as 58 townships altogether. There were 32 in Nebraska, 156 in Colorado, and 26 in California which are not resurveyed yet.

The surveys are made from year to year out of the annual appropriation. Resurveys become necessary from two causes; one is from just the natural obliteration of the survey, the monuments, from the lapse of time, and the other is a defective survey. We had a very scandalous record here on surveys about twenty or twenty-five years ago, in which there were an immense number of surveys made with nothing marked on the ground at all; and it is absolutely impossible to find any corners. Then there are all the time new surveys being made.

The CHAIRMAN. At that time were the surveys made under the direction of the Government, or made by contract?

Mr. RICHARDS. Made by contract, just as they are made now, but the present system of examinations insures good surveys.

The CHAIRMAN. Are all of the resurveys made necessary by Congressional authorization, or has the Department discretion to institute a resurvey where it is deemed necessary?

Mr. RICHARDS. The Department has the discretion under certain conditions. The rule is that where all of the settlers in a township, every one, shall join in a request for a resurvey in order to define and

adjust their boundaries, then the survey may be ordered; but there is a very small fraction of resurveying that is done in that way. Ninety-five per cent of all the resurveys are made after the passage of bills authorizing the resurvey of particular townships. No appropriations are made at the time such bills are passed. For instance, in these acts of March 3, 1905, there was no appropriation; they were surveyed out of the apportionment made to the States for that year from the general appropriation.

The CHAIRMAN. Do these acts limit the time within which the resurvey shall be made?

Mr. RICHARDS. No, sir; they do not.

The CHAIRMAN. The time is within the discretion of the Department, and the Department acts when it gets the money.

Mr. RICHARDS. We get the authority from Congress, and we do it when we get the money. There was so much of this ordered and they are asking for so much of it for purposes of settlement, that in order to get anywhere near complying with the requirements of these acts of Congress we thought we ought to have \$25,000 more. If we don't get it we won't make the surveys.

I have a memorandum here, made up for me in the surveying division, which shows that the amount of resurveying that has been ordered in excess of what we have in sight to do it with would require an additional appropriation of \$55,500 instead of \$25,000.

The CHAIRMAN. Then this should be \$455,000?

Mr. RICHARDS. If you are going to clean it up; but we probably can not get it done this year, although we can use to very good advantage the \$425,000.

#### EXPENSES OF SURVEY AND SALE OF ABANDONED MILITARY RESERVATIONS.

The CHAIRMAN. The next item is for necessary expenses of survey, appraisal, and sale of abandoned military reservations transferred to the control of the Secretary of the Interior under the provisions of an act of Congress approved July 5, 1884, and so forth, \$6,000.

Mr. RICHARDS. There is an item there for \$480 for Fort Sherman which might be stricken out. The other item there is rather problematical. We had in 1904 \$6,480, and we expended \$3,352. For 1905 we had the same, and expended \$2,039. This year we had the same, and we have expended up to this time \$535—I think that could be made \$3,000 instead of \$6,000. It is a question of having the reservations to survey and sell. If we do have them, and don't have the money to survey them, we will have to ask for it, but I don't think we will have anything in excess of \$3,000.

#### REIMBURSING STATE OF UTAH.

The CHAIRMAN. The next item is to reimburse the State of Utah, as provided in the act of August 18, 1894, \$555.

Mr. RICHARDS. The act of August, 1894, provided that certain States may advance money to the United States in order to secure the survey of land when we haven't the money available for that purpose; that is, the lands granted to the States under the acts of admission, and that the States shall be reimbursed for the amounts so advanced.

The CHAIRMAN. The law authorizes the reimbursement?

Mr. RICHARDS. And authorizes them to advance the money. They have advanced \$555, which was used in this survey of lands that they selected.

The CHAIRMAN. Is this the first time that this has been included in your estimate?

Mr. RICHARDS. I think so. The States that could have had this done under that act are Washington, Idaho, Montana, South Dakota, North Dakota, Utah, and Wyoming.

The CHAIRMAN. The State of Washington advanced \$17,032, which has been reimbursed.

Here is a bill, H. R. 8992, in regard to the Northern Pacific Railway land grant. Has your attention been called to that?

Mr. RICHARDS. No; I am not familiar with that proposition; that is, that particular bill.

The classification referred to there is as to whether or not they are mineral lands, so that they would not select and have patented to them mineral lands.

#### OKLAHOMA TOWN-LOT FUND.

(See also pp. 577, 688.)

The CHAIRMAN. Do you know whether or not there were any funds in the Department of the Interior, in the Land Office, derived from the sale of public lands that have not been turned into the Treasury of the United States?

Mr. RICHARDS. I don't recall any.

The CHAIRMAN. Do you remember the act of March 31, 1901, known as the town-lot act, the Oklahoma town-lot act, which authorized the sale of certain town lots in the Territory of Oklahoma, and directed the application of the proceeds, or so much thereof as might be necessary, to the construction of school buildings, court-houses, jails, and bridges in those towns?

Mr. RICHARDS. Yes, I remember; I know all about that.

The CHAIRMAN. Has that sale taken place under your immediate supervision?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. The sale of the lots?

Mr. RICHARDS. Yes, sir.

The CHAIRMAN. Do you know the amount realized from the sale of the lots, and have all of the lots been disposed of?

Mr. RICHARDS. There were two reservations—the Kiowa, Comanche, and Apache and the Wichita. The law directed the Secretary of the Interior to divide the tract into such number of counties as might be necessary; that there should be a tract of land not to exceed a half section selected for each one of these counties for the purpose of a county seat, and that that be surveyed and sold, and the money received should be used for the support of the county government for the first year, and then for such improvements as might be necessary in the county and municipalities, and ordinary expenses of that character. Three counties were created and named Kiowa, Comanche, and Caddo, respectively. I can not give you the exact figures about those three town sites, but they sold for something more than \$700,000. I made the counties under the direction of the

Secretary of the Interior and selected the land for the three county seats. One of the towns was named Lawton, one Hobart, and one Anadarko. I only remember the figures in connection with the Lawton town site.

That sold for \$414,000 in cash, and the others, I think, for about \$300,000—three or four hundred thousand dollars. That money was immediately placed in the subtreasury in St. Louis. I had a man at each of these three towns conducting the sales, and put them under bonds of \$100,000 apiece. Every night they remitted the money to the subtreasury at St. Louis, and it was placed to the credit of these town-site funds.

My connection with the business was ended when I got the money into the subtreasury, and what has been done with it I don't know. There has been a large amount of expenditure, because I recommended at once in regard to these town sites that a portion of this money should be expended in the town sites for putting in waterworks, grading of streets, and paving of streets.

Extraordinary prices were paid for the lots. In the town of Lawton the highest priced lot was one 25 feet wide and 150 feet deep that sold for \$4,535, and there wasn't a thing there but prairie—there wasn't a house within 3 miles. I think the men that bought those lots were going to give them value by the improvements that they were to put on them, and they were interested in having the money expended there. There have been waterworks put in Lawton, Anadarko, and I think in Hobart.

The CHAIRMAN. Who owns the waterworks?

Mr. RICHARDS. They will be owned by the city.

The CHAIRMAN. Were those expenditures authorized under the act?

Mr. RICHARDS. I think they had a special act for those expenditures; that is my recollection.

The CHAIRMAN. Under whose jurisdiction were these improvements made?

Mr. RICHARDS. The Secretary of the Interior.

The CHAIRMAN. They were not made under you?

Mr. RICHARDS. No; I had nothing to do with it after I completed the sale and put the money in the subtreasury.

The CHAIRMAN. You deposited the money in the subtreasury to the credit of this fund?

Mr. RICHARDS. The town-site fund?

The CHAIRMAN. Did you account to the Secretary of the Interior and the Secretary of the Treasury for the receipt of these moneys?

Mr. RICHARDS. Yes; to the Secretary of the Interior.

The CHAIRMAN. The Auditor of the Interior Department says that there has never been an accounting of that fund, and the payments have never been audited by anyone—the payments out of the fund.

Mr. RICHARDS. Well, I am sure I don't know anything about that.

The CHAIRMAN. He says there has never been any accounting to the Treasury Department for the receipt of this money, and that money that was paid into the subtreasury has never been put into the Treasury. I should think that would be, under the law, in the Treasury of the United States.

Mr. SMITH. It was not deposited in the subtreasury to the credit of the United States, but to the credit of the Secretary of the Interior.

The CHAIRMAN. Was it deposited in the subtreasury to the credit of

the Secretary of the Interior, or to the credit of the Treasury of the United States?

Mr. RICHARDS. I don't know. It was deposited to the credit of the town sites—to the credit of the Secretary of the Interior as trustee for these town sites. The first deposit of an amount there was from the town of Hobart.

The money was sent to the subtreasury at St. Louis, and no receipt was received. Of course the man that sent that money—the agent conducting the sale—wanted to know why he didn't get the receipt, and he sent an inquiry to the subtreasury about it. The subtreasurer replied that they had forwarded an inquiry to Washington asking as to how this money was to be credited, and until he got a reply to that he could not give a receipt. In the course of two or three days he got his receipt, and our agents had a receipt for every dollar that they received, and I have got a receipt for every dollar that came in.

Mr. SMITH. The report of Mr. Ambrose, agent of the Comptroller of the Currency, and of Mr. Northup, agent of the Auditor for the Interior Department, says that the gross proceeds of the sales, as shown by the daily abstract of sales, were \$736,000, and that these funds appear to have been daily transmitted by the town-site commissioners to the subtreasury at St. Louis, and there deposited to the credit of the Secretary of the Interior, except such part of the funds as was necessary to meet the daily expenses of the sales, including the per diem compensation of the town-site commissioners. Accounts for such expenses are not on file in the General Land Office, but are understood to be on file in the disbursing division of the Secretary's Office.

Mr. RICHARDS. Do you want to ascertain the expense of making these sales?

The CHAIRMAN. No; here is the idea: The law expressly provides that all public funds, public moneys, received by the administrative officers of the Government shall be deposited with the Secretary of the Treasury or accounted for to the accounting officer, which, in this case, would be the Auditor of the Treasury for the Interior Department, and that these funds have not been so deposited, and have never been accounted for. The purpose of my inquiry was to ascertain, first, the fact from you, if you know, as to where the money was deposited, and whether or not an accounting has been made, and, if the money has not been deposited in the Treasury, and no accounting made, whether you know why it has not been done. The law is explicit on the subject as to the depositing of public funds, and makes no distinction between trust funds and any other funds.

And I wanted to follow that with a question as to whether there are any other funds that you know anything about derived from the sale of our public lands that were deposited to the credit of any departmental officer, or have not been deposited in the Treasury of the United States.

Mr. RICHARDS. I don't know anything about any other, because there are no other funds that have come into our office since I have been in there, excepting this fund.

The CHAIRMAN. We were informed by one of the witnesses here on Saturday that there was another fund of some \$25,000 received from the sale of condemned property in connection with the Reclama-

tion Service that has been deposited in the Treasury of the United States, but had not been accounted for.

Mr. RICHARDS. I don't know anything about that. That comes through the Reclamation Service.

The CHAIRMAN. And this being under your immediate jurisdiction, as I had supposed, was the reason why I addressed these questions to you to ascertain the facts.

Mr. RICHARDS. Opening these lands in Oklahoma was a new proposition. Nothing had been done just this way before. I was the Assistant Commissioner at that time, and I was directed by the Secretary to take charge of this work. I went down there and laid out these counties, I surveyed these town sites, I made these sales, had registration and drawing, registration at which there were 168,000 people registered to draw 13,000 claims, and we put a man on every claim. The same day that we begun the entries of land—on the 6th of August, 1901—we begun the sales of these town sites in three different towns. The sale was a cash sale, public auction.

A purchaser was allowed twenty minutes within which to make his payment for the lot; and if he did not pay we put the lot up again, and we did not have to resell but one lot. The money was immediately transmitted to the subtreasury, as I stated, and the expenses of each one of these sales of these town sites were paid out of this fund as we went along. Now, that may be a point that some auditor is worrying about. It never occurred to me. The entire sale of the Lawton town site, where we took in \$414,000, amounted to four-fifths of 1 per cent. Those expenses were paid. They were accounted for, there was a receipt for every dollar that was paid in there, I settled my accounts and turned the business over to the Secretary of the Interior. Now, I don't know anything more than that.

Mr. SULLIVAN. There is no question about the regularity of the proceeding. The only question is whether that provision in regard to the payment of the money into the Treasury has been complied with. We understand that there has been no audit of these accounts by anyone excepting under the supervision of the one who received the money and disbursed; in other words, no independent audit.

Mr. RICHARDS. Does that relate to the expenses of the sale?

The CHAIRMAN. No; the proceeds of the sale.

Mr. SULLIVAN. To the whole \$740,000.

The CHAIRMAN. Here is the point. The question is whether there is not an abuse here of administration—lax administration—with regard to the receipt of over \$700,000, which, under the statutes of the United States, should have been paid into the Treasury of the United States and accounted for to the accounting officer.

Our information is that that has not been done in this case, and that there are a number of cases, not only in the Interior Department, but in other Departments, where this practice has obtained for some time in regard to the receipt of moneys from the sale of public property, and that there has been a failure to account for them to the accounting officers, or not putting it in the Treasury and not accounting for it at all, excepting such an account as may be made to the head of the Department or the head of the bureau receiving money, which is in direct violation of law. And the question is, to what extent this practice has grown up in the Department—that is the real

subject of our inquiry; to know whether any legislation is necessary to correct an evil. It is not in the matter of your administration, but simply whether or not this law has been complied with in respect to the payment of public moneys into the Treasury of the United States, and if not, why not?

Mr. RICHARDS. I can send a little printed report here of the whole business down there.

The CHAIRMAN. I would be glad to get it, as a matter of information.

Mr. RICHARDS. How it has been taken out of the subtreasury I don't know.

Mr. SMITH. It was never put in as Government money. The United States owned this land under the decision of the Supreme Court of the United States, and the money for the sale of that land, therefore, belonged to the United States, but it was never put into the Treasury of the United States.

Mr. RICHARDS. We have been criticized severely in regard to that matter, because they said that money ought to have gone to the Indians, that it was the Indians' land, and the Government took it away from them.

Mr. SMITH. The Indians never owned that land.

Mr. RICHARDS. I will say that so far as the expense of that thing is concerned, the money never went into the Treasury; it was paid as we went along.

Mr. SMITH. For your services?

Mr. RICHARDS. Yes, sir.

Mr. SMITH. It was not paid out of this fund.

Mr. RICHARDS. Oh, yes.

Mr. SMITH. The record that we have here shows very fully that it was not paid out of this fund, but reimbursed to this fund long afterwards. I call your attention to this report made by Mr. Ambrose and Mr. Northup.

Mr. RICHARDS. I will tell you how we did that. We paid our people and clerks and everything there from our regular appropriation, and put in a claim against his fund for it and got it.

Mr. SMITH. The record shows that this expense was paid out of divers appropriations, and then erroneously refunded to the wrong appropriation. According to the statements of these officers who inspected the records, you divided those expenses, and paid it out of salaries of the General Land Office, surveying of public lands, reproducing plats of surveys, and then it was erroneously credited back to surveying public lands.

Mr. RICHARDS. I don't know how that was done. I know about the division part of it, I remember about that. I figured it this way: there was an expense of \$5,100 that came out of some Government appropriations. I did not figure as to what particular appropriation it came from, only that it should be repaid from the proceeds of the sale of the town sites. It was a difficult matter to keep an account between three town sites that had been surveyed, platted, sold, and the money turned into the Treasury. I thought the expenses to the amount of \$5,100 and some odd dollars, which the Government had paid, ought to come from the sale of these lots, so I recommended that amount be taxed equally upon the three town sites, which would make \$1,700 apiece, and the money covered back into

the Treasury. I made no suggestion as to what fund that should be credited to.

Mr. SMITH. So far as I can discover, what actually resulted was this: You first paid out all this money, charging it to separate appropriations.

Mr. RICHARDS. It was our regular force doing it. That is, it was part of my salary; I had a lot of clerks, I took some deputy surveyors, examiners of surveys, and made the surveys. They were paid their usual salary from the regular appropriation.

Mr. SMITH. In place of covering the money back into the Treasury, it operated to cover it back into appropriations.

Now, passing from that item, I find here in section 1765 of the Revised Statutes that "No officer in any branch of the public service, or any other person whose salary, pay, or emoluments are fixed by law or regulations, shall receive any additional pay, extra allowance, or compensation, in any form whatever, for the disbursement of public money, or for any other service or duty whatever, unless the same is authorized by law, and the appropriation therefore explicitly states that it is for such additional pay, extra allowance, or compensation."

Now, under that statute how do you explain your ability to send a man of yours down there at \$25 a day, from your office, a regular employee of the office.

Mr. RICHARDS. The pay of these town-site commissioners was fixed by the Secretary of the Interior. They were to be paid \$25 a day. I had so many applications for the appointment of men to make those sales of the town sites that I found that it was causing me more trouble than anything else, so I reported to the Secretary of the Interior that I could not make those sales, and appoint people from the outside as commissioners; that I had men there whom I knew, that could do that work, that I could have faith in, and if those men—two of them were in the Land Office, and one of them in the Indian Office—could be given a leave of absence without pay, and be appointed as commissioners under this act, I would be satisfied. They each gave a bond of \$100,000, which they got from the bonding companies and paid for out of their own pockets. I took the three men, Mr. Nessler from the Indian Office, Mr. Holcomb, and Mr. Hampton. Those three men were given leaves of absence; they were not on any other pay; and were paid \$25 a day for the first twenty days and \$10 per day for any additional time.

Mr. SMITH. They were civil-service employees, were they not?

Mr. RICHARDS. Yes.

Mr. SMITH. Do you claim that under section 1765, by simply the granting of a leave of absence, you can give them three or four times their regular pay?

Mr. RICHARDS. I don't know; all I know is that we did it.

Mr. SMITH. And the Auditor says it is illegal.

Mr. RICHARDS. Well, I don't know. They were paid out of that fund.

Mr. SMITH. This may be an unwise statute, but it is here.

Mr. RICHARDS. If we got through at all, we were doing very well. I got every dollar of that money into the Treasury.

Mr. SMITH. It is not in the Treasury.

Mr. RICHARDS. It went into the subtreasury, and I got receipts for it. That is all I know. The subtreasurer issued receipts for that

money after receiving instructions from the Treasury Department at Washington. I think I can find the correspondence with the sub-treasurer about this matter.

Mr. SMITH. Would you send those letters to the committee? I understand these letters practically hold that it was illegal to deposit this money to the credit of the Secretary of the Interior.

Mr. RICHARDS. Our agents were held under \$100,000 bond, and they did not want to give up any money until they thought they had good receipts. So they sent the money into the subtreasury, and when they did not get any receipts they made inquiry right away and the sub-treasurer got instructions from Washington and then we got the receipts.

The CHAIRMAN. Did they get their instructions from the Treasury Department or the Secretary of the Interior?

Mr. RICHARDS. I don't know. But I can show you all our correspondence.

Mr. SMITH. This report of Mr. Ambrose and Mr. Northup shows quite a number of smaller payments, illegally made, and these only serve to call attention to what we are after, and that is whether these claims have ever been properly audited, and this \$700,000 properly accounted for.

Mr. RICHARDS. I have no knowledge as to what has been done with the money since we turned it into the subtreasury. I lost track of it there.

The CHAIRMAN. You say you do not know of any other moneys received from the sale of public lands or other public property under your jurisdiction where the proceeds of such sales have not been turned into the Treasury of the United States and accounted for to the accounting officers of the Treasury for the Interior Department?

Mr. RICHARDS. I don't think of anything at the present time.

---

FRIDAY, April 13, 1906.

## UNITED STATES GEOLOGICAL SURVEY.

### STATEMENT OF CHARLES D. WALCOTT, DIRECTOR.

#### OFFICE OF THE DIRECTOR.

The CHAIRMAN. We will go to page 137, office of the Director of the Geological Survey. Your estimate for the fiscal year 1907 under this title is an increase over the current appropriation of about \$3,000. Will you state, Mr. Walcott, the reason for that increase, and the necessity?

Mr. WALCOTT. Mr. Chairman, that is explained on page 138, the next page, by the transfer of one clerk of class 2, now detailed from the Pension Office, and one clerk of class 1, making that additional amount.

The CHAIRMAN. How long has it been since these clerks were transferred to your office?

Mr. WALCOTT. One clerk was detailed in 1898, and the second clerk was detailed in November, 1902.

The CHAIRMAN. They have been in your office ever since?

Mr. WALCOTT. Ever since. They were detailed by the Secretary of the Interior, one on account of her knowledge of statistical work, she having been employed in collecting mining statistics conjointly with the Eleventh Census. She was transferred from the Census to the Pension Office, and from there transferred or detailed to the office of the Geological Survey.

The CHAIRMAN. Although your current appropriation is \$32,720, the amount actually paid to-day for the clerical service in your office is \$35,340, the amount which you estimate?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. By dropping these two clerks from the Pension roll, which has been done in the Legislative bill, the ultimate result is identically the same?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. It does not involve any increased expense to the Government?

Mr. WALCOTT. No, sir; no additional increase in cost.

The CHAIRMAN. Have you submitted to Congress the detailed statement of the employees in your office and the salaries paid, or does this paragraph—

Mr. WALCOTT. This paragraph states those that were provided for in the office of the Director, and on page 138, in the second item, "Scientific Assistants of the Geological Survey," the others are enumerated. They were first inserted in the appropriation for 1893 for the first list under the office of the Director, and I believe in 1892 or thereabouts for the second list. And those are all the specified salaries that are made for the operations of the Geological Survey.

The CHAIRMAN. How much of a library have you there?

Mr. WALCOTT. The total number of books in the library at the beginning of this fiscal year was 58,681.

The CHAIRMAN. What kind of a library is it, miscellaneous or scientific?

Mr. WALCOTT. The library pertains to geological work, topographical work, and the other work of the Survey solely. It is a geological or technical library pertaining to the operations of the Survey for the Government. The Library of Congress does not duplicate the books that we have except as to those that come in through copyright, and if you were to inquire for a library pertaining to geological subjects you would be referred to our library. That is by arrangement with the Librarian of Congress.

The CHAIRMAN. All works on geology?

Mr. WALCOTT. Geology, surveying, chemistry, physics, and all the branches of work that the Geological Survey touches.

The CHAIRMAN. Is it anything more than a record of the work that each office is doing?

Mr. WALCOTT. It is a record of the work that is being done throughout the world in those lines of work.

The CHAIRMAN. Not only in your Office but any other country?

Mr. WALCOTT. Throughout the world; and we have very large acquisitions coming through exchanges of publications from foreign governments and institutions that are publishing in that line. There

are many gaps that can not be filled by exchange; literature and periodicals, especially foreign periodicals, and other works that are published for which we can not exchange. The \$2,000 for the library is used entirely for the purchase of books, pamphlets, and maps.

The CHAIRMAN. I think you misunderstood me. I wanted to find out the character of the library in order to determine the necessity for a \$2,000 librarian. Who uses the library?

Mr. WALCOTT. It is used by all of the members of the Survey, and as a reference library by people from all sections of the country that are interested in the topics which the library contains books upon.

The CHAIRMAN. Have you any idea about the number of visitors to the library?

Mr. WALCOTT. No, sir.

The CHAIRMAN. What does the librarian do?

Mr. WALCOTT. He has charge of the selecting of all the books, the cataloguing of all the books, and furnishing information to anybody that wishes information. For instance, if I were carrying on an investigation, I would go to him and say, "Mr. Weeks, I want all of the literature in the library on this subject." It might be the testing of fuels, coals, or upon methods of treating any mineral, or the occurrence of any mineral. It is his business to be able to assemble the literature and send it to me. Mr. Weeks is a geologist, appointed as a result of a civil-service examination, served as a geologist a number of years, came into the Survey as a stenographer and typewriter, and then took a course of three months or more at the Library of Congress where he was trained in the methods there employed, and was then appointed librarian. He is an unusually well-trained man and occupies an important position.

The CHAIRMAN. Has he an assistant?

Mr. WALCOTT. Several assistants.

The CHAIRMAN. They are not provided for here.

Mr. WALCOTT. Not in specific terms; no, sir.

The CHAIRMAN. Has he more than one assistant?

Mr. WALCOTT. I think he has others in addition to the two cataloguers mentioned—one at \$1,200 and one at \$720. I will say that those individuals are skilled in cataloguing and library work, acquainted with several foreign languages, and people who are especially well educated and well trained for that work.

The CHAIRMAN. Are the acquisitions so numerous and frequent as to require the constant time and attention of two cataloguers?

Mr. WALCOTT. During the fiscal year 1905 there were 2,661 books added to the library.

The CHAIRMAN. What does a cataloguer do except to take the title of a book, give it its number, and state the general subjects treated?

Mr. WALCOTT. I do not find a statement here of the acquisition of pamphlets and maps. The work of this assistant librarian is to assist the librarian, of course, and also to be posted on what is in the library, give information such as he is able to give; and we also catalogue all current literature. If a scientific magazine or periodical comes in, the cataloguers go through and catalogue each article in that publication upon the work of the Survey or any of its branches. If, for instance, a report of the geological survey of Canada comes in, it may have twenty articles in it, and they are catalogued for the

reference catalogue, and cross references are made. They scan the articles so as to get some idea of what is in them, and put that on the card in addition to the mere title. Often the title is blind, and does not indicate what is in the book, and that work requires skilled men a great deal of the time.

The CHAIRMAN. You have five employees in the library?

Mr. WALCOTT. There are six employees, and they are busy all the time.

The CHAIRMAN. Two cataloguers and two assistant librarians and a librarian. It is not a library that people generally have occasion to use, is it?

Mr. WALCOTT. No; it is not a popular library in any sense. The librarian also looks after the matter of transmission of all the foreign exchanges and library exchanges, the receiving of the material, the acknowledging of the material; also, after the binding of books, their preparation for binding. During the year 1905 there were 1,500 books prepared for the bindery. All of the foreign books and many of the other books come in paper covers.

The CHAIRMAN. Where do you have them bound?

Mr. WALCOTT. Through the Interior Department.

The CHAIRMAN. In the Government Printing Office?

Mr. WALCOTT. Yes; the Government Printing Office.

The CHAIRMAN. Does the librarian control the matter of selling geological and topographical maps?

Mr. WALCOTT. No, sir; that is in the hands of the document clerk. The library I consider as a tool to be used by the members of the Survey, just as are hammers and compasses and surveying instruments. The books in the library are there for the purpose of enabling scientific men to acquire information with regard to all that has been done before, so that work may not be duplicated. If members of the Survey are to carry on an investigation of the same type that has been carried on elsewhere, it is their duty to see what has already been done elsewhere, in order to save time and money, and to acquaint themselves with all existing knowledge in the particular line which they are to work upon. It is not for recreation but as a means to an end in the operations of the Survey.

The CHAIRMAN. Primarily for the use of your force?

Mr. WALCOTT. Yes, sir. If you have three or four men in the library who know what is in the library, when a man goes to one he can quickly place him in touch with what he wants. It is a saving of time to everyone that uses the library. I think it is an economical expenditure of money.

The CHAIRMAN. I have no question about that, only it occurred to me that you have a much larger force than is absolutely necessary for the accomplishment of that purpose.

Mr. WALCOTT. Well, we have not kept up with the library work, and I know that the people work overtime, and have done so for the last three years, endeavoring to keep up with the duties that they have to perform. During the day they are interrupted many times, and it is very difficult to keep up with the current material that is coming in day after day, to have it catalogued and ready.

My idea is to have everything that comes in accessible as soon as possible. Every book is numbered and put out on a large table

where it remains for one week, so that the technical and scientific men can keep up with the current literature that comes in, and then the books, maps, and pamphlets are placed on the shelves or in cases as soon as catalogued as to title and contents. Of course we do not wish to publish that which has been published elsewhere, but with the mass of literature at present it requires a good deal of care and work to avoid doing that.

The CHAIRMAN. Do you receive and catalogue all current magazines there?

Mr. WALCOTT. Only those of a technical character that bear upon the work of the Survey. The current magazines, the popular current literature, we do not touch at all.

The CHAIRMAN. Only those bearing upon the subjects that relate to your particular work?

Mr. WALCOTT. Since taking up the reclamation work, the library has been expanded in the line of hydrographic work and all lines of physics pertaining to water. We also buy legal books, bearing on the legal aspects of that work, but those are paid for from the reclamation fund.

The CHAIRMAN. How many photographers have you? You have provided for in the current law four photographers, or one photographer and three assistants, at the bottom of page 137. Are they employed exclusively in your office here in Washington?

Mr. WALCOTT. Yes; entirely employed in the photographic laboratory of the Survey.

The CHAIRMAN. In addition to that, how many field photographers have you?

Mr. WALCOTT. There are none connected with the work of the Survey proper. There is one connected with the reclamation work.

The CHAIRMAN. How long have you had these four photographers—how many years?

Mr. WALCOTT. They have been there since I have had charge—since 1894.

The CHAIRMAN. Do they do work in connection with the Reclamation Service?

Mr. WALCOTT. The Reclamation Service pays for two or three photographers who work in the same laboratory. The expenses of the work pertaining to the Reclamation Service are paid from that fund.

The CHAIRMAN. Then how do you get back into the Treasury the amount which is paid out under this appropriation to the photographers for your Bureau?

Mr. WALCOTT. We keep the cost of every piece of work that is done in the photographic laboratory, and the Reclamation Service purchases its own material and provides for its own men. The work that is done by these photographic men of the Geological Survey proper, on the topographic maps and the geological work for the Geological Survey proper, is kept distinct from the work of the Reclamation Service.

The CHAIRMAN. Do they get additional compensation for the work that they do for the Reclamation Service?

Mr. WALCOTT. No, sir; they work in the same laboratory, and they do the same kind of work, but the work relating to the Reclamation Service is done by other men.

The CHAIRMAN. Let me understand you. Do you employ, in addition to the photographers in connection with your own office, additional photographers in your office?

Mr. WALCOTT. Yes, sir; and these additional photographers are paid for out of the reclamation fund, and do the work for that service.

The CHAIRMAN. I understood you to say that these men were doing work for which the Government was paying them out of the reclamation fund.

Mr. WALCOTT. No; they could not do that. The regular Geological Survey photographers could not be paid out of the reclamation fund.

Mr. SULLIVAN. I see you have here two paleontologists at \$2,000 each. What is their work—their duties?

Mr. WALCOTT. Suppose we take a mining district like the Cripple Creek mining district of Colorado, which was surveyed a few years ago. We first made a detailed topographic map so as to get the relief of the ground, drainage, and all matters relating to the topography. That map, when prepared, is taken by the geologist, who determines the surface outcrop of all the rocks and the character of the rocks in that territory. In the Cripple Creek district it is found that the rock is a mass of granite where an ancient volcano has broken up through.

There has been eruption after eruption, shivering the adjoining granites and crowding the erupted rock up through them, which has subsequently hardened. After that force was exerted, geyser action went on, carrying heated water and bringing up the hot solutions, which settled in and about these cracks, leaving the mineral behind—the gold, the quartz, and other materials. Now, the mining geologist examines and locates on the topographic maps all of these different rocks that are exposed. The geologist must know the area and character of each of the groups of rocks, because this knowledge has a direct bearing upon the relations of the ore deposits. Next, the chemist tells him the chemical character of these rocks; he analyzes them and determines that. The petrographer studies the rocks under the microscope to determine the physical characteristics which can not be determined by the chemist. In that way, between the chemist and the petrographer, the geologist can determine each one of these series of rocks, and of course the distribution, as they have been mapped.

Mr. SULLIVAN. And all of these various services are related to the investigation of the value of the mines?

Mr. WALCOTT. Yes, sir; the mines and valuable minerals. Now, in the Leadville district, instead of coming up through a mass of granite, the erupted rock came up through sedimentary rocks that were deposited in layers. These rocks carry fossils in them—that is, the remains of the life of the time in the ocean. Now, in the evolution of life we find a relatively regular succession, the dying out of the old forms and the coming in of new forms, and these sedimentary formations, owing to the volcanic matter coming up through them, are broken and displaced. By the examination of the fossils we can determine the different horizons and reconstruct on maps and in sections the geology of that region. In other words, the fossils are the letters, which make up the words, by which you read the history of the rocks, and by this means determine the relation of the different masses.

Mr. TAYLOR. You say horizon. Do you mean the strata?

Mr. WALCOTT. Yes; a certain level or bed in the strata.

Mr. TAYLOR. The strata and horizon are convertible terms?

Mr. WALCOTT. Interchangeable. When I was a young man in Indiana the subject of finding commercial coals was very important. They occurred in Ohio and over in Illinois, and Mr. Cox, the State geologist of Indiana, was requested to ascertain where he could get coal and develop the industries around Indianapolis, the capital. He went to Ohio and he went to Illinois, and he studied, not only the coals, but he studied fossils and the plants which occurred in each horizon, and found the difference—that is, the evolution of plant life in going through several hundred feet of strata, plants from some coal beds having one character and some another.

And then he went to work in Ohio and examined five hundred or a thousand feet of the strata to ascertain the characteristics of the different plant life there. Then he returned to his own State and began to work on the rocks, and found that the plants which occurred three or four hundred feet above the coals in Ohio and Illinois also occurred in the rocks along the Indiana streams. A company was formed which sunk shafts down and found the coking coals, the coals which resulted in the development of that part of the State. That, you might say, is the result of the work of a paleontologist.

The CHAIRMAN. Then, the statement made some years ago on the floor of the House that the principal purpose of the investigations of the paleontologist was not for the true animal, but an examination of fossils with a view of ascertaining whether the claim that has been made is true, that at some time away back in the history of the formation of the world a species of birds had teeth. This very appropriation for these examinations was at that time reduced from forty thousand dollars to about ten thousand dollars, and has ever since been carried at that amount.

Mr. WALCOTT. I know well that debate, and that it started primarily from a difference of opinion between two distinguished college professors who had a controversy as to paleontological matters and the succession of life. There was a book published upon fossil birds with teeth, which gave a very thorough summary of the development of early bird life. That was of educational value and scientific value, but not of much value in the development of ore beds or mineral beds. That brings up the question of the study of vertebrate remains in many formations of the West, notably in Colorado and along the Rocky Mountain front, where we have the vertebrate remains and the different horizons from which we determine the succession of life among the skeletons as readily as we determine it by the plants and similar early life elsewhere.

Mr. TAYLOR. Will you please give me the distinction between horizon and strata, if there is any?

Mr. WALCOTT. If we speak of horizon where we have a certain grouping of animal remains or plant remains, we mean the position or level in the strata in which they occur.

Mr. TAYLOR. Then they are not exactly convertible terms. Horizons may be in strata, but strata could not be in horizons.

Mr. WALCOTT. Oh, no. We say the things occur in the same horizon. It means that they occur not necessarily in the same strata, because in one place you might have a sand deposit, in another place a

mud deposit, and in another place a limestone deposit, and all deposited in the same life period, which is the same paleontological horizon.

Mr. SULLIVAN. The paleontologist is used simply as an aid to the geologist?

Mr. WALCOTT. An aid to geological work. We get scientific results in connection with a knowledge of the ancient life of the earth, and in learning of what has gone before.

Mr. SULLIVAN. Does he do work as a paleontologist independent of his employment as assistant to the geologist?

Mr. WALCOTT. The particular paleontologists at present under consideration go in the field and collect their own material, working out the sections so they will have accurate knowledge of just where the fossil remains come from—the position of the strata; otherwise they would be of only biological or zoological value.

Mr. SULLIVAN. Their employment is for an economical purpose?

Mr. WALCOTT. Yes, sir.

#### GENERAL EXPENSES.

The CHAIRMAN. The next item for general expenses for the Geological Survey, I observe that you have inserted in your estimates some new language. What is the necessity? The first is the word "absolutely" preceding the word "necessary."

Mr. WALCOTT. I will say that sometime about July, 1905, the Comptroller decided that what we call the contingent supplies, the miscellaneous supplies of the Geological Survey, must be paid for from the appropriations for the Survey and not from the appropriations for contingent supplies of the Interior Department.

The CHAIRMAN. You have been paying the necessary expenses for the Geological Survey out of this appropriation of \$20,000, haven't you?

Mr. WALCOTT. We pay for the skilled labor as stated. What you refer to is a general statement that has always preceded our appropriations since I have had charge.

The CHAIRMAN. What is the necessity for having this language in here if you have no appropriation?

And all other absolutely necessary expenses, including telegrams, furniture, stationery, telephones, and all other necessary articles required in the field and in Washington, District of Columbia, to be expended under the direction of the Secretary of the Interior.

You have paid out of this appropriation heretofore "necessary expenses," and under the decision of the Comptroller they must have been absolutely necessary expenses, and that is the reason for inserting the word "absolutely" here, which has not been heretofore carried in your appropriation.

Mr. WALCOTT. May I make a general statement. "For pay of skilled laborers and various temporary employees," we pay nothing out of that excepting salaries. We did not pay for any supplies of any character.

The CHAIRMAN. Then what is the necessity for that preceding language in the bill?

Mr. WALCOTT. "For topographical surveys in various portions of the United States," which is the next item following, the estimate for 1906-7 is \$350,000. Out of that we pay not only the salaries of the

topographers who are doing the work, but also for the supplies which they need to a great extent both in the field and in the office, and it is the same way for other appropriations for the Geological Survey.

Now, in the year 1905, up to June 30, we received from the contingent supplies—appropriation of the Interior Department—\$8,639.39. We received from the stationery appropriation for the Interior Department \$10,162.53.

The CHAIRMAN. I think I see where I have made my mistake. On page 139 is a general statement of the purposes for which appropriations are subsequently made under specific heads.

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. Now, you may go ahead and make your general statement.

Mr. WALCOTT. As I was stating, we received the amounts mentioned for contingent supplies and stationery supplies, and we also received from the appropriation for printing and binding of the Interior Department for the fiscal year 1905 \$21,262.62. Now the Comptroller, in a decision dated February 14, 1906, decided that the supplies needed by the Geological Survey may be divided into four classes, as follows:

1. Supplies which are properly used only in the Office of the Geological Survey in the dispatch of its general administrative business, and of which the use, as applied to any specific service, as paleontologic researches, would be only to the extent necessary or expedient in carrying out the general administrative purposes of the Geological Survey as a branch of the Executive Department.

Concerning such supplies no question is raised, as it would not be seriously contended that they should be paid for out of the funds appropriated for special investigations.

2. Supplies for use only in the field in the several special investigations. The contention would not be seriously made that such supplies should be paid for otherwise than from the several appropriations for special investigations.

3. Supplies used primarily in the field, such as the various field notebooks, for the collection of data in the said special investigations. The data are entered on such books while work is being carried on in the field, the results being worked out later in the general offices of the Survey, and the books themselves are filed in the Washington office and become part of the permanent office records. I think the purchase of such supplies is an expense for practically the sole use of the special investigations and would be properly payable out of the appropriations specifically made therefor.

4. Supplies which are used in the field or in the office, but which in their nature seem to be nearer general office supplies than supplies for particular services in the field, such as account books, vouchers, letter heads, etc.

This fourth class presents the only real difficulty, and in its solution the proper test to be applied would seem to be the primary uses to which the articles are to be supplied, always bearing in mind the words which Congress has used in making the several appropriations under consideration.

The result of that decision is, that whereas in the fiscal year 1905 the Interior Department paid for \$21,262.62 worth of printing and binding these notebooks and other such material, under the ruling of the Comptroller, dated February 14, 1906, and his first reference to it in a decision dated July 13, 1905, we are now obliged ourselves to pay for such expenses that have heretofore been paid for by the Interior Department. There is a point of difference constantly arising as to what constitutes the field supplies and office supplies; for instance, on a question of charging for printing of vouchers which have been put in within the last few days, also the question of notebooks. The

notebooks are first used here in Washington, and partially filled out with data pertaining to the work to be done, and then taken into the field where field notes are added, and brought back and used in the office. To clear that up so there would be no question as to how this expense should be met, these words are put in—

including the pay of necessary clerical and scientific force and other employees in the field and in the office at Washington, District of Columbia, and all other absolutely necessary expenses, including telegrams, furniture, stationery, telephones, and all other necessary articles required in the field and in Washington, District of Columbia, to be expended under the direction of the Secretary of the Interior.

Now, take the item of telephones. I believe the Interior Department supplies us with 17 telephones, and we pay for the use of 5 other telephones, which it is decided are for use in purely special investigations; and to avoid these complications I should like very much to have this language go in, so that there will be no misunderstanding as to how they are to be paid for and who is to pay for them.

The CHAIRMAN. Is the appropriation for contingent expenses of the Interior Department reduced, do you know, in consequence of this language here?

Mr. WALCOTT. That appropriation occurs in the legislative bill. I do not know that the appropriation has been reduced.

The CHAIRMAN. I think it has been reduced.

Mr. WALCOTT. I will say, Mr. Chairman, we carefully considered what we supposed will be needed for stationery supplies for the fiscal year.

The CHAIRMAN. How much do you increase the appropriation?

Mr. WALCOTT. We have considered what stationery will be needed for the fiscal year ending June 30, 1907, and found that it will cost us \$17,500. Here is a list of items for printing and binding and stationery, including vouchers, pay rolls, accounts, letter heads, notebooks, triangulation notebooks, and so on, and also other items supplied by the Department from the contingent fund. It is quite a large list, with a statement of what the binding and printing is used for, and this printing and binding will cost us \$27,500.

#### *Stationery supplies.*

For the fiscal year ending June 30, 1905, the Geological Survey received through the Department of the Interior stationery supplies, nonrepay .....	\$10, 162. 53
Repay, from Survey appropriation .....	3, 921. 73
Purchased in open market, under authority from the Secretary of the Interior, payment being made from Survey appropriations .....	342. 83
Total .....	14, 427. 09
Allowing for probable increase for the two years, 1906 and 1907. It is estimated that the Survey will need for the fiscal year ending June 30, 1907, stationery supplies amounting to .....	17, 500. 00

#### *Printing and binding.*

For the fiscal year ending June 30, 1905, the Geological Survey received through the Department of the Interior supplies (printed and bound, including stationery forms, blanks, blank books, etc.) for which it was charged .....	21, 262. 62
Allowing for probable increase for the two years, 1906 and 1907. It is estimated that the Survey will need for the fiscal year ending June 30, 1907, supplies (printed and bound, including stationery forms, blanks, blank books, etc.) amounting to .....	27, 500. 00

*Contingent supplies.*

For the fiscal year ending June 30, 1905, the Geological Survey received through the Department of the Interior contingent supplies, nonrepay-----	\$8, 639. 39
Purchased in open market, under authority from the Secretary of the Interior, payment being made from Survey appropriations-----	11, 593. 19
Repay, from Survey appropriations-----	194. 64
Total-----	20, 427. 22
Allowing for probable increase for the two years, 1906 and 1907, it is estimated that the Survey will need for the fiscal year ending June 30, 1907, for contingent supplies-----	25, 000. 00

*Estimated needs.*

For stationery supplies-----	17, 500. 00
For printing and binding-----	27, 500. 00
For contingent supplies-----	25, 000. 00
Total for fiscal year 1907-----	70, 000. 00

*Printing for the United States Geological Survey, paid for out of the appropriation for printing for the Interior Department.*

*Topography:*

Level books.  
 Traverse books.  
 Transit books.  
 Computation books.  
 Pocket notebooks.  
 Computation geodetic books.  
 Distances geodetic books.  
 Distances coordinate books.  
 Triangulation books.  
 Field notebooks.  
 Vertical angle books.  
 Vertical angle record books.  
 Traverse record books.  
 Public land survey books.  
 Bench mark description books.  
 Small account books.  
 Large account books.  
 Primary traverse field notebooks.  
 Primary traverse distance record books.  
 Precise level notebooks.  
 Computation primary traverse books.  
 Yards and rod level notebooks.

*Accounts:*

Vouchers.  
 Letter heads.  
 Postal cards.  
 Blanks for transmitting vouchers.  
 Circular letters transmitting checks, etc.  
 Subvoucher books.  
 Journey order books.

*Accounts—Continued.*

Envelopes, etc.

*Geology:*

Mine notebooks, large and small.

*Hydrography:*

Well record notebooks.  
 Land classification books.  
 Circular letters.  
 Postal cards.  
 Water-supply papers.  
 Current meter notebooks.  
 Boring records notebooks.  
 Travelling order books.  
 Hydrographic record books.  
 Statements of hydrographic work.

*Mineral resources:*

Circular letters, clay, coal, tin, etc.  
 Postal cards.  
 Blank books.  
 Directories of producers of various minerals, etc.

*Documents:*

Circular letters.  
 Water-supply papers.  
 Lists of publications.  
 Sale account books.  
 Circulars announcing special sendings.  
 Receipts for publications.  
 Various printed forms used in correspondence, including various postal card notices of new publications, etc.

The appropriation for printing and binding, Department of the Interior, for the fiscal year 1905, was-----	\$422, 000. 00
The Geological Survey used-----	21, 262. 62
or about 5½ per cent of the whole appropriation.	

*Miscellaneous supplies payable from Department contingent fund.*

Brushes.	Man-hole gaskets.
Bronze.	Packing rubber.
Hack saw blades.	Ebonite and C for water and heating pipes.
Cuspidors.	Drip pans.
Boxes.	Putty.
Bolts.	Nail pullers.
Mops.	Sheet brass.
Flour for paste.	Door springs.
Files.	Sheet iron.
Chisels.	Butcher knives, for cutting paper and twine.
Filters.	Wheelbarrows.
Awls, small.	Trucks.
Needles and thread, binder's.	Scoops.
Chair cushions.	Blocks and wheels for pipe cutters.
Hassocks, Bibb's, one-half inch self-closing, for sink.	Rubber hose.
Towel hampers.	Lumber.
Stop jars.	Coal.
Wringers.	Lubricating oil.
Wash bowls and pitchers.	Oilers.
Borax.	Lanterns.
Disinfectants.	Wood.
Moth balls.	Clocks, and repairs to same.
Book supports.	Dustine.
Lost pans.	Soap.
Carpets, rugs, linoleum, mats, and repairs to same.	Rope.
Drawing tables with trestles.	Chimney sweeps.
Desks and tables.	Marking pots and brushes.
Typewriter cabinets, stands, and covers.	Pomade, Putz.
Step ladders.	Tubing, gas.
Drawing boards.	Cloths for desks.
Desk covers.	Upholstering.
Desk trays.	Emery grinders.
Chairs, and repairs to same.	Railroad guides.
Spring clamps.	Bullingers' Postal Guide.
Window shades.	Directories.
Specimen drawers.	Brooms.
Waste baskets.	Baskets.
Curtains.	Batteries.
File folders and indexes.	Repairs to telephones.
Camera covers.	Wire.
Keys, door.	Wire molding and caps.
Lights, Welsbach.	Repair green for curtains.
Lights, drop.	Electric cut-outs.
Coolers, water, and stands.	Oilcloth.
Electric-light bulbs.	Laprobos.
Weighing scales.	Horse blankets.
Awnings.	Springs.
Wagon whips.	Thermometers, for office use.
Hose couplings.	Combs.
Typewriter felts.	Sash cords.
Flags.	Chamois skins.
Files, transfer cases.	Door checks.
Hammers.	Valves.
Scrapers, wall.	Buckets.
Glue.	Leather.
Harness.	Soap dishes.
Filter stones.	Furniture and repairs.
Hardware.	Typewriters and repairs.
Resistance coils.	Electric fans and repairs.
Sockets and bushings for pipe dies, etc.	Rubber stamps and repairs.
Washers.	Numbering machines and repairs.
	Stamp racks.

Stamp pads.  
 Rent of telephones.  
 Stoves, gas, and radiators, gas.  
 Presses, McGill.  
 Staples, McGill.  
 Staple fasteners.  
 Addresses, stencils for mimeographs.  
 Oilers for typewriters.  
 Clamps, hose.  
 Mail-bag holders.  
 Ice boxes and repairs.  
 Fire extinguishers.  
 Water glasses.  
 Picture wire.  
 Cleaning, altering, and laying carpets and rugs.  
 Lye, Red Seal.  
 Rubber mats.

Glass.  
 Wash basins, office use.  
 Towels.  
 Brackets.  
 Stencil paper.  
 Paint.  
 Pitchers, water.  
 Carpet paper.  
 Toilet paper.  
 Roach poison.  
 Punches, clip board file.  
 Furniture polish.  
 Towel racks.  
 Hatchets.  
 Tongs, ice.  
 Cotton waste.  
 Rubber tires.

The CHAIRMAN. Heretofore it has been paid out of the appropriation for contingent expenses of the Interior Department?

Mr. WALCOTT. For 1905 the Interior Department paid \$21,262.62 from the appropriation for printing and binding; \$10,162.53 from the appropriation for stationery, and \$8,639.39 from the appropriation for contingent supplies.

The CHAIRMAN. Where is that expense paid—out of what appropriation is it being paid—in 1906?

Mr. WALCOTT. In 1906, prior to the decision of the Comptroller, it was paid by the Department, and subsequently we endeavored to distribute it among the appropriations that used the material; that is, if topography used 30 per cent it was charged with 30 per cent of the amount expended, and if geology used 30 per cent it was charged with 30 per cent. We divide it as nearly as we can among the different branches of the work.

The CHAIRMAN. You have no deficiency among any of these appropriations for the current year?

Mr. WALCOTT. No, sir. That amount comes out of what would otherwise go into field work. As it came unexpectedly in this fiscal year it has caused great inconvenience and will delay field work this spring, and may involve the furloughing of some of the men.

The CHAIRMAN. Will that be the case in 1907 if this language goes in there?

Mr. WALCOTT. Yes. There will be no increase on account of the decision. The first letter came in July, 1905, when I was away in the field. It was November or December before it was called to my attention; and then I wrote another letter, and the Comptroller's letter here, which I quoted, giving the final decision, is dated February 14, 1906, so that there has been really no opportunity for considering the matter.

The CHAIRMAN. What I want to get at is, your appropriations here are not increased in consequence of this new language on page 139 of the bill?

Mr. WALCOTT. No, sir.

## SURVEYING FOREST RESERVES.

(See also p. 521.)

The CHAIRMAN. I observe here that one of the objects mentioned on page 139, which is included in subsequent estimates, is for surveying forest reserves. Is not that a duplication of the work of the Forestry Division of the Agricultural Department, or of work that has heretofore been done by the Interior Department?

Mr. WALCOTT. No, sir. The line is clearly drawn. The survey of the reserves means the making of topographic maps and the marking of the boundaries of the reserves. That the law provided for. These maps are turned over to the officers of the Forestry Service, on which they plat the distribution of the forests, the merchantable timber, the burned areas, and so on.

The CHAIRMAN. Then the Forestry Service does not make a survey?

Mr. WALCOTT. No, sir; they do not make a survey. Often in the reserves there are mining areas and districts, and the prospector has the right to enter a forest reserve and develop any mining industry that there may be in there; and these maps then become of direct service to the Geological Survey.

The CHAIRMAN. Does not the General Land Office in the Interior Department make a survey of those forest reserves?

Mr. WALCOTT. They have in certain cases indicated the townships by running the township lines. That does not give any relief of the surface on a topographic map at all. These surveys are more apt to be inaccurate than accurate, and in our experience, in surveying these districts in the West, we rarely find monuments or traces of original land surveys.

The CHAIRMAN. Are not these surveys just as accurate as the surveys upon which all the public domain is disposed of?

Mr. WALCOTT. In mountain districts and forest-covered country the land surveys are apt to be very inaccurate, much more so than in the open agricultural country, owing to the difficulties of making them at all accurately.

The CHAIRMAN. I do not see why the boundaries of the forest reserves can not be surveyed as accurately by the surveyors engaged by the General Land Office as they could be by your service.

Mr. WALCOTT. They could be, but they are not authorized by the law governing the General Land Office to do it. When our men are making the topographic surveys, and are having the triangulation and intersecting traverse lines made, they can locate those points closely within 50 to 100 feet at the outside, in the roughest of country. The land surveyor, on the other hand, is the man employed by contract for running the line at so much per mile, and has no means of locating it except by astronomical observations, to determine his location on a given point; and then, as he runs over the rough country, he has not either the methods or the instruments necessary to enable him to do that accurately.

Even out on the plains we have townships five miles across on the north side and six miles across on the south side, showing a mile in error. In the mountains they are generally irregular, especially for the older surveys, because you could rarely, if ever, find the monuments originally left. In many of the forest reserves they have never

made surveys, because they are not agricultural or mineral lands. But there is no duplication of work. We looked out for that very carefully, because the Land Office does not make surveys of the boundaries of forest reserves.

#### ASSIGNMENT OF PAY BY MEN IN THE FIELD.

Mr. Chairman, I do not know the proper place to bring this in, but the Comptroller has recently decided that our men engaged in field work, or anybody, in fact, engaged in Government work, can not assign their salaries. That is, if a man is sent to Alaska, he must have his check for his pay sent to him there, and indorse it, and send it back to his wife, or to whomever he wishes to have the benefit of using the money; and it will work very severe hardship upon many of our men.

I find that in the Joint Resolution No. 10, Public Resolution No. 10 approved March 21, 1906, it is provided—

That the Secretary of the Interior be, and he is hereby, authorized to permit teachers and other employees of the United States Bureau of Education employed in Alaska to make assignments of their pay, under such regulations as he may prescribe, during such time as they may be in the employ of the Bureau of Education in Alaska; and the Secretary of the Interior is further authorized in his discretion, under such regulations as he may prescribe, to reimburse school-teachers in Alaska for expenses incurred by them in the discharge of their duties and paid from their personal funds.

I shall ask, if possible, to have inserted in the bill here a clause relating to the employees of the Geological Survey to this effect:

That the Secretary of the Interior be, and he is hereby, authorized to permit scientific and other employees of the United States Geological Survey, employed in the field, to make assignments of their pay, under such regulations as he may prescribe, during such time as they may be in the employ of the United States Geological Survey. And the Secretary of the Interior is further authorized in his discretion, under such regulations as he may prescribe, to reimburse the scientific and other employees for expenses incurred by them in the discharge of their duties and paid from their personal funds.

A man goes to the field, and he may be a hundred miles away from a railroad, or from immediate post-office communication, and under the present ruling of the Comptroller his check must be sent out to him. It may be weeks before he gets it, because the mail may come to him very irregularly, and in the meantime it must come back, and his family must get along as best they can.

The CHAIRMAN. Why should we not make a general provision of that kind, applicable to all field men?

Mr. WALCOTT. I think you should do so. I bring this up only in relation to the Geological Survey.

Mr. SULLIVAN. It is also in the Army bill.

The CHAIRMAN. I mean all field service men. They are all away from their families. Leave that item here with us. We may thrash something out concerning it.

Mr. WALCOTT. The second part of this provision is this: If one of our men goes to the field to give an illustration, say to Montana, his traveling expenses can be put into his traveling account and paid; but as soon as he leaves the railroad it may be necessary to hire a team or he may go on horseback, or hire a pack train of three or four mules, or it may be necessary to buy provisions, and so on. Under the

recent ruling of the Comptroller he must become a disbursing officer to do that. His immediate traveling expenses can be paid, but if he hires a few mules and buys provisions, if he is out of the country of hotels and usual transportation facilities, he can not use his own money and be paid back again under this decision.

In the past twenty-five years we have been in the habit of permitting men to use their own money and take vouchers for their expenditures, and on their return the amount expended has been paid back to them. At present it can not be paid back to them, because the Comptroller rules that an employee can not advance his own funds for such purposes. A man needs to have a bond and become a disbursing officer; it is a matter that is very important.

Mr. TAYLOR. Do you think you have covered it?

Mr. WALCOTT. Yes. We have two or three hundred men out in the field. They have got to keep these two accounts; one of traveling expenses, and then have a disbursing officer with them, which would increase the cost of doing the work very much.

TOPOGRAPHICAL SURVEYS, PAY OF SKILLED LABORERS AND TEMPORARY EMPLOYEES, AND REPORT OF PERSONAL SERVICES.

The CHAIRMAN. I observe, Mr. Walcott, here a provision carried in the sundry civil bill for the fiscal year 1903, which reads as follows:

Hereafter in lieu of the specific estimates for personal services now required by law, there shall be submitted in the Annual Book of Estimates, under each item of appropriation under "General Expenses of the Geological Survey," notes showing the number of persons employed and the rates of compensation paid to each from each of said appropriations during the fiscal year next preceding the fiscal year for which estimates are submitted.

In accordance with that provision I have observed that you have submitted a statement of the number of people employed and the compensation paid to each, but you do not foot up the aggregate amount. Now, the first item for pay of skilled laborers and various temporary employees is \$20,000 for the current fiscal year. It is a detailed statement, yet it fails to show that the total amount of that appropriation would be expended during this fiscal year in payment of these employees. I have not figured it up, but I want to ascertain whether there is a balance of that \$20,000 left over?

Mr. WALCOTT. No, sir; there is very rarely a balance. There may be a few dollars, because we try not to have a deficiency, but it is mostly used up.

I will give you the figures for that, Mr. Chairman. The amount expended for salaries as stated was \$16,940.

You will note that the salaries come to \$16,940, leaving a balance of \$3,060, and that pays for all miscellaneous day labor. If we have to have an extra carpenter to make cases or do any work of that kind, that expense is paid from that balance of \$3,060. I can furnish you with a detailed statement of how every penny was expended last year.

The CHAIRMAN. Can you furnish us with a detailed statement of the amounts, if any, covered back into the Treasury from the appropriations made for these several purposes stated in this part of the bill for the year 1905?

Mr. WALCOTT. Yes, sir; it will be inserted in the hearing.

The CHAIRMAN. That will show how accurate your estimates have been heretofore.

*Amounts appropriated and statement showing balance September 30, 1905, amounts paid since September 30, 1905, and amounts available for outstanding liabilities on April 14, 1906, for fiscal year ending June 30, 1905.*

Appropriations, 1904 and 1905.	Amounts appropriated.	Balances Sept. 30, 1905.	Amount paid since Sept. 30, 1905.	Amount available Apr. 14, 1906, for outstanding liabilities, 1905.
Salaries of scientific assistants .....	\$29,900.00			(a)
Skilled laborers and various temporary employees.....	20,000.00	\$58.58		\$58.58
Topographic surveys.....	300,000.00	719.90	\$876.26	343.64
Geologic surveys.....	175,000.00	1,576.38	1,131.58	444.80

Surveying forest reserves.....	130,000.00	1,954.88	1,631.00	323.88
Furnishing new addition, Geological Survey.....	10,500.00	67.08		67.08
	1,178,420.00	10,186.60	6,404.70	8,781.90

<sup>a</sup>So much of these amounts as have not been called for and paid out prior to July, 1907, will lapse into the Treasury, and will no longer be available for purposes for which they were appropriated unless reappropriated by Congress.

Mr. WALCOTT. Of course this covers the fixed and annual salaries. But it is only in the case of this one item for skilled labor that it is all used up for salaries. In the case of topography, in 1905 there was \$350,000 appropriated, and of that amount \$169,660 was used for salaries. The remaining portion of it was used for the expenses of the field work and the purchase of supplies.

The CHAIRMAN. Should you not include your field force in this detailed statement?

Mr. WALCOTT. We have in the detailed statement there, \$169,660.

The CHAIRMAN. That is for the force employed here in Washington?

Mr. WALCOTT. No, sir. You will see, following that item:

One geographer .....	\$4,000
One geographer .....	3,500
Two geographers, each .....	3,000
One geographer .....	2,700
Four topographers, each .....	2,700
One topographer .....	2,500
Three topographers, each .....	2,400
Five topographers, each .....	2,200
Ten topographers, each .....	2,000
Twelve topographers, each .....	1,800
Ten topographers, each .....	1,600
One draftsman .....	1,600
Four topographers, each .....	1,400
One draftsman .....	1,400
Seven assistant topographers, each .....	1,400
Eleven assistant topographers, each .....	1,200
Five topographic aids, each .....	1,200
Two topographic aids, each .....	1,000

They are the field force. This states all the field force, also below, the office force.

The CHAIRMAN. I understood you to say that the balance of the \$350,000 was paid for salaries to your field force.

Mr. WALCOTT. No; it goes to the cooks and packers and teamsters and rodmen and miscellaneous aids employed for a week or a month or two on temporary employment of that kind, also to the traveling expenses, the subsistence, and all the expenses connected with the topographic work.

The CHAIRMAN. After the salaries are paid there is a large balance, of which no account is made at all. If so much were given for so many temporary employees, giving the aggregate, and so much for supplies and other expenses, and that was stated in that statement, that would inform us. I think that is contemplated in this law here which I have quoted relating to personal services.

Mr. WALCOTT. I understood that it was the intent of the law, at the time, to give a list of the salaried employees. It was fully discussed at the time, and it was done in order to get a list of the technical employees and office employees. As to the field force, such as aids, cooks and packers and teamsters and laborers, it was not intended to include them. Very often a man is picked up only for a day, and then again it may be for three days or longer. A voucher is taken. Formerly we had all those schedules, and the men's names, and when they were paid, and printed it all; and the information given was not worth the cost of printing it.

The CHAIRMAN. There is \$190,000 that has been expended, for which there is no accounting at all in that one item.

Mr. WALCOTT. If you will go back to the annual reports several years ago, you will find that matter all printed.

The CHAIRMAN. I do not think it is necessary to submit it in detail, but if the statement contained, in addition to what you have here, the amount paid for temporary employment, and so much for other service, it would be more enlightening—

Mr. TAYLOR. A statement divided up into subheads which would dispose of that fund, but not to go into the items in detail.

Mr. WALCOTT. I will see, Mr. Chairman, that that is put into the estimates for next year, and I can send up the statement in a few days, covering the present fiscal year as far as returns are in.

Reverting to your inquiry regarding that portion of topographic funds, appropriation of \$350,000 for fiscal year 1905-6, not utilized in paying salaries, and may be classified as follows, the same as for other large lump-sum appropriations; this gives the actual expenditures for the last nine months and estimated expenditures for the remaining three months of this fiscal year:

## TOPOGRAPHY.

Annual and scientific salaries.....	\$129, 100. 00
Temporary and field-labor salaries.....	70, 000. 00
Clerical and office-labor salaries.....	29, 500. 00
Traveling and field expenses and subsistence and miscellaneous supplies for field.....	101, 300. 00
Purchase of instruments and materials for field.....	15, 500. 00
Freight, expressage, and telegrams.....	4, 600. 00
	<hr/>
	350, 000. 00

## GEOLOGY.

Annual salaries.....	\$92, 275.00
Clerical and office labor.....	24, 905.35
Temporary salaries.....	35, 414.75
Field labor.....	5, 798.32
Traveling expenses and subsistence.....	37, 903.67
Instruments.....	2, 230.98
Freight, express, etc.....	1, 405.93

200, 000. 00

## PALEONTOLOGY.

Annual salaries.....	7, 200.00
Temporary salaries.....	190.00
Traveling expenses.....	2, 074.55
Freight, express, etc.....	268.47
Instruments.....	268.98

10, 000. 00

## FORESTRY.

Annual and scientific salaries.....	\$36, 500.00
Temporary and field salaries.....	32, 000.00
Clerical and office salaries.....	13, 700.00
Traveling and field expense.....	38, 000.00
Purchase of instruments and outfit.....	8, 000.00
Freight, express, and telegraph.....	1, 800.00

130, 000. 00

## HYDROGRAPHY.

Annual and scientific salaries.....	\$100, 000.00
Temporary and field labor.....	38, 000.00
Clerical and office labor.....	12, 000.00
Traveling and field expenses and subsistence and miscellaneous supplies for field.....	40, 000.00
Purchase of instruments and materials for field.....	8, 000.00
Freight, expressage, and telegrams.....	2, 000.00

200, 000. 00

## MINERAL RESOURCES OF THE UNITED STATES.

Annual, scientific, and technical salaries.....	\$23, 970.00
Clerical and office labor.....	16, 832.00
Temporary field labor.....	24, 501.00
Traveling expenses, field subsistence, and miscellaneous supplies.....	29, 455.00
Instruments and material.....	4, 750.00
Freight, express, and telegrams.....	492.00

Total appropriation..... 100, 000. 00

The CHAIRMAN. If you could, without too much trouble, we would be glad. We will have the hearings here for several days. It may serve as a guide.

Mr. WALCOTT. I will say that we endeavor to maintain a certain percentage between the salary list and the expense list of field work, so as not to exceed a certain total amount for salaries.

The CHAIRMAN. This enables Congress to keep track of the salaries of employees in the aggregate and in detail, both here and in the field; but as to the remainder of the appropriation, which is very large, we have no means of knowing, or the purposes for which that has been expended.

Mr. WALCOTT. I will send up the balance of each item.

APPROPRIATIONS "IMMEDIATELY AVAILABLE."

Mr. TAYLOR. Before you leave page 140, Mr. Chairman, I see you have the words there, "immediately available." What is the necessity of that year after year?

Mr. WALCOTT. Because we will have several hundred men in the field at work, and to bring up the field expenses sharp on the 1st day of July, so that they can balance up all their accounts to the 1st day of July and expend the appropriation up to that time and not incur a deficit, or else not use the money we wish to use, is a very difficult undertaking. To make an appropriation match on with that of the next fiscal year, right in the middle of the field season, brings about a condition of affairs that would cause an immense amount of trouble and eventually loss in time and work. For example, a man will be sent into the field, and he has had an allotment, say of \$3,000 to do a certain amount of field work with; and of that amount \$1,400 is available up to the 1st day of July; when he gets to the 15th of June, owing to contingencies which are constantly arising, he may have used up his \$1,400.

He then must lie still, with his regular men, discharge laborers and aids and wait until the 1st of July; whereas if the next fiscal year's funds were available he could go right on and finish his season's work, and not disrupt his party and lose time, money in salaries, and part of the best time of the field working season.

Mr. TAYLOR. We are giving you money now for the fiscal year 1907, and if you ask it to be immediately available now you can use the money that Congress appropriates for the year 1907 for work done in the year 1906.

Mr. WALCOTT. Congress states that it is immediately available, which carries with it, according to the Comptroller's decision, the assurance that it is available for use at that time—

The CHAIRMAN. For the purpose for which the appropriation is made.

Mr. WALCOTT. If we could have that on the 1st of January—if the fiscal year ended with the calendar year there would be no difficulty; but with these men working in Alaska and all over the country, to bring up every account so that it will come out even on the 1st day of July makes it expensive in time and money.

Mr. TAYLOR. Does it not enable you to use money appropriated for 1907 in such a way as to supply a deficiency, if you had a deficiency, in 1906?

Mr. WALCOTT. It would if we had one.

Mr. TAYLOR. How do you justify that on the ground of book-keeping?

Mr. WALCOTT. Well, as I simply stated as an illustration, we authorize a surveyor or a topographer to go into a district—say in Alaska, and allow him \$7,000 with which to accomplish that work; and he has to leave here in March and get up there in April.

He has many contingencies, and he knows that he has that amount of money to produce that map and get back here in October or November. If we told him he must spend so much of that money up to the 1st of July, and no more, the contingencies which are constantly arising in field work might use up his proportion for the old fiscal

year and he would be held up for the remainder of that old fiscal year, five or ten or twenty days, with no money to do anything with. That is the condition.

Mr. TAYLOR. I do not see how you produce that condition.

The CHAIRMAN. This enables you to increase the appropriation for the current fiscal year?

Mr. WALCOTT. It would, but we have no design of doing that. It is simply to avoid a confusion, and I must say a waste of time which means money, in trying to bring expenditure for field work right up to a given day in field operations.

Mr. TAYLOR. Let me ask you a question. You authorize a man to go to Alaska to do work for what year—1906?

Mr. WALCOTT. We say he is authorized to do it during the field season of 1906.

Mr. TAYLOR. You make that authorization out of the allowance made you for 1906?

Mr. WALCOTT. The appropriation for Alaska was carried, for instance, on the urgent deficiency bill passed in February.

The CHAIRMAN. For \$80,000?

Mr. WALCOTT. Yes; and we have a balance of that left over sufficient to carry the salaries until the 1st of July. We always provide for that. But the field expenses of the season begin just as soon as they leave here; the men are now already off, and the expenses continue until they return, and that money is appropriated for surveys in Alaska. It does not say the fiscal year—

The CHAIRMAN. To continue available during the fiscal year 1907?

Mr. WALCOTT. I can very well recall in the past, where in my own fieldwork, between 1880 and 1890, it was a constant struggle to bring up the money allotted to me so as not to create a deficiency and then start over and go on to the next fiscal year.

The CHAIRMAN. When you make your estimates for the service of the fiscal year 1906, we will say, that includes all of your service up to the 1st of July, 1906. Now, for the year 1907 you submit your estimates for the expenses of your entire service, and why do you not the appropriation made for the fiscal year on the basis of your estimates provide for the service for that year, leaving the appropriation for the coming fiscal year to take care of the service from the beginning of that new fiscal year on up to the next? What is the necessity of duplicating appropriations for the same service for the same fiscal year? I do not get your idea in regard to the necessity growing either out of the service or the method of bookkeeping.

Mr. TAYLOR. I can say that I do not understand your practice except that your statement of it is a practical admission that you use the money appropriated for 1907 to pay for work done in 1906 that ought to have been provided for out of the appropriation for 1906.

Mr. WALCOTT. Take the Topographic Branch. We will have 60 parties in the field. We can not estimate down to a few dollars just what they will spend up to the 1st of July, their aggregate expenses being over \$1,000 per day. We send them into the field and tell them this money is appropriated, and they are expected to spend so much money during that field season from the spring, in April or May, until they come back in November. They must plan their work

intelligently, and know how much they are to have during that period.

We send out 60 parties, and we invariably find that while they can estimate quite closely, there will be emergencies arising—the death of animals, the breaking of instruments, and so forth—from the fact that the work, though not hazardous, is full of contingencies, and in the aggregate \$15,000 more may be expended than we anticipated they would spend. If we can not use any money until the 1st of July we have got to keep these men in Washington until the money is available on the 1st of July and then send them out. I have known, between the eighties and nineties, before this system was introduced, when we would have 50 men here in the city waiting in that way.

Mr. TAYLOR. That could be provided for by a deficiency.

Mr. WALCOTT. We want to avoid a deficiency. That is why I ask this to be done. It is simply what I consider a more business-like way, rather than let a technicality interfere with business methods.

The CHAIRMAN. Take the case you cite. This method of appropriating obviates the necessity of careful estimates. You do not have to be careful to estimate how much will be required. You first start out to estimate or lay out your work. When do you do that—at what time of year—for the next season?

Mr. WALCOTT. We lay out the work just as soon as we have an idea what the appropriation is going to be for the succeeding fiscal year.

The CHAIRMAN. You have not got your work laid out for the fiscal year 1907, have you?

Mr. WALCOTT. We have it so well in mind that if we knew tomorrow what we are going to have we can plan and start the parties out in a few days. It is all contingent, of course, upon the appropriations being made.

The CHAIRMAN. You have your plans made out now, contingent upon the appropriations being made?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. Those plans necessarily contemplate the employment of so many men?

Mr. WALCOTT. In our regular force salaries are provided for up to the 1st of July.

The CHAIRMAN. I mean in your field force; and you know from your experience in the past about how much the incidental expenses—the expenses incident to that work—have been and will be in the next fiscal year?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. When you start out your force in the spring of 1906, we will say, in the event Congress should not appropriate an amount for the fiscal year 1907 sufficient to continue the work on the basis planned, why could you not, to avoid a deficiency, curtail the plans of operation which you had originally laid out on the basis of the appropriation of 1906?

Mr. WALCOTT. We do do that. For instance, when Congress has gone over in its session past the 1st of July into the next succeeding fiscal year, and the appropriations are made on a ratio of the previous year's appropriations, where it goes over thirty days we would have one-twelfth of those appropriations, and the appropriations of that amount that you gave to meet expenses would be much less, because

it would be distributed over twelve months instead of five months; and then we have to limit our field work simply to what we receive, and then stop work.

The CHAIRMAN. You do not have to apportion your appropriation in equal monthly installments?

Mr. WALCOTT. Not in the fieldwork. We do for the salaries.

The CHAIRMAN. The only real advantage that I can see to the Department is to obviate the necessity of a careful estimate of what would be needed for the coming fiscal year; because you know in advance that, if this appropriation is made immediately available, you will have what is appropriated for the next year for use during the remainder of this fiscal year, and therefore there is no necessity for exercising the same degree of care for what is required. The question in my mind is whether that will not lead to more extravagant expenditure than there would be otherwise.

Mr. WALCOTT. I do not see how it can lead to extravagance.

The CHAIRMAN. Because you would have all the money you want.

Mr. WALCOTT. No, sir; we have not had all the money we wanted for many years.

I will say that at the present time the pressure for topographical work in all sections of the country is such that when we come to make up the plans for the parties we take off \$50 here, and \$100 there, and \$200 in another place, in the attempt to make up enough to send out another party to meet the demand. We want to get as much work and good work as the money will cover. Oftentimes the appropriation is carried in the Urgent Deficiency bill in the long sessions of Congress, in order to pursue the investigation into the mineral resources of Alaska.

#### ALASKA—INVESTIGATION OF THE MINERAL RESOURCES.

The CHAIRMAN. You also carry it in this bill. I recall there was an item for that object on the Urgent Deficiency bill passed last February; and that being the case, it should not be reappropriated in this bill.

Mr. WALCOTT. It was appropriated, and it is not to be reappropriated in this bill. We do not ask for it again. The estimate is made in the Book of Estimates under the Survey appropriations.

The CHAIRMAN. I understood in the hearing on the Urgent Deficiency bill, when you were before the committee, that it could be dropped out of this bill.

Mr. WALCOTT. It was in the estimates. I had nothing to do with the making up of the estimates.

The CHAIRMAN. It is in the estimates "for continuation of the investigation of the mineral resources of Alaska, \$80,000, to be available" during the fiscal year 1907.

Mr. WALCOTT. I have made this memorandum in the book here: "Made in the Urgent Deficiency bill" where it is stated here, on page 143.

Mr. TAYLOR. That does not go into this bill here?

Mr. WALCOTT. No, sir. That is already made. I am not asking that it be made again.

Mr. SULLIVAN. That \$80,000 goes out?

Mr. WALCOTT. Yes. That is already made in the Urgent Deficiency bill.

The CHAIRMAN. How long has it been since you have had this appropriation made immediately available?

Mr. WALCOTT. I do not recall. I should say six or seven years. It may be longer. I do not recall the exact year when it was done. I found that I could plan more intelligently and more economically in getting results from the season's work by knowing in advance what I had for the full season than where I was in doubt.

#### TOPOGRAPHIC SURVEYS.

(See also pp. 472, 481.)

The CHAIRMAN. Where does this pressure you speak of for topographic work come from?

Mr. WALCOTT. It comes from all sections of the country. Largely from Members of Congress and Senators on account of their constituents. We have on file now for 1906 dozens of formal requests by them, backed by petitions from city officials, county supervisors, mining and water-power engineers. It comes also from State geologists, State engineers, governors of States, forestry commissions, railway and mining engineers, water supply and sanitary commissions for cities and States. Also from executive departments of the Government. Often from the Post-Office Department in connection with rural free-delivery routes; the War Department and the Department of Agriculture.

The CHAIRMAN. From whom—the State?

Mr. WALCOTT. It comes from the States, and from individuals, and from people who are interested in all types of development. Several engineers were in the office this past week asking for topographic surveys here in Georgia [indicating on map]; surveys both of their water supply, questions as to the development of their water supply, and of their mineral deposits, in this area in western and central Georgia. At the same time, within a week—

#### GAUGING STREAMS.

(See also p. 467.)

The CHAIRMAN. Right there let me say, Mr. Walcott, that a member of Congress from Georgia told me the other day that you had a man down there supposed to be making an investigation as to the flow of water—

Mr. WALCOTT. Gauging streams?

The CHAIRMAN. Yes, gauging streams; who was doing practically nothing, and the people down there can not understand what the purpose of an investigation of that kind is when the streams are of no consequence.

Mr. WALCOTT. I can prepare a statement very quickly if desired, showing just exactly what he is doing, and where and what it is for.

The CHAIRMAN. Has he got any assistants?

Mr. WALCOTT. The gentleman, I think, to whom you refer has charge of all river-gauging stations in the southern end of the Appalachian region. The gauge readers are men employed very often as

bridge tenders at railroad crossings and rivers, where they are paid \$5 a month to read the gauges two or three times a day. Other people who have sufficient intelligence and are living near the gauging station are employed as gauge readers. The business of that gentleman you refer to is to visit the gauging stations, make meter measurements of discharge, collect general hydrographic data, see that the gauges are running properly, and that the gauge readers are doing their duty and are reading the gauges correctly.

The CHAIRMAN. What governmental purpose does that subserve?

Mr. WALCOTT. That serves the purpose of obtaining data in regard to flow through a succession of years on rivers running through many States, as several of them do, thus collecting information in regard to the water available for power or other useful purposes.

Take, for instance, the flow of the rivers running southward and eastward from the Appalachian range: If we can get the run-off for ten years an engineer can then estimate the high and low water flow and the possible power development; what would be necessary for storage, to supplement the low water run-off, and solve questions affecting the development of the industries of the region or section concerned.

Mr. SULLIVAN. The total run-off, you mean, in gallons?

Mr. WALCOTT. In second-feet, that being the unit of measurement in general use. This, of course, can be reduced to gallons.

Mr. SULLIVAN. That kind of test, Mr. Chairman, it seems to me, would relate to the variability of water power on the stream.

Mr. WALCOTT. These data show the variability of water available for power throughout the year on any stream or branch of a stream. The enormous development and utilization of electric power make these data very important. Then I find another thing, Mr. Chairman, that gaugings made by the Government—and we are publishing this year 14 pamphlets containing the results of stream measurements in various sections of the United States—are accepted by engineers everywhere as reliable. Gaugings made by a private individual, on the other hand, are not generally accepted, because he may be influenced by considerations which would not affect the Government official.

Mr. SULLIVAN. That is, the disinterestedness and the large amount of data available to the Government make their reports more valuable?

Mr. WALCOTT. Yes. In a given district like this in Georgia and northern Alabama [indicating on the map], and running into South Carolina, there are 34 gauging stations. Our district hydrographer and his assistants, working from the Atlanta office, attend not only to these, but to 22 more in North Carolina and Tennessee. If one man is not reading rightly, or not reading at all, or is putting down figures improperly, it is very quickly found out by the fact that his figures do not agree with the general average of the figures of the country surrounding.

The CHAIRMAN. But the final result is for the benefit of the State and private interests of the State?

Mr. WALCOTT. It is for the general development of the country.

The CHAIRMAN. Why should not the State itself carry this on?

Mr. WALCOTT. One State—the State of Georgia—might carry it on if it had the necessary skilled men and men with the knowledge and

desire to do it; but where you have these interstate streams running from one State to another, one State does it and another does not, and the work is not of value to the development of the country.

The CHAIRMAN. Is there a navigable stream in Georgia now, for instance, that you are taking these gauges of?

Mr. WALCOTT. No; the gauges are in the upper course of the streams.

The CHAIRMAN. The Government has no control over the water?

Mr. WALCOTT. No; not until it reaches navigable streams. Army engineers are making a number of these streams navigable by a series of dams——

The CHAIRMAN. And locks?

Mr. WALCOTT. Yes; and all that information is eagerly sought by engineers who have charge of the development of these works which are under Government appropriation.

Mr. SULLIVAN. Now, is there any other purpose for the gauging of streams except that of influencing the judgment of private investors and furnishing some other information to engineers?

Mr. WALCOTT. It is important in its relation to municipal water supply. Take, for example, the city of New York, and all our large towns and cities that are reaching out for municipal water supply.

Mr. SULLIVAN. But that is for a purpose purely local?

Mr. WALCOTT. Yes.

Mr. SULLIVAN. I do not quite catch your observation about the Army engineers, and so forth.

Mr. WALCOTT. I said that the Army engineers, where they were developing navigation in rivers in the South by a series of locks and dams, found our reports valuable as giving a basis upon which to calculate the maximum and minimum supply of water in those streams.

Mr. SULLIVAN. In what way would your reports be of assistance to them?

Mr. WALCOTT. By determining the amount of water that annually runs off during a series of years. The important thing in that problem is the minimum amount. If they plan their work on a few rainy years while going on with their work, there may come along a few years of minimum rainfall—lean years—in which their work would be of little value, as the water would be too low for navigation. I wish I had an engineer here to explain the details of this to you.

The CHAIRMAN. Go on and explain where this pressure comes for topographic work done by the Geological Survey. I interrupted you when you started to tell it.

Mr. TAYLOR. Before he goes on I want to ask him one question: Of what cost to the Government is this gauging?

Mr. WALCOTT. This gauging is carried on for the entire United States, and I have here a map showing its distribution.

Mr. TAYLOR. Does it not cost \$200,000?

Mr. WALCOTT. That \$200,000 is used for the gauging of streams, the determination of underground water supply in the way of artesian water, especially in the plains of the West, and in fact in all localities where underground water supplies can be obtained.

We began a number of years ago an investigation of the artesian-water supply of what we call the Atlantic Coastal Plain, starting in New Jersey and carrying it on down to Florida. We found from

geological studies that the intake of water in sandstone in this locality is right in the city of Washington. Go to the west of Washington and you do not find any sandstones bearing water, but go to the east and you do find them.

This investigation was carried on, I think, for three years, and then maps were published and the data given, indicating the depth to which they must bore for water over large areas from New Jersey south to Florida; and if you go there to-day you will find thousands of artesian wells supplying water for drinking purposes, very largely in districts that were formerly fever infested and malarious, which are now supplied with pure water, and those troubles have ceased. That is a direct return from this single investigation of possible underground water supply. That same thing is now being carried on in relation to the Great Plains.

Mr. SULLIVAN. Were they malarial by reason of drinking a bad surface-water supply?

Mr. WALCOTT. The water runs to the coast from the mountains—the Appalachians—and then runs for many miles through swamps and flats and low country, and it is pretty bad by the time it gets to the lowlands. The Cotton Islands now have an artesian water supply, where before they had only rain water, caught in cisterns and other receptacles.

Mr. TAYLOR. And the health of the people has been very much improved by that investigation.

Mr. WALCOTT. That statement has been given to me. I do not know it personally.

The CHAIRMAN. When was this policy of gauging streams inaugurated?—

Mr. TAYLOR. And when is it likely to stop? [Laughter.]

The CHAIRMAN. The first question is much more easily answered than the second. [Laughter.]

Mr. WALCOTT. The work was started in 1894, when an appropriation of \$12,500 was made—

Mr. TAYLOR. In 1895—

The CHAIRMAN. It has grown in seven years to \$200,000—

Mr. WALCOTT. And then it was increased up to the present time. The idea originally was in regard to the water supply for irrigation in the West more largely than for any other purpose.

Mr. TAYLOR. Has this arid land reclamation grown out of that?

Mr. WALCOTT. To a large extent. The appropriation started at \$12,500, and gradually increased to \$200,000, and in 1902, when the reclamation or irrigation act was passed, the data for inaugurating large irrigation enterprises had been collected as the result of the expenditures from this fund upon gauging streams and determining the water supply of the West.

Mr. Chairman, I have here a rather short statement of the purposes of this expenditure of \$200,000. If you have no objection, I would be glad to put it in the record. It is more concisely stated than in this discussion.

The CHAIRMAN. Very well.

Mr. WALCOTT. Here it is:

*Classification of expenditures during fiscal year ended June 30, 1905.*

	Services.	Expenses, supplies, and equipment (consolidated).	Total.
Topographic surveys .....	\$190,901.66	\$115,279.86	\$306,181.52
Geologic surveys .....	118,743.29	35,156.79	153,900.08
Mineral resources of Alaska .....	46,517.88	29,511.60	76,029.48
Salaries of scientific assistants .....	29,900.00		29,900.00
Skilled laborers and various temporary employees .....	19,941.42		19,941.42
Paleontologic researches .....	7,402.59	1,849.11	9,251.70
Chemical and physical researches .....	16,013.55	3,637.03	19,650.58

HYDROGRAPHY, HYDROLOGY, HYDRO-ECONOMICS.

In 1902 the hydrographic branch of the Survey was organized from what was formerly known as the division of hydrography, and the newly created reclamation service was made a part of this branch. The investigations assigned to this branch were specialized into the division of hydrography, which measures the surface flow; the division of hydrology or hydro-geology, which studies underground waters; the division of hydro-economics, which examines the quality of the waters and the reclamation service, or corps of engineers engaged in locating reservoir sites and constructing large works for irrigation purposes.

Study of the water power and resources of the country prior to 1901 laid the foundation upon which extensive investigations since that time have been based. These investigations are designed to give information concerning latent resources, the utilization of which will greatly benefit the country. Each year since 1901 several million dollars have been invested in power plants and mills which would not have been erected in the absence of the official data concerning the amount of water which could be depended upon for such purposes.

The development of water powers has been most important in the Appalachian region of the South, but even as far north as Maine there has been great activity. Investors and engineers have sought for every scrap of information upon which they could base plans for larger utilization of the waters that were running to waste.

One of the principal uses of the hydrographic work has been the demonstration of the water power value of southern rivers. Prior to the time of starting this work it was the general impression among engineers and capitalists that these streams were wholly unfit for power purposes, and no large development

was carried on until after the data collected by the Geological Survey became available. Among the notable developments since that time may be mentioned the following: Chattahoochee River at Bull Sluice, above Atlanta, Ga.; Chattahoochee River at Gainesville, Ga.; Yellow River at Conyers, Ga.; Oconee River at Milledgeville, Ga.; Tallapoosa River at Tallassee, Ala. These and many other developments are bringing the Southern States into prominence as manufacturing districts.

In the Middle West, particularly in the Mississippi Valley, water power has been of less relative importance; but here the pressing questions relate to the quality as well as the quantity of the water available for industrial purposes and for domestic and municipal supply. Great industries, such as paper making, are dependent upon securing an adequate supply of water of good quality, and as the wave of manufacturing has swept down the Ohio Valley it has given rise to a large number of questions concerning the water which may be had from surface or underground sources. The hydrographic investigations have disclosed facts by which manufacturers have been able intelligently to consider the extension of their operations and by which communities have been satisfactorily guided in obtaining a sufficient supply of potable water.

In the arid or semiarid West, embracing nearly one-half of the United States, nearly all land values rest upon water, and here the systematic investigations of the Geological Survey have been of even greater value than in the East. The reclamation of the arid lands by means of irrigation has been greatly stimulated by the figures obtained in relation to river flow, and many private enterprises, especially those on a small scale, have been rendered possible by the knowledge gained respecting the behavior of the streams.

During 1903 the work of all these divisions, and particularly of the reclamation service, was extended so as to cover investigations in all the States and Territories, the matters of largest industrial or economic importance receiving most attention. Reports on the various subjects were printed and sent to inquirers, and many hundreds of letters requesting specific information on particular points were answered.

During 1904 and 1905 the work of the hydrographic branch has followed along the lines indicated above, and as a result of larger experience additional information has been obtained with even greater economy than in the past.

The correspondence has greatly increased and general inquiries are being answered as far as practicable by brief printed reports, prepared to cover the points of greatest interest to water users. In the three years including the spring of 1904 the maximum results of this organization have been achieved.

#### TOPOGRAPHIC SURVEYS (CONTINUED).

(See also p. 481.)

Mr. WALCOTT (continuing). Mr. Chairman, speaking about topographic work, many applications have come in from Tennessee and Kentucky. We have surveyed a large area here in eastern Tennessee [indicating on map]. There are areas east of Nashville and Columbia, and the Waynesboro sheet in Tennessee, between the area surveyed in eastern Tennessee and the central belt, which are supposed to contain mineral values in the way of oil and gas, and we have been in receipt of a great number of applications by way of petitions, and also several Members of Congress have come to us with applications for their people, for the surveying of that particular area.

Mr. BROWNLOW. How about the survey in Tennessee of Cumberland Gap, between Claiborne County in Tennessee and Bell County in Kentucky? What I want to know is whether there has been a survey of that locality in Tennessee next to Cumberland Gap?

Mr. WALCOTT. It has not been fully resurveyed.

#### COOPERATION WITH STATE GEOLOGICAL SURVEYS.

The CHAIRMAN. Mr. Walcott, has the State of Tennessee a State geologist?

Mr. WALCOTT. No, sir. The State of Kentucky has. Professor Norwood was appointed last year.

The CHAIRMAN. They have one in Tennessee, and in most all the States.

Mr. WALCOTT. I do not know of any in Tennessee at the present time, although there may be one.

Mr. BROWNLOW. We had a State geologist who has published a book.

Mr. WALCOTT. He has grown very old, and they have not appointed anybody in his place. They have one in West Virginia, one in North Carolina, one in Maryland, one in South Carolina, one in New York, one in Alabama, and one in Georgia. In fact, twenty-five States have State geologists.

Mr. SULLIVAN. Is there one in Massachusetts?

Mr. WALCOTT. I do not think so.

Mr. SULLIVAN. I never heard of him.

The CHAIRMAN. Are we duplicating the work of State geologists?

Mr. WALCOTT. No; we are cooperating with them and with States where there is no State geologist.

The CHAIRMAN. Will you explain how this cooperation is carried on? To what extent do we cooperate?

Mr. WALCOTT. In the State of West Virginia, for instance, the State appropriates \$20,000 a year for the maintenance of the geological survey and for the payment of a portion of the field expenses of topographic work.

The CHAIRMAN. They turn it over to the State geological survey?

Mr. WALCOTT. They turn \$15,000 of it over to the United States Geological Survey, and the State survey pays the field expenses to the extent of \$15,000 of our topographic work.

The CHAIRMAN. Does the Government of the United States contribute any portion to the work of that survey?

Mr. WALCOTT. The Government of the United States is carrying on the topographic work in that State, and we have full control of the topographic work and contribute an amount equal to that contributed by the State.

The CHAIRMAN. My question is this: While the State of West Virginia spends \$15,000 in the making of a topographical survey of that State, what amount is the Government of the United States expending on it, and how is it expending it in connection with the work done by the State survey?

Mr. WALCOTT. The Geological Survey in its topographic force spends \$1 for each dollar that is contributed by the State. That is, the money contributed by the Survey goes to pay the salaries of the technical force of topographers and field force to the extent that the State amount does not provide for.

The CHAIRMAN. When you speak of "the Survey" you mean the United States Geological Survey?

Mr. WALCOTT. Yes, sir. In other words, if the State contributes \$15,000 we keep a book account, and we charge against the account the salaries of the topographers for the year they are engaged in that work, and we charge against the State the expenses for field work incident to the making of surveys for the topographic map, and to the extent that we send vouchers to the State for payment we transmit an

equal amount to our disbursing office for payment from Government funds.

The CHAIRMAN. And that same practice obtains in every State where they have a geologist and an appropriation for a topographic survey of the State?

Mr. WALCOTT. Sometimes a State is represented by a commission. In the State of Pennsylvania they have a commission of three, appointed by the governor, but they have no State geologist. It may be a State engineer, as is the case in New York. In other words, it is an official representing the State.

The CHAIRMAN. I mean the proportional amount contributed by the Government and the State, in the State where you are making this topographic survey, is on the same basis as you have mentioned with respect to West Virginia, wherever the Government duplicates it, dollar for dollar?

Mr. WALCOTT. Yes; or vice versa. If the Government puts up a dollar the State meets it.

I have here a statement of the topographic surveys and the amount contributed by each State, the area mapped, and the total cost under these various arrangements; also a statement of the benefits derived from this cooperation.

The CHAIRMAN. You can submit that to the stenographer.

Mr. WALCOTT. Here it is:

#### COOPERATION IN TOPOGRAPHIC SURVEYS.

The idea of cooperation in public surveys between the Federal and State governments originated in connection with the plan to make a topographic map of Massachusetts. The cooperative survey of Massachusetts was commenced in 1885 and completed in 1888.

At the time of commencing the cooperative survey of Massachusetts the State of New Jersey was engaged in making a topographic map of its area. Attention being attracted to the Federal cooperation with Massachusetts, arrangements were made whereby the Federal survey took up the work and carried it to completion in 1887. Since that time appropriations have been made by a number of States.

The table following shows the States in which cooperative surveys have been completed or are in progress. The scale of all work completed under cooperation, except that in California, is 1:62,500, and the contour interval is from 10 to 20 feet. In California some areas have been surveyed on the scale of 1:125,000 with 100-foot contours, and some special maps have been made on the large scale of 2 inches to the mile with contour intervals of 5 feet. In the column "Area mapped," only those areas mapped since the inception of cooperation are enumerated:

#### *Cooperative topographic surveys in various States.*

State.	Area.	Area mapped to April 30, 1906.	Total cost to June, 1906.	Appropriated by State to June, 1906.
	<i>Sq. miles.</i>	<i>Sq. miles.</i>		
Alabama.....	52,250	3,456	\$26,500	\$5,000

METHODS OF COOPERATION.

In the establishment and conduct of cooperative surveys certain methods which have been developed through an experience of eighteen years are followed.

The Director is requested by citizens of a State which may be interested in procuring topographic surveys to inform them as to his ability to accept such offers of cooperation as the State may be prepared to make, it being understood that efforts to secure cooperation must originate with the residents of the State. This Survey furnishes such information concerning the details of previous cooperative arrangements as may be sought, and in other ways assists the State officials and legislators to attain the object desired by them. The State legislature usually enacts legislation providing for a cooperative survey to be conducted under the supervision of a State official or commission, who (1) shall have control of the expenditure of the money appropriated; (2) shall make agreements with the United States Geological Survey as to the methods of conducting the work, and (3) shall recommend the order in point of priority in which various portions of the State shall be surveyed.

It is invariably stipulated that the field operations shall be under the supervision of the Director of the Geological Survey. This Survey furnishes expert assistants, who take charge of the work, and who discuss the results for publication or draft the manuscript maps. All details of the work are performed by them under rules and by methods which experience has shown to be the most economical and judicious, and which tend at all times to maintain a uniformity of treatment for the whole of the United States.

The United States Geological Survey accepts the recommendations of the State officials for the employment of such temporary assistants as may prove qualified for the work, thus insuring the employment of residents of the State so far as practicable. The law usually specifies that a sum equal to that appropriated by the State shall be expended in the same time by the United States Geological Survey.

BENEFITS FROM COOPERATION.

The Federal Survey benefits by the great increase in funds available for the extension of its legitimate operations. This Survey is charged with the duty of making a topographic and geologic map of the entire area of the United States, as well as of studying its water resources and reporting on its other economic products. The expense of this work to the Federal Treasury is reduced by the amount appropriated by the various States for cooperative surveys. To date this amounts to \$768,497.

All agreements for cooperation being on the basis of equal expenditure, they necessarily reduce by one-half the cost to the Federal Government of conducting its operations. An additional benefit from cooperation is the hastening of the completion of the topographic map, which thus renders it available at an earlier date as a base for the further studies of economic resources, geology, hydrography, and the classification of lands.

From the experience gained certain conditions essential to the success of cooperation have been established. All work which is in part paid for by the Federal Survey and which may be published by it or on its authority must be controlled by the Director. He selects assistants to perform such work, or

approves their selection. In its execution the work is subject to the supervision and approval of the appropriate chief of division of the Federal Survey. All agreements for cooperation are drawn in such manner as not to conflict with the organic law of the Survey in regard to collections, furnishing information, or giving expert testimony.

One important point to be considered in all such work is that the general plans and methods of the Federal Survey can not be set aside on account of State cooperation.

At the present time the funds available for cooperation are so limited that its further extension is dependent on increase of appropriations by Congress.

It is against the policy of the Survey to stop work on important areas or subjects in order that cooperation with individual States may be extended. The Director is willing to enter into a cooperative agreement only when the interests of the country as a whole will be benefited.

The appropriations made by the States for cooperative surveys are accepted chiefly for actual field work in which are included the services of temporary employees, who are usually residents of the State, and for the living and traveling expenses of the field force. It may be used in paying office salaries only in so far as it is necessary to equalize the expenses of both parties to the cooperation. Thus the larger part of the amount appropriated by the State is returned to the people thereof.

The appropriation of the Federal Government is devoted chiefly to paying the salaries of the permanent employees, a small portion of it being expended on general administration and a considerable portion on field and office work.

All the assistant surveyors, as levelmen, transitmen, etc., and such helpers as rodmen, teamster, and cook, are employed under regulations of the Department of the Interior, in the locality in which the work is being done and under the terms of a signed application and agreement, which they must file when seeking such employment.

The CHAIRMAN. I would like to ask you, Mr. Walcott, for the purpose of getting at the real reason for appropriating money out of the Federal Treasury for these topographic surveys of States: How are the people of Minnesota, for example, interested in a topographic survey of the State of Tennessee? Or how are the people of New York interested in a topographic survey of Missouri or any other far-off State, that they should be taxed for the purpose of making these State topographic surveys?

Mr. WALCOTT. I should say that would come under the clause of the Constitution providing for the general welfare. [Laughter.]

The CHAIRMAN. How are they benefited?

Mr. WALCOTT. This statement will answer that inquiry:

#### OBJECTS AND USES OF TOPOGRAPHIC MAPS.

Among other uses of the topographic maps are:

1. *Educational.*—(a) By promoting an exact knowledge of the country; (b) by serving teachers and pupils in geographic studies.

2. *Practical.*—As preliminary maps for planning engineering projects. Highways, electric roads, railroads, aqueducts, and sewerage plants may be laid out on them, and the cost of preliminary surveys may be saved. Areas of catchment for water supply, sites for reservoirs, and routes of canals may be ascertained from these maps.

3. *Political.*—In all questions relating to political or legislative matters. For these purposes they afford accurate information as to the relations of boundaries and towns to natural features.

4. *Administrative and military.*—In all questions relating to Federal or State administrations of public works, as canals, reservations, parks, highways, and as military base maps on which to plan works of offense, defense, camps, marches, etc.

5. *Statistical.*—As base maps for the graphic representation of all facts relating to population, industries, products, or other statistical information.

6. *Economic.*—As a means for showing the location, extent, and accessibility of lands, waters, forests, and valuable minerals. In this respect these maps are indispensable to State and Federal bureaus, and to owners, investors, and corporations.

## EXTENT OF TOPOGRAPHIC SURVEYS.

During the last three years, from January 1, 1903, to December 31, 1905, inclusive, the Geological Survey has conducted topographic mapping in 45 States and Territories; and of those in which no work has been done, Connecticut, District of Columbia, Massachusetts, New Jersey, and Rhode Island have been completely mapped. In California these surveys have, during the period named, covered 7,698 square miles; in Ohio, 10,034 square miles; in New York, 6,823 square miles; in Pennsylvania, 4,063 square miles; in West Virginia, 4,208 square miles; in Washington, 4,071 square miles; in Arizona, 4,307 square miles; in Nevada, 8,609 square miles, and in other States smaller areas.

The total number of square miles mapped during the three years above named was 99,820, an area as great as all of the New England States, New Jersey, Maryland, and West Virginia combined, or nearly as great as the whole of Austria, or of Italy, or of the United Kingdom. The map thus made shows every detail of every stream, however small; the positions of rapids, falls, and still waters on the larger streams; the length, bends, and other details of roads, including neighborhood roads, however little used, and every house. It shows, also, the slopes and grades of the surface of the land, and thus serves all the purposes of preliminary studies for railways, improved highways, city water supplies, sanitary improvements, etc.

Moreover, being made on so large a scale that a distance of 100 feet is readily perceptible on the map, it furnishes a basis from which all other maps, county, State, or of miscellaneous subdivisions, can be prepared.

Besides the work above described, the Survey has furnished much information to the Department of Agriculture concerning forest conditions in areas proposed for forest reserves.

In connection with the running of lines of levels for determining slopes, the Survey establishes permanent marks, called benchmarks, which furnish a foundation upon which all other surveys for industrial or public uses may be based. During the last three years there have been run 92,905 linear miles of accurate spirit levels, in the course of which 5,920 permanent benchmarks of metal have been established.

As a basis for the horizontal control of these surveys a careful geodetic triangulation, supplemented by lines of primary traverse, has been conducted, during the last three years, over an area of 131,240 square miles, distributed through portions of 42 States and Territories. This work has resulted in determining the geodetic positions of 8,758 points, of which 1,676 have been permanently marked by metal tablets or stone monuments. To these may hereafter be referred all future surveys for either political or property boundaries, or for other public or private uses.

Incidentally, during the time mentioned there have been made detailed surveys on a larger scale, showing more minutely the surface relief and the topographic features of areas aggregating 2,865 square miles, distributed widely through the Western and Southern States, for the purpose of affording the geologists base maps on which they can delineate in greater detail the geologic formations, with a view to aiding in the development of the various mining industries of the country.

There have also been made careful surveys, including lines of levels, showing the slopes and grades of 1,043 miles of the rivers of the country.

The results of the primary triangulation and the spirit leveling, including descriptions of the bench marks established, have been published in bulletins, for which there is a great demand from railway and city engineers and others engaged in making surveys for various purposes.

With the data resulting from the standard topographic surveys made during the three years from January 1, 1903, to January 1, 1906, there have been prepared 303 atlas sheets, and 324 have been engraved and published. As an indication of the demand for these maps it may be stated that since January, 1903, to January, 1906, there have been sold, at the price fixed by law, 1,007,280 copies of the atlas sheets thus prepared by the Geological Survey, and the proceeds have been covered into the Treasury.

I want to correct one statement. In some cases in the past these payments have not been dollar for dollar. Sometimes the States have expended less than we have; but the general system is to pay dollar for dollar. The table does not always indicate how much money was spent before cooperation by the State was begun.

SATURDAY, April 14, 1906.

COOPERATION WITH STATE GEOLOGICAL SURVEYS (CONTINUED).

The CHAIRMAN. Mr. Walcott, when we closed the hearing last evening we were considering the appropriation for topographical surveys, \$350,000, on page 140 of the bill. You described last evening the system of Federal cooperation with the States in the making of these topographical surveys, in which you stated that, taking West Virginia as an illustration, they appropriated \$15,000, turning that over to the Geological Survey and the Government of the United States, and that you contributed or apportioned out of this appropriation an amount equal to the amount appropriated by the State of West Virginia, and with that total amount the surveys were made, and the maps and work incident to the topographical surveys, including the maps, was done. That is a correct statement of the manner in which the Federal Government is cooperating with States in the making of these topographical surveys, is it not? And I want to ask you whether there is any statutory authorization for such cooperation?

Mr. WALCOTT. I think not. The cooperation idea was started as far back as 1884, and has always been reported to Congress in the annual report and fully described in all the hearings, although the cooperation is not quite in that way indicated—that is, the financial part of it. The State does not turn the money over to the Government, but we turn over to the accredited official of the State (the official representing the State in this matter) the vouchers for field expenses, field supplies, and so forth, and they pay them. We do not handle that money at all; it does not come into our possession except as the vouchers are turned over and are settled. The money does not come to us.

The CHAIRMAN. You employ the entire force, do you?

Mr. WALCOTT. We have absolute control of it.

The CHAIRMAN. You fix the salaries?

Mr. WALCOTT. The salaries of our own men are all fixed as stated in the estimates, those of the technical force; and the State officials have nothing to do with that, excepting that if they think the work is not being properly done they have a right to say it shall not go further.

The CHAIRMAN. Is not part of the force employed directly by the Government and appropriated for in this bill, paid by the States through vouchers, and in the manner in which you described?

Mr. WALCOTT. In the sense that we pay two salaries?

The CHAIRMAN. No. Any part of the salaries which you in a detailed statement here, following the appropriation, paid out of the moneys, or paid by the State on vouchers submitted by you to a State official having control of the money appropriated for the topographical surveys.

Mr. WALCOTT. Not to my knowledge. I now recall one instance of a case in the State of Maryland, where our appropriations had reached such a low ebb toward spring that we could not go on with the work in that State unless the State paid a part of the salaries of the men that were sent to the field. In that case the men were fur-

loughed without pay and allowed to go on the rolls as employees of the State. But in no instance is there any mixing up of the salaries. They were furloughed, and practically employed by the State as private individuals.

The CHAIRMAN. Then there is no statute which either authorizes or defines the extent of Federal cooperation in the States in the making of these topographical surveys?

Mr. WALCOTT. Not that I am aware of.

The CHAIRMAN. Is there any comparison, Mr. Walcott, between the Federal cooperation with the States in the making of topographical surveys, and the construction of roads or doing of anything else within the States that pertains peculiarly to the people of the States?

Mr. WALCOTT. I should say not. Not having had a legal training I may say that I can not discuss it from a legal standpoint; but from the ordinary business standpoint I should say no.

The CHAIRMAN. Is there any distinction between the work which the Geological Survey is doing in connection with the gauging of streams and determining water supplies of rivers within the States, and the doing of any work or making any internal improvements within the States other than gauging the streams?

Mr. WALCOTT. We make no internal improvements.

The CHAIRMAN. I mean nonnavigable streams. What I mean is the building of roads, or Federal cooperation in the doing of anything within the States the benefit of which is derived wholly by the people of that State. You indicated yesterday that the gauging of these streams was for the purpose of giving the people of the States information concerning the extent of the water flow in rivers, and it was utilized in connection with the development of water power, and so forth, within the States.

I simply want to know whether there is any distinction between this work in connection with gauging of these streams by the Federal Government and the building of roads or any other internal improvement that might be of a public character within the State, the benefit of which is peculiarly derived by the people of the State.

Mr. WALCOTT. As to the gauging of streams, I would say that the streams are interstate streams, and the gauging in one State, of course, benefits the people all along the line of that stream; but there is no reason that I can see why the mere principle of cooperation should not be entered into in any of the operations of the Survey in a State—that is, in relation to topography or hydrography, the gauging of streams, they all having the same bearing.

Mr. SULLIVAN. I suppose it would rest on the same principle that requires the Agricultural Department to estimate the cotton crop.

The CHAIRMAN. When did this cooperation with the States in the matter of topographic surveys begin?

Mr. WALCOTT. I do not recall the exact date, but it was prior to 1890—in 1884, I believe. I think I gave the stenographer yesterday a full statement of all the cooperation which exists, and the table, I think, will appear in the minutes, showing when it began, and the total amount for each State. I think the first State was Massachusetts, and it came out there through the request of the State board. They were planning to have certain topographic maps made within the State, and they wished to take advantage of the methods and

organization developed in the Geological Survey. They asked if that work could be undertaken in cooperation with the work they were doing in the State. After this cooperation was begun they paid one-half of the cost of mapping the State of Massachusetts.

It was the same way with Connecticut and Rhode Island, and it is now advanced in New York, so that possibly 35,000 square miles out of the 47,000 of the State have been mapped. It is going on in the State of Pennsylvania in the same manner, and in West Virginia, Ohio, and Maryland.

Also to a limited extent in North Carolina, Alabama, and Kentucky. Some States have had a small sum, a thousand dollars or two thousand dollars a year. As I said, in the memoranda which I gave the stenographer yesterday the principles underlying this cooperation, and what appear to be the benefit to the Government in doing that work, and the advantages in carrying it on in that way, are set forth.

The CHAIRMAN. Is there any reason why the States themselves, excepting in the matter of expense, could not make topographical surveys of their own States?

Mr. WALCOTT. The great difficulty in individual States is this: In the first place it requires high skill and men who have been selected by long training to properly do the work. The work starts with triangulation, which requires skill, and extends from State to State across the country without regard to the State boundaries. Then the topographic sketching and the detailed work requires men who must be experts of unusual ability, so that the mapping shall be satisfactory.

Mr. TAYLOR. You did not find those experts even in the older States of Massachusetts and Connecticut?

Mr. WALCOTT. There were very few experts anywhere in the country, and very few topographic maps were made before the National Survey began. To-day I do not know of ten topographers in the United States available outside of the Geological Survey, and most of those are men who have been trained in the Survey and left it for various purposes. In holding examinations for topographic assistants, although the technical schools and universities like Lehigh, Cornell, and the Boston Institute of Technology are training men technically in this work, yet we can hardly get the necessary supply of men who can do this work well.

Of ten men taking the civil-service examination, there may possibly be two or three who will turn out to have the requisite ability and skill to make a good map. They have to give the expression, in the topography on their maps, of the relief of the ground. They have to be accurate; they must have a knowledge of mathematics; and it requires the ability of an artist united with judgment and training, a combination you rarely get.

The CHAIRMAN. The result of this policy, Mr. Walcott, has been to cause the States to depend upon the Federal Government for the doing of this work almost entirely, has it not?

Mr. WALCOTT. The work was not done before the Federal survey started in with it. If you will look at the number of States cooperating, you will see that there are relatively few; and of the thirty States that have State organizations dealing with mining and geology, none of them are undertaking topographic work. It is apparently

not beyond the ability of a State to handle it, but practically they do not appear to be able to do it.

#### TOPOGRAPHIC SURVEYS (AGAIN).

The CHAIRMAN. Do you make topographic maps of the cities?

Mr. WALCOTT. Only incidentally to the survey of the larger area in the progress of making a general topographic map. In only a few instances we made a special attempt to make a city map very accurate; one was Pittsburg and vicinity, in which the city contributed the additional cost of doing it. Another case was the city of St. Louis, prior to the great exposition there, when it was thought to be desirable to have not only the city, but the surrounding country included in the topographic maps of which St. Louis formed a portion. The city of Louisville recently sent a delegation asking if we would furlough three or four of our men this spring to make a topographic map of the surroundings of Louisville, they to pay all expenses, including their salaries, in order to get a detailed topographic map suitable to base their sewerage system upon. They did not feel that they had the men, or that they could well get the men, that would do that work as well for the city. Of course that is no expense to the Government.

The CHAIRMEN. Were the men furloughed?

Mr. WALCOTT. The men were furloughed, and are now doing the work.

Mr. SMITH. What is the chief utility of a topographic survey, Mr. Walcott?

Mr. WALCOTT. Mr. Smith, I made a full statement of that for the record of yesterday.

Mr. SMITH. I was unavoidably detained away, and could not have the privilege of hearing you. I wanted to ask this, with a view to propounding another question, though I can perhaps proceed to it directly. Is not a topographic survey quite as much or more valuable in the thinly settled mountain States as it would be in the ordinary agricultural regions of the Eastern States?

Mr. WALCOTT. I might illustrate the topographic map in this way. Take a thickly settled community, like New York or Boston or Philadelphia, and the topographic map is used as the basis for operations or improvements both of individuals and of corporations where they wish to know the relief of the ground, the drainage, and the improvements made by man in the way of railroads, building, and all the culture of man. That refers to drainage and municipal water supply as well. Take it in the West, for instance, say in Wyoming. There the topographic maps may be made over a region that is comparatively a desert, having only a few scattered inhabitants, but that map is used as the basis for the geological map, and the two are combined as a basis for determining what may be the underground water supply—the artesian water supply—over that area. Or, if there is coal or oil present it is used as the basis upon which to plat the formations carrying either coal or oil or any other mineral. Without a good topographic map it is utterly useless to try to get the distribution of any mineral, such as coal, oil, or peat, intelligently, so that the engineer can go on and determine the possible supply or the depth.

Mr. SMITH. That brings me right to the question I have in mind. I realize the importance of topographical surveys to cities and urban population, but it seems to me, from your statement, that these surveys would be of perhaps more value in the undeveloped than the developed regions. Yet under your statement of cooperation does it not result in diverting Federal money to those States that are rich enough to be able to bear half of the cost, to the detriment of those newly and partially settled States, where the surveys would be of great importance in the development.

Mr. WALCOTT. If you will look at this map [showing] you will see that a great deal of work has been concentrated in the East in the Appalachian belt. Now, in the State of Pennsylvania there is no question about the enormous mineral wealth. They have expended a million dollars in a geological survey without making topographic maps.

When they asked for this cooperation, that million dollars, as far as practical application in the development of the State is concerned, might as well not have been spent, because without the topographic maps, without the means of locating everything accurately upon the ground, and with only the general statements made in books concerning the mineral veins or the coal or oil deposits, the engineer was left too much at sea, and the capitalist as well, in obtaining accurate information which would enable them to go on in practical development. At the centers of population there are more uses for the topographic maps in many ways than in these larger western semideveloped or populated areas, and the theory has been that where the centers of population occur, where there is the greatest amount of wealth or value, and where the Government receives the most returns, the maps would be of sufficient value to warrant their being practically made under a system of cooperation.

Mr. SMITH. I notice that this survey, as I catch it, absolutely covers Connecticut, does it not?

Mr. WALCOTT. Connecticut paid one-half of the cost, as well as Massachusetts and Rhode Island.

Mr. SMITH. It also appears, for instance, that in my own State the survey does not cover the coal regions, but does cover some other regions.

Mr. WALCOTT. In cooperating with your State, the Geological Survey made the maps where they were requested. In this connection I will call attention to these large squares [indicating]. Those squares equal a square degree. These maps are reconnaissance maps. They cover approximately 4,000 square miles each, while the next smaller squares cover approximately 1,000 square miles each, and the still smaller ones one-fourth of that. It costs as much to make that map, one-fourth the size, as it does the larger maps; but the larger maps are reconnaissance maps, and are not maps in which the surveys would be of benefit for mineral, coal belts, and things of that kind. In Iowa the very recent work is upon the larger scale, a detail map which is of service in the development of your resources.

Mr. SMITH. It is a purely agricultural region, and the mineral regions to the south are not surveyed at all.

Mr. WALCOTT. We are cooperating with the State survey out there to the extent that we asked them where work could be done, in their judgment, that would be of the greatest service to the State.

Mr. SMITH. The main subject of my inquiry was whether or not the great mineral resources of the West, which are fabulous in value and amount, would not be more rapidly promoted by this survey than in any other part of the United States. True it is that Pennsylvania has great coal deposits, but they have been so far discovered, and they are largely developed.

The CHAIRMAN. In Pennsylvania and in many Eastern States which are thickly settled the result of this investigation primarily is for the benefit of the State and the people, while in the West the Government of the United States has a vast domain, and there these surveys would result beneficially to the Government in producing a market for the salable property.

Mr. WALCOTT. This, as you will see [indicating], represents the entire gold area of Nevada, where active development is going on now, Tonopah, Gold Fields, Bullfrog, and all the great gold camps. The precious metals are scattered over a very small area, and the coals and the oils over a very large area. One is usually deposited vertically and the other horizontally. There is not an important mining area in the West that is producing largely gold, silver, or copper but what is mapped, and these maps have been spread over the West at important mining centers and where active development is going on. I will give you an illustration. In Minnesota you will notice there is very little on the map, but those maps that have been made cover the entire iron-producing belt of Minnesota.

The CHAIRMAN. When were those surveys made?

Mr. WALCOTT. In the last six years.

The CHAIRMAN. The iron discoveries caused the making of the surveys?

Mr. WALCOTT. In the last ten years, I will say. Just as soon as the iron ore discovery was announced, then we began to make these maps the next year. They are made in the forests, a great many of them, where it is difficult to make them—where the season is short, but the work was pushed over the entire iron belt. It is represented by this little grouping of maps at the north end. It is mapped around Duluth, and around the cities of St. Paul and Minneapolis. I will say in that connection that the former State geologist of Minnesota requested the national survey not to do any topographical work up to the time that it was begun.

The CHAIRMAN. You made a topographic map of Minneapolis and St. Paul, did you not?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. At the request of the cities?

Mr. WALCOTT. At the request of the cities. I do not recall the details of it fully, but it was largely from the engineering departments of the two cities in relation to their water supply, and questions that came up in regard to development of the cities.

Mr. SMITH. Does this system of cooperation operate to divert these funds to places where they would not otherwise go; that is to say, if you make a contract with the State of Massachusetts that you will share the expense with them of the survey there, does not that have influence on you to put the money in there—your half of it—when perhaps even not the half would go in there but for the cooperation of the State?

Mr. WALCOTT. Certainly; to put it immediately there. But ultimately we expect to survey the whole country, not only on account of geologic investigations, but also as bases for forestry, water supply, and engineering developments. The cooperative funds furnished by the States enable us to complete those States, and soon free more of our money for use elsewhere.

Mr. SMITH. And therefore this cooperation system tends to divert this money to places where it would not otherwise go, taking it away from places that would otherwise receive it?

Mr. SULLIVAN. In other words, divert it into those places that do not think the work of sufficient importance to defray the whole cost?

Mr. SMITH. I think my question is fair. It seems to me that the Geological Survey is not wholly of value, as I understand it, in surveying something that has been discovered, but for the purpose of throwing light upon the probability of discovery in that neighborhood, is it not?

Mr. WALCOTT. The topographic map does not lead to the discovery of mineral values. The topographic map is the basis of the geological map, and the geological map serves as a basis for the engineer to work out the mineral values. The Government can not prospect for minerals as such; that is, we have no authority to go on the plains east of the Rocky Mountains and make borings or sink shafts to discover lignites that occur there.

If there is an outcrop discovered showing the occurrence of a special mineral, the presence of lignite, or oil, or natural gas, or anything of that kind, indicating that it is probably there, that calls our attention to that neighborhood; but we can not send out prospectors over the country. There are thousands of men prospecting all over the United States constantly, searching for valuable minerals. As an illustration: Platinum we import almost entirely from Russia. Last week a man came into the office bringing a sample of ore, and said, "I think we have platinum in Colorado, in a mine there. We are not sure of it, and we are told by the people where we send our ore that there is no appreciable amount of platinum, but our assayer thinks he finds platinum there, and that we should be on the lookout for it; and will you look into it?" I consider that where we import a mineral, and do not produce it in this country, it is our duty to send one of our experts—not taking this man's statement—but to send a man there to get his own sample and determine, if possible, whether there is a supply of platinum there.

Mr. SMITH. You think the Geological Survey should wholly be secondary and not primary; that is, it should await discovery and then survey the sphere of discovery, rather than by a general survey in advance indicate the discovery hoped for?

Mr. WALCOTT. Take the illustration I gave on the plains. We hear that mineral is supposed to occur there, and such things are known by rumor. Some development takes place, then we send there and have it examined from a geological point of view, and the map showing where it could occur, and where it will not occur, is made, which leads to the development of that region.

Mr. SMITH. When we made geological surveys in our State for coal the purpose was to enlighten the explorer as to where he might look with wisdom. I should think the Geological Survey was not to

indicate a discovery already made, but to indicate the character of the region, so that they may explore the region.

Mr. WALCOTT. It was known in Iowa that coal occurred in certain places, and then a survey was made to limit the area within which they would probably find coal.

Mr. SMITH. The Geological Survey, as it would seem to a nonexpert, ought to have for its principal object the examination of the character of the soils and the development of a region, in order that one might intelligently determine whether it was worth the exploration or not—a mere general guide. If that is the purpose of it, then it is more necessary in the undeveloped portions of the United States than the highly developed portions; and yet the system of dividing the expense tends directly to divert the funds to the thickly settled and wealthy portions of the United States, and away from those portions in which untold development might occur and untold national wealth added.

Mr. WALCOTT. I did not fully carry out my statement of cooperation. The State of California is cooperating with us; I did not mention that. The State of Washington has a bill, as I understand it, now pending for cooperation; and we are receiving inquiries from Oregon in relation to cooperation there. And I think it will not be long before other States will be taking it up.

Mr. SMITH. Those are rich States. The State of Nevada is poor. Now, do I understand that in the diverting of this money by reason of cooperation to richer States, the possibility of the development of Nevada is largely lost sight of, and only those things surveyed where private enterprise has already made discovery?

Mr. WALCOTT. I do not like to put a personal statement in here, but in 1896 I left Carson, Nev., and personally made a reconnoissance down through what is now known as the great gold belt, traveling in the desert for two succeeding summers—one summer six weeks, and the other two months. In the fall of 1896 I gave out a newspaper account—a statement which was published—that that was the future gold belt, and that prospecting would probably be rewarded there more than elsewhere. Also at a banquet given me in the city of Carson, Nev., I made the same statement. Shortly after that (whether from that or not I can not say) prospecting was extended into that region, and soon afterwards these discoveries began to be made. And we send men in that manner, making what we call reconnoissance surveys, in advance of maps, topographic and geologic, and indicating in their reports where it is probable that mineral values will be found as far as they can determine from the geological condition and the reconnoissance.

Mr. SMITH. That shows the great value of that kind of a survey.

Mr. TAYLOR. Do I understand you to say that Nevada has been thoroughly surveyed?

Mr. WALCOTT. Oh, no. The gold field as indicated on the map has been surveyed. The report on the Tonopah district has been published, and that on the Goldfield district is in preparation. The reconnoissance last year was extended out over the desert covering the other known gold belts. There are other mountain ranges crossing Nevada north and south, quite a number of them, and as the result of the discoveries the whole State is overrun with prospectors. We can not send men to examine the whole area of every range.

A range may cover 3,000 square miles, and it may be that a space one-half by one-quarter of a mile in size will contain all the valuable mineral in the range. To endeavor to make an examination of that range to discover that particular area would involve an expense that we could not assume, as in the case of the platinum. As soon as we hear that there has been a probable discovery, we send an expert and try to ascertain whether it is of sufficient value to warrant our work there.

The CHAIRMAN. Now, Mr. Smith's idea, as I understand it, is that the appropriations for topographic surveys of cities and the more thickly populated States tends to divert the appropriations made for this purpose from the section of the country in which the Government itself has a greater interest, as a government, than it has in the Eastern States by reason of the fact that it has land. Its lands are in the West, and it is necessary and desirable for the Government to encourage the population of that part of the country rather than assist private enterprise in the Eastern States.

Mr. WALCOTT. Mr. Chairman, the Geological Survey is, of course, interested primarily in the mineral wealth and development of the country from that point of view, and we have to-day over 50,000 correspondents who are mineral producers. These are scattered all over the United States, and through them we keep in touch with the mineral product and new discoveries and all that is going on in the way of mineral production. Our effort always is to aid in the development of any area, east or west, as rapidly as we can and as thoroughly as we can, and I do not find from the expressions of opinion through the mining papers and through correspondence that any area in the West is being neglected on account of cooperation in the East.

The CHAIRMAN. That may be. If that is so, then perhaps the appropriation for this department—the geological surveys and the topographical surveys—is really more than is necessary from the standpoint of the Government's interest. Of course, from the standpoint of seeking or obtaining information, that will be primarily of benefit to private interests, will it not?

Mr. WALCOTT. May I make another statement? These maps are not only used by our geologic branch in aiding development of mineral resources, but they are used by the Agricultural Department as bases for all their soil surveys throughout the eastern country and all the agricultural regions. They are also used by that Department as a basis for forestry surveys and the classification of forests, both in the East and in the forest reserves of the West. They are called for by the War Department for use in the military development of the Government as a basis for acquiring information in regard to the topographic and other features of the country. We have a close cooperation with the War Department, whereby we furnish them confidential information concerning bridges, stream fords, road surfaces, blacksmith shops, water and forage supplies, etc. They furnish us revisions of our maps through their division headquarters. The accompanying letter indicates what is being done. These topographic maps are of use for all knowledge that civilized people can acquire as to the surface of the ground. It strikes me that in the large communities, where the population is large, the Government has

great interest in its people and their resources, and it gets its returns in benefits to their general welfare and for the general benefit of the people in thickly settled communities quite as much as it would in the development of the resources of the West.

WAR DEPARTMENT.  
OFFICE OF THE CHIEF OF STAFF,  
*Washington, April 16, 1906.*

THE DIRECTOR UNITED STATES GEOLOGICAL SURVEY.

*Washington, D. C.*

SIR: Referring to previous correspondence, transmitting many of the advance sheets containing military information to this division of the General Staff, the result of the first ten months' work of the United States Geological Survey, in accordance with the joint agreement between the Secretary of War and the Secretary of the Interior, dated June 12, 1905, I have the honor, by authority of the Chief of Staff, to state that the character of the work performed by your office to date, as evidenced by the sheets in question, is entirely satisfactory. It is evident that your topographers have shown intelligence and care in gathering the special information desired by the War Department and in placing it on the photolithographs furnished this Office.

This information will prove invaluable in case these sheets have to be used in active field operations.

Very respectfully,

WM. D. BEACH,  
Major, General Staff,  
Chief Second (Mil. Inf.) Division.

The CHAIRMAN. During the current fiscal year, Mr. Walcott, with what States was the Federal Government cooperating in the making of topographic surveys?

Mr. WALCOTT. Mr. Chairman, in the hearings of yesterday there is a table giving a full statement of the cooperation.

The CHAIRMAN. In which the work is now going on?

Mr. WALCOTT. Yes; and the amounts appropriated.

#### APPROPRIATIONS "IMMEDIATELY AVAILABLE" (AGAIN).

Mr. Chairman, may I add here that I have always assumed that when Congress said "immediately available" in an appropriation that they intended that that money should be available for expenditure from the time the bill became a law, and I was not violating the law if I used that money after that time.

The CHAIRMAN. That is the purpose of the legislation, "to be immediately available."

Mr. SMITH. But it makes your appropriation overlap, while others do not. If money for the next year should be available back to March, and the old year available up to the 30th of June, you would have two overlapping appropriations for March, April, May, and June, which is not allowed to other branches of the Government.

Mr. BROWNLOW. In order that your appropriation may be of service, it must be available during the spring, summer, and fall seasons.

Mr. WALCOTT. Our work is concentrated in the five or six months of the summer season, and the difficulties of bringing this up so that our appropriations are available only on the 1st of July are very great. We are spending money all over the country. For instance, on the 1st of July, 1905, we had on our books \$241,000 still unexpended, so far as any accounts that we knew of in the office were concerned. On the first day of September, 1905, that had almost all

been paid out on obligations incurred before the 1st of July, leaving a balance of \$10,186.

On the 14th day of April, 1906, there was left of that balance \$3,781.90. If you will say that we can have a deficiency of a few thousand dollars, more or less, we can go up to the close of the fiscal year and begin anew the 1st of July. Under the present system I can plan the work for the summer and fall. To do this I wish to have an idea of just what is coming and what is available. There are parties to outfit with supplies, instruments, animals, wagons, and what not, to carry them through to October, and you can not do it intelligently on an artificial division of funds on the 1st of July. Making this fund "immediately available" enables us to make our plans so that practically we do not have to pay attention, or the men in the field do not, to the matter. If this were not done and a field party is out, and they find on the 15th of June, owing to exigencies which may occur, that they have exhausted their allotment, they would have to sit down and wait to July 1, because there is no money to go on with.

The CHAIRMAN. That is also practically true so far as accommodating the workings of other branches of the service is concerned, if it were permitted.

Mr. WALCOTT. The trouble comes in the field expense. The field expense of last year, field and supplies, was \$202,000, traveling expenses \$87,000, and other large items, which we can not regulate as closely as we can salaries. It would seem to me that it is a more businesslike way of doing it, and we get much better results.

#### TOPOGRAPHIC SURVEYS (AGAIN).

Mr. SULLIVAN. Topographic surveys deal only with surface conditions?

Mr. WALCOTT. Yes.

Mr. SULLIVAN. And, therefore, there would not be the necessity for such a survey in a flat country as a hilly country?

Mr. WALCOTT. I have here a group of maps that have been engraved and delivered to me within the last week. They represent different types of topography. Here is the Goldfield special map. Here is a map of West Virginia. This map shows the hills, ravines, the mountains, and valleys covering that area, and you can at one glance ascertain about those. Goldfield is a relatively flat country, and yet the topographic map at Goldfield, with slight relief, is fully as important to the development of the mining industry there, the geology, etc., as it is in the more rugged region of West Virginia. Take the State of Ohio, which has a comparatively small relief, the making of the topographic map in the eastern section of that State led to the tracing of the anticlinals, the arches in the strata that carry the gas and the oil of the western and southwestern part of Ohio, and also the distribution of coal; and while upon that map it appears to be a relatively smooth country there may, in a distance of 10 miles, be a difference in level of one, two, or three hundred feet, and that seriously affects the relations of the surface to the underlying beds of sandstone carrying oil or gas or coal, making a great deal of difference in relation to the development of those resources.

I find in the experience of the engineers who are working upon the artesian water supply of the Great Plains, where apparently to the

eye there is no relief whatever, that there is a relief. The country rises from the Mississippi River to the foothills of the Rockies, 4,000 feet, so gradually that you are hardly aware of it. Those maps enable them to predict within one or two feet the depth up to one and two thousand feet at which they will strike water. Problems of that kind that appeal directly to the engineer make the maps useful even in a flat country.

## GEOLOGICAL SURVEYS.

The CHAIRMAN. The next item is for geological surveys in the various portions of the United States. Have you the same system of cooperation in the matter of the geological surveys as you have in topographical surveys?

Mr. WALCOTT. We have in a limited degree. I suppose all the cooperation that we have had would not amount to \$10,000 in a year.

The CHAIRMAN. Your appropriation for this particular service, I observe, has increased 100 per cent in the last decade, and 400 per cent in thirteen years. What is the reason for this very rapid increase in appropriations for this work?

Mr. WALCOTT. As I stated before, it is necessary to have a topographic map before we make a geologic map. In the early years of the service we had no topographic maps whatever, and there was no basis for geological mapping. It was not until about 1890, that there was a sufficient number of topographic maps surveyed and engraved, and available as a basis to begin any extensive geological mapping.

The CHAIRMAN. As a result of this Federal cooperation of the States in the matter of topographic surveys, we are obliged to increase the appropriation for geological surveys which are based upon the topographic service.

Mr. WALCOTT. This map [showing] shows in blue the geological folios which have been published, based upon this geological work, and you can see the extent of the cooperating interests, and the extent in the West where there is no cooperation. I think the map shows the effect of the geological work. In the southern Appalachians there has been no cooperation, but the topographic work was spread rapidly over those areas covering principally the coal fields and the iron fields of the whole southern country. In the West the series of maps there covers the entire area of what we call the mother lode gold belt of California, which is the greatest gold belt that we know of in the world excepting that of South Africa. Of this great gold belt, which includes deep, expensive mining, but still profitable, about one three-hundredth of the gold has been taken out.

In the earlier development of California the mining was very largely placer diggings—that is, the washing of gravel that had been washed down and which carried with it the gold from the rocks of the gold belt. That is largely exhausted now, and the mines have gone down to the lodes from which that placer gold was derived. The geologic map of this gold belt is now completed, and it is serving as the basis for very extensive and very large development that is going on in the deep mining, along what we call the mother lode gold belt of California. This district [indicating] here in Montana covers the great copper area of Montana. Copper mining is one of our

great industries, and this Montana area has been covered. This [indicating] covers the gold area in southern Idaho, and here are the great mining camps of Colorado, each one of them being covered by these maps.

The CHAIRMAN. Most of this land or territory in which you have made geological surveys in the West is land that is either owned by the Government or owned by private individuals of moderate means. Now, the geological surveys that are made in the more eastern States are surveys of land that are already owned by large corporations and wealthy individuals.

Mr. WALCOTT. At the time the surveys in the southern Appalachians and throughout the Appalachian region were made it was not in the hands of corporations or wealthy individuals, but largely in the hands of small operators, and they have been aggregated or brought together by the larger organizations. That is the history nearly everywhere else, as in northern Michigan and the Minnesota iron fields.

Mr. SMITH. May I ask what these regions are in the eastern Dakotas, both North and South, which are indicated here [referring to map]?

Mr. WALCOTT. Those are areas to a certain extent of lignites and in which questions of underground water have arisen. Water in that region is considered the same as a mineral; it is the life or death of the region.

Mr. SMITH. That is true of eastern Dakota as much as the western. Is it? All east of the Missouri River is well watered.

Mr. WALCOTT. Artesian water in the West.

Mr. Chairman, I would like to say one thing now. We have been speaking of gold, silver, and so on, and I would like to speak of the clay products of the United States for last year. Before stating that, I will say that the mineral products about seven years ago amounted to some six hundred millions of dollars. The product to-day is a billion two hundred million, and to keep pace at all with the growth of this mineral industry and to assist in its development we have increased our work in many States and in many fields.

The clay products of 1905 were valued at over thirty-five millions of dollars, and in many districts the geological conditions under which they occurred are not well known. So we are giving much time and attention to the study of clays throughout the United States. We are getting samples and examining them. They are sent in by farmers, prospectors, and others, who think that they have something in their region that is of commercial value, and they have been informed as to what it may be. Small operators are starting up from western Tennessee to western Kentucky, and down along the Appalachian belt. I simply give that as an illustration of a development of a great industry within comparatively few years.

Mr. SULLIVAN. I would like to ask if there is any data showing the deposits of infusorial earth.

Mr. WALCOTT. Infusorial earth is largely an organic product, or a lake deposit of infusorial animals, and occurs usually where there has been fresh-water lakes. The lake beds occur in Montana and in other intermountain States. They also occur in some areas of the East. In 1904 the production of infusorial earth amounted to 6,274 tons, valued at \$44,000.

Mr. SULLIVAN. About \$7 a ton.

Mr. WALCOTT. The report states that there were 6,274 short tons, valued at \$44,000. That industry seems to be failing. In 1903 there were 9,000 tons, valued at \$76,000. In 1902, 4,000 tons, valued at \$52,000.

Mr. SULLIVAN. That can not be the product that I am talking about, or else that describes a very inferior quality of it. The infusorial earth that I speak of is extremely valuable commercially. They use it as a base for all kind of powder, gunpowder, dynamite, and all sorts of cleaning material, polishes, and tooth powder.

Mr. WALCOTT. Tooth powder is not made from silicious earth. Well, 6,000 tons would give a very large supply for those purposes.

Mr. SULLIVAN. And at \$7 a ton it is not any more valuable than coal. It has not been discovered very often in such quantities as to be commercially profitable.

Mr. WALCOTT. We import a great deal of it.

The CHAIRMAN. The next item is for paleontologic researches relating to the geology of the United States, \$10,000. That was explained in connection with the former item.

#### CHEMICAL AND PHYSICAL RESEARCHES.

The CHAIRMAN. The next item is on page 144, for chemical and physical researches relating to the geology of the United States.

Mr. WALCOTT. That has already been explained, Mr. Chairman. I do not know whether it was as fully as you wish, but the purpose of it was explained yesterday as to the survey of the mining district.

Mr. SULLIVAN. We have had an explanation of everything except the amount.

The CHAIRMAN. Is the amount asked for here necessary, Mr. Walcott? I observe that you did not have, until 1901, more than \$17,000 for this purpose, and you are now asking for \$20,000, and you have \$20,000 in the current appropriation.

Mr. WALCOTT. In 1892, when the survey appropriations were cut very extensively, this appropriation was reduced from \$17,000 to \$5,000, and the chemical laboratory was practically wiped out. But on account of the development of the mining investigations and other investigations where it was necessary to have chemical work we asked to have the appropriation restored. We now have rather a makeshift of a laboratory, and we have not further room for its development.

The CHAIRMAN. You say a makeshift laboratory?

Mr. WALCOTT. Yes; to a certain extent. We have not the accommodations in our building for a proper chemical laboratory.

The CHAIRMAN. How much of this appropriation is paid for salaries?

Mr. WALCOTT. It is stated right below there.

The CHAIRMAN. The aggregate is not given. I did not know but that you had a statement of the amount paid for salaries and the amount paid for other purposes.

Mr. SMITH. It is \$15,900.

Mr. WALCOTT. \$15,700.

The CHAIRMAN. It would be more convenient for the committee if the total were stated as well as the details.

Mr. WALCOTT. \$15,700 is the total amount paid out of the \$20,000 allotted for salaries.

Mr. SULLIVAN. That is \$1,800 more than we figured.

Mr. WALCOTT. This was added up by the clerk.

Mr. SULLIVAN. You must have another man not shown here. Would you mind reading that off?

Mr. WALCOTT. There are two assistant chemists at \$1,800.

Mr. SULLIVAN. That is it.

Mr. WALCOTT. Mr. Chairman, in the next year's estimates I will see that they are all summarized and added up with the totals.

#### PREPARATION OF THE ILLUSTRATIONS.

The CHAIRMAN. The next is the preparation of the illustrations of the Geological Survey. You ask for an increase of the appropriation over the current appropriation. Is that absolutely necessary?

Mr. WALCOTT. The appropriation for this purpose has not been increased since 1903. As you will notice, in 1892 it was cut down from \$16,000 to \$5,000 in the general cutting of appropriations that occurred at that time. In 1894 it was raised to \$13,000; in 1902 to \$16,280; in 1903 to \$18,280, where it has remained to the present time. I think the general increase in our appropriations between 1903 and the present time has been between \$300,000 and \$400,000. That has resulted in a larger output of work. This increase in the general work of the Survey brings in more maps and other illustrations, and requires a large increase in the way of illustrations that have to be prepared for publication.

This item pays for the expenses (exclusive of the reclamation work) of the photographic laboratory and the preparation of illustrations, maps, etc., that occur in our various publications; and we find that with the increased output of the work, owing to the increased appropriations, we are getting into a position where we are not keeping up with this work, and this increase is asked simply to enable us to keep up with current work.

The CHAIRMAN. This appropriation is not made immediately available, I see; but to illustrate the effect of making appropriations immediately available it serves this purpose. You were not given for the fiscal year 1906 the amount of your estimate. If this appropriation were made available for 1907, you could go on and use the amount you estimated for the current fiscal year, regardless of the amount fixed by Congress for that purpose, thereby making your Department the judge of what the standard of expenditures should be, instead of Congress.

Mr. WALCOTT. Of the appropriation of \$18,280 for 1906, \$14,500 goes into salaries, leaving a balance of \$3,780 for supplies of all kinds. Now, the \$14,500 of salaries is annual. That is planned for from July to July. In that case we do not need to buy our supplies, and can know what we have got to carry us to the 1st of July. There are no unusual contingent expenses, and we simply plan to close up the work we can do with the amount of money allowed until the 1st day of July. It is in the office; it is not men in the field, but a few men in the office strictly under office control.

The CHAIRMAN. Now, I observe here in your item for paleontologic researches, \$10,000, you give the number employed and paid under

that appropriation, being five people. I observe, under the title for the preparation of illustrations of the Geological Survey, that you have six paleontologic draftsmen—

Mr. WALCOTT. Mr. Chairman, those names—

The CHAIRMAN. In addition to five that are employed and paid out of another appropriation.

Mr. WALCOTT. Those appointments were made as paleontologic draftsmen through a period of years running back before my day in charge of the Survey, and they are simply terms that are used to cover draftsmen who are skilled in making paleontologic drawings, and also skilled in general drafting; and the significance of the term "paleontologic draftsman"—that is the term used there—is not to indicate that that person is solely employed for that purpose. I spoke not long ago to our appointment clerk, and asked him how those names originated. He said they were made when the whole appropriation was \$40,000, largely for paleontology, and there were many people at work at this, and they simply came down to the present time.

Mr. SULLIVAN. What is the least number of per diem men steadily employed? For how many days in a year do you estimate?

Mr. WALCOTT. They are employed in this way: At the present time and within the next six weeks a large proportion of our field force will be leaving the office, and during the summer months we drop clerks and draftsmen and all of the employees who are not needed and who are employed by per diem, and that relieves the appropriation of that expense; and in the fall, when the field force return, we always find on the civil service lists stenographers and draftsmen and other clerical employees who are very glad to get work sometimes for a week, two weeks, three months, as the case may be. In other words, those people are simply employed for the job they have to do, and when it is completed they are dropped. If their salaries were fixed and their places were filled by permanent employees they would be practically idle during the summer months. That is the necessity for flexibility in employing help. It is to accommodate the needs of our work when the field men come in and get their results in shape.

Mr. SULLIVAN. I notice in your table of employees two per diem men here under the head of "Illustrations of the Geological Survey," one draftsman and one paleontologic draftsman, and I notice that the salaries here are \$14,500, which you stated a few moments ago was the entire sum for salaries.

Mr. WALCOTT. This balance of \$3,780 is used to purchase supplies and for any emergency of employing a per diem person to help out in any work.

Mr. SULLIVAN. Then it includes the salaries of these two per diem men?

Mr. WALCOTT. That I can not say. I do not know what that may be. They may be employed a week or a month.

Mr. SULLIVAN. There is \$14,500 here outside the per diem men, so that they evidently must be paid from that source?

Mr. WALCOTT. Yes. For instance, when the Alaskan work comes in, and they bring in their large map of Alaska and wish to get that out as promptly as possible, owing to the desirability of getting it into the hands of the people before the beginning of the next season,

to be used next spring by the prospectors and people who have use for maps—mining people—we rush that through and get it to the printer and have it ready by the springtime.

The CHAIRMAN. What is the object of these geological investigations?

Mr. WALCOTT. They include special maps, maps of mining areas and geologic sections; illustrations reproduced from photographs, and anything that can be represented in a graphic form.

The CHAIRMAN. Who determines what illustrations shall be used in connection with the publications of your department?

Mr. WALCOTT. I will instance the Tonapah report, which is now out. When the work came in from the field we had his map roughly worked out in the field, and that man was getting \$2,600 a year. He turned that map over to the draughtsman, who carefully followed the outlines indicated on the rough map so that it could be properly reproduced; then he brought with him graphic sections of the mines and of the rocks, and also photographs of such things as could be photographed, to illustrate any features that he wished to bring out. He also brought with him the ores and gangue rocks carrying ores, and of these microscopic sections were made and illustrated largely by photography. They illustrate to a mining and technical man at once the character of the rock and the ore, so far as they can be illustrated in that manner. The geologist gets his report ready.

Then that is transmitted to the chief geologist. He has charge of all these matters in the Geological Survey, and by him it is referred to a committee of five men, one of whom is the chief of the division of illustrations, another of whom is an expert in charge of our engraving and printing division, who knows all about reproduction of illustrations, and the other men are geologists, supposed to know about these things. The committee makes the geologist justify all the illustrations that he asks for. He goes before the committee and explains, so as to keep out illustrations from a sentimental point of view, and from the viewpoint of mere embellishment, or anything of that kind; and any publication of the Survey that carries illustrations has to undergo that examination.

Then the text of every publication that is issued has to go to some man entirely independent of the man who writes it and has to be examined and reported upon, so that if the writer has included matter which apparently should not go in, or if he could put it in better form or reduce it it is done, and if there is a question between the two it is referred to still another expert, who examines and reports upon it, and it is very rarely that any of these appeals from decisions of these committees reach me. Occasionally one will come up.

The CHAIRMAN. You do not find it is the tendency of those charged with the duty of making these decisions to amplify their publications as much as possible by including in them in many instances illustrations that are really of no practical value to anyone, unless, perhaps, he is an expert or a scientist? Or perhaps a better way to put it would be that it would be of no value except to those who in many instances would be gratified merely to look at the pictures? I am speaking principally of photographs. Of course, I can understand the reasons for the reproduction of geologic maps, because that is to give the information obtained by the men in charge of the surveys

in the field; but I observe, and Members of Congress have spoken to me of the fact, that there are a great many illustrations in the way of photographs that are really of no practical value to anybody, but which cost a great deal when it comes to engraving and printing them in connection with your publications. I thought it was due, perhaps, to a tendency on the part of those who were producing these publications to make them attractive to the eye rather than valuable as books of information.

Mr. WALCOTT. I am perfectly willing to answer that question now, of course, but in connection with the subject of publications I have a good deal of data, and I presume it will be brought up in the appropriation for publications, covering that ground quite thoroughly. Before the hearing is over I would like to present it fully.

The CHAIRMAN. We have another item here where perhaps the answer would be more pertinent.

Mr. SMITH. I notice in the last sundry civil bill there is a provision—

That hereafter no part of the appropriations made for printing and binding shall be used for any illustration, engraving, or photograph in any document or report ordered printed by Congress unless the order to print expressly authorizes the same, nor in any document or report of any Executive Department or other Government establishment until the head of the Executive Department or Government establishment shall certify, in a letter transmitting such report, that the illustration is necessary and relates entirely to the transaction of public business.

Has that been complied with in your branch?

Mr. WALCOTT. In every publication transmitted for publication to the Public Printer a letter of transmission is sent to that effect, certifying so far as the individual publication is concerned.

Mr. SMITH. What I am getting at is this: Is a letter sent to the Secretary? It seems to require the head of the Department to do it. Does the Secretary certify that all these illustrations are necessary?

Mr. WALCOTT. The examination as to the photographs or maps that are to be thrown out does not reach me. That is, the author would accept the decision of the committee. He can appeal to me if he wishes to.

Mr. SMITH. Under this statute do you certify to the Secretary of the Interior, and does he, upon the basis of your certificate, certify to the Public Printer?

Mr. WALCOTT. Every publication is brought to my desk with the illustrations, and I kept an eye out on the general work, and I look at these publications and turn them over; and I have an examining committee in which they O. K. all the publications examined, and they are also O. K'd by the author. Then in transmitting them to the Secretary of the Interior I certify in the regular form required by law that the conditions have been complied with, so far as I can certify to it, and then he forwards it to the Public Printer.

Mr. SMITH. With a letter from him to the same effect?

Mr. WALCOTT. I presume so. I have no question that that is the effect, because I imagine the Public Printer would not receive it unless it was in the proper form.

The CHAIRMAN. Do the orders for printing go from you to the Secretary, and then from the Secretary to the Public Printer?

Mr. WALCOTT. Everything that we print that is published by the Government Printing Office goes to the Secretary of the Interior,

with three copies of the transmitting letter and a copy of that letter, I presume, goes from the Secretary to the Public Printer.

PREPARATION OF REPORT OF THE MINERAL RESOURCES—BLACK SANDS.

The CHAIRMAN. For the preparation of the report of mineral resources I observe that you recommend the omission of the following language, which is in the current law: "and the investigation of methods of extraction of mineral values of the black sands of the Pacific slope." Why should not that be included in the general report of mineral resources?

Mr. WALCOTT. A special appropriation was made for that in the urgent deficiency bill, to carry on that work until it was completed at Portland.

The CHAIRMAN. I understand that there is an appropriation to carry out the work, but this appropriation here is "for the preparation of the report of mineral resources of the United States, including phosphates, which report shall be published in one octavo volume and as a distinct publication." Now, you desire that this report on the methods of extraction of mineral values of the black sands of the Pacific slope shall be omitted from this report for next year. Is that upon the theory that the investigation at that time was then concluded and included in the report for the current year on the mineral resources, or do you propose to have a special report for that particular investigation?

Mr. WALCOTT. That language was originally put in there because that work was understood to be taken up in connection with the Portland Exposition, and by the 1st of July the plant that we have at Portland, which is now on the old fair grounds, will have to be taken away, and the work that is carried on in that line, such as will be carried on in a more limited degree, will be taken elsewhere. We have found, since starting that investigation, that the black sands of the Pacific shore and the intermountain States—that is, Idaho, Wyoming, Montana, and even Colorado—do not comprise all that there are, but that there are also black sands in Maryland near Baltimore, and down on the southern Appalachians there are sands which could well be examined, and we do not care to limit it or make it local. The implication would be, if this language were continued, that we were only to investigate the black sands of the Pacific slope.

Mr. SMITH. That is not a question of investigation, but a question of reports.

Mr. SULLIVAN. His answer, I think, makes it clear that the report will include the investigation of black sands wherever found.

Mr. SMITH. I understand he proposes to strike out the report on black sands.

Mr. WALCOTT. Phosphates were put in there one year, because it was feared that phosphates would not be looked into.

Mr. TAYLOR. Do you mean to say that black sands will be looked into if this is left out?

Mr. WALCOTT. Yes. I think the legislation should not go into detail in matters of this kind. As an illustration, you might as well put in iron ore or zinc.

The CHAIRMAN. What I am trying to get at is that if you omit

his language here, and the investigation of the black sands is continued, will the result of that investigation be included in the report of the mineral resources hereafter? Will the report contain the result of that investigation with this language out?

Mr. WALCOTT. Yes, sir.

Mr. SMITH. You are limited to one octavo volume as to the report in the mineral resources of the United States?

Mr. WALCOTT. Yes, sir.

Mr. SMITH. Why would not this meet your entire approval if we should strike out simply the words "of the Pacific slope?"

Mr. WALCOTT. That would be just as well. We have got in phosphates and black sands, and if you keep on adding those details—

The CHAIRMAN. My impression is that the whole thing should go out.

Mr. WALCOTT. I should leave out black sands and phosphates.

Mr. SMITH. What we want to avoid of course, you see, is anything that implies the issuance of a separate report upon these separate investigations. I fully concur that either phosphates ought to come out or black sands ought to stay in. There is no reason applicable to the one that is not applicable to the other.

Mr. WALCOTT. If you put in two of those, why not put in the other fifty or sixty?

Mr. SMITH. You leave in phosphates, and I do not see why you should strike out black sands.

Mr. WALCOTT. This language was put in by the clerk in making up the estimates while I was in the field, and as phosphates had been in for several years, he naturally left it in without a thought. He knew that the special investigation of black sands at Portland would have to be brought to a close, and the language "black sands of the Pacific slope" was originally put in on account of the investigation.

Mr. SMITH. You do not understand that in any other publication you can publish a separate report on the black sands if we should leave this out?

Mr. WALCOTT. We have that appropriation of \$150,000 for publications of the Survey. That publishes bulletins and monographs and reports upon mining districts and special subjects. They are paid from that appropriation. The report on mineral resources includes investigations that are carried on under that appropriation—I mean the gathering of statistics and special investigations in regard to any mineral resources that are carried on under that appropriation.

Mr. SMITH. Under this other item you publish monographs?

Mr. WALCOTT. We do not duplicate.

Mr. SMITH. I thought it might be desirable to make a general report, and then treat portions of it in a separate publication for people who, for instance, might want the individual subject alone.

Mr. WALCOTT. The annual report gives a summary of the mineral productions of the United States in ten pages: just the totals, such as clay, iron ores, and other products. The volume on mineral resources gives it by States, and also any information that is entirely fresh and new and any results that would be apt to be of benefit to that industry; but it must be brought within the compass of one volume.

The CHAIRMAN. Will you state to the committee wherein, under this language, you get any authority whatever to conduct mineral investigations and the employment of men who, as you say in your notes, are employed and paid under this appropriation? I can not see any authority for anything except the preparation of the report.

Mr. SULLIVAN. That is all it is.

The CHAIRMAN. I understand from his statement that the investigation, the result of which is embodied in the report, is made and paid for out of this appropriation. I would like to know where the authority under that language exists for that investigation?

Mr. SULLIVAN. I understood it was an office force used for the purpose of preparing these reports.

Mr. WALCOTT. Doctor Day, the expert in charge of the division, is an expert geologist and mineralogist. It is necessary to have such a man in charge. The statistics and information are accumulated first by sending out circulars to every mineral producer in the United States that we know of, something like 50,000 of them. They go out in December. Those returns are then sent in and copied by statistical clerks. There is always a number of producers who do not reply, and to them we send out a second circular to get missing replies. Then there is always a group of people who are new producers, who are not in touch with the method of the Government's collection of statistics, and we send into the field some expert with knowledge of that business who goes directly to their mines, and there brings together information that we wish to incorporate in these volumes.

Now in order not to be misled and give out erroneous information we must have men in touch with those various industries. There are two experts here provided for, and the second one is a man thoroughly acquainted with the gold-mining industry of the United States. Everything pertaining to statistics in relation to gold and silver passes through that man's hands, and he is responsible for them; it is his business to keep in touch with and to know of every new mining district, and every new producing mine, and all the facts pertaining to that industry which can be gathered by an expert.

And if, during the time that he is gathering that, he makes investigations, or if there is any information collected by him that will be of value, he brings it in and makes a synopsis of it, and it is printed in this report. I would like to add a concisely prepared statement on this general subject.

#### MEMORANDUM AS TO REPORT ON MINERAL RESOURCES.

In the preparation of the report on the mineral resources of the United States it is necessary each year to make a complete canvass of all the mines of the United States in order to collect a statement of the total amount of each useful mineral product of the country and its value.

This canvass includes each year preliminary correspondence to ascertain the names and addresses of the new mines which have been opened during the year preparatory to securing from each mine operator a voluntary statement as to the exact amount of material which the mine has produced.

The report would be absolutely worthless unless all these returns were practically complete early in the year.

The number of mines in the United States is increasing with great rapidity, and within recent years the changes of consolidation which have taken place in the mining interests, and the other changes of ownership, have rendered these statistics of production extremely difficult to collect, and while the cost per

mine has not increased the total statement can not be completed in reasonable time to be of greatest value for less than an appropriation of \$75,000, estimated for.

Further, the rapid increase in demand for many minerals not heretofore utilized has developed many new localities, descriptions of which are necessary for an efficient presentation of the subject.

An additional necessary expense in the preparation of these reports is due to the necessity of obtaining from each constituent branch where consolidation of interests exists a separate statement rather than relying upon the corporation for one statement of associated companies. In this connection it is particularly desirable that an individual statement from each petroleum producing company should be obtained rather than accepting the statement from a single corporation. During the last year the appropriation for this work was allotted as follows:

To the support of branch offices in Western States engaged in the preparation of the reports on precious metals, copper, lead, zinc, borax, quicksilver, magnesite, chrome iron ore, and supplementary work on coal, iron ore, and structural materials.....	\$12,000
Salaries .....	35,055
Traveling expenses.....	6,000
Field expenses.....	20,145

#### DUPLICATION OF WORK AS TO STATISTICS OF MINERAL RESOURCES.

(See also p. 559.)

The CHAIRMAN. This service is exactly duplicated by the Treasury Department through the office of the Director of the Mint; and I have a statement here which shows a very great discrepancy between the results of the mineral statistics furnished by this report of yours and the statistics that are furnished by the Director of the Mint. What is the necessity for duplicating this work, and which of the two Departments is the most competent to obtain and furnish reliable and accurate information?

Mr. WALCOTT. The statistics gathered by the Mint are taken from the returns, I understand, of the express companies and the mints and the financial institutions which handle the finished product of the gold and silver. What we want for the purposes of the producer is a knowledge of the actual product as it is taken from the mine. The Mint gathers its statistics, as I stated, from the returns of the express companies and organizations who handle only the finished product.

Now, in the case, for instance, of Tonopah or any mining camp, we get at the statement of production from the producer, and also the aggregate mineral products, whether it is placer gold or taken from veins, and the character of the ore from which it comes. We gather not only the statistics that give the general value of the product, but also the statistics giving the character of the ore and information which the Director of the Mint does not in any way touch, and the systems of work do not duplicate each other to any significant extent.

The CHAIRMAN. I have here a statement, Mr. Walcott, giving the statistics shown by your report, and as shown by the Director of the Mint in nine States; gold and silver produced in nine States. Your report shows an excess of \$1,130,027 in gold in five States, while the Mint report shows an excess of \$1,280,999 in gold in the other four States. For the nine States the excess is \$150,972 of gold in favor of the Mint's report. In the case of silver your report shows an excess of \$877,679, including two States, while the Mint report shows an

excess of \$1,777,906 in three States. For the five States reporting silver the Mint shows an excess of \$860,227. For the entire nine States, as to the total gold and silver, the Mint shows an output of \$1,011,199 more than is shown by the report published by your Bureau.

Now, there is such a discrepancy between the two that it seems to me we ought to find out which has the best facilities for collecting and publishing accurate statistics, and to which Department the subject belongs more logically, and then we should put a stop to the work of the other Department, because, while I will not say both are rendered valueless, their value is very materially destroyed by reason of the discrepancy, which shows that either one or the other must be unreliable.

MR. WALCOTT. I would not like to answer that offhand, because I have not the statistical information in hand. I will put it in the hands of the experts in charge of that work, if I may do so, and I would like to submit a statement later on in regard to that. I should like to verify the figures you have mentioned there by comparison with the published reports of the Mint and the Survey, and ascertain the reason myself. I do not know.

THE CHAIRMAN. I fail to see any necessity for more than one Department of the Government collecting these statistics, and I should say that one Department only should be held responsible for furnishing reliable statistics. There is no necessity, that I can see, for the duplication of this work at all. I do not know which one of the two Departments is the best equipped for the classification of reliable information on this subject.

MR. TAYLOR. It seems to me, upon the statement Mr. Walcott made, that the aggregate reported from you ought to be greater than the report from the Mint, inasmuch as you deal with the products in gross in the mines and they deal with the finished product after it is brought into commercial life.

MR. SULLIVAN. That same thing puzzled me. It seemed to me that if one of the two Departments was in error the figures of the Survey should be the larger.

THE CHAIRMAN. You rely for your information upon the producer, and is it not a fact that the producer is likely, perhaps, to be inclined to withhold the information as to the amount of his production?

MR. WALCOTT. The producers very rarely understate it.

THE CHAIRMAN. They sometimes do not want to disclose their product, and it is to their interest in some instances to keep that from the public, while the Mint deals with the product as it actually exists.

The product comes ultimately to the Mint, and it is my impression, from the little study I have given to the subject, that the Mint, owing to that fact, would be able to furnish the country with more reliable statistics in regard to the production of gold and silver than the Geological Survey; and these figures show, in this statement that I have presented here, such a wide discrepancy between the reports of the two Departments that it suggested to me the idea of finding out which Department was furnishing the most reliable information, and then the idea of clothing that Department with the exclusive authority to collect those statistics.

MR. SULLIVAN. Do I understand that the Mint statistics deal with the gold and silver that actually come to the Mint?

The CHAIRMAN. That is one of the sources of their information.

Mr. WALCOTT. There is a large amount of gold and silver used in the arts.

Mr. SULLIVAN. That is what I wanted to get at—in excess of what comes to the Mint.

The CHAIRMAN. Where is it treated? Where is the metal extracted? In the assay offices. A great deal of it is not treated in private institutions. It is treated in the assay offices and mints of the United States, and then it goes into the arts.

Mr. SMITH. Why is this information not best obtainable from the stamp mills? Most of it is produced from lode mines, is it not, Mr. Walcott?

Mr. TAYLOR. I should suggest, Mr. Walcott, that there are a good many mines with which you are not in touch yet. There must be things with which your men are not in touch.

Mr. WALCOTT. I would like to have a statement prepared and look into the matter more thoroughly, and make a report upon it.

The CHAIRMAN. We would be glad to have you give information as to the sources from which you obtain data upon which your statistics are based.

Mr. SULLIVAN. Of course the Survey report is more comprehensive than the Mint report, because it discloses the amount derived from all sources and all kinds of mining.

Mr. WALCOTT. This \$75,000 not only covers the gold and silver, but all the mineral products of the United States.

The CHAIRMAN. Does the Director of the Mint report on anything but gold and silver?

Mr. WALCOTT. Nothing else that I know of, nor are production statistics for other metals collected by any other bureau of the Government than the Geological Survey.

#### MEMORANDUM CONCERNING GOLD AND SILVER STATISTICS.

The statement presented (Table 1) of the production of gold and silver, as reported by the Mint and by the Survey, shows an extremely close agreement in the total for the nine States mentioned. In \$60,200,000 there is only a difference of \$151,000—only one-fourth of 1 per cent. The difference in the value of the product for individual States is greater, because of the difference in the method of collecting the data.

This table is, however, incomplete, and gives a false idea of the actual differences. The following table (No. 2) of the total production furnishes a clearer basis of comparison:

*Comparative statistics between the United States Geological Survey and the United States Mint official reports of gold and silver output for the same year in the same States.*

[M. = Mint; S. = Survey, indicating which showed larger amount.]

The Geological Survey is exclusively responsible for its figures in the following States and Territories: Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Oregon, South Dakota, Texas, Utah, Washington, Wyoming and Michigan. The figures of the Mint Bureau for New Mexico have been obtained from the agent of the Geological Survey in that Territory. In Cali-

ifornia the regular agent of the Geological Survey has been permitted to supervise the collection of statistics for the Mint, although the data were of course collected on a different system. In case of the Southern Appalachian States the Geological Survey has accepted the figures of the Director of the Mint.

Comparison of the two sets of figures for gold shows that the Geological Survey exceeds by \$370,948, while in the case of silver the Mint exceeds by \$1,420,646. The agreement in the case of gold must be considered as remarkably close. The difference in the figures for the production of silver is in large degree due to the very small amounts of silver contained in various ores. These small amounts are not paid for by the smelters, and the mine operators derive no benefit from them. They appear, however, in the totals secured by the Mint, and it is therefore to be expected that the production of silver, as obtained by the Mint, should somewhat exceed that obtained by the Geological Survey. It should also be noted that the principal differences in the silver production, according to the Survey, and according to the Mint, obtain in States in which smelting forms the most important process of reduction.

These relations do not hold true in the same degree for gold. Small fractions of ounces of gold are often paid for by the smelter, and the production is in this respect easier to trace.

The Mint naturally receives a report of the precious metals obtained by the officers in charge of each assay office, or other official depository for gold and silver, and it checks these data by returns from express companies and smelters, which give more regard to totals than to localities.

The Geological Survey collects its data by statistical blanks filled out by each operator. The data are thus obtained directly from the producers. The Survey groups all of these data according to the mining camp or region from which they come. The mining companies give this information freely, in confidence, knowing that it will be used neither to promote nor injure their personal interests, because it is only used to compile the totals of the districts.

The Survey checks and supplements these data—

- (1) Through the intimate knowledge of its agents concerning the operations of each of these camps.
- (2) Through returns from the smelters.
- (3) From the data furnished it by the Director of the Mint concerning the amount of precious metals actually received at depositories by the Government officials.

The Geological Survey can thus group these data accurately according to the States and according to the mining camps where the gold and silver are produced, and it studies these returns in connection with its examinations of the ore bodies and of the mining and metallurgical operations, and its investigations therefore relate not only to current production, but also to future development.

Furthermore, the collection of statistics covering the production of gold and silver from the mines and mining camps forms only a part of the duties of the agents of the Geological Survey, for the same men also gather complete data of the production of copper, lead, and zinc. Much of this product comes from the same mine and the same ores as the gold and silver. At the same time the agents collect full data as to tonnage, concentration, smelting, and other processes for obtaining these metals. These data can only be obtained by direct correspondence with, or by visiting the producers. The value of such data to the mining industry is difficult to exaggerate, and this is a necessary part of the Survey's work.

It was because of the fact that this statistical work as to the production of precious and other metals is so intimately and inseparably associated with the investigation of the nature and extent of the ore deposits, the mining methods, and the metallurgical processes of the country, that this work was undertaken by the Geological Survey. Our experience has shown the wisdom of this plan.

As the work of the Geological Survey progresses it becomes more and more evident that the mining men of the country look to this Bureau for information to keep them in touch with the development of the different mining camps. The Geological Survey publishes records of all important mining camps, so that their past and prospective values can be actually gauged.

It is evident from the above that there is little duplication of work. Each office collects a part—the Survey from the mines and the Mint from the depositories.

Therefore a joint report is obviously the best outcome of the work, and by careful cooperation only one total will be published. In connection with this the Survey will give the details of mining operations, and the Mint the details of

the disposition of the bullion. This cooperation means bringing to bear on a most important statistical subject the best efforts of each Bureau to a joint result.

The CHAIRMAN. I notice on page 146, at the end of this paragraph, that you ask us to insert new language there—"to be immediately available." Why should this be made immediately available?

Mr. WALCOTT. Simply on account, but to a very much more limited extent than in paleontology and geology, of the field force necessary to gather the statistics. That is not nearly so important, but it was put in at the request of the head of the division.

The CHAIRMAN. Can you tell us how much of this appropriation of \$75,000 is expended for field assistance in the collection of mineral statistics, and how much is expended for clerical services in the office here in Washington?

Mr. WALCOTT. The salaries listed here come to \$35,770.

Mr. SULLIVAN. I notice again in that connection that that excludes per diem men.

Mr. WALCOTT. I wish to say in that connection that the men who gather the great amount of statistics are men who are employed on short periods per diem.

Mr. SULLIVAN. What fund do you charge that to?

Mr. WALCOTT. To the same appropriation of \$75,000.

Mr. SULLIVAN. So that the \$30,760 statement is not accurate?

Mr. WALCOTT. That represents the fixed annual salaries, and the per diem amounts are paid for special agents in the field. In many mining districts we will have an agent who will be paid perhaps for a week's work, or for two weeks' work, at the annual gathering of statistics, and for looking after the schedules and matters pertaining to the gathering of information at that time.

Mr. SULLIVAN. Have you any idea of how much the total compensation of these 11 per diem employees amounts to in a year?

Mr. WALCOTT. I have not personal knowledge now. If you wish, I can have it brought together. We would have to examine the vouchers and assemble it.

Mr. SULLIVAN. It would vary much year by year, would it?

Mr. WALCOTT. I know we have a large number of special agents during the periods of gathering statistics, through January and February.

Mr. SULLIVAN. One year would not exceed another very much, would it, as to these per diem employees? It would aid the committee in ascertaining the total amount paid for salaries if we had that information. Otherwise we would have no means of knowing the total amount paid for salaries.

Mr. WALCOTT. I have that in the annual report, a table which will be included in the hearings of yesterday; a statement which shows the total amount paid for services during the fiscal year 1905.

Mr. SULLIVAN. That does not seem to touch the precise point.

Mr. WALCOTT. That shows the relation of field expenses to the salaries.

Mr. SULLIVAN. There is not enough in that to aid me in the particular inquiry that I addressed to you.

Mr. WALCOTT. No. I will have that prepared and inserted here.

*Expenditures in the preparation of the report on the mineral resources of the United States, fiscal year ended June 30, 1905.*

Permanent salaries-----	\$35, 770. 00
As follows :	
2 geologists-----	\$3, 600
1 statistician-----	3, 300
1 statistician-----	2, 000
1 statistical clerk-----	1, 600
3 statistical experts-----	1, 400
2 statistical experts-----	1, 200
3 stenographers-----	1, 200
2 stenographers-----	1, 000
3 clerks-----	1, 000
11 per diem salaries-----	6, 692. 00
As follows :	
3 stenographers at \$3 per diem-----	\$729
1 special agent at \$8 per diem-----	2, 504
2 special agents at \$6 per diem-----	1, 934
4 special agents at \$5 per diem-----	1, 525
1 special expert at \$7 per diem-----	0
51 field agents and clerical assistants away from Washington-----	21, 134. 75
As follows :	
2 field assistants at \$10 per diem.	
2 field assistants at \$6 per diem.	
17 field agents at \$5 per diem.	
30 field agents at \$3 per diem.	
Traveling expenses-----	7, 550. 00
Rent of field offices-----	408. 00
Miscellaneous supplies-----	2, 500. 00
Freight, express, etc.-----	450. 00
Total-----	74, 504. 75

The CHAIRMAN. Could you estimate the amount expended in the preparation of the report on mineral resources of the United States that was paid out for so much of the report as relates to gold and silver? If you can get that I wish you would. If we want to avoid this duplication we should do it on some reliable basis.

Mr. WALCOTT. Yes; I will do that (see p. —).

Mr. SULLIVAN. Does the question of printing arise here?

Mr. WALCOTT. As to the joint resolutions which have passed the House and Senate in regard to printing I was going to ask, in order to have this volume come out as heretofore for twenty years and more, that the words, on page 146 of the bill, "for 1905" shall be added; that is, so that that will read: "which report shall be published in one octavo volume and as a distinct publication, the number of copies, printing of separate chapters, and mode of distribution of which shall be the same as of the annual report for 1905." That is in order to keep the report continuing in this form. I recall the editor called my attention to the fact that the resolutions which passed were not clear in his mind, as to how they would affect that report, it being a separate report; and he said that that language should be added, so that there would be no misunderstanding.

The CHAIRMAN. If we commence making any innovations upon the practice contemplated by these resolutions it would be likely to subvert the whole intention.

Mr. WALCOTT. It would not be an innovation. It says, "in the same manner as heretofore."

The CHAIRMAN. Does the editor explain in what respect these joint resolutions would change the method of the printing of this report?

Mr. WALCOTT. We might let this go over until this whole matter is taken up, because it will involve the whole question of printing.

Mr. SULLIVAN. You do not insist upon that "immediately available" clause under the head of mineral resources, do you, Doctor?

Mr. WALCOTT. No, sir; I do not insist upon it. It would be convenient to have it, but if it is not thought advisable, never mind. We only asked for that where it applies to fieldwork. I think it is desirable to do it that way, and it is a better business method from the point of view of getting the most out of the money and conducting the business.

#### LIBRARY, PURCHASE OF BOOKS FOR.

The CHAIRMAN. The next item is, "For the purchase of necessary books for the library, including directories and professional and scientific periodicals needed for statistical purposes." That estimate for the next fiscal year is the same as the current appropriation?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. Is that appropriation expended every year?

Mr. WALCOTT. Oh, yes, sir. In 1904 we had \$6,000, and in 1905 it was reduced to \$2,000, and it is that for 1906. That enables us to buy the current literature which is not given to us that we can not get in exchange or in any other way.

Mr. SULLIVAN. We went into that item.

Mr. SMITH. I would like to ask how extensive is the permanent library of the Geological Survey?

The CHAIRMAN. It comprises 58,000 volumes.

Mr. WALCOTT. There are over 100,000 pamphlets also, and some 90,000 maps. It is, of course, the largest geological library, and it is the geological library of the Government. The Congressional Library does not duplicate this library.

Mr. SMITH. It far exceeds the law library which the Government provides for the Supreme Court.

Mr. SULLIVAN. There are no boundaries assigned for it, except those that exist in the imagination of the director. [Laughter.]

#### ENGRAVING AND PRINTING GEOLOGICAL MAPS.

The CHAIRMAN. The next item is for engraving and printing the geological maps of the United States, \$100,000. Now, Mr. Walcott, I inferred from your statement a moment ago, in discussing the item for the preparation of illustrations for the Geological Survey, that that included the engraving of your geological maps?

Mr. WALCOTT. That item did not include the engraving or reproduction of anything. It is simply for the preparing of the illustrations before they are transmitted to the engraver, or to be reproduced in any manner.

The CHAIRMAN. Does this item on page 145, for the preparation of illustrations of the Geological Survey, include the preparation of maps for the Geological Survey?

Mr. WALCOTT. It includes the preparation of such maps and illustrations as go into the published reports. The topographic maps are prepared by the topographers as they come in out of the field, except as they may receive occasional assistance from some draftsman in inking their pencil marks.

The CHAIRMAN. The only question in my mind was whether these two appropriations were not interchangeable.

Mr. WALCOTT. They are absolutely distinct, and are in no way interchangeable.

Mr. SULLIVAN. The one is preparation of the work for the printer or engraver, and the other is the work done by the printer or engraver.

Mr. WALCOTT. Each map is prepared and transmitted formally through the office of the chief clerk to the chief engraver, and when it reaches the latter it is in the form for him to put it in the hands of the engravers and have it engraved and printed.

The CHAIRMAN. Can you tell us how much of this \$100,000 a year, which you have had ever since 1903, was expended, say, in the fiscal year 1905 for engraving and how much for printing?

Mr. WALCOTT. I have all that data in the office, classified, but I do not have it with me. I can send it up.

APRIL 14, 1906.

*Cost of engraving and printing topographic and geologic maps, United States Geological Survey.*

(a) Engraving:		
Copperplate engraving	-----	\$28,713.50
Lithographic engraving	-----	6,200.00
Photolithographing	-----	2,739.00
		<u>\$37,652.50</u>
(b) Printing:		
Lithographic printing	-----	19,958.25
Type work (composition and presswork)	-----	5,573.75
Mechanical, electrotyping and plate making	-----	2,100.00
Map mounting and binding	-----	3,352.00
		<u>30,982.00</u>
(c) Editing and proof reading	-----	7,100.00
(d) Administration and clerks	-----	6,526.00
(e) Laborers	-----	1,972.00
(f) Supplies (copperplates, stones, paper, ink, etc.)	-----	15,767.50
		<u>100,000.00</u>
Total	-----	

*Payments made to per diem employees from the appropriation for engraving and printing geological maps of the United States during the fiscal year ending June 30, 1905.*

Total .....			13,175.20

The CHAIRMAN. We would like to have the expenditure under each item separate, for engraving and for printing. This is exclusively for engraving and printing, I observe, and involves only two items of expenditure. If you will give us the amount under each head we shall be glad.

#### SALE OF MAPS.

In this connection, Mr. Walcott, have you any statement that you desire to make to the committee concerning the sale of topographic and geological maps?

Mr. WALCOTT. During the fiscal year ending June 30, 1905, there was received from the sale of topographic maps, \$10,680.26; of geologic folios, \$2,101.55, and of topographic folios, \$130.15, making a total of \$12,920.96. That money is covered into the Treasury and we do not get the benefit of it. That amount is represented largely by paper and presswork. It does not include the preparation of the maps in the field or the office.

In 1903 our annual appropriation was \$100,000, and up to the present time it has been \$100,000; but the appropriations for the Survey have increased between three and four hundred thousand dollars in that time, and naturally the accumulated work coming in has increased.

We have introduced several new methods by which we have reduced the cost in the engraving and printing division, but we have reached the limit of that. One year we ran considerably behind, so as not to be able to lay in our stock of paper, and an appropriation of \$10,000 was made especially for paper, which was bought. Now, this year we are coming up against a similar condition of affairs, and we also have a demand coming from map publishers, State governments, and foreign governments, and individuals and interests concerned in the reproduction of maps, for what are called transfers, in order that they may reproduce our maps, which are published by square degrees and parts of degrees for counties or States or local needs. The cost to us of furnishing that material now amounts in the neighborhood of \$5,000 a year, and that is turned into the Treasury and we get no benefit from it, so far as our appropriations are concerned.

Now, this \$13,000 and \$5,000, if we continue it, make a draft on our resources, which we are not able to use in our work of reproducing these field maps and publishing them, of \$18,000. I think it was wise to furnish these transfers, and in a letter which I addressed to the Secretary of the Interior on January 12, 1906, I stated the conditions in relation to this item, and that letter was transmitted from the Interior Department under date of January 12, and printed as House Document No. 365.

In that is recommended a paragraph for insertion in the sundry civil bill, which was recommended in the urgent deficiency bill, but it was either not brought up or not considered at that time. This paragraph is to the effect that—

The director of the Geological Survey shall, if the regular map work of the Survey is in no wise interfered with thereby, hereafter furnish to any person, concern, institution, or State or foreign government, that shall pay in advance the cost thereof with 10 per cent added, transfers or copies of any cartographic or other engraved or lithographic data in the division of engraving and printing of the Survey, and the moneys received by the Director for such transfers or copies shall be deposited in the Treasury to the credit of the appropriation for engraving and printing the geological maps of the United States, and such moneys may then be used to defray the expenses of engraving and printing the geological maps of the United States, in the same manner as that appropriation is used, and this provision shall become effective immediately and shall apply to the fiscal year 1906.

If this paragraph can be inserted in the sundry civil bill and become law, we can do all of the above work without cost to the Government, and with great benefit to the people who wish to use the data preserved in our office. The other amendment provides for the return to the appropriation of the money received from the sale of maps and folios. This is as follows:

That the money received from the sale of the maps and folios of the Geological Survey shall be deposited in the Treasury to the credit of the appropriation for engraving and printing the geological maps of the United States.

I earnestly hope that these two amendments may be approved of, or, in event of the committee not deeming it wise to insert such legis-

lation, that the appropriation for engraving and printing the geological maps of the United States be increased from \$100,000 to \$115,000.

In other words, if we can have that legislation, we can furnish to all who wish to use this cartographic material—and it is very extensively demanded—the data which they require, and it will be paid back to the Government. If we do not receive back into the appropriation for engraving and printing the topographic and geological maps the money it costs to produce them, which is the amount received through sales, we can not continue engraving and printing them at the rate at which they are demanded. This failure to secure the refund operates as a direct drain upon the production of the plates from which the maps are printed; in other words, the greater the sales the smaller the possibility of the production of new maps.

The CHAIRMAN. From whom comes this demand?

Mr. WALCOTT. It comes from the great map publishers of the world, from all publishers of local maps in the different States; also from those firms that are publishing general maps, and a very large demand comes from schools, colleges, universities, State officials, Members of Congress, and from the public generally. The Geological Survey maps of this character are accurate, and they form what are called the mother or base map for all maps which are subsequently printed of the regions which they cover.

The CHAIRMAN. Do you get any part of this demand from the owners of large areas of mineral lands, or the operators and people interested in the development of mineral lands?

Mr. WALCOTT. Such demand would come to us from the local publishers of the maps which they wish.

The CHAIRMAN. For instance, from a party who may own a very large tract of land, or a party which has in contemplation the purchase of a tract of coal land, for example, who wants information as to the results of the Geological Survey; do they write for those maps?

Mr. WALCOTT. They write direct to us and purchase the maps. We last year sold \$13,000 worth of geological and topographic maps to supply the country.

The CHAIRMAN. Have you ever thought of ascertaining the proportion of cost of those maps on the basis of including the cost of the work which the Government is doing and paying for in order to collect the data and information which the maps show, including that as a part of the cost of the maps to these private parties and individuals and corporations?

Mr. WALCOTT. When I took charge of the Survey in 1894 these maps were given away, largely through applications of individuals and many of them through Congress. I found there was a considerable waste, as there are always collectors who want to get something for nothing; but with that system the maps distributed in 1894 amounted, I think, to some 86,000 copies.

I asked legislation to enable us to sell those maps, and as a result of that discussion which took place in the committees it was decided to ask a nominal price, covering the cost of printing and paper, in order that the cost to the individuals who used them most—that is, the student and the prospector and the teacher, and they are by great odds the largest purchasers of maps for educational purposes, and the local engineer and the local individual who buys them—in order that

the cost. I say, should be simply the cost of paper and printing, and not take in the further cost of surveying or engraving or anything of that kind.

The CHAIRMAN. In view of the fact that the Government is cooperating, as you explained yesterday, with the States in making these topographic surveys, largely in the interest and for the benefit of the people of the localities and States, do you not think that the Government could very properly ask these people, if they desired to have the reproduction of a map, to pay a part of the cost of the original map, including a part of the expense of that survey? It seems to me it would not be inequitable at all to ask that these people reimburse the Government—those especially interested, who desire this information—to contribute something to the payment of the expense of making the original surveys and collecting the information upon which the maps was based.

Mr. SULLIVAN. Would not that, however, increase the pressure upon Members of Congress for the free distribution of them?

The CHAIRMAN. It might.

Mr. SULLIVAN. And is it not better to sell them at the actual cost of the paper and printing and thereby take that burden off Congress?

The CHAIRMAN. There is not really very much pressure upon Congress for the distribution of these maps.

Mr. WALCOTT. Under the present system they are well known throughout the country, and as soon as a map is finished notice of it appears in the engineering and mining journals, technical journals of every character throughout the country, and also in the catalogues as they are published, and of course in the locality which the map covers, so that it is very widely known; and the policy is to distribute these maps not as most other Government publications are distributed, but to sell them.

The CHAIRMAN. How many of them are distributed free? What proportion of the total issue?

Mr. WALCOTT. Two copies are furnished to each Member of Congress under the law. Then there is a certain number furnished to libraries. Some 400 are authorized to be furnished to foreign institutions, surveys, and exchanges, who send us back their map material.

The CHAIRMAN. Those are free?

Mr. WALCOTT. Yes.

The CHAIRMAN. How many copies do you publish of each map?

Mr. WALCOTT. The edition varies. Of a map like this Tonapah, Nevada, map, for which there is a large demand, we might publish six or eight thousand copies.

The CHAIRMAN. What do you sell that for per piece?

Mr. WALCOTT. Five cents apiece for a single map, and \$3 a hundred. For instance, of the geological map and folio of the Cripple Creek district there were 7,000 copies printed. Within six months our supply was exhausted. They were sold at 50 cents apiece. We never printed another edition, because it is an expensive folio, but there is constant inquiry for it. Of a map that is of minor interest we print an edition of 2,000 copies. That supplies the libraries and exchanges and the quotas of Members of Congress. Then, if there is a further demand we can print an additional edition of a thousand, or what may be necessary.

The CHAIRMAN. Is there not as much reason for including a part of the original cost of collecting the material for the making of the original map as there is for charging for the material in the copies that are sold to these people?

Mr. WALCOTT. As I recall, the original intent was simply to put on a nominal price, and that was supposed to be the price of printing and paper, in order to prevent the waste coming from free distribution. We have very largely the free distribution of most Government publications, and these maps were distributed free ten years ago. Under the present system of selling these maps at a nominal cost I think last year 600,000 copies were sold, whereas under the old system of giving them away, free about 80,000 or 90,000 copies were distributed.

The CHAIRMAN. What would a private company manufacturing maps charge for a map like that?

Mr. WALCOTT. Fifty cents, I should say; perhaps a dollar. It would be difficult to say, because they vary so much. A map like that [indicating] costs much more to engrave, on account of the number of lines and the character of the topography, as compared with a map having much more simple topography.

The CHAIRMAN. Ten cents for a map that you make and sell would not be an unreasonable price, would it, if the private concern would sell it for 50 cents?

Mr. WALCOTT. No, sir.

The CHAIRMAN. That would include a part of the cost of the original production?

Mr. TAYLOR. You would sell as many at 10 cents, or possibly at 25 cents, as you would at 3 cents?

Mr. WALCOTT. I could not say. This involves the whole purpose and policy, it seems to me, of the Government, in distributing its publications and the information it gathers.

Mr. SULLIVAN. That 5 cents covers the cost of materials and labor involved in the construction of the map?

Mr. WALCOTT. We sell them at 5 cents, or \$3 a hundred.

Mr. BROWNLOW. I understood you to say that six months after the issue of a folio the edition was exhausted?

Mr. WALCOTT. That was the Cripple Creek folio. There was a great demand for that.

Mr. BROWNLOW. Did that exhaust the demand?

Mr. WALCOTT. The demand continued after that, but the stones had been cleaned off, and as the cost of reproduction would hardly have warranted another edition we thought that edition would have to answer.

The CHAIRMAN. In your experience do the Members of Congress call for the copies placed to their credit?

Mr. WALCOTT. The system pursued has been to inform each Member of Congress of the maps at his disposal for distribution. For instance, if 30 new maps come out in the course of three months we send to each Member of Congress a list of them, and state that there are at his disposal 2 copies of each of these 30 maps, or an equivalent number (60) of any particular sheet or sheets he may select. A man from Nevada would naturally want a Nevada map, and a Member of Congress from Maine would want the Maine map, and in that way the matter is adjusted. I asked the document clerk a few days since if

there was a large number of maps that were intended for distribution by Members of Congress that had not been called for—that is, copies intended for free distribution through Congress—and he reported that he had very few maps on hand credited to Members of Congress.

The CHAIRMAN. Is not that due to the fact that you ask Members of Congress to turn their quotas over to you?

Mr. WALCOTT. We ask them to turn over to us their quotas and fill out all applications that come to them for these maps. We have every day a large mail, sometimes 300 letters, sometimes 500 letters a day, in relation to maps, asking for maps, and a great many of these come through Members of Congress.

The CHAIRMAN. Do not most of the Members transfer their quotas to you?

Mr. WALCOTT. I should say perhaps 30 per cent of them do. They transfer their requests directly to us and ask us to send them.

May I leave these amendments with the stenographer?

The CHAIRMAN. Yes.

---

TUESDAY, April 17, 1906.

ENGRAVING AND PRINTING GEOLOGICAL MAPS (CONTINUED).

The CHAIRMAN. Mr. Walcott, I asked you on Saturday last to give the committee a statement showing the appropriation fund, on page 147, expended for engraving, and the amount for printing.

Mr. WALCOTT. I have it here, and it will be put in the hearings at the proper place.

The CHAIRMAN. Can you give us now the total of each?

Mr. WALCOTT. For engraving in 1905: For salaries, \$37,652.50; for printing, the total salaries were \$30,982. For editing and proof reading, \$7,100. The editing and proof reading consists in this: An engraver after taking a map and engraving it on copper has a proof made from it, and there are three plates for each map, one plate for the drainage, which is printed in blue; one plate for the relief or topography, which is printed in brown, and one plate for the culture or work of man, roads, bridges, towns, and what not, which is printed in black. Each one of those has to be carefully proof read to see that there are no mistakes, and also when the three plates are printed on one sheet of paper to see that the work is accurate and the words are properly spelled. That is the editing.

The CHAIRMAN. What do you say the salaries for engraving were?

Mr. WALCOTT. \$35,652.50.

The CHAIRMAN. What additional expense is there in addition to the salaries?

Mr. WALCOTT. The proof reading was \$7,100. Then we have laborers who do the laboring work for the office, carrying the plates and lithographic stones, cleaning the presses, and all that. They are paid \$1,700. We call them laborers because they are the men doing the labor work.

The CHAIRMAN. Now the items for printing.

Mr. WALCOTT. Printing, \$30,982 for salaries. Then we have the supplies, which includes copper plates, lithographic stones, paper,

ink, and repairs, amounting to \$15,767.50. The cost of administration, including the engravers and the clerks, three clerks and a couple of messenger boys, comes to \$6,526. The total is \$100,000.

Mr. SULLIVAN. \$100,000 flat?

Mr. WALCOTT. That is the way it is added up here by our bookkeeper.

Mr. SULLIVAN. It looks as if some one was trying to make the punishment fit the crime.

Mr. WALCOTT. Prior to the conclusion of each fiscal year we buy supplies with as much money as we have available. This appropriation is one that is not sufficiently large to keep up with the work and supply transfers and sell maps. We are falling behind. An extra \$10,000 was appropriated for map paper several years ago, but we are coming up to the 1st of July lacking seasoned paper. We ought to buy \$10,000 worth of paper and we haven't any money to do it with. I spoke of that in connection with getting the refund from the sale of maps, transfers, etc., at the last hearing.

The CHAIRMAN. That item for supplies, \$15,767.50, represents actual purchases made, and is not a mere matter of bookkeeping!

Mr. WALCOTT. So far as I know. It is given to me as transcribed from the books. It is running expenses of every kind, excepting salaries, for twelve months.

The CHAIRMAN. It is not a bookkeeping item of intention to make purchases later?

Mr. TAYLOR. It is a mere transfer from your books?

Mr. WALCOTT. Yes.

#### GAUGING STREAMS (CONTINUED).

The CHAIRMAN. On page 148, at the bottom of the page, for gauging the streams and determining the water supply of the United States, and for the investigation of underground currents and artesian wells, and the preparation of reports upon the best methods of utilizing the water resources, you have estimated \$200,000 for the next fiscal year, and you have the same amount for the current year. I would like to ask you to furnish the committee, if you can—or later, if you can not do it at this time—an estimate of how much of that \$200,000 has been expended in the States where the Government has no public land, or where there is no reclamation going on. And how much is being expended and is necessary to be expended in connection with the reclamation service.

Mr. WALCOTT. Mr. Chairman, I have those figures, but not arranged in the same manner; but I will put it in the hearings.

The CHAIRMAN. I would also like to have you include in that statement information as to whether in the event the appropriation is reduced in the amount necessary for work in connection with the reclamation service your clerical force now engaged could be reduced, or would be reduced.

Mr. WALCOTT. In relation to the connection between this fund and the reclamation work, I will say that the law permits in carrying it into effect the use of the funds for all purposes connected with that; but the reclamation fund does not permit us to gauge streams or obtain knowledge of underground water supplies in any of the irrigation States. There is no duplication of work where we would spend any part of this \$200,000 for purely reclamation projects.

The CHAIRMAN. Assuming that that is true, and assuming that the committee would appropriate for carrying on this work in connection with the reclamation work and appropriate the amount necessary for the reclamation service, I simply desired to have the committee informed as to the amount necessary in that event. That was the reason for making the request—that is, the segregation of the appropriations between the amount expended in the irrigation States and the amount that is expended in the gauging of streams in the States where the Government has no public land or has no other interest.

Expenditures from the appropriation for the fiscal year 1905 "for gauging the streams and determining the water supply of the United States, and for the investigation of underground currents and artesian wells, and the preparation of reports upon the best methods of utilizing the water resources, two hundred thousand dollars."

Arid States, west of one hundredth meridian:		
Gauging surface streams	\$51,945.01	
Underground waters	22,738.04	
		\$74,683.05
Humid States, east of one hundredth meridian:		
Gauging surface streams	58,567.12	
Underground waters	13,920.65	
River profile surveys	830.23	
		73,318.00
Computations, maps, reports, inspection, and administration, Washington office		37,548.96
Quality of water (hydroeconomics)		14,286.26
Unexpended		163.73
		200,000.00

Mr. SMITH. What is meant by "voucher clerk," stated there, as applying to such a small office—an office expending only \$200,000 and containing 78 employees?

Mr. WALCOTT. In reply to that question I will say that each of these appropriations provides that certain work shall be carried out. In the earlier part of this bill we have a provision made for a few clerks under the heading of the office of the Director, on pages 137 and 138, amounting in 1906 to \$32,740. That amount has been approximately the same for the last ten years. The growth of the Survey necessitated the employment of more clerks from year to year. To conduct the work of the office, the administration of the office, we charge against each one of these appropriations the pro rata share of the office expenses in addition to the number provided for under the item of \$32,740. It is not that the voucher clerk passes upon the vouchers of that particular \$200,000, but that voucher clerk passes upon the vouchers of \$300,000 of topographic or geologic or other appropriations of the Survey; in other words, there is no classified office force that covers the entire office force of the Survey.

Mr. SMITH. Then, as a matter of fact, if I understand you, you practically transfer these funds that are appropriated from one item of appropriation to another. You appoint a voucher clerk under this fund, although a man could make out all of the vouchers of this fund in one day in a month, and then you have him do work in connection with the other vouchers on other items, although he is drawing money in connection with the gauging of streams. Is that correct?

Mr. WALCOTT. That is practically correct.

Mr. SMITH. Do you think it is legal, Mr. Walcott, to transfer these funds from one head to another?

Mr. WALCOTT. I think Mr. Courts may remember that this question of the office force of the Survey has been explained to the committee many times in the past; and the question of classifying that force and providing for it has been up several times.

The CHAIRMAN. Would it not be better administration, Mr. Walcott, for you to provide without classification, if classification is not practicable, for the entire office force employed in connection with all the work of the Survey, and then provide for the work in the field under the different headings that you are now receiving your appropriations for?

Mr. WALCOTT. That classification I think would be one on a more businesslike basis.

The CHAIRMAN. You have a permanent office force all of the time that is working, doing the clerical work incident to the administration of all these various appropriations.

Mr. WALCOTT. Certainly.

The CHAIRMAN. Wouldn't it be better to have that force provided for specifically without classification, if classification is not practicable, than to be drawing from one fund for this man, and another for that man, while they are doing work incident to the administration of different appropriations.

Mr. WALCOTT. In order that that matter might be fully before the committees every year, the plan of printing every employee under each appropriation, showing what he is paid for, etc., was put into these estimates, in order that the full knowledge might be before the committee as to how the money is used.

Mr. SMITH. I did not mean to question your candor about the matter, but the question is, Do you not practically certify here, in order to get this money upon this item of appropriation for voucher clerk, that his work is done on the item covered by that appropriation, and if the facts are to the contrary, is not that illegal? As a matter of fact, that is only a trifling portion of his work.

Mr. WALCOTT. I should say, under a strict construction, I do not know, and, as I said yesterday, I am not a lawyer. I am not posted as to what may be legal in governing these appropriations, but I will say that it is not businesslike to do it without direct authority, to say the least.

Mr. SMITH. I know. But in order to get this fund audited by the Comptroller you have to send in a voucher to show that this work was done under this head.

Mr. WALCOTT. Yes, sir.

Mr. SMITH. He would not audit it unless you did so?

Mr. WALCOTT. No, sir.

Mr. SMITH. But that is not the fact. It is not done under this head, but it is done under many heads.

Mr. WALCOTT. Well, he does many things.

Mr. SMITH. As a matter of fact, this voucher clerk could look after the vouchers under this particular head in one day in a month. couldn't he?

Mr. WALCOTT. I presume so.

Mr. SMITH. There are only 78 employees, and he would be able to clean it all up in one day, yet you certify that he is doing this work under this head, while he is doing it under other heads. I don't think that is legal, Mr. Walcott.

Mr. WALCOTT. Well, you might put it in this way, as to whether a man was being paid extravagantly under this head for doing the work.

Mr. SMITH. And doing the other work for nothing?

Mr. WALCOTT. Doing the other work for nothing.

The CHAIRMAN. The point I want to impress upon Mr. Walcott is, that I am not criticising his organization or assuming that he is entirely responsible for this. This bill itself, carrying the appropriation in the form it does, is undoubtedly responsible for the present method.

But as an administrative officer I would like to submit to you, Mr. Walcott, as to whether it would not be better administration to provide for all of the clerical assistants which you know you require in the administration of your office than to segregate your employees, to try to segregate them, by charging so much money to this appropriation and so much money to that, instead of providing for all of them in one sum, or classifying them? It would seem to me to be better administration to do it in that way; and I do not know what the committee may think of it when they come to make up this bill. so of course we would want to have your judgment about it. The plan would be to make provision for all of the clerks employed there, appropriating for them specifically as a whole, and then deduct from the other appropriations the amount which is charged to them.

Mr. WALCOTT. I think that would be practicable, and I think it would do away with the difficulty suggested by Mr. Smith.

The CHAIRMAN. It would undoubtedly do away with that.

Mr. WALCOTT. I do not know why it would not be practicable to do that.

WASHINGTON, D. C., April 26, 1906.

HON. JAMES W. TAWNEY,

*Chairman Committee on Appropriations.*

DEAR SIR: In my hearing before the appropriations committee April 17 on the subject of the general expenses of the Survey I was asked if I thought it was legal to pay employees in the office engaged in general work covering all of the operations of the Survey from the various sums appropriated, such as "topographical surveys," "Geological surveys," etc. At the time I think the committee and myself overlooked the language under the paragraph "For general expenses of the Geological Survey," which reads as follows:

"For the Geological Survey and the classification of the public lands and examination of the geological structure, mineral resources, and the products of the national domain, to continue the preparation of a geological map of the United States, gauging streams, and determining the water supply, and for surveying forest reserves, *including the pay of necessary clerical and scientific force and other employees in the field and in the office at Washington, District of Columbia, and all other necessary expenses, including telegrams, to be expended under the direction of the Secretary of the Interior, namely:*"

The particular words I wish to call attention to are in italics.

I think this language fully authorizes the employment of all the clerical and other force necessary to properly carry on the work of the Survey in Washington, and to pay for it from the various appropriations made in the items that follow.

As I now recall, this has been the understanding since I took charge of the Survey in 1894.

If this view is correct, then the statement of the amount paid for annual salaries under each item as submitted in the Book of Estimates, also the amount of the per diem salaries and the amount paid for temporary field force, field expenses, supplies, etc., will give the committee full knowledge of just how the appropriations are expended.

Yours, respectfully,

CHAS. WALCOTT, *Director.*

Mr. SMITH. Is the expenditure in this item in a separate subdivision of your office?

Mr. WALCOTT. There is a separate book account kept of it, of course; it is in charge of the chief distributing clerk.

Mr. SMITH. This work of gauging streams—I am not speaking of the expenditure of the money—under whose head is that?

Mr. WALCOTT. The work of gauging streams is under the hydrographer, as we call him, of the Survey, but each one of those items is under the head of a special chief, just like the chief of a division in an ordinary office.

Mr. SMITH. Are these numerous clerks that are covered in this appropriation just like this voucher clerk, working partly under this item and partly under others?

Mr. WALCOTT. Some are, such as stenographers; while there are others who are employed, and if they have not sufficient work to do under this appropriation they are put somewhere else.

The CHAIRMAN. Then this does not really represent any waste?

Mr. WALCOTT. No waste; they are kept busy at something all of the time.

Mr. SMITH. That is commendable, certainly.

Mr. WALCOTT. During the winter months when the men are all in from the field these clerks are all busy in their special branches. In the summer time the per diem people are furloughed or dropped and the permanent employees are given employment in anything that may turn up that they are able to do.

Mr. SMITH. Why shouldn't those clerks be carried in the general appropriation for the clerical work of your office and not carried in this way, because they do not spend anything like all of their time in this work?

The CHAIRMAN. I notice that you have two cataloguers—one at \$1,200 and one at \$720—in this item.

Mr. WALCOTT. I think they were spoken of in connection with the library.

The CHAIRMAN. That is what I wanted to ask you about.

Mr. WALCOTT. These two people are engaged in cataloguing things in connection with this special branch, and also in cataloguing any material that comes in the office. They are employed as cataloguers to do whatever there is in that kind of work.

Mr. SMITH. What cataloguing is there to do under this item?

Mr. WALCOTT. There is not a considerable amount of it; simply the papers that may come in in relation to hydrography, in things pertaining to this branch of the work.

Mr. SMITH. But this is not a general appropriation for hydrography, but simply an appropriation for gauging streams. What cataloguing is there to do in connection with gauging streams?

Mr. WALCOTT. We have a publication in relation to gauging streams; but what I wish to explain again is this: That we have to provide for the clerical work of the office, and in providing for that we take a certain percentage of each appropriation and charge that clerical force against it. As the chairman has expressed it, it would be better to have the clerical force provided for as a whole and the aggregate amount which is charged against each one of these appropriations taken from them and appropriated for a clerical force.

The CHAIRMAN. It seems to me that that would simplify the administrative part of your work in the office, and also the accounts.

Mr. WALCOTT. I will say that every year after the appropriations are made we have to calculate very carefully what the clerical force of the office will cost for the year, and then prorate it and charge it against this appropriation over and above this amount of \$32,740.

Mr. SMITH. As a matter of fact, these cataloguers are practically library employees, and have almost nothing to do with this item.

Mr. WALCOTT. Practically, yes; but, as I say, it is prorated against this special appropriation.

Mr. SULLIVAN. You ascertain the allotment for clerk hire and assign in the estimate a sufficient number of clerks to use the money.

Mr. WALCOTT. Yes, sir.

Mr. SULLIVAN. To do what Mr. Tawney suggests will somewhat destroy the symmetry of the estimate.

Mr. SMITH. In making this apportionment do you make the pro rata apportionment upon the amount appropriated or upon the amount of clerical service actually required up to that appropriation?

Mr. WALCOTT. The way we do is this: For the actual employees under that appropriation, where all of the work pertaining to that appropriation is separate from the other, it is charged to that appropriation flat, and then the balance of the employees who work, as in the case of these cataloguers, for all divisions, that amount is prorated to the appropriations.

Mr. SMITH. When you prorate, you mean dollars of the appropriation, without any reference whatever to the amount needed for that branch?

Mr. WALCOTT. Certainly.

The CHAIRMAN. In what respect does your service differ? I do not mean the work, but the service, from the Coast and Geodetic Survey service, where we provide specially for the office force and for the field force; and where we provide specifically for all contingent expenses.

Mr. WALCOTT. As I understand it, in the work of the Coast and Geodetic Survey, they have a specific line of work covering very few operations. The work of the Geological Survey covers many operations, many fields of activity. I would like to ask you, if I may, that when you have the Superintendent of the Coast and Geodetic Survey before you, to ask him if he thinks that our system would work as beneficially in his department—I mean as to the technical and scientific work. If I have understood correctly, he feels that he could get better results without the classification of his scientific and technical force than he could with it.

The CHAIRMAN. Suppose we were to provide so much for the office force, the clerical force, without classification.

Mr. WALCOTT. So far as the classification of clerical force is concerned, there is no objection to it whatever. I do not know that it would make any material difference. That would depend upon the administrative officers in charge. If to-day an \$1,800 clerk, or we will say the assistant librarian, drops out, resigns, or is removed, unless there is some person especially qualified to take a place like that, no one is appointed to that \$1,800 place. It may be that a \$1,400 librarian, or a person qualified, is taken from the civil service

at \$1,200, and put in that place, and the next person below, if they are not qualified, is not promoted to it; in other words, it is running the office in the manner that an ordinary business manager would run it. I will make an illustration:

One of our geologists, the man who surveyed the Tonopah district was getting \$2,700, and I hoped in time to raise him to \$3,000. An outside mining organization last summer offered him \$5,000; and as it was necessary for him to increase his income if he could, owing to various obligations, he resigned and took that place. We had in the Survey another man to whom we paid \$2,700, and he has gone to Chicago at a salary of \$5,000. We get men and train them through years of work, from the time they join the Survey after passing the first examination, and they finally reach proficiency and effectiveness so that they are in demand. In the case of those who survive and become very proficient, if the Director of the Survey can not offer them any inducement that they are going to get a salary of, say, \$3,000 or \$3,500, the chances are that he will lose him. The average man who is satisfied with \$2,000 or \$2,500 always stays with you, but it is the best qualified men that we especially want to keep. If you have ten places at \$2,000, ten places at \$2,400, ten places at \$2,700 or \$3,000, and the \$3,000 man drops out, you would like to put one of the other men in his place; but under this system, if you haven't the man qualified, the money is not used.

The CHAIRMAN. Under your system you have sufficient latitude to enable you to increase such a man's salary.

Mr. WALCOTT. Of course he could not get up to \$5,000, because the highest salary paid is \$4,000.

The CHAIRMAN. But up to the point of \$4,000 you can increase the man's salary, if you desire to do so, under your present appropriation?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. But even if we desired to appropriate one sum for your entire clerical force, would you have the same discretion that you have now?

Mr. WALCOTT. Yes, sir.

Mr. SMITH. All that you claim to exercise discretion in is with reference to the scientific force?

Mr. WALCOTT. The technical and scientific force; but I think it is wise to do the same for the clerical force if you have good administration.

The CHAIRMAN. That is undoubtedly true. The question resolves itself into one of efficient administration.

Mr. WALCOTT. Yes.

The CHAIRMAN. Then it is better for Congress to specifically provide for the clerical force, fixing the salaries paid, is it not?

Mr. WALCOTT. Yes, sir; on general principles. I also think it is a very good system, no matter what you do, to have these salaries printed with the estimates. In that way the committees and Congress will know just what is being paid and where it is going. I think the summing up in per diem will add to that, so we will have knowledge of the total.

Mr. SULLIVAN. Have you given the total salaries under this head of gauging streams?

Mr. WALCOTT. Yes; \$79,360.

Mr. SULLIVAN. That excludes the per diem.

Mr. WALCOTT. There are two per diem men down here; they are not estimated. I will say in relation to per diem employees in this special work that we employ men for gauging streams, sometimes bridge tenders on railways, sometimes farmers living near the stations, and they are paid all the way from \$3 to \$10 a month; and to get at the actual amount paid out in wages to these men would necessitate going through all the vouchers of last year. As there are many hundreds, it would take a great deal of work to do it.

Mr. SULLIVAN. Have you a detailed statement showing the amount paid for supplies and salaries under this heading under the \$200,000 appropriation?

Mr. WALCOTT. I will put that statement in the hearings.

#### FOREST RESERVES, SURVEYING (AGAIN).

The CHAIRMAN. The next item is on page 150, for continuation of the survey of the public lands that have been or may hereafter be designated as forest reserves.

Mr. WALCOTT. In my first explanation before the committee under topography I explained what these were made for.

The CHAIRMAN. And you said this service was not duplicated by the Forestry Division of the Agricultural Department?

Mr. WALCOTT. Not at all.

The CHAIRMAN. This survey, as I understood you to say, is made for the use and benefit of the Forestry Division?

Mr. WALCOTT. Yes; primarily.

The CHAIRMAN. Is your survey also used in connection with the Land Office—used by the Land Office?

Mr. WALCOTT. The topographic maps are not used in operations that are carried on in the Land Office, as far as I know.

The CHAIRMAN. To what extent has this survey been made, and have you data showing the extent to which the survey will be continued during the current fiscal year, to determine the amount of money that we should appropriate for the service?

Mr. WALCOTT. This survey of the forest reserves began in 1897 and has continued up to the present time. Detailed topographic maps have been made of 56,797 square miles and reconnoissance maps made in some rougher mountain portions of 1,072 square miles.

The boundary lines have been surveyed and marked with permanent monuments to the extent of 2,026 miles, and lines exclusive of boundaries have been run to the extent of 2,080 miles, and for control of topography for relief 14,964 miles of level lines have been run, and permanent bench marks have been indicated by standard iron posts to the number of 3,671. That is simply a summing up of the amount of work that has been done.

I have not here the total area of the forest reserves. There have been frequent changes within the last year even. I can answer this later on in the hearing after obtaining it from the Chief Forester.

[United States Department of Agriculture, Forest Service, Gifford Pinchot, Forester.]

<sup>i</sup> 13,210 square miles for the United States.  
<sup>j</sup> 160,984 square miles, United States, including Alaska and Porto Rico = 160,984 + square miles or 33,219 exclusive of Alaska and Porto Rico.

The CHAIRMAN. You say this survey of forest reserves began in 1897? The first appropriation was in 1898, was it not?  
 Mr. WALCOTT. I beg pardon, that was made for the fiscal year 1898 and began in 1897, I believe.

The CHAIRMAN. Was there any survey of the forest reserves prior to that time?

Mr. WALCOTT. No, sir. There may have been some incidental topographical maps made in connection with mineral-land survey and geological surveys, but not to any considerable extent.

The CHAIRMAN. What conditions prompted the Government to institute these surveys of forest reserves?

Mr. WALCOTT. When the original forest-reserve areas were withdrawn the land was reserved for forestry purposes only. With the forest-reserve act the question of the classification and administration of the forests on the reserves came up. It was reported upon at that time and the necessity for having a topographic map upon which to plat the commercial forests and burned areas and all matters pertaining to forestry was at once apparent. No intelligent forestry can be carried on without maps upon which to plat the distribution of the occurrence of the various classes of timber.

The CHAIRMAN. Both as to topography and as to boundaries?

Mr. WALCOTT. Yes; and also the distribution of the forests. The topographers, in making these maps, also at the same time indicated the character of the forests, so far as their knowledge will permit them to go; and since then large areas have been carefully examined by forestry experts, and it is being carried on to-day under the Agricultural Department by the Forestry Service. It is indispensable to have these forest reserves surveyed. This amount for the coming year will not finish the work, because there are many thousands of square miles that have not yet been touched.

The CHAIRMAN. Do you have any idea of the number of years required to complete these surveys?

Mr. WALCOTT. If I knew the actual extent of the forest reserves I might say. But they have been increased very largely within the last year, and I think ultimately all the western forests in the control of the Government will be included in the reserves. It is safe to say that.

The CHAIRMAN. What is the area of these reserves that have been surveyed within the last fiscal year?

Mr. WALCOTT. Three thousand and twenty-eight square miles, during the fiscal year 1904-5. During the present year the area was 7,824 square miles.

The CHAIRMAN. Surveyed during the last fiscal year?

Mr. WALCOTT. Yes, sir; in 1905.

Mr. SMITH. I notice that the language of this item is, "For continuation of the survey," etc., without specifying whether topographic or geological, as in other cases. What was the reason for that?

Mr. WALCOTT. It was always understood to be primarily topographic. In 1897 and 1898 the survey included the mapping of the forest areas, so far as our men could in making a topographic map. This also included a survey of the forest covering.

Mr. SMITH. It included the right to expend the money?

Mr. WALCOTT. We do not expend any money for geological work, as such, in that connection, that I know of.

Mr. SMITH. Why is it so much more important to proceed more rapidly with those lands, that are never to be sold, than with the other lands, which are to be sold?

Mr. WALCOTT. The forest reserves have been quite a tax upon the Government. In order to make them self-supporting we must have the means of classifying and selling the timber and also of administering the reserves. This will bring the whole matter down to a business basis.

In India they have all their forest reserves mapped. They have a forestry force of 13,000 people, and, according to the record I have of the India survey, they pay the entire expense, including that of six or seven hundred English officers who have charge of the forest reserves, and they turned several million dollars back into the treasury from the sale of timber.

This service of ours began only a few years ago, and I understand that the income this year will be in the neighborhood of half a million dollars, and it is supposed that within two years this service will be entirely self-supporting. In other words, it will pay for all its cost and for all the surveying of the areas, and probably put a surplus into the Treasury. That can not be done unless they have these maps upon which to indicate their boundaries and properly administer the reserves.

That is the reason for pushing this special work. It might be a wise policy, perhaps, to push it more rapidly than we do now. No map is made of the forestry reserves without the Chief Forester of the Agricultural Department indicating where that map can be made to the most advantage to push the development of what we might call the commercial interests of the forest reserves and make them self-supporting.

Mr. SMITH. I did not realize before that in these worthless forest reserves there are large amounts of timber which can be cut and sold without detriment to the forests.

Mr. WALCOTT. A forest should be treated just as you treat any other land for a crop. The matured timber should be taken out promptly, properly forested, and put on the market. In Canada they sell their timber by stumpage. They have regulations and rules, and the timber is cut under the direction of the forest officer. Under the method that has been pursued in this country until within a very short time a firm or individual will get control of say 10,000 acres of forest land; they want to get every cent out of it they can and they do not care how. They send their lumbermen in the forest in the winter to turn into logs the standing timber, and they cut anything that will go into the market and anything that they can sell, from a tree 6 inches in diameter to a fully developed tree, they leave the residue piled up in a general brush heap, and a match thrown down or a fire started by lightning there finds everything in readiness for a tremendous conflagration.

In the forest reserves they can only cut trees marked by forestry officers. It is regulated so as to leave the younger trees to mature, and where the trees are rapidly growing you ought to be able to get a crop in at least every fifteen years, and in that way to keep up a rotation, as you would keep a rotation of agricultural crops, as the timber matures.

Mr. SMITH. You say about a half a million dollars was received last year?

Mr. WALCOTT. I can not be positive about the statement; but in two years, I think, from what I know of it, the reserves will be on a

self-supporting basis. Those figures can be obtained, and I would like to include them in the record.

(The estimate is a half a million for 1906 and a million for 1907.)

Mr. SMITH. They can be gotten in the Agricultural Department?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. Permits are issued for the cutting of timber for one year. Heretofore one of the conditions of the permit was that the timber had to be manufactured on the reservation. I think there has been an elimination of that condition, however.

Now, Mr. Walcott, is the force of geographers, topographers, assistants, editors, clerks, stenographers, and so forth, enumerated on page 151 as being employed and paid out of the appropriation for the continuation of the survey of public lands, and so forth, for forest reserve purposes all employed in connection with that particular service, or are those people working generally in the office?

Mr. WALCOTT. It is the same as regards the clerks as it is in regard to the other appropriation.

The CHAIRMAN. When there is work to do they do that work, and when there is not they do not?

Mr. WALCOTT. The technical employees are employed for the field and office work. The clerical employees are for office work in the Survey.

Mr. SMITH. Right at that point, in order to fully understand where you draw the line of distinction, passing down I find here one editor. Is he strictly employed upon this business?

Mr. WALCOTT. No, sir. When I speak of technical employees it ends at topographic aids.

Mr. SMITH. Is that draughtsman employed chiefly on this work?

Mr. WALCOTT. In making the maps the draughtsman may be employed on that.

Mr. SMITH. All below the topographic aids are covered in this class you have given as being employed upon this other work that is found necessary?

Mr. WALCOTT. Of course, when the reports come in they use the stenographers; but the bulk of their work goes wherever it may be necessary to use it.

The CHAIRMAN. What do you mean by the distribution of timber on forest reserves? Your scientific men do not inquire as to how much oak or pine is on the reserve or the character of the timber?

Mr. WALCOTT. The topographer has to go over the ground. The timber in those forest reserves is mostly the coniferous trees, and he indicates the boundaries, also the burned districts, and makes out notes, which are turned over to the forest officer as an indication of what is there.

The CHAIRMAN. They make an estimate, but not of the character of the wood?

Mr. WALCOTT. If we make a topographic map and two-thirds of it is of a burned area, they know it is not necessary to send an expert gauger or forester there to determine what may be there, or if it is second growth.

The CHAIRMAN. But they go there, the inspectors and estimators, and they make a thorough estimate of the amount of timber before a permit is given?

Mr. WALCOTT. Certainly. But they have this preliminary knowledge just as soon as our men can plat it upon the maps in coming from the field, and upon photographic copies of the maps before they are engraved, in order to assist them in the directing examinations.

The CHAIRMAN. Have you made a detailed statement of the expenditures of the appropriation of \$130,000 for this service, including temporary employees?

Mr. SULLIVAN. These are all permanent?

Mr. WALCOTT. Yes, sir. It is in the annual report of the Survey, page 243, where it is all summed up. It is right there [indicating] on page 243. It is divided into ten different heads of classified expenditures.

Mr. SULLIVAN. Do you mean this tabulation is correct—\$81,000 and odd dollars?

Mr. WALCOTT. That includes camp men, laborers, and everything.

Mr. SULLIVAN. They are not in this list, then?

Mr. WALCOTT. No. We employ a cook for a month, or a packer, or a camp man. We do not put them down there. But these other men are employed in the permanent force of the office.

Mr. SULLIVAN. These people are employed in Washington?

Mr. WALCOTT. Yes, in Washington. Of course, these men from here up [indicating] do the field work. But this includes these.

Mr. SULLIVAN. Eighty-one thousand dollars, there, is shown for services, and this bill appropriates \$43,000.

Mr. WALCOTT. That includes all the field men.

Mr. SULLIVAN. That leaves about \$38,000 for field men. I notice in that you have an unexpended balance of \$7,342.59, and then you have a probable amount required to meet outstanding liabilities of \$7,342.59. The punishment fits the crime exactly once more.

Mr. WALCOTT. I do not know how much will be turned in, as we can not tell exactly.

Mr. SULLIVAN. Evidently nothing.

Mr. WALCOTT. That is a disbursing officer's statement, which he published July 1, as to what balance he has and what he thinks is to be taken up. Most of the disbursing officers would be apt to put it all down. Of course it can not be paid unless the obligations have been incurred.

Mr. SULLIVAN. Did the man who made that statement as to liabilities make any real mental operation or simply take those figures and move them down?

Mr. WALCOTT. He simply put them down. This amount is to cover the express charges and freight charges and bonded railroad charges, and all that sort of thing. As I said in my last hearing, the bills may come in for two weeks or three weeks or two months or six months.

Mr. SULLIVAN. Then the primary object of the estimate is not to discard liabilities, but to prevent any amount of an appropriation from finding its way back to the Treasury?

Mr. WALCOTT. He can not incur liabilities on account of that balance after the 1st of July. There is no authority for spending that. It is not a continuing appropriation.

Mr. SULLIVAN. Did anything get into the Treasury at the end of that fiscal year, as a matter of fact?

Mr. WALCOTT. I imagine the account is still open.

Mr. SULLIVAN. That is, on July 1, 1905?

The CHAIRMAN. You return your accounts first?

Mr. WALCOTT. We returned them September 1. I gave a statement at the last hearing of one particular item where there was still an unused balance, and we do not know whether other accounts will come in in connection with that or not. Railroad transportation, taken upon Government requests, and freight charges and express charges drift in sometimes a year after the close of the fiscal year. It may be the close of next July before we get the last of them.

Mr. SULLIVAN. Do you mind finding out and letting us know whether that account has been closed for the fiscal year 1905?

Mr. WALCOTT. That is, forest reserves?

Mr. SULLIVAN. I am inquiring now as to the item of \$7,342.59, which was estimated would be necessary to meet outstanding obligations. I want to know if any part of that was turned back to the Treasury?

Mr. WALCOTT. I do not think it has been yet. I do not think the account has been settled up.

The CHAIRMAN. I do not know that we want that statement to go into the record in that form.

Mr. WALCOTT. It is a matter of the Treasury officials.

The CHAIRMAN. It was turned over to the Treasury if there was a balance on the 1st of September—paid into the Treasury. It was then available for payment by direct check on the Treasury. The amount was still available for payment of obligations chargeable to that fund.

Mr. SMITH. For two years, under the covering-in act?

The CHAIRMAN. Anyhow, it is turned in until it is covered into the Treasury two years later, under what is called the covering-in act.

Mr. SULLIVAN. Is any certificate made by the head of the Department to the Treasury when the balance is turned in to the effect that there are outstanding obligations that may be discharged later? Is there any statute as to that?

The CHAIRMAN. The statute fixes that.

Mr. WALCOTT. On September 1 we are obliged to turn in all balances in the Treasury, and then the statement is made that there probably are charges against that balance.

Mr. SULLIVAN. Does it ever happen, when an unused balance is turned in on September 1, that you make a statement to the Treasurer that there are no outstanding charges against the account.

Mr. WALCOTT. That is a matter I could not answer. You would have to have the disbursing officer here to answer that.

Mr. SULLIVAN. If it ever did happen, what I want to know is what would happen to the fund so turned in? Would it immediately go into the general fund or wait until two years?

Mr. SMITH. I do not understand, under the covering-in law, that the amount is dependent upon the statement of a disbursing officer.

The CHAIRMAN. If there is any account sent to the Treasury by the disbursing officer that is chargeable to that appropriation at any time within two years it is paid out of that appropriation. At the expiration of two years it is no longer available for the payment of anything, except by action of Congress.

Mr. SMITH. That two years is from the end of the fiscal year, not from the time it is turned in?

The CHAIRMAN. Yes; from the end of the fiscal year; not from the time it is turned in. From the end of the fiscal year 1905 on for two years the appropriation is available.

## RENTAL OF QUARTERS FOR GEOLOGICAL SURVEY.

(See, also, p. 533.)

Now, I will renew the question asked a moment ago about the item on page 151.

Mr. WALCOTT. That is for rent of the basement of the addition to the main building of the Survey, as stated in the item itself. That basement area covers 7,000 square feet. At the present time we are paying \$31,400 for rent in the Hooe Building and annex, the buildings that the Survey occupies, and \$3,000 from the reclamation fund for the space the reclamation force occupies. The force is crowded throughout, and there is very little storage room, and the object of getting this additional space is for the storage of documents, maps, and the other material which is accumulating in the Survey.

The CHAIRMAN. How long do you preserve your documents outside of those that are preserved in your library?

Mr. WALCOTT. The publications that are issued by the Survey are delivered at the Survey building—those that are to be distributed through the Survey; and they are constantly coming in and going out, and they occupy quite a large space, necessarily.

The CHAIRMAN. This is not, then, for permanent storage?

Mr. WALCOTT. Oh, no; this is simply material that is being handled over and over.

The CHAIRMAN. Where do you handle that material now?

Mr. WALCOTT. We have been handling that material under the old offices, and in this particular cellar. It is on the level of the street or alley at the back or side. When the building was completed I asked permission of the landlord to put some of the material in there temporarily. "Well," he said, "yes; but I can not give you any lease on it." Of course we could not make any lease upon it, and we have piled up there in that space quite a large amount of material at the present time, and I told him I would bring the matter to the attention of the committee of Congress and endeavor to secure an appropriation at this coming fiscal year. We are already paying him for the other space in the building, and he said, "All right; go ahead."

The CHAIRMAN. Could he lease this basement to any other tenant?

Mr. WALCOTT. Undoubtedly; because that property in that neighborhood is all in use.

The CHAIRMAN. It could be leased for storage purposes, could it not?

Mr. WALCOTT. The back part could be used for a shop—say, for 50 feet. That could be used for shop purposes.

The CHAIRMAN. Is it well lighted?

Mr. WALCOTT. Yes; it is entirely out of the ground on the back, and there are windows.

The CHAIRMAN. You are occupying that building from the ground floor to the top?

Mr. WALCOTT. No, sir. There is a series of stores on the first floor.

The CHAIRMAN. You are occupying the second floor?

Mr. WALCOTT. We are occupying the basement and the space above the first story.

The CHAIRMAN. Are you paying any rent for the basement you are occupying?

Mr. WALCOTT. We occupy one large cellar, a cellar running through, where we have a carpenter shop, and where field material and surveying instruments are stored, and things of that kind, and camp outfit.

The CHAIRMAN. Have you no building or room now where you are handling documents, as they are coming in and going out?

Mr. WALCOTT. The Superintendent of Documents, if he had ample quarters, could take care of a great deal of our material, but he has no facilities, and he is obliged to keep them there until they are sent out.

The CHAIRMAN. Your documents are not under the jurisdiction of the Superintendent of Documents?

Mr. WALCOTT. Under the law the documents are not turned over to the Superintendent of Documents until we certify that the demands we have for them for distribution or exchanges, or any other distribution under the law are completed, excepting that we send to the Superintendent of Documents at once the number required for state depositories. We send directly to the Superintendent of Documents to fill those out.

Mr. SMITH. What are the dimensions—what is the frontage on F street? You gave us the area.

Mr. WALCOTT. It is 40 feet. F street is the dark end. The light end is on the broad alley to the south.

Mr. SMITH. Is it of the same width on the alley?

Mr. WALCOTT. Yes, sir.

Mr. SMITH. Is it deep enough to make an area of 7,000 feet?

Mr. WALCOTT. Yes.

Mr. SMITH. Is it 105 feet in depth?

Mr. WALCOTT. I do not get the exact depth of it. According to figures on this estimate that I have here, there would be 8,680 square feet in it, but they gave me the figures as 7,000 square feet. The data given as a result of measurements are 158½ feet for the front part, and back of that 58½ feet. Of that 58½ feet in the back, a part is under the sidewalk, and it is very dark and somewhat damp, so that the estimate of available space for our purposes would be about 7,000 square feet.

Mr. SMITH. It is nearly 200 feet deep?

Mr. WALCOTT. Yes, sir.

Mr. SMITH. Has the basement under the stores all been rented together?

Mr. WALCOTT. I can not give the exact history before my time, but we have had the basements there under the old part, and they were estimated for as a part of the rental as far back as I know.

Mr. SMITH. You do not know what the estimate for the other basement is per square foot?

Mr. WALCOTT. No, sir. When the Survey went in there I understand the rent was \$20,000. The building has been enlarged from time to time, and in process of these enlargements the rental charge

on the first portion was reduced to approximately \$12,000. When the Survey first went in it was a new building, and that was the rental price, and it was accepted and taken at the time.

Mr. SMITH. If you can not give us the amount per square foot for the best of the basement, can you tell us what this rental is per square foot for the whole of the building that you are now occupying, or the floor space?

Mr. WALCOTT. I have not that data with me, but I will put it into this part of the hearings.

Mr. SMITH. I would like to know what that is per square foot, in order that we can see if you are paying as much per square foot for this basement as you are paying for good upstairs rooms.

Mr. WALCOTT. I think I have the data here from which this can be dug out, but to save time now I can insert it later.

Mr. SMITH. Make a statement of it, so that you can transmit it later.

#### STATEMENT OF NUMBER OF SQUARE FEET AND RENTAL OF PRESENT RENTED QUARTERS.

The annual rental now paid is \$34,900 for 105,670 square feet of floor space=33.1 cents per square foot.

As stated, the cellar to be rented has a floor space of 8,680 square feet, of which 7,000 square feet is space in which publications can be stored, sorted, and put up for distribution. The proposed rental, \$1,500, would make the cost per square foot about 20.1 cents, which is 10 cents less per square foot than for the other portions of the building.

#### RENT, RECLAMATION SERVICE.

(See also p. 531.)

The CHAIRMAN. Take the three next items. The first one is on page 151, for an appropriation of \$3,000 for so much space as is occupied by those engaged in the Reclamation Service. The next is \$500 for the purchase of books and periodicals in connection with that service, and the next is an increase of \$1,000 to the disbursing officer on account of disbursements made for the Reclamation Service. Has not the Secretary of the Interior authority to make all of those payments without Congress making a specific appropriation for them?

#### DISBURSING CLERK, RECLAMATION SERVICE.

Mr. WALCOTT. The Reclamation Service began in 1902. The Director of the Geological Survey was instructed to organize a force and conduct that work, and the chief disbursing officer of the Survey was instructed to look after the disbursements, and he has done so in the last three years, or since July, 1902. The Secretary has, it is true, authority to employ a special disbursing officer to make the disbursements for the reclamation fund.

The CHAIRMAN. But he can not increase his compensation by any additional disbursements, provided his salary is \$2,500?

Mr. WALCOTT. No, sir.

The CHAIRMAN. That is the reason?

Mr. WALCOTT. Yes; there is great responsibility placed upon him in attending to this. The disbursements of the Reclamation Service will amount to about \$11,000,000 this year, and many of them are made by separate disbursing agents scattered about; but they are

all responsible to this one disbursing agent, and he has the financial control of the disbursements of the Reclamation Service. I have stated under this item submitted here, in small type at the bottom of page 152, in the transmission of the estimates, that—

The reclamation fund now amounts to over \$26,000,000. For three years the chief disbursing clerk of the Geological Survey has been in charge of the disbursements for this service without any additional compensation. His present salary is \$2,500 per annum, which is inadequate, considering the responsibilities placed upon him in connection with the disbursements for the Reclamation Service.

An addition of \$1,000 to his salary was estimated for under date of November 21, 1904, as printed in the House of Representatives Document No. 50, Fifty-eighth Congress, third session. The estimate was approved by the Secretary of the Interior and forwarded by the Secretary of the Treasury.

Mr. McChesney's services have been most satisfactory during the past twenty-six years, as chief disbursing clerk, and I think he should have the additional compensation on account of the added responsibilities and labor thrown upon him in making disbursements for the Reclamation Service.

#### RENT, RECLAMATION SERVICE (AGAIN).

The CHAIRMAN. I have observed your note there, but there is no limitation on the Secretary of the Interior as to either of the two other items, such as applies to the additional compensation of your disbursing officer.

Mr. WALCOTT. No, sir.

The CHAIRMAN. Why, then, do you ask us to appropriate when it is in the power of the Secretary to authorize what you want without our action?

Mr. WALCOTT. For rent, as I understand it, there is a limitation by law that there shall not be any rentals paid in the District of Columbia without express authority. I think in relation to the other item that we had no authority to extend that. The Comptroller, at least, said we had not; and we came to Congress accordingly for that authority.

The CHAIRMAN. You want to provide that it is to be paid out of the reclamation fund?

Mr. WALCOTT. Yes.

Mr. TAYLOR. A thousand dollars is to be paid out of the reclamation funds, but in the case of the others, not?

#### BOOKS FOR RECLAMATION SERVICE.

Mr. WALCOTT. On page 152 the bill says:

The Secretary of the Interior may authorize the purchase of such law books, books of reference, periodicals, engineering and statistical publications as are needed in carrying out the surveys and examinations authorized by the act of June 17, 1902, entitled "An act appropriating the receipts from the sale and disposal of public lands in certain States and Territories for the construction of irrigation works for the reclamation of arid lands," and such expenditures shall not exceed the sum of \$500.

It is by implication to be paid by that fund. Of course we do not pay from any other fund.

The CHAIRMAN. You pay now out of the Treasury that \$500, and \$3,000 for rent is paid out of the Treasury.

Mr. WALCOTT. Out of the reclamation fund.

Mr. SMITH. So far as this bill shows, they come out of the Treasury of the United States.

Mr. WALCOTT. But we charge it to the reclamation fund.

Mr. SMITH. I do not think the statute is specific enough for that purpose. Now, I would like to ask a question about the first of these three items. You speak of this rent of office accommodations in the city of Washington, District of Columbia. Your office accommodations are quite largely in the Hooe Building?

Mr. WALCOTT. Yes.

Mr. SMITH. How do you apportion that to the reclamation fund?

Mr. WALCOTT. We estimate the cost per square foot. They are all in the new portion of the building, and the additional rent paid for that new portion was placed at \$3,000 for the space occupied by the Reclamation Service.

Mr. SMITH. You say that is in the new portion?

Mr. WALCOTT. Yes.

Mr. SMITH. What wing?

Mr. WALCOTT. The east wing.

I think as a matter of justice to Mr. McChesney this should be allowed. He has this load to carry every year. It is a matter of justice. If the Secretary chose to appoint a disbursing officer or disbursing clerk at \$5,000 a year for the Reclamation Service, he is at liberty to do so.

---

MONDAY, April 23, 1906.

Mr. WALCOTT. I have one or two questions which I might answer quickly, which were asked at the other hearing.

#### RENTAL OF QUARTERS FOR THE GEOLOGICAL SURVEY (AGAIN).

One question was asked in relation to the rental space in the building now used by the Geological Survey. I find that the annual rental now paid is \$34,900 for 105,670 square feet of floor space, which equals 33.1 cents per square foot. That is the rental of the present quarters.

I stated that the cellar to be rented has a floor space of 8,680 square feet, of which 7,000 square feet is space in which publications can be stored, sorted, and put up for distribution. The proposed rental—\$1,500—would make the cost per square foot about 20.1 cents, which is 10 cents less per square foot than for the other portions of the building.

The question was asked, What is the proportion between the rental of the cellar space and the rental of the other portions of the building? That answers your question, Mr. Chairman.

Mr. SMITH. That answers it. As I understand it, this 33 cents includes the other basement you have rented there?

Mr. WALCOTT. Yes, sir; it includes the whole thing.

#### BALANCES OF APPROPRIATIONS COVERED IN.

Another question was asked as to the amount which reverted to the Treasury from the appropriation of the Geological Survey for any fiscal year. In order to get a fiscal year for which the accounts

were fully settled, which takes place, you know, two years after the expiration of the fiscal year, I obtained the figures for the fiscal year 1903, and this table shows the amounts which reverted to the Treasury for that year from the total appropriations of the Survey. The total amount turned in was \$2,824.76. This statement from which that amount was derived can be put into the hearings, and will show just what went back from each item.

*Statement of amounts that reverted to the Treasury from the appropriation of the Geological Survey for the fiscal year of 1903.*

Salaries of scientific assistants.....	\$326.04
Skilled laborers and temporary employees.....	8.09
Paleontologic researches.....	181.08
Chemical and physical researches.....	253.41
Preparation of illustrations.....	581.21
Books for the library and transportation of exchanges.....	282.80
Gauging streams, etc.....	105.73
Geological maps of the United States.....	8.39
Mineral resources of Alaska.....	376.09
Salaries, office of the Geological Survey.....	388.78
Surveying forest reserves.....	15.15
Installation of electric system of power and lighting.....	197.49
Iron fire and burglar proof safe.....	100.00
Total.....	2,824.76

Now, for the fiscal year 1905 the balance turned in, September 30, 1905, or reported to the Treasury, was \$10,186.60; and the amount paid since September 30, 1905, and to April 14, 1906, was \$6,404.70, leaving a balance for outstanding liabilities of \$3,781.90, which is proportionately about the same as the year 1903. I will also submit this table:

*Amounts appropriated and statement showing balance September 30, 1905, amounts paid since September 30, 1905, and amounts available for outstanding liabilities on April 14, 1906, for fiscal year ending June 30, 1905.*

Appropriations, 1904 and 1905.	Amounts appropriated.	Balances September 30, 1905.	Amount paid since September 30, 1905.	Amount available April 14, 1906, for outstanding liabilities, 1905.
Salaries of scientific assistants.....	\$29,900.00			(a)
Skilled laborers and various temporary employees.....	20,000.00	\$58.58		\$58.58
Topographic surveys.....	300,000.00	719.90	\$376.26	\$348.64
Geologic surveys.....	175,000.00	1,576.38	1,131.58	444.80
Paleontologic researches.....	10,000.00	536.15	419.81	116.34
Chemical and physical researches.....	20,000.00	692.94	117.96	574.98
Preparation of illustrations.....	18,280.00	161.48	56.36	125.12
Mineral resources of the United States.....	50,000.00	124.38	86.63	63.67
Books for the library.....	2,000.00	84.63	79.91	4.72
Gauging streams, etc.....	200,000.00	419.27	273.29	145.98
Geological maps of the United States.....	100,000.00	1,485.14	583.26	901.88
Mineral resources of Alaska.....	80,000.00	1,847.29	1,648.64	198.65
Salaries, Office of the Geological Survey.....	32,740.00	458.50		458.50
Surveying forest reserves.....	130,000.00	1,954.88	1,631.00	323.88
Furnishing new addition, Geological Survey.....	10,500.00	67.08		67.08
Total.....	1,178,420.00	10,186.60	6,404.70	\$3,781.90

<sup>a</sup> So much of these amounts as have not been called for and paid out prior to July, 1907, will lapse into the Treasury and will no longer be available for purposes for which they were appropriated unless reappropriated by Congress.

METHOD OF PAYMENT OF SALARIES.

Now, Mr. Chairman, in the hearings on Friday and Saturday, April 13 and 14, the question of providing a better method for the payment of clerical and other employees in the office in Washington was discussed—that is, a method better than the payment from bulk sums appropriated; and I have here the suggestion of an amendment which would probably cover that case. It is as follows:

Of the several lump appropriations made, or that may hereafter be made, for the Geological Survey, there may be used for the payment of clerical and other office employees connected with the administration of the office and its laboratories in Washington, District of Columbia, for services not necessarily implied in the language of the appropriation, an amount not to exceed ten per centum.

Such authority would, without question, legally authorize the payment of such salaries, and with the practice of stating in the estimates the salaries paid for the preceding fiscal year, Congress would have full information as to the amount that had been expended for the purpose.

At the present time, under the title of "Salaries, office of Director," we have \$32,740 appropriated. Then, for skilled laborers and various temporary employees \$20,000 is appropriated. That makes \$52,740. That does not pay for all the clerical force of the office, as was explained at the other hearing, and does not cover various clerks and employees who are charged against the bulk sums appropriated.

The question was raised as to the legality of it and the wisdom of doing it. This allotment, I think, will provide a means of doing that. I simply present it as a suggestion to the committee.

The CHAIRMAN. How do you arrive at that estimate?

Mr. WALCOTT. I asked the chief disbursing office for a statement and an allotment for the office force for the fiscal year 1906, and he gave me as that amount \$97,000, which is a little over 9 per cent—

The CHAIRMAN. Of the total appropriation?

Mr. WALCOTT. Yes, sir; and the wording is "there may be used." I do not say "shall be used." I think this method will keep the salaries down. Every chief of a branch or a division wants to get as much field work done as he can, because his reputation depends upon it. The effort is to keep down office expenses, and that is the reason why we hire per diem men, and that is a more economical method and will lead to less cost than if we made appropriations for fixed places at fixed salaries for the whole work. This would insure the careful scanning of the salary list of the office.

USE OF GEOLOGICAL MAPS BY THE GENERAL LAND OFFICE, ETC.

There is another feature I should like to bring up. At one of the hearings the question was asked if the Land Office used our maps. It does not use our topographic maps to any great extent, although we furnish it with a complete set of them. But there is a cordial cooperation between the Geological Survey and the General Land Office, and I can best illustrate it by a few instances.

1. In July, 1895, under special instructions from the Secretary of the Interior, Mr. Lindgren, Mr. Willis, and Mr. George Otis Smith made an examination of certain reported gold-bearing gravels near

the city of Tacoma, Wash., which had been entered by some parties as a placer claim. The examination proved that the gravels contained no placer gold. All expenses of the work were borne by the Geological Survey.

2. In November, 1897, by order of the Secretary of the Interior, Mr. Lindgren, with the assistance of Mr. Schrader, made a complete geological survey of two townships in southeastern Arizona, with a view of determining their mineral or nonmineral character, and the land was classed as mineral land. All expenses were paid by the Geological Survey.

3. In October, 1898, at the request of the Department of Justice, Mr. Lindgren made a detailed examination of about 6 square miles adjacent to the town of Oracle, Pinal County, Ariz. The examination was required to determine the mineral or nonmineral character of the land, and a report was transmitted to the Department of Justice on October 28.

4. In September, 1899, Mr. Lindgren's field work in Idaho was interrupted by orders from the Secretary of the Interior to proceed to Spokane, Wash., to testify in a case affecting Government lands.

5. From December 1, 1902, to March 1, 1903, Mr. Taff was engaged in a determination of the coal lands of Indian Territory, which was done in cooperation with the Bureau of Indian Affairs and at the request of the Secretary of the Interior. The field expenses of Mr. Taff and three assistants were paid by the Bureau of Indian Affairs, as also was the expense of office work in Muscogee during the field season. Mr. Taff's salary and the expenses of preparing the report on classification and description of the coal lands during the summer of 1903 were paid by the Geological Survey.

6. From August 7 to December 1, 1905, at the request of the Secretary of the Interior, Mr. Taff cooperated with Special Agent Hair in the examination of suspended State land selections in Utah, to determine the mineral or nonmineral character.

Mr. TAYLOR. At the request of the Secretary of the Interior?

Mr. WALCOTT. Yes.

Mr. SMITH. Mr. Taff is another employee?

Mr. WALCOTT. Yes; he is not Mr. Taft, the Secretary of War. The season closed before the completion of this work and the understanding is that it will be resumed at the beginning of the field season of 1906. All field expenses pertaining directly to lands in question were paid by the General Land Office, and other expenses, together with Mr. Taff's salary, were paid by the Geological Survey. The report on the classification of the lands examined has been prepared by the Geological Survey.

7. In July, 1905, a request was made by the Secretary of the Interior for a geologist to examine and classify a large tract of land in northern Idaho which was in controversy between the Northern Pacific Railroad Company and the Government. This land, including parts of 30 townships, had been classed as mineral land by a United States mineral commission created under act of February 26, 1905. This classification was protested by the Northern Pacific Company.

From August 1 to October 1 Mr. Collier, in cooperation with a special agent of the General Land Office, made a critical examination of this territory, sampling the known prospects and mines and pre-

paring a map of the lands in question. From October 1 to October 14 Mr. Collier attended the hearing of the case at the Coeur d'Alene land office, giving testimony on the witness stand for two and one-half days. The classification of the tract in general as mineral land was sustained by the register's decision. In this work Mr. Collier's traveling and field expenses were paid by the General Land Office and his salary by the Geological Survey.

8. Under date of March 3, 1906, Mr. Taff was detailed by the Secretary of the Interior to assist the officers of the Department of Justice in the investigation and litigation of certain coal lands in Utah and Colorado (copy of letter attached). This will probably require his entire services for at least one year. While thus detailed his expenses will be paid by the Department of Justice and his salary by the Geological Survey.

9. The Commissioner of the General Land Office has requested the detail of a geologist to examine and report on the mineral or non-mineral character of lands in the Colville Indian Reservation of Washington; also of a geologist to continue the examination of contested state selections of coal lands in Utah; also one or more geologists to examine coal lands in Colorado and New Mexico.

These various details will occupy the time of at least three and probably more geologists, at a cost for salaries of at least \$7,000, for work for which the Survey makes no direct record of the work done. Moreover, the demands for work of this kind by other departments and bureaus are certain to increase in the future rather than diminish, and will make a serious draft on the Survey appropriations.

In addition to the detail of geologists to the Land Office several parties were last season engaged in work which is of direct benefit to that office in determining the mineral or nonmineral character of public lands. An area of about 1,000 square miles in southwestern Wyoming was examined, and the lands containing commercially valuable coal were accurately located with reference to land lines. The same was done for an area of about 700 square miles in Colorado and about 2,000 square miles in New Mexico. The entire expense of this work, \$14,600, was, of course, borne wholly by the Geological Survey.

DEPARTMENT OF THE INTERIOR,  
Washington, March 3, 1906.

Mr. JOSEPH A. TAFF,  
*Geologist, Geological Survey.*

SIR: At the request of the Acting Attorney-General you are hereby detailed to assist the officers of the Department of Justice in the investigation and litigation of certain coal-land frauds in Utah and Colorado, and any other matters in which your services may be needed.

For the performance of this duty you will be designated as a special agent, and your expenses will be paid by the Department of Justice, but your salary of \$2,400 a year will be paid as usual by this Department.

Very respectfully,

E. A. HITCHCOCK,  
*Secretary.*

(Through the Director of the Geological Survey.)

Mr. Chairman, I wished to bring this matter to the attention of the committee, because it is a case of cooperative work between two bureaus of the same Department, in which the field expense for this cooperative work has been borne by the General Land Office and the

salaries by the Geological Survey. It is a question which, I think, should be considered or taken up in connection with the appropriations for our work. It is very liable to increase.

The CHAIRMAN. What are your recommendations in regard to that?

Mr. WALCOTT. I have not thought out any recommendation, but it is work pertaining to the classification of public lands, in order to enable the Government to secure larger revenues in the sale of these lands, and to enable the Land Office to determine the mineral or non-mineral lands. It might be well for the Department, as such, to make a recommendation, as it involves the operations of the Land Office and of the Geological Survey.

The CHAIRMAN. Have you any other matters?

Mr. SMITH. I would like to ask him a question in that connection. Mr. Walcott, after you have made one of these surveys for the purpose of aiding the General Land Office, is the material thus secured, even though the primary purpose was for the Land Office, afterwards utilized by you in any topographical survey?

Mr. WALCOTT. Only in a geological survey. The topographic maps are sometimes used in connection with the public-land sections, townships, in making up maps for the sale of coal lands, based upon the land divisions. Now, in the case of the coal lands I spoke of in Wyoming, the information would be used in our future mapping of that coal district. In the case of minor areas, which were under contention in suits between the Government and other parties, very little of that data would be utilized by us.

Mr. SMITH. Take your first case. In locating a mineral region you would examine that which was not mineral as well as that which is?

Mr. WALCOTT. I will give an illustration. The Survey made a topographic map of the Indian Territory, along with the making of the Land-Office map, which was done by the Geological Survey. That was followed all over the coal region by the making of a geological map showing the distribution of the coal and the coal-bearing formation. It was made by the geologist, Mr. Taff, already mentioned. He has since been directed by the Secretary of the Interior to carefully examine all of these coal lands in relation to the possible tonnage of coal on the lands owned by the Government, especially with reference to the leasing or the selling of the land, and those examinations have been made and the reports have gone to the Secretary, and the data has been published in pamphlets, so as to instruct and inform bidders who are bidding for the coal lands which were to be offered for sale.

Mr. SMITH. What I am trying to get at is whether it would be fair to charge this to the Land Office, or whether your Bureau gets some benefit from these surveys?

Mr. WALCOTT. I should say it is all Government work, and the benefit comes to the Government. In the case of the general surveys, such as the geological survey of the Indian Territory, it is perfectly right that we should pay for those expenses. But in the case of a suit—as, for instance, one now pending in the Department of Justice—it looks as if the obtaining of the data and the time spent in getting detailed data for that suit and appearing at that suit and posting the Government attorneys and all that should be charged against the Bureau that uses it. The same is true of the detailed examina-

tions to determine the approximate tonnage of the coal deposits of the Indian Territory.

The CHAIRMAN. You mean it should be charged against the Land Office?

Mr. SMITH. The Department of Justice.

Mr. WALCOTT. It is for the benefit of the Land Office.

The CHAIRMAN. I think the Land Office bears the expense of collecting testimony for the lawsuits, and it furnishes to the Department of Justice the testimony and the Department of Justice tries the cases.

Mr. SMITH. I do not so understand it. I supposed it was the duty of the United States attorney to obtain evidence and that work went on, and it was all paid out of Department of Justice funds.

Mr. WALCOTT. My object in bringing this up is to indicate where a portion of the funds appropriated for the Geological Survey goes, and what is accomplished in connection with the Land Office.

#### INTERNATIONAL SEISMOLOGICAL ASSOCIATION.

I have another matter, a small matter, if I may bring it up. There was transmitted through the Treasury Department from the Secretary of the Interior an estimate, in House Document No. 370, of which I have an extra copy—an estimate headed "International Seismological Association." The item reads:

For defraying the necessary expenses in fulfilling the obligations of the United States as a member of the International Seismological Association, including the annual contribution to the expenses of the association, and the expenses of the United States delegate in attending the meetings of the commission, etc. (submitted), \$1,300.

This is a geological matter.

Mr. SULLIVAN. It looks, Doctor, as if you had anticipated this earthquake.

Mr. WALCOTT. This refers to the international investigation and study of earthquake phenomena. In this document you will find the explanation of the origin of the movement for such investigation, and that the request came through the Department of State and was transmitted to the Geological Survey through the Interior Department, and report made upon it by Prof. Harry Fielding Reid, who is an expert in regard to seismological phenomena. On page 4 there is a report by him, and on page 2 there is a letter which I wrote to the Secretary of the Interior, transmitting that report, and on page 1 there is a letter coming from the Interior Department, in which this recommendation is approved and the estimate is duly submitted. The object of it is to have an international study of earthquake phenomena by an international commission, which will keep a systematic record of all earthquakes.

Mr. SULLIVAN. I think the Treasury would quake in anticipation of it. [Laughter.]

Mr. WALCOTT. There are a great many phenomena in relation to earthquakes with which we are entirely unacquainted, and it seems desirable to get the cooperation of all nations, because in any earthquake the vibrations are carried around the world.

A very important matter is to determine earthquake areas. The earthquake areas of the sea depths are practically unknown. It is

known that in the past ocean cables have been broken by earthquake shocks, and by keeping systematic records we will find, after a time, the areas which are but little disturbed by earthquakes at the bottom of the sea, where the cables can be most safely laid. We can also determine the center of earthquake activity and the distribution of the shocks and resulting movements that come from them. I think it is an admirable thing to do. It is a matter that may lead to very important results.

The expense will average from \$1,000 to \$1,100 a year. I presented this matter, since it comes through the Geological Survey, to the Department of the Interior, and through the Department of the Interior it comes to Congress.

In the hearings we have had we have already reached the question of publications.

#### PRINTING AND BINDING.

The CHAIRMAN. On page 328 of the bill you have an estimate for the coming fiscal year of \$65,000 for engraving the illustrations necessary for the annual report of the Director, and for the monographs, professional papers, bulletins, water-supply papers, and the report on mineral resources. I want to ask you, first, why the expense for preparation of any illustrations or engravings for the report on mineral resources should not be paid out of the appropriation for the preparation of the reports of mineral resources of the United States, found on page 145 of the bill. Is not engraving the illustrations a part of the preparation of the report?

Mr. WALCOTT. The preparation of the illustrations is a part of the expense of the report. This item for engraving illustrations means the reproduction of drawings, photographs, etc., for printing. For instance, if a section of a mine is to be illustrated, the illustration is drawn and transmitted with the manuscript for the text, and under the law the Public Printer arranges for its reproduction by the most appropriate process. It is a part of the work in charge of the Public Printer, like the typesetting and the presswork. A plate or a text figure is made of the illustration, and it is finally placed with or in the text. It is not the preparation, but the reproduction of the illustration.

The CHAIRMAN. The reproduction of the illustration is not charged as printing.

The next item, part of it, refers to the printing of the report on mineral resources.

Mr. WALCOTT. That is a question of method in connection with work at the Government Printing Office.

The CHAIRMAN. In other words, we have three appropriations on this report on the mineral resources of the United States. First, you have an appropriation under the current law for \$75,000 for preparing the report, and then you have an appropriation of \$65,000 out of which the cost of engraving the illustrations is to be paid for that report; then you have another appropriation of \$150,000, a part of which is to defray the expense of printing and binding the report.

Mr. WALCOTT. As a matter of fact, I think there have been very few illustrations appearing in the reports on mineral resources. This language would permit of their use, but I think there will be

none in this year's report, or if any, very few. However, it ought to be possible to use an illustration whenever one is necessary.

The CHAIRMAN. I observe that in the fiscal year ending June 30, 1901, your appropriation for engraving illustrations that are necessary for your annual report, monographs, and so forth, was \$17,000. In 1902 it was \$25,000, an increase of \$8,000. In 1903 it was \$65,000, which was a very large increase. Since that time it has been annually \$65,000.

Mr. WALCOTT. In 1901 and 1902 a large portion of the expense of reproducing the illustrations was borne by the Congressional allotment, because the papers accompanied the annual report; but in 1902 I asked that all charges of cost of printing and engraving by the Government Printer for the Geological Survey be combined in one place under one appropriation.

The CHAIRMAN. As to these illustrations and this engraving, who orders those to be included in your annual report; who directs that they be made, and that they be included in the report? Under the present law no illustrations can be used in an annual report unless authorized by the head of a department.

Mr. WALCOTT. I transmit to the Secretary of the Interior every report, whether an annual report or one of some other series, with a statement concerning the illustrations—a certificate that those illustrations are necessary and are entirely in the interest of the public business. The Secretary has them examined and then certifies to the Public Printer that they are necessary for that report. Then the Public Printer has them reproduced.

The CHAIRMAN. Can you give us any other information in regard to the printing of your Bureau?

Mr. WALCOTT. We endeavor to guard against the use of unnecessary illustrations. There is a standing committee on illustrations, whose duty it is to admit only such drawings, photographs, etc., as are essential to the elucidation of a subject which can not be treated concisely and satisfactorily in the letter-press. But a large number of maps and other illustrations are absolutely necessary. There should be some means of getting illustrations reproduced more promptly. No private concern would submit to the delays which are common with Government work. Often the making-up of the pages of letter-press is delayed several weeks because the contractor fails to deliver the text cuts. At the present time, it is true, the Survey, by permission of the Public Printer, fixes a time limit for this contract work, but there is no direct penalty for failure to deliver the lithographs or engravings by the time specified.

The Survey is well equipped to do the lithographic work for the reports, along with that for the maps, and could do it more cheaply than it is done under the present contract system; and the reports could be got out more promptly if the other kinds of work on illustrations, such as photo-engraving and wax engraving, were done by the Survey, but whether the cost would be less than under the present contract system is still open to question, in view of the added machinery, floor space, and employees that would be necessary.

SUGGESTION TO PROVIDE FOR THE EXECUTION OF THE ILLUSTRATIONS FOR THE ANNUAL REPORTS, MONOGRAPHS, AND BULLETINS OF THE GEOLOGICAL SURVEY, UNDER CERTAIN CONDITIONS, BY SAID SURVEY, RATHER THAN BY CONTRACT.

In the present law—that is, the printing act approved January 12, 1895, section 15—it is provided that:

When the probable total cost of the maps or plates accompanying one work or document exceeds \$1,200, the lithographing or engraving thereof shall be awarded to the lowest and best bidder, after advertisement by the Public Printer, under the direction of the joint committee, which may authorize him to make immediate contracts for lithographing or engraving whenever the exigencies of the public service do not justify advertisement for proposals.

This makes it imperative that the maps and illustrations for the annual reports, monographs, and bulletins shall be contracted for by the Public Printer. It has been found, as the result of long experience, that it is exceedingly difficult, with a few exceptions, to keep the contractors up to the standard of accuracy and excellence demanded for the scientific work of the Survey—a standard that is set by the work done by the Survey. The Survey engraves and prints all the geologic maps comprised in the geological folios and all topographic maps. This work is of a higher standard than could be reached under the present contract system, and it is desired to have the maps and illustrations for the reports and other publications of the Survey brought to the same standard of excellence.

The amendment submitted herewith provides that these illustrations may be executed by contract, through the Public Printer, or by the Geological Survey, at the discretion of the Public Printer. That is, if the Public Printer deems it to the advantage of the Government to have the work done by contract, he can so order. If he deems it best that it be done by the Survey, he can have it done in that way and pay for it the same as in the case of a private contractor.

The Survey now has a division of engraving and printing fully equipped for map and chromo-lithographic work, and, with the aid of some additional work room, it can execute all the work proposed.

It is my opinion that it would be advantageous to leave it discretionary with the latter officer to have the work done by contract or by the Survey.

Attention should be called to the cost to the Survey of inspecting the editions of maps and illustrations executed under the contract system. It is necessary that some member of the illustrations division of the Survey should inspect the edition of every map or illustration submitted by the engraver, and it frequently happens that large numbers are rejected because of defective execution, necessitating delays after the delivery of the editions. Delays also occur prior to the printing and delivery of the edition, owing to the failure of the contractors to do their work properly. These delays are frequently prolonged, seriously interfering with the prompt publication of the work.

#### PRESENT LAW.

SEC. 15. When the probable total cost of the maps or plates accompanying one work or document exceeds twelve hundred dollars, the lithographing or engraving thereof shall be awarded to the lowest and best bidder, after advertisement by the Public Printer, under the direction of the joint committee, which may authorize him to make immediate contracts for lithographing or engraving whenever the exigencies of the public service do not justify advertisement for proposals. (Vol. 28, p. 603.)

## PROPOSED SUBSTITUTE.

That the Public Printer shall have the drawings of the illustrations for any book or pamphlet report of the Geological Survey reproduced in the engraving and printing division of the Geological Survey, instead of by private parties under contract, if in his judgment the publication of the report will thereby be expedited or its cost minimized; and whenever such illustrations are reproduced in the engraving and printing division of the Geological Survey, the Director of the Survey shall certify to the Public Printer the cost of such reproduction, and that amount shall be charged against the appropriation for engraving the illustrations for the annual report of the Director and for the monographs, professional papers, bulletins, water-supply and irrigation papers, and the report on mineral resources, and be credited to the appropriation for engraving and printing the geological maps of the United States.

At the present time the allotment for the cost of text and illustrations is \$215,000—\$150,000 for text and \$65,000 for illustrations. For the year 1905 this sum was nearly all used, and it is probable the same will be true this fiscal year 1906. In this connection it may be well to call attention to the fact that in the fiscal year 1903, when the reduction in the cost of publications was recommended and carried into effect, the total appropriation of the Survey, exclusive of the allotment for engraving and printing, was \$1,162,800. For the present fiscal year 1906 the total appropriation, exclusive of the allotment for engraving and printing, is \$1,545,882.30, an increase of \$383,082.30.

This increase has largely increased the activities of the Survey and the resultant amount of material transmitted for printing. The reason that no further increase has been requested for printing arises from economies exercised in various directions, which affect the cost of printing the publications.

It looks now as though the amount of matter submitted for publication for the current year and next year will be considerably increased, owing to the output resulting from the enlargement of the Survey. It is proposed to meet this by still further economies in various directions; notably, if Congress will permit a change in the law respecting the number of copies to be issued of the various publications. For instance, at the present time 13,000 copies of the annual reports are printed, exclusive of the usual number; I think 5,000 copies will answer all necessary demands, and that the cost of the report can be very much reduced.

## AMENDMENT RELATING TO ANNUAL REPORT.

The printing act of January 12, 1895, contains the following paragraph:

SEC. 91. The annual reports of executive officers shall be printed in the same type and form as the report of the head of the Department which it accompanies unless otherwise ordered by the Joint Committee on Printing. (28 Stat., 623.)

But the same act (sec. 73, p. 614) provides that there shall be printed—

Of the report of the Geological Survey, uniform with the preceding reports, 10,000 copies. \* \* \*

The preceding reports had been of royal octavo size, and the Director's report had been set in 12-point (pica) type.

The act of May 16, 1902 (32 Stat., 741), provided—

\* \* \* That hereafter the publications of the Geological Survey shall consist of the annual report of the Director, which shall be confined to one volume of royal octavo size. \* \* \*

The large form (royal octavo) and the large type (12 point) were features introduced many years ago by Directors King and Powell in the first and second annuals—the large form for the accommodation of maps and other illustrations, and the large type for the purpose of setting off the Director's report proper from the professional papers which were for many years included in the same volume.

In furtherance of the policy to reduce printing expenses, I intend to make the annual report of the Director briefer, and, in order that there may be no doubt respecting the legality of reducing the form and the type, recommend that the following proviso be inserted in the sundry civil bill:

*Provided*, That the annual report of the Director of the Geological Survey shall be printed in the same type and form as the report of the head of the Department which it accompanies, unless otherwise ordered by the Joint Committee on Printing.

*Provided*, That hereafter there shall be printed of the annual reports of the Director of the Geological Survey, in addition to the usual number, only the following number of copies: For the Senate, 500 copies; for the House, 1,500 copies, and for the Geological Survey 3,000 copies.

The annual report of the Director of the Geological Survey would then cease to be exceptional in form and style.

I recommend that of each series of Geological Survey reports there be printed the number of copies indicated in the following table:

*Number of copies of Geological Survey reports published (not including the "usual number") and number recommended to be published.*

Series.	Present distribution.	Distribution recommended.	Reduction.
Annual reports:			
To Senate .....	3,000	500	2,500
To House .....	6,000	1,500	4,500
To Geological Survey .....	4,000	3,000	1,000
Professional papers and bulletins:			
To Senate .....	1,000	500	500
To House .....	2,000	1,500	500
To Geological Survey .....	(a)	(a)	
Water supply and irrigation papers:			
To Senate .....	1,500	500	1,000
To House .....	2,500	1,500	1,000
To Geological Survey .....	(a)	(a)	
Monographs .....	(a)	(a)	
Geologic folios:			
To Congress (2 each) .....	972	972	
To libraries and depositories .....	2,500	2,700	
To geological Survey .....	(a)	(a)	

*a May 16, 1902.*—In editions as recommended in each case by the Director and approved by the Secretary of the Interior, but not to exceed 10,000 copies: *Provided*, That whenever the stock on hand of any of the reports of the Survey shall have become exhausted and the demand for the report continues, there shall be published, on the approval of the Secretary of the Interior, as many additional copies of the report as the Director of the Survey shall state will, in his judgment, be necessary to meet the demand.

The number of publications out to date is: Annual reports, 60 volumes (26 reports); monographs, 48 volumes (and 11 atlases); bulletins, 275; professional papers, 46; water-supply papers, 154; total, 589; geologic folios, 132; topographic maps, about 1,500.

If the proviso in regard to the annual report is attached to this appropriation the edition will be reduced 8,000 copies (from 13,000 to 5,000), which will reduce the expense greatly.

The CHAIRMAN. Have you any estimate from the Public Printer as to what the exact cost will be?

Mr. WALCOTT. No, sir. The cost of the last four annual reports was, approximately, \$12,000 each.

The CHAIRMAN. Is that the engraving or just the printing?

Mr. WALCOTT. The printing. I think this amendment would reduce the cost, approximately, to \$5,000; it might be somewhat more; I can not say. There will be less in the report, and it will be printed in a smaller form.

The Public Printer's report shows that the following is the total cost for all the publications of the survey for the years stated.  
[Reads:]

1900-----	\$161, 294. 75
1901-----	262, 303. 61
1902-----	326, 147. 18
1903-----	222, 847. 00
1904-----	183, 588. 01
1905-----	200, 537. 53

It will be seen by this that the total cost for the last year given by the Public Printer, 1905, is \$125,609.65 less than for 1902.

In the spring of 1902 I investigated the cost of publications of the Survey, and found that, under the existing law, it was very large. I then made recommendations in relation to legislation and restriction of publications, which were submitted to the Department and approved by the Secretary and passed by Congress, so as to become law and effective, on May 16, 1902. Under this act the cost of publications, as shown above, has been greatly reduced.

In 1902 the very large cost arose from the expense connected with 13,000 copies of the annual report, in the old form, consisting of several large volumes, all bound, with numerous illustrations; and at that time I recommended that the annual report be confined to one volume and that a specific sum be set aside or allotted from the Public Printer's fund for the engraving, illustrating, and printing of everything that came from the Geological Survey. Under the new law, approved May 16, 1902, in the next year, 1903, the amount charged is \$222,847. I suspect that something came over from the previous year, as it was more than the direct appropriation.

That legislation, which was recommended and which brought about this large reduction in cost of printing, was a provision that the edition should be in conformity with existing laws as regards the distribution by Congress and to libraries and through the superintendent of documents, but that the distribution to the general public should be determined in each case by the Director of the Geological Survey, subject to the approval of the Secretary of the Interior, the number to be that which it was thought would serve the particular purpose.

For instance, of a report on the Tonopah mining district, for which there is likely to be a very large demand, there will be 6,000 or 8,000 copies printed (the limit is 10,000). On the other hand, of a report consisting of computations or tables used by engineers or topographers, 500 copies will supply the probable demands, and only that many are printed. In other words, the edition is made to meet the demand as nearly as we can foretell it. In that way we have been able to save very largely in the cost of printing and to avoid an accumulation of documents. Under the law as it existed prior

to the enactment of the joint resolutions recently approved a stated number had to be printed for Congress in one edition.

These resolutions, as I understand them, provide that the Public Printer will determine, under rules and regulations established by the Joint Committee on Printing, and with the aid of the Congressional folding room officers, how many copies it will be advisable to print in the first instance for Congress. That will naturally result in a reduction of printing for Congress similar to the reduction for the Survey resulting from the law of May 16, 1902. We endeavored to work out that principle in 1902 for our quota of the Geological Survey publications, and the result has been very satisfactory; but the accumulation of publications of the Geological Survey in the document rooms of Congress was, we judged, beyond our proper control, seeming to require Congressional initiative.

The law of May 16, 1902, permitting the printing of reports in editions dependent on the probable demand, and of additional copies when stock is exhausted, has been satisfactory. This flexibility makes it possible to avoid a surplus in the Survey storage rooms and to obtain more copies when needed. Under this law additional copies of eleven reports have been ordered, as shown in accompanying table.

*Publications of which reprints have been ordered under law of May 16, 1902.*

Publication.	Title.	No. of copies.
Bulletin No. 176.....	Some principles and methods of rock analysis. (Two reprints.)	1 50
Bulletin No. 182.....	Report on economic geology of Silverton quadrangle, Colorado.	50
Bulletin No. 193.....	The geological relations and distribution of platinum and associated metals.	50
Bulletin No. 208.....	Descriptive geology of Nevada south of fortieth parallel and adjacent portions of California.	50
Bulletin No. 219.....	Ore deposits of Tonopah, Nev.	50
Bulletin No. 222.....	Catalogue and index of Hayden, King, Powell, and Wheeler surveys.	50
Bulletin No. 224.....	Gazetteer of Texas.	1 20
Bulletin No. 225.....	Contributions to economic geology for 1903. (Two reprints.)	1 00
Bulletin No. 271.....	Bibliography and index of North American geology, paleontology, petrology, and mineralogy for 1894.	1 00
Water-supply paper 56.....	Methods of stream measurement.	5 00
Water-supply paper 74.....	Water resources of California.	1 00

The CHAIRMAN. Have you statement there showing separately the cost of printing and binding of the annual report, the monographs, professional papers, bulletins, water-supply papers, and the report on mineral resources?

Mr. WALCOTT. I have all of the data which was prepared for the Joint Committee on Printing, and if you wish I will have a copy inserted in this statement covering the last three or four years.

*Amounts expended for Geological Survey publications, by classes, during the last three fiscal years.*

Publications.	1902-3.	1903-4.	1904-5.
Annual report.....	\$101,283.47	\$12,032.98	\$22,445.40
Monographs.....	26,369.57	28,940.02	11,700.00
Professional papers.....	34,249.35	53,744.20	28,911.00
Bulletins.....	22,208.27	39,482.56	57,800.00
Water-supply papers.....	25,772.31	32,374.56	64,980.00
Mineral resources.....	12,104.03	15,145.86	14,000.00

Additional cost resulted from preparation of 25 base maps, upon which progress of work shown from year to year. The cost of the last annual report (twenty-sixth) was —.

The CHAIRMAN. I would like very much to have it.

Can you obtain from the Public Printer a statement of how much the printing of your report will cost on the basis of a reduction in the number of volumes that you suggest, namely, 8,000 volumes?

Mr. WALCOTT. I will ask him for it.

GOVERNMENT PRINTING OFFICE,  
OFFICE OF THE PUBLIC PRINTER,  
Washington, D. C., April 27, 1906.

The DIRECTOR UNITED STATES GEOLOGICAL SURVEY,  
Washington, D. C.

SIR: In compliance with the request contained in your favor of April 26, I have the honor to inclose herewith itemized statement of the cost of your twenty-sixth annual report and the estimated cost of your forthcoming annual report, based upon information furnished by you.

Very truly, yours,

CHAS. A. STILLINGS, *Public Printer.*

Twenty-sixth Annual Report of the Director of the United States Geological Survey, 1905:

13,000 copies—

Composition .....	\$707. 07	
Electrotyping .....	177. 10	
Presswork .....	866. 25	
Folding .....	3, 148. 60	
Paper .....	1, 367. 44	
Binding .....	3, 105. 00	
		\$9, 371. 46
Illustrations .....		2, 231. 90
Total .....		<u>11, 603. 36</u>

Estimate for the Twenty-seventh Annual Report Director of the United States Geological Survey, 1906, based on 300 pages, same as Annual Report Secretary of the Interior, unbound:

5,000 copies—

Composition .....	\$770. 00	
Electrotyping .....	165. 00	
Presswork .....	150. 00	
Folding .....	667. 50	
Paper .....	176. 05	
Illustrations .....	1, 200. 00	
		3, 128. 55
Binding 5,000 copies in cloth .....		900. 00
Total .....		<u>4, 028. 55</u>

The CHAIRMAN. And could this appropriation be reduced in consequence of that reduction to that extent?

Mr. WALCOTT. For the year 1905 the appropriation was nearly all used, and probably the same will be the case for this year, 1906. Let me repeat that in the fiscal year 1903, when the reduction of cost of publications was recommended and carried into effect, the total appropriation was \$383,000 less than the appropriation for the current fiscal year; and the appropriations have been steadily increasing since 1902-3. There has resulted an increased output of publications connected with geological work, and of the maps and illustrations that go with them. As I have already stated, we have kept our printing within the appropriation by various economies, and I think that the continually increasing output will make necessary all of the appropriation asked. We did not use it all the past year. This is not an appropriation; it is an allotment from the public printing fund.

The CHAIRMAN. Well, it will have to be carried this year as an appropriation.

Mr. WALCOTT. As it is in the current law it is an allotment, not an appropriation.

The CHAIRMAN. For the next year it will be carried as an appropriation to be expended in the printing of the documents that are specifically enumerated.

Mr. WALCOTT. Under the new joint resolution, in transmitting any paper the Survey needs only to specify the number of copies it will require, first, for exchange and depositors, and, second, for free distribution; and the Public Printer will determine, under rules and regulations established by the Joint Committee on Printing, and with the aid of the Congressional folding-room officers, how many copies it will be advisable to print in the first instance for Congress. As I understand it, that places the responsibility for every copy that is printed—for all of the copies that are printed for the Geological Survey—upon the Director, and for the edition printed by Congress upon the joint committee.

The CHAIRMAN. In that connection, do you understand that you determine then the number of bulletins that are to be printed for the use of the Geological Survey, or does the Public Printer do that?

• Mr. WALCOTT. We state to the Secretary of the Interior how many copies in our judgment will be needed of each paper or publication that is transmitted to him, and then he transmits that to the Public Printer.

The CHAIRMAN. Under this system, do you think that there will be any reduction in the number of monographs, professional papers, bulletins, and water-supply papers?

Mr. WALCOTT. In general, it may be stated that the papers of the Geological Survey reach 2,750 libraries, educational institutions, and scientific exchanges. One thousand seven hundred and fifty of those that go to libraries are fixed by law. The libraries have been designated, and they go out from the superintendent of documents.

The other 1,000 copies, to educational institutions and scientific exchanges, are also provided for by previous law stating the number that can be distributed in that manner. The number available for free distribution varies with the document, being as low in some instances as 250, 500 to 1,500 copies being the number usually ordered for this purpose, the number in each case being based upon an estimate of the minimum demand. If the number ordered for distribution or sale are disposed of and the demand continues we are authorized to certify that fact to the Secretary of the Interior, and have another edition printed.

The distribution of documents of the Survey, except in the instance of those issued to libraries and educational institutions under existing laws, follows only on direct application; that is, it is necessary to individually file a request for a report before it will be forwarded. Each applicant is additionally required to restrict requests to the documents or several publications in which they have active interest. Indiscriminate applications are not given favorable consideration. It has not been deemed expedient to maintain a general or public mailing list for sending documents. Such lists soon outgrow their utility, besides establishing a class distribution.

Distribution of the sales publications follows upon actual purchase. All funds received from such sales are monthly deposited in the

Treasury of the United States, and an itemized statement of the number of each document sold and receipts therefor accompanies the deposit. A card-index record is kept of the distribution of all important documents, and duplication of distribution is prevented.

The detailed distribution is indicated in the following tabular statement:

Annual reports:

2,000 for distribution to scientific exchanges, libraries, etc.

2,000 for distribution to general public on application.

(Stat. L., vol. 20, p. 394; Stat. L., vol. 28, p. 614; Stat. L., vol. 32, pt. 1, p. 741.)

Monographs:

1,000 distributed to scientific exchanges, libraries, etc.

1,700 libraries and educational institutions, designated by members of Congress under acts 1887, 1895, through superintendent of documents.

250 to 1,350 for sale at cost of printing and binding. If remaining in stock five years after issue can be distributed free to libraries, etc.

(Stat. L., vol. 20, p. 394; Stat. L., vol. 24, p. 647; Stat. L., vol. 28, p. 621; Stat. L., vol. 29, p. 465; Stat. L., vol. 32, pt. 1, p. 741; Stat. L., vol. 32, pt. 1, p. 1146.)

Bulletins:

1,000 distributed to scientific exchanges, libraries, etc.

1,700 libraries and educational institutions, designated by members of Congress, under acts 1887, 1895, through superintendent of documents.

250 to 4,500 distributed upon application to general public, libraries, etc. (Bulletins printed prior to No. 153 formerly were distributed through sale.)

(Stat. L., vol. 20, p. 394; Stat. L., vol. 24, p. 647; Stat. L., vol. 28, p. 621;

Stat. L., vol. 29, p. 465; Stat. L., vol. 32, pt. 1, p. 741; Stat. L., vol. 32, pt. 1, p. 1146.)

Mineral resources:

1,000 distributed to scientific exchanges, libraries, etc.

300 distributed, upon application, to general public and collaborators.

(1,700 copies of numbers 1 to 10 supplied to libraries and educational institutions designated by Members of Congress.) (Nos. 1 to 10 were distributed through sale.)

Stat. L., vol. 20, p. 394; Stat. L., vol. —, p. 1161; Stat. L., vol. 32, pt. 1, p. 741; vol. 24, p. 647.

Professional papers:

2,000 distributed to scientific exchanges, etc.

1,000 to 3,000 distributed on application.

Stat. L., vol. 20, p. 394; Stat. L., vol. 29, p. 453; Stat. L., vol. 32, pt. 1, p. 741.

Water-supply papers:

2,000 scientific exchanges.

2,000 distributed upon application.

Stat. L., vol. 20, p. 394; Stat. L., vol. 29, p. 453; Stat. L., vol. 32, pt. 1, p. 741.

Biologic folios:

700 to designated depositories.

1,254 to libraries designated by members of Congress.

700 to foreign governments.

962 to Congress (each member 2 copies).

300 for official use, Library and Station.

914 (more or less) for sale.

Stat. L., vol. 28, p. 610; Stat. L., vol. 24, p. 647; Stat. L., vol. 28, p. 610.

621; Stat. L., vol. 29, p. 453; Stat. L., vol. 29, p. 752.

Topographic map sheets:

Designated depositories (Stat. L., vol. 28, p. 610; Stat. L., vol. 29, p. 752) 300

Foreign governments, U. S. Department of Interior, and others 500

etc. (Stat. L., vol. 29, p. 752) 500

To each member of Congress 2 copies (Stat. L., vol. 28, p. 610) 962

For official use of library and station (Stat. L., vol. 29, p. 701), not exceeding 300

For sale, as many as the Director shall deem proper (Stat. L., vol. 29, p. 752)

The CHAIRMAN. Under what authority are these monographs, professional papers, bulletins, and water-supply papers, that members of Congress receive for distribution, printed and distributed?

Mr. WALCOTT. Under the law of May 16, 1902. I have here a copy of the laws in force relating to publication and distribution of reports and maps of the Geological Survey from 1879 to the present time, which I will insert in the record. The canceled portions have been abrogated or superseded by later enactments and are shown by asterisks.

LAWS IN FORCE RELATING TO PUBLICATION AND DISTRIBUTION OF REPORTS AND MAPS OF THE GEOLOGICAL SURVEY.

1879. The publications of the Geological Survey shall consist of \* \* \* geological and economic maps illustrating the resources and classification of the lands. \* \* \* All special memoirs and reports of said Survey \* \* \* shall be published for scientific exchanges, \* \* \* and all literary and cartographic materials received in exchange shall be the property of the United States and form a part of the library of the organization; and the money resulting from the sale of such publications shall be covered into the Treasury of the United States. \* \* \* (Vol. 20, pp. 394-395.)

1882. \* \* \* And to continue the preparation of a geological map of the United States. (Vol. 22, p. 329.)

1887. *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That there shall be distributed from the number of special memoirs and reports of the United States Geological Survey now authorized by law one copy of every such publication to every public library which shall be designated to the Secretary of the Interior as follows: Two public libraries to be designated by each of the Senators from the States, respectively; two public libraries by the Representative in Congress from every Congressional district, and two public libraries by the Delegate from every Territory. Such public libraries to be additional to those to which the said publications are distributed under existing law. (Vol. 24, p. 647.)

1895. \* \* \* And of all publications of the Executive Departments not intended for their especial use, but made for distribution, five hundred copies shall be at once delivered to the superintendent of documents for distribution to designated depositories and State and Territorial libraries. (Vol. 28, p. 610.)

1895. Of the Report of the Geological Survey, uniform with the preceding reports, ten thousand copies—two thousand for the Senate, four thousand for the House, four thousand for distribution by the Geological Survey. (Vol. 28, p. 614.)

1895. Of the President's message and accompanying documents and of the annual reports of the Departments to Congress there shall be printed one thousand copies for the Senate and two thousand copies for the House. (Vol. 28, p. 615.)

1895. And there shall be distributed of monographs, bulletins, and reports of the United States Geological Survey now in possession of said Survey, being publications prior to the year eighteen hundred and ninety-four, one copy of every such publication to every public library which shall be designated to the Superintendent of Documents, as follows: Two public libraries to be designated by each of the Senators from the States, respectively; two public libraries by the Representatives in Congress from each Congressional district, and two public libraries by the Delegate from each Territory. Such public libraries to be additional to those which the said publications are distributed under existing law. (Vol. 28, p. 621.)

1895. *Provided*, That hereafter the report of the mineral resources of the United States shall be \* \* \* printed for each preceding calendar year as soon as compiled and transmitted for publication, and that the separate chapters on any given mineral product, such as iron, coal, building stone, and so forth, shall be printed as rapidly as transmitted for publication; that a pamphlet edition of any chapter shall be printed for distribution on the request of the Director of the Geological Survey, approved by the Secretary of the Interior, the size of the edition to be controlled by the importance of the mineral treated; \* \* \*. (Vol. 28, p. 960.)

1895. *Provided*, That hereafter \* \* \* copies of the monographs \* \* \* shall be published for scientific exchanges and for sale at the cost of paper, printing, and binding, and ten per centum added. (Vol. 28, p. 960.)

1896. *Provided*, That hereafter the reports of the Geological Survey in relation to the gauging of streams and to the methods of utilizing the water resources may be printed in octavo form, \* \* \* of which \* \* \* one thousand five hundred copies shall be delivered to the Senate and two thousand five hundred copies shall be delivered to the House of Representatives for distribution. (Vol. 29, p. 453.)

1896. *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That the provisions of section seventy-nine of "An act providing for the public printing and binding and the distribution of public documents," approved January twelfth, eighteen hundred and ninety-five, which section reads as follows: "There shall be distributed of monographs, bulletins, and reports of the United States Geological Survey, now in possession of said Survey, being publications prior to the year eighteen hundred and ninety-four, one copy of every such publication to every public library which shall be designated to the Superintendent of Documents, as follows: Two public libraries to be designated by each of the Senators from the States, respectively, two public libraries by the Representative in Congress from each Congressional district, and two public libraries by the Delegate from each Territory; such public libraries to be additional to those to which said publications are distributed under existing law." shall be extended to monographs, bulletins, and reports of the Geological Survey which were published during the year eighteen hundred and ninety-four, and to those which may be published in the future: *Provided*, That nothing herein contained shall be construed to interfere with the distribution of memoirs and reports, so far as the same is provided for by the joint resolution "To distribute copies of special memoirs and reports of the United States Geological Survey," approved March third, eighteen hundred and eighty-seven. (Vol. 29, p. 465.)

1897. *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That the Director of the Geological Survey be, and hereby is, authorized and directed, on the approval of the Secretary of the Interior, to dispose of the topographic and geologic maps and atlases of the United States, made and published by the Geological Survey, at such prices and under such regulations as may from time to time be fixed by him and approved by the Secretary of the Interior; and that a number of copies of each map or atlas, not exceeding five hundred, shall be distributed gratuitously among foreign governments and Departments of our own Government, to literary and scientific associations, and to such educational institutions or libraries as may be designated by the Director of the Survey and approved by the Secretary of the Interior.

SEC. 2. That one copy of each map and atlas shall be sent to each Senator and each Representative and Delegate in Congress, if published within his term; and that a second copy shall be placed at the disposal of each Senator, Representative, and Delegate. (Vol. 29, p. 701.)

1902. For the preparation of the report of the mineral resources of the United States, including phosphates, which report shall be published in one octavo volume, and as a distinct publication, the \* \* \* printing of separate chapters and mode of distribution of which shall be the same as of the annual report. \* \* \* (Vol. 32, pt. 1, p. 455.)

1902. *Resolved by the Senate and House of Representatives of the United States of America in Congress assembled*, That hereafter the publications of the Geological Survey shall consist of the annual report of the Director, which shall be confined to one volume of royal octavo size; monographs, of quarto size; professional papers, of quarto size; bulletins, of ordinary octavo size; mineral resources, of ordinary octavo size; water supply and irrigation papers, of ordinary octavo size; and such maps, folios, and atlases as may be required by existing law.

That hereafter the reports of the Geological Survey, except the annual report of the Director, shall be published in editions as recommended in each case by the Director and approved by the Secretary of the Interior, but not to exceed ten thousand copies.

That whenever the edition of any of the reports of the Survey shall have become exhausted, and the demand for it continues, there shall be published, on the requisition of the Secretary of the Interior, as many additional copies of the report as the Director of the Survey shall state will, in his judgment, be necessary to meet the demand.

That the bulletins and professional papers shall be distributed gratuitously and not sold; and that of the number published one thousand copies shall be delivered to the Senate and two thousand copies shall be delivered to the House of Representatives for distribution.

That the provision of law approved June eleventh, eighteen hundred and ninety-six, restricting the water-supply papers to one hundred pages and to editions of five thousand copies shall be, and hereby is, rescinded.

That the Director of the Survey shall transmit to the Library of Congress two copies of every report of the Bureau as soon as the first delivery to the Survey is made, such copies to be additional to those received by the Library of Congress under existing law. (Vol. 32, pt. 1, p. 741.)

1903. The Director of the Geological Survey shall hereafter distribute to public libraries that have not already received them such copies of sale publications as may remain on hand at the expiration of five years after date of delivery to the Survey document room, excepting a reserve number not to exceed two hundred copies. (Vol. 32, pt. 1, p. 1146.)

The CHAIRMAN. The reason why I ask is that during this session and in past sessions of Congress there has been a great deal of complaint on the part of members of Congress that they are receiving such a large quantity of bulletins and other papers from the Geological Survey for which neither they nor their constituents have any use; that they have looked upon this as an extravagant waste of money.

Mr. WALCOTT. That is corrected by this joint resolution; that is the object of the joint resolution. We fully realized it, and in many instances we have written to members of Congress and asked if they would not turn their quota over to us in order that we might distribute it where it is needed. For instance, in the West the water supply papers are wanted.

It has been stated in the daily papers that there are in various storehouses a large number of Survey water-supply and irrigation papers. Many of these, especially the earlier numbers, have considerable value; they are out of print so far as the Survey is concerned, but it is quite likely that hundreds of copies are in the Congressional storehouses. I have endeavored to get some of them to send to engineers, investors, and others who are continually asking for information, and occasionally, as a personal favor, I have secured a few of them and have thus been able to supply the needs of correspondents. Some of these older papers are literally worth their weight in silver, if not in gold, especially where the facts presented are needed in preparing evidence in suits at law or in working up details for development of water power.

When the Survey's quota is exhausted it is customary to refer persons asking for these publications to their member of Congress. He in turn, as a rule, refers the letter to me and frequently is considerably annoyed when I refer it back to him with the suggestion that he supply the constituent from his quota, apparently holding me responsible for not in some way getting the copies which are to his credit, but over which I have no control.

There are very few complete sets of the papers in existence. There is a steady demand from the large libraries for copies, so that they may have complete sets. Some of the larger libraries have been able to bring together complete sets by cutting up bound volumes of public documents sent to them. It is common, however, for engineers and others to write that they find difficulty in consulting these papers at the public libraries.

If the Survey could get the copies in Congressional document rooms and storehouses, a considerable number of complete sets could be made up and presented to libraries desiring them, and other copies could be given to correspondents who have for years been importuning me for them.

Mr. TAYLOR. Is that what you call irrigation papers?

Mr. WALCOTT. Irrigation papers. In the Appalachian region, of course, the papers relating to the geological condition of that region are wanted. Under this joint resolution the number to be printed for the use of Congress will depend upon the judgment of the Joint Committee on Printing.

The CHAIRMAN. The superintendent of documents.

Mr. WALCOTT. Yes; and the folding-room officials; and the number printed for the use of the Geological Survey will depend upon the judgment of the officers of the Survey, just as has been the case since May 16, 1902.

Mr. SULLIVAN. I have never had any time to study these reports myself, but they keep accumulating; they keep coming in; and I was thinking of conducting a little private investigation of my own to determine the fuel values of the reports of the Geological Survey.

Mr. WALCOTT. We will be most happy to have them turned over to us. We will place them where the people need them. I have made a more radical suggestion to the Printing Committee than this resolution implies, which is to the effect that all publications of the Geological Survey be delivered to the Geological Survey, and that members of Congress have lists of the publications submitted to them, and they indicate the distribution that they desire.

Mr. SULLIVAN. That is what ought to be done.

I see that \$415,000 is the amount of your estimates in this bill for publications. You have for preparation of illustrations of the Geological Survey, \$25,000; preparation of the report on mineral resources of the United States, \$75,000.

Mr. WALCOTT. That is not a printing item.

Mr. SULLIVAN. It is a part of the total cost of the publication for information.

Mr. WALCOTT. The collecting of the data is not the cost of publication.

Mr. SULLIVAN. What do you mean by the preparation of the report? Why isn't that a necessary part of the cost of publication?

Mr. WALCOTT. You might extend it further.

The CHAIRMAN. Mr. Sullivan's idea is that the report is prepared from material the collection for which is paid for out of some other appropriation.

Mr. WALCOTT. Oh, no. This \$75,000 pays for the collecting and compiling of the material and the preparation, or writing, of the report.

The CHAIRMAN. I thought every other expense of your department was found under some proper head in the bill. This reads, on page 145, "For preparation of the illustrations of the Geological Survey," the estimate for 1907 being \$25,000.

Mr. SULLIVAN. "For the preparation of illustrations of the Geological Survey, \$25,000; for the preparation of the report of the mineral resources of the United States, \$75,000; for engraving and printing the geological maps of the United States, \$100,000;" and

then, "for engraving and illustrations of the reports and other papers, \$65,000; and printing and binding reports on these other papers mentioned, \$150,000," making a total of \$415,000. I contend, on the face of this statement, notwithstanding your disclaimer, that this is apparently the appropriation for the publication of the information which your bureau is furnishing the public.

Mr. WALCOTT. The item "Preparation of illustrations for the Geological Survey, \$25,000," is to cover the preparation of the maps, sections, and other illustrations that go in the publications of the Survey. That item is for getting the material ready for publication; it is not an expense of publication.

Mr. SULLIVAN. I should think it a proper classification and expense of publication.

Mr. WALCOTT. It is an item for preparation of material for publication before it is transmitted to the Public Printer. From the item for the mineral resources, \$75,000, for the fiscal year ending June 30, 1905, there was paid for permanent salaries \$35,770; for per diem salaries, \$6,692. For 51 field agents and clerical assistants for field agents away from Washington, \$21,134.75; traveling expenses, \$7,550.

Mr. SULLIVAN. Have you 51 field agents?

Mr. WALCOTT. Yes; in collecting these data.

Mr. SULLIVAN. Those are per diem men, largely?

Mr. WALCOTT. Yes. The full statement is in the hearings. That money is expended in obtaining this information, and I should classify it in the same manner as I would that for obtaining the data for topographic maps of a mining district or for any other operation of the Geological Survey; but I should not classify it under publications.

Mr. SULLIVAN. Perhaps my classification is due to my ignorance of the situation. Let us find that out. Go back for a moment to page 145, "For the preparation of the illustrations of the Geological Survey, \$25,000."

Mr. WALCOTT. This is for preparation of illustrations for publications, but not the cost of publication after the publications are prepared.

Mr. SULLIVAN. I agree with you if you are using the word in its absolute sense, that it is not a part of the cost of actual publication. But it is a part of the charge to the United States which results from our system of giving the information to the public which is collected under your auspices.

Mr. WALCOTT. Certainly; if you put it in that sense it is correct.

Mr. SULLIVAN. In that particular sense is what I mean.

Mr. WALCOTT. In the case of mineral resources it is the collecting of information which is to be given to the public, as I understand it.

Mr. SULLIVAN. Have you got other employees now in the department investigating the mineral resources of the United States who are charged to an item in this bill other than this one?

Mr. WALCOTT. Yes; Mr. Holmes, in connection with fuel resources, is carrying on an investigation, you might say, of the mineral resources of the United States.

Mr. SULLIVAN. Do you say that these employees who are enumerated on page 146 are the employees of your department who make the original investigations in this special field, namely, the mineral resources of the United States, and that those same persons prepare

the report of the mineral resources of the United States? Reading it, I would assume that the investigations were made by another set of employees of the Survey, and that this set which is named on page 146 was appointed for a distinctly different purpose, namely, to avail themselves of the original investigation of the first set and incorporate their work in the report. That is my assumption. If I am wrong in that I wish you would say so.

Mr. SMITH. I would suggest, in clearing this matter up, that the Director furnish a statement of expenditures, say, of the year 1905, under this heading.

Mr. WALCOTT. I think that that has been quite thoroughly explained at a previous hearing.

Mr. SULLIVAN. Do you say in this statement—I have not had time to fully examine it—that certain employees are devoted to the original investigation, and certain others named here to the compilation and preparation of those investigations for purposes of reports of the information collected by the first set?

Mr. WALCOTT. I would say, in answer, that in the records of a previous hearing there is given a list of the employees and the cost of their services. In that there were given 16 employees—statistical clerks, statistical experts, stenographers, and clerks—that were employed in Washington in compiling the data which went into the reports. Now, in this same statement there are 51 field agents, who were engaged in obtaining data from original sources in the field; the traveling expenses and freight and miscellaneous expenses; also the salaries of two geologists who had charge of the work both in the field and in the office. Altogether, they make a sum of \$74,504.75 for the fiscal year 1905. The clerks that were employed here in the office, putting the data in shape to go to the Printer, might be considered as concerned with publication; but the same principle, it appears to me, would apply—

Mr. SULLIVAN. Right there, before you elaborate your theory, I want to say that I find here in the estimates that the salary roll for those in Washington who are used in connection with this report is \$30,760.

Mr. WALCOTT. That proportion, I should say, would be correct.

Mr. SULLIVAN. So that a portion of the balance of the \$75,000 is paid for traveling expenses of field agents, which field agents make original investigations, as I understand it.

Mr. WALCOTT. They go to the original sources of information to get it.

Mr. SULLIVAN. Even under my classification I would not include that charge with the charge for publication. So, therefore, \$30,000 of this \$75,000 is clearly and properly chargeable to publication. Leaving out, now, the question of \$45,000, or any fragment of it, the \$30,000 would go there.

Mr. WALCOTT. May I illustrate that further? If we sent out, in connection with the geological work, a geologist to make a survey of a mining district, he would bring all his data to the office, and there he would write them up and prepare them for publication. Isn't that a similar charge?

Mr. SULLIVAN. I should say that part of that expense is chargeable to original investigations and part to the report.

Mr. WALCOTT. That would necessarily be the case with almost every item of the appropriations; you can not avoid that. But as I look at it, the actual cost of what we ordinarily call "publication" is the cost after it reaches the Government Printing Office or our engraving division. That is the customary and commercial way of using the term.

Mr. SULLIVAN. I find the total charge to publication would be, making the necessary deductions, somewhere about \$375,000.

Mr. WALCOTT. The preparation of material and publishing?

Mr. SULLIVAN. Yes; of all publications.

The CHAIRMAN. I did not get clear in my mind the reason for the increases in the amounts of these two items on page 328, engraving illustrations, etc., and printing and binding the annual reports—\$17,000 in the first instance, in 1901, and \$20,000 in the other instance in the same year; and then, in 1903, \$65,000 in the first instance, and \$150,000 in the second instance.

Mr. WALCOTT. The reason for that is this: The cost of printing a considerable amount of our publications prior to 1902 was charged against the appropriation for Congressional printing and binding, and was not charged against the Geological Survey. I asked, in 1902, that all charges for publications of the Geological Survey be brought together, and that a limit be placed upon the amount expended. As I stated, that has resulted in a reduction of cost of printing between 1902 and 1905 of \$125,000.

The CHAIRMAN. In both items?

Mr. WALCOTT. In both items. The aggregate cost in 1902 as compared with 1905 is a reduction of \$125,000.

The CHAIRMAN. Then, we are to-day, Members of Congress and Senators, receiving these publications that are mentioned in this paragraph from the Geological Survey; and they are printed out of appropriations for the Geological Survey, and not in connection with the Congressional printing.

Mr. WALCOTT. And there is no charge against Congressional printing, as I understand the matter, for anything that is prepared by the Geological Survey unless it is something that is ordered by resolution and printed as a Congressional document.

The CHAIRMAN. How much of these two appropriations is expended in connection with printing that relates to the Reclamation Service?

Mr. WALCOTT. Nothing except a brief account of the work of the Reclamation Service, which is printed in the annual report of the Director of the Geological Survey. The annual report of the Reclamation Service is printed as a Congressional document.

The CHAIRMAN. The cost of printing for the Reclamation Service, excepting the annual report, is paid out of the reclamation fund.

Mr. WALCOTT. The annual report of the Reclamation Service contains numerous necessary maps and illustrations and all that is printed in relation to the operations of that Service.

The CHAIRMAN. And that is paid out of the Congressional appropriation for printing.

Mr. WALCOTT. I don't know how that is paid. Under the law the report is transmitted to Congress by the Secretary of the Interior.

The CHAIRMAN. I thought it was paid for out of the Congressional appropriation.

I receive a certain number of copies of the Congressional edition, the result of concurrent resolution of Congress, but not as Director of the Geological Survey.

The CHAIRMAN. You receive a certain number of copies of the annual report printed by Congress?

Mr. WALCOTT. Of the Reclamation Service?

The CHAIRMAN. Yes. How many do you receive?

Mr. WALCOTT. It depends upon the resolution each year, which provides for the publication. I think only 2,000 copies of the last report were published. The rest are distributed through Congress.

Mr. SMITH. Do you know any reason why the report of the Reclamation Service should not be charged to the reclamation fund—that the printing of it?

Mr. WALCOTT. That does not come within my jurisdiction.

Mr. SMITH. I wanted to get any suggestions you might have on the subject.

Mr. WALCOTT. Congress orders the report printed, which means the usual number, I suppose. The Reclamation Service is not a part of the Geological Survey.

Mr. SMITH. A portion of those reports go to your office. Do you understand that you pay for that out of your appropriation, or that you in any way pay for that out of the Congressional appropriation?

Mr. WALCOTT. As I understand it there is nothing that is printed as a result of the work of the Geological Survey, or transmitted for publication by the Geological Survey, and paid for from any fund whatever, excepting these appropriations carried in the sundry civil appropriation bill.

Mr. SMITH. You have a quota yourself of the reports of the Reclamation Service. I speak of that because you have given me some.

Mr. WALCOTT. I will put it in this way: The Reclamation Service is absolutely distinct from the Geological Survey.

Mr. SMITH. We understand that.

Mr. WALCOTT. And as Director of the Reclamation Service the report is made to the Secretary, the reclamation fund being in charge of the Secretary. The reclamation act provides that the annual report shall be transmitted to Congress.

Mr. SMITH. I thought perhaps that if we came to the subject of that is charged for Reclamation Service, that you might be in a position to give us some light as to how those things are charged.

#### OKLAHOMA TOWN-LOT FUND (AGAIN).

(See also p. 688.)

The CHAIRMAN. I have a matter that I want to inquire about which does not relate to the Geological Survey or the Reclamation Service. You have been directed, Mr. Walcott, have you not, by the Secretary of the Interior to supervise the expenditure of a certain fund created under the act of March 3, 1901, from the sale of town lots in Oklahoma, to be disposed of under the direction of the Secretary, known as the Oklahoma town-lot fund?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. Can you tell the committee how that fund has been administered and expended?

Mr. WALCOTT. I received instructions from the Secretary of the Interior to take charge of the building of the waterworks, sewers, court-houses, jails, schools, and bridges in certain towns in Oklahoma, the expense being charged to this town-lot fund. The plan of operations was submitted to the Secretary and approved, and under that an engineer was detailed and has taken charge of those works and carried them forward during the past three years. They are now nearly completed. When the vouchers are transmitted for various expenses, they are approved by the engineer, go to the office, and are transmitted to the Secretary of the Interior, after which we have nothing further to do with them.

The CHAIRMAN. Your responsibility ends with the transmission of the vouchers for the work which is done under your direction?

Mr. WALCOTT. The disbursements are made in the Interior Department. They are not made by our disbursing officer. The vouchers do not come back to us.

The CHAIRMAN. This fund arises from the sale of town lots belonging to the Government of the United States in the Territory of Oklahoma?

Mr. WALCOTT. That is my understanding; yes, sir.

The CHAIRMAN. What is the aggregate amount of that fund, do you know, or what was it?

Mr. WALCOTT. I believe, approximately, \$700,000. I do not recall exactly from memory.

The CHAIRMAN. Is that fund paid into the Treasury of the United States?

Mr. WALCOTT. I do not know.

The CHAIRMAN. Who would be likely to be able to advise the committee as to where that fund is?

Mr. WALCOTT. The Secretary of the Interior has full charge. I believe.

The CHAIRMAN. Where are these disbursements audited?

Mr. WALCOTT. That I do not know.

The CHAIRMAN. If they are audited at all, they would be audited in the Interior Department, would they not?

Mr. WALCOTT. The accounts of the Geological Survey are transmitted and audited in the Treasury by the Auditor for the Interior Department. I do not know anything relating to the method of handling the accounts of this fund.

The CHAIRMAN. Do you know how much of this fund, which amounts approximately to \$700,000, has been expended?

Mr. WALCOTT. I do not, sir.

The CHAIRMAN. Your responsibility, however, I understood you to say, ends when the work is done and the vouchers for the payment of the work have been transmitted to the Secretary of the Interior?

Mr. WALCOTT. Yes, sir.

The CHAIRMAN. That is the end of your service in connection with that matter?

Mr. WALCOTT. We are acting directly under the authority and direction of the Secretary of the Interior, and all contracts are for amounts approximately to \$700,000, has been expended? completion of the work and to the expense, and those vouchers are transmitted through our office to the office of the Secretary.

FRIDAY, April 27, 1906.

## DUPLICATION OF STATISTICS CONCERNING MINERAL RESOURCES.

**STATEMENT OF MR. GEORGE E. ROBERTS, DIRECTOR OF THE MINT, ACCOMPANIED BY MR. DAVID T. DAY, CHIEF OF DIVISION OF MINING AND MINERAL RESOURCES, GEOLOGICAL SURVEY.**

The CHAIRMAN. The item we want to discuss is at the bottom of page 145 of the bill.

Mr. Day and Mr. Roberts, we have discovered, in the consideration of the item for the preparation of the report on the mineral resources of the United States, that the Geological Survey and the Bureau of the Mint are both engaged in the collection of statistics showing the annual production of the precious metals, and that there is quite a discrepancy between the statistics published by each of these Bureaus.

It is the desire of the committee, if possible, to avoid duplication as far as this work is now being duplicated by these two Bureaus, and to ascertain if it is practicable to make the statistics regarding the annual production of the precious metals more valuable than they are now by reason of these discrepancies. We have asked you gentlemen to come here for the purpose of ascertaining that and giving us information as to whether this can be done. Have you gentlemen had any conference before coming here in regard to the subject-matter of the inquiry?

Mr. ROBERTS. Yes, sir. Doctor Day and myself have gone over the matter in the last few days, and had done so previous to that. I am satisfied, from my own side of the case, that up to within the last year or two the Bureau of the Mint has made the official figures on the production of gold and silver for about thirty years, and in connection with them we have collected the statistics of the production of gold and silver all over the world, and we have also made the official figures for the consumption of the precious metals in the industrial arts.

Our method of collecting these figures for the United States has been to distribute the producing States and Territories among the heads of our western offices. For instance, the superintendent of the mint at Denver has collected the figures for Colorado. The mint at San Francisco collected the figures for California and Alaska. Our office at Carson City, Nev., made the figures for Nevada. The assay office at Helena, Mont., made the figures for Montana and also Utah, we not having any office in Utah. The office at Seattle made the figures for Washington and Oregon.

Now, these local officials made a survey of the mining districts and something of a canvass of the mining camps, but relied more particularly on the returns of the local reductioners, stampers, cyanide plants, and so on, and their figures of the deposits of gold in the offices of the Service. Then the Bureau here in Washington received reports from the more important refineries of the country. I might state that the mines ordinarily ship their products to some customs

smelter and the smelter makes the shipment to the refinery, where the bullion is finally refined and separated from silver, and so on, so that we had about three checks on it in that way.

Now, the Geological Survey, in developing their work upon the production of minerals and metals, have naturally come up against our work, and to some extent they have overlapped, although within the last year or two the Geological Survey have used the figures of the Mint. If their work in gold and silver involved an additional force or additional machinery for collecting it, I should still be inclined to insist that the work should be left entirely to the Bureau. But, as a matter of fact, in their canvass, in the system they have adopted for collecting statistics for copper and lead, they cover practically the same field we do in the field work—that is to say, in the canvass of the mining districts; and our duplication is simply to that extent.

The CHAIRMAN. Your work is also duplicated in the publication of these reports?

Mr. ROBERTS. That is true. That has only been within the last year or so. That obviously should be avoided. It discredits both reports to have two sets of figures made, even though they are not very far apart. In fact, they are quite confirmatory of each other.

Mr. SMITH. They are far apart as to the States. The aggregate difference would amount to more than \$4,000,000 a year. If you are below the Geological Survey on one item and above it on another you offset the errors and you get a small aggregate of difference.

Mr. ROBERTS. That might arise from errors as to the combined product, although it would accord as to the total of the country. There might be some controversy as to which State it originated in or came from.

Mr. SMITH. There might be a difference of \$700,000 in a State.

Mr. ROBERTS. In the State of Nevada that is due to the fact that there was great mining development in Nevada that year.

Mr. SMITH. A difference of \$700,000 to a State.

Mr. ROBERTS. There is in the State of Nevada. I think, to some extent, that is perhaps due to the fact that there was great mining development in Nevada that year, while the transportation facilities were poor, and our figures being based chiefly upon what actually came upon the market, the silver and gold that actually was deposited at the mints out of the smelters and refineries. Their figures being based on a mine-to-mine canvass might include considerable that had not reached the reduction works. There always would be some variation in those figures. Doctor Day and I in considering the matter have reached this understanding which we are going to undertake to carry out; that they should do the field work entirely, we to canvass the camps, and that we should continue our system of collecting figures from the reduction works.

But they will turn their figures ultimately over to me, and that they will be taken into account and harmonized as much as possible; and one set of figures only will be published as the official estimate of the production of gold and silver in the United States.

Mr. SMITH. And that only published once and by you.

Mr. ROBERTS. They would publish it, of course, in their volume of mineral resources. Their volume on mineral resources includes all the metals and minerals, and they naturally would want to say something about gold and silver.

Mr. SMITH. Now, this material comes in in fragments. It has to be collected, analyzed, and all that. Are they to continue to analyze and make the computations based upon their reports before turning them over to you, or turn them over to you simply as they come in?

Mr. ROBERTS. I assume, in order to make an effective comparison, that we would have to have the figures in detail—that is, the producers' figures—because we shall have figures from the reduction works, and if there is a discrepancy, as there no doubt will be, we shall want to analyze it and determine where it is. In that way the two reports will be a check upon each other.

Mr. SMITH. What I wanted to get at was whether, with your understanding with Doctor Day, you will get reports from agents also out in the field collecting data as to lead, copper, gold, and silver, and when they come to make the transmittal to your office without further labor upon the gold and silver reports they will simply transmit to your office the original information, so that no more time will be devoted in the Geological Survey to computations based upon those figures, or whether we are going to have them analyzed twice, once in each bureau.

Mr. ROBERTS. Well, their form of report consists of a report from each mine operated, in which he says he produces so much lead, copper, silver, and gold. You understand that in such States as Utah, Arizona, and Nevada these metals are produced in conjunction, to a great extent—that is, from the same mines—and, of course, that is the strength of the argument for the Geological Survey in taking up this work, and with a force that I feel obliged to concede.

Mr. SULLIVAN. Your department began to do this work before the Survey?

Mr. ROBERTS. Oh, yes; we have been doing it a great many years. Of course the production of gold of the United States practically all goes to the Mint. There is less than 1 per cent of it that does not eventually go to the Mint. That is the easiest, readiest, and quickest way of realizing upon it. There is no charge for coinage.

Mr. TAYLOR. It reaches the Mint because it is all sold to the Mint?

Mr. ROBERTS. It is the quickest and easiest way to dispose and realize on it.

Mr. TAYLOR. You think that the difference in the returns would be the same as in all cases where the producer loses all and the final result is obtained. In a sale of the gold it is estimated, so much gold—you don't make any estimates; you have bought it; it is an actual thing, and it is a difference in favor of the producer which exists in all commodities that are sold. In the general result the lost gold is upon the producer in the real amount. For instance, a man gets his gold from the mine; he comes to you to sell it. You are not going to pay for more gold than he has, and he must stand the loss. You don't pay on an assay.

Mr. ROBERTS. Yes; we make an assay ourselves, and pay exactly for what we get.

Mr. TAYLOR. Then I can not understand why it is that you have a difference between the reports of the Mint and the reports of the Geological Survey.

Mr. BROWNLOW. The final result, as I understand it, Mr. Director, is very near the same.

Mr. ROBERTS. There is not very much difference when you consider the total volume of it.

Mr. SMITH. The assembling of statistics is a work of very considerable labor, is it not; and it involves expense?

Mr. ROBERTS. Do you mean the handling of them after they have been received from the field agents?

Mr. SMITH. Yes; the assembling of their figures and the establishment of computations upon the basis of their figures. That is a burden of considerable expense to the Government, isn't it?

Mr. ROBERTS. Not as to those metals.

Mr. SMITH. It is not?

Mr. ROBERTS. No.

Mr. SMITH. How many men are employed in your office in preparing the report on gold and silver in the United States as distinguished from the rest of the world?

Mr. ROBERTS. Well, there is not one man the year round.

Mr. SMITH. Will it not be equal to one man the year round?

Mr. ROBERTS. No, sir.

Mr. SMITH. Of course, your figures from abroad are taken from foreign publications?

Mr. ROBERTS. Yes; they are official figures.

Mr. SMITH. So you do no work on them at all?

Mr. ROBERTS. Practically none.

Doctor DAY. The reports are so identical that whether it is that much more or that much below is a matter of indifference. It would be impossible for either one to make a report of the same nature again and not make fully as great a discrepancy as there is between the two reports.

Mr. SMITH. There was only 5 per cent on silver?

Doctor DAY. No, sir; there is \$1,400,000—

Mr. SMITH. That difference was that the Mint reported more than you did by nearly 5 per cent?

Doctor DAY. Yes, sir.

Mr. SMITH. In order that there may be no misunderstanding in the future, if I understand it, even if there is no legislation, you have now reached a distinct understanding with the Director of the Mint whereby he will abandon his field work at the mines. You will do that in connection with your investigations of copper and other mineral resources, return the results of that to the Director of the Mint, and then you will carry these figures with his return from the mines themselves and from smelters and all other sources of information; and compile the figures, thus fully showing the results to be expected in both bureaus?

Doctor DAY. Yes.

Mr. SMITH. So, if there is nothing done by legislation, there will be no conflicting figures in this matter.

Doctor DAY. It is understood that there has been no conflicting figures published, except for one year. It was a wise thing for each Bureau to determine just what it could do by itself and see how the results would come out. It was not the intention to publish conflicting reports. The Director of the Mint and I have been getting together on this thing for the last five years, and as the result of that have what you might call useful duplication, in certain cases, in order to see how the work could best be brought together.

We have arrived, as shown in that typewritten statement, at a method of cooperation by which there is no duplication and by which this extremely difficult and important kind of statistics on gold and silver can be so collected as to give probably a much more valuable result than is obtained in any other country.

Mr. SMITH. If this work is done as you now contemplate, it will be more accurate than either the work of the men or the Geological Survey—by comparison of the two systems?

Doctor DAY. It must be. I think the statement made by the Director of the Mint is as full and clear as I can make, and I have nothing further to suggest.

I would suggest, gentlemen, that that joint statement from the Director of the Mint and myself be substituted for the statement in regard to that same table, which was submitted by the Director of the Geological Survey two or three days ago, and which has not been printed.

Mr. SULLIVAN. I want to say, also, in explaining the confusion of the committee, that when this statement was submitted there was nothing apparent on its face, nothing said in connection with it which indicated to us that that production of the nine States was not the total production of the United States. We discovered that this morning from you.

Mr. SMITH. None of us happened to note that. It did not cover all of the gold-producing States, but only the principal ones.

---

TUESDAY, *April 17, 1906.*

# **STATEMENT OF MR. CHARLES D. WALCOTT, DIRECTOR OF THE GEOLOGICAL SURVEY.**

(See also p. 571.)

## **TESTING FUELS.**

The CHAIRMAN. Now, on page 150, I observe that you do not include, or did not intend to include, in the next fiscal year, when these estimates were made up, the item for the continuation and completion of the investigation of the structural materials of the United States, and also the continuation and completion at St. Louis of the analyzing and testing of the coals, lignites, and other fuel substances of the United States. Why was that omitted when this estimate was made up?

Mr. WALCOTT. The appropriation for the current year for the fuel investigations was \$202,000, and for the investigation of structural materials \$12,500. These appropriations were available at the beginning of the fiscal year and the work was progressing under them when the estimates were made up. We did not know what the extent of the results that would flow from those investigations would be, and I decided, in view of that, to wait until we had had at least six months or, if possible, more time to see how successful the new course of experiments would be. The result of that work has been satisfactory, as far as I am able to determine from the judgment of

engineers and others; and knowing that, I submitted to the Secretary of the Interior, as a result of a resolution that was introduced in the Senate, a report upon this investigation which was printed as Senate Document No. 214.

In that report, and in answer to the question in the Senate resolution as to the amount of money that will be needed, I submitted the estimate or statement of what would be needed, on page 2, for the continuation of the investigation of the coals, lignites, and other fuel substances of the United States, \$200,000, and for the removal of the plant and necessary equipment, \$50,000. I will state that the work has been carried on for two years upon the exposition grounds at St. Louis, where the site was furnished free and many facilities given for the work. The time that we might occupy this site was extended to July 1, 1906, by which time the city authorities said that they would like to have the buildings moved from the grounds. On page 14 is an estimate for the investigation of materials used in building and construction work, \$100,000. In this document is well stated the results of the investigations and the reasons why, so far as we could judge, they should be continued.

In the investigation of the fuels we are endeavoring to complete by the end of the present fiscal year, the general work provided for in the current appropriation, namely, the making of tests as to the comparative fuel values of coals and lignites collected in different parts of the United States. The results of these investigations have been highly gratifying to the officers of the Geological Survey, and appear to have met with the general approval of both the users and consumers of coal throughout the country.

In connection with these investigations so many new and important problems have been opened up, which promise results of such great value to the people in all parts of the country, that I can not do otherwise than urge the importance of continuing these investigations for a period of years.

The people of the United States expended for fuels during the past year about \$1,500,000,000. If the results of these investigations can save to the country even 1 per cent of this expenditure the investment must certainly be regarded as a good one.

For the investigation of structural materials the current appropriation is too small to enable us to do the work for which there has been a constantly increasing demand throughout the year.

The amount of money being expended by the Government itself in its public buildings and its great engineering projects, like the isthmian canal, and through the different branches of the Army and Navy, will aggregate from \$40,000,000 to \$50,000,000, and, in addition to this, the amount expended by the different cities and States and by the people of the country in general engineering and building work during the past twelve months has aggregated more than \$1,000,000,000.

In all of this work, both by the Government and by the people in all parts of the country, building materials are being used that are but little understood, and the general testimony of the engineers bears out the statement that these materials are being used wastefully and, in many cases, with great uncertainty.

In order to simplify and avoid duplication in these investigations by the Government, the War Department, the Navy Department, the

Isthmian Canal Commission, and the Supervising Architect's Office of the Treasury Department are all cooperating with the Geological Survey with a view to having the results of these investigations become immediately available for use by all these branches of the Government.

If I may so suggest, the Architect of the Treasury Department has a great deal to do with building material and the use of material, and he possibly could state to the committee what he thinks of this investigation and the probable result from it. I think Colonel Ernst, the engineer on the Panama Commission, has knowledge of structural materials that will enter into the work, and it would be well to ask him what he thinks of this line of investigation, because from the letters and from the statements that have come to me from engineers it is admitted that they are of great importance. The German Government has built large testing works, and they are carrying on extensive investigations. Doctor Holmes can tell us more of that, because he has seen the actual work going on. It appears to me to be an excellent use of money in getting practical results that will be of permanent service and value not only to the Government itself, which is expending these appropriations for its own work, but to the people of the country at large.

Now, on the question of construction in reclamation projects under way, and which work is in charge of the Director of the Geological Survey, we find it constantly necessary to be testing cements. We find that the concretes and the cements differ and that we do not know why they differ; and that we are at fault at times, and quite seriously, in not knowing the cause of the weaknesses that occur in the cement work or the concrete work. Of course, concrete is one of the things that these proposed tests should take up. Doctor Holmes has had charge of the fuel-testing plants and cement and structural testing material, and I think he can tell you about it and answer questions much better than I can.

The CHAIRMAN. So far as the Government is consuming coal, using building and other structural material, there is, from the standpoint of the Government, a necessity for these various tests being made for the purpose of securing the best and most economical fuel and the best and most economical material in the work that it is doing, but outside of the use of fuel and structural material which the Government is using in the building of its public buildings and in the Reclamation Service to which you have referred, and outside of the consumption of coal by the Departments of the Government, wherein is there any governmental necessity for these tests?

Mr. SCLIVAN. Including also the Government public lands containing deposits of coals and lignites.

The CHAIRMAN. I did not enumerate all.

Mr. WALCOTT. You have summed up the benefits that would go directly to the Government, yet they would go to the individual or corporation.

The CHAIRMAN. Would not then the private interests incidentally derive all the benefit that they can reasonably ask the Government to give them resulting from the investigations that the Government is making, the tests it is making in connection with fuel and material that the Government is examining itself; and is not that incidental

benefit practically all that the public would ask the Government to furnish?

Mr. WALCOTT. You take the subject of the testing of coals and lignites and peats. In the testing of coals the Government wishes to know what the heat units, steam-producing units for its ships, are; and also the nature and the heat values of the coals used in its public buildings, etc.

The CHAIRMAN. We have now in the Navy a coal-testing plant which the officers of the Navy informed this committee at this session of Congress was testing all the coals that were produced, and when coal is discovered they examine it, make a thorough test, giving the heat units and all of the chemical parts of the coal in order to determine its value as a fuel.

Mr. WALCOTT. Mr. Chairman, the naval officers have expressed great interest in our more extensive investigation of fuel resources of the country, and for the Bureau of Yards and Docks we are investigating problems connected with the storage of coals, spontaneous combustion of coals, etc. But I realize that the amounts expended by the Government itself for fuels is limited to a few million dollars.

As a people we have a coal supply that nature has given us, and if we can make that coal supply go two or three times as far as it normally would under existing conditions, the benefit goes to the nation, to the people as a whole, and, of course, to the Government; and in the tests thus far carried on in connection with this coal at St. Louis, I think it has been abundantly demonstrated and accepted by engineers and experts that the energy of coal which can be obtained has been clearly shown to be two and one-half times what it was four years ago. Mr. Holmes can tell you more of the details of that.

The CHAIRMAN. Let me ask you right there, does that increased energy result from the utilization of more of the heat units than we have been utilizing heretofore in the consumption or means of consumption of fuel?

Mr. WALCOTT. It is in the making of gas and using it through the gas engines in the form of fuel instead of burning the coal under a boiler to produce steam. That is wherein the benefit comes. That is being successfully developed, and Mr. Holmes will explain it.

The CHAIRMAN. The economy comes largely from the mechanical appliances that are used to-day as compared with the mechanical appliances used in the generation of power in the past.

Mr. TAYLOR. Do you mean also from the mechanical appliances that are used resulting from the investigations made at St. Louis?

Mr. WALCOTT. I should like to, if I may, have Doctor Holmes explain those technical parts of it. I can do it, but not half as well as he can. Our greatest work has been in showing how new processes could be made use of in burning our various coals and lignites for heat, power, and light. This applies also to lignites and peats, which he will explain.

Mr. SMITH. When you say that the power obtained is two and one-half times greater, is it also obtained at a greater expense?

Mr. WALCOTT. I am speaking second-handed. The results through the steam plant and through the gas plant are approximately the same in cost, except a slightly increased cost of installation for the producer gas plant.

Mr. HOLMES. The operating expenses are about the same.

Mr. SMITH. In the practical operation that came with the methods devised and which were utilized as a result of these experiments, you would not get two and one-half times as much power from a ton of coal; and in obtaining that power, will you not have a greater expense than before?

Mr. HOLMES. In installation the expense would be 50 or 75 per cent more for the gas engine than for the steam plant, but not in operating expense.

Mr. SMITH. Fifty per cent or 75 per cent more of expense of installation?

Mr. WALCOTT. That will be a small factor, however, in a period of years.

The CHAIRMAN. Can you or Mr. Holmes give us the relative amount of fuel consumed in this country for domestic purposes, in the homes, and such places of heating, aside from the amount consumed for power?

Mr. HOLMES. It is estimated at about one-third used for domestic purposes.

The CHAIRMAN. And two-thirds for power?

Mr. HOLMES. Yes, sir; power and light.

Mr. SMITH. You say the installation in order to obtain two and one-half times as much power costs 50 per cent to 75 per cent more. What is the length of life of the new installation as compared with the old?

Mr. HOLMES. That would be difficult to say, because the new installation is a new field; and the increased cost of installation is due to the limited number of gas engines and producers at present manufactured. Ten years ago there was hardly a gas engine of any considerable size made in the United States. Five years ago there were no very large gas engines, and within three years, at the time of the St. Louis Exposition, there were but few companies manufacturing 250-horsepower gas engines in the United States.

Mr. SMITH. Can you, from your knowledge of the facts of the heat applied in various forms—your scientific knowledge—tell whether this apparatus will last as long or longer than the old?

Mr. HOLMES. I should judge from our experience of eighteen months that the new gas-engine installation would last at least as long if not one and one-half times longer than the old forms of boilers and engines. Our installation consisted of new boilers, a new steam engine, and a new gas engine. The boilers have had to be reset and a number of repairs have been made, and these expenses of upkeep have, I believe, exceeded those required by the gas plant and engine.

Mr. SMITH. When you say boilers, do you refer to the old-fashioned type of boilers?

Mr. HOLMES. No, sir; the modern water-tube boiler.

Mr. SMITH. I wanted to ascertain the net gain.

Mr. HOLMES. The gas-engine people claim that the increased cost of installation is hardly more than 25 per cent, but I would not accept their estimate of it, as I think it too low, though doubtless this gas-power installation will cheapen as the equipment is improved and more extensively manufactured.

Mr. SMITH. I wanted to know whether the use of gas engines was more trying on the machinery.

Mr. HOLMES. Not at all.

Mr. WALCOTT. I would like at this time to file some statements and estimates in connection with the expenditures and investigations in testing fuels and structural materials.

The CHAIRMAN. Very well.

Following are the statements:

*Estimated expenditures for testing fuels.*

Appropriation asked for .....		<u>\$200,000</u>
Operating expenses:		
Field work .....	\$10,200	
Washery investigations .....	19,840	
Chemical investigations .....	26,060	
Boiler or steam production .....	45,200	
Producer gas investigations .....	41,720	
Briquetting investigations .....	12,700	
Coking investigations .....	12,200	
General and office expenses .....	32,080	
Total .....		<u>200,000</u>
Additional equipment:		
For briquetting .....	\$30,000	
Rent on 1 gas producer, special 500 horsepower (value, \$15,000) .....	3,000	
Rent on 1 new generator (value, \$5,000) .....	2,000	
Removal expenses .....	15,000	
Total .....		<u>50,000</u>
Grand total .....		<u>250,000</u>

FUEL INVESTIGATIONS.

*Estimated expenditures, 1906-7, by subjects.*

Field work:			
Services—			
1 geologist .....	\$2,400		
1 chief inspector .....	1,800		
2 assistant inspectors, at \$1,500 .....	3,000		
		<u>\$7,200</u>	
Travelling expenses .....		3,000	
			<u>\$10,200</u>
Coal washing investigations:			
Services—			
1 expert in charge .....	\$2,400		
2 assistant experts, at \$1,500 .....	3,000		
2 expert laborers, at \$720 .....	1,440		
		<u>6,840</u>	
Travelling expenses .....		2,000	
Additions and changes in equipment .....		7,500	
Storage bins for coal .....		3,500	
			<u>19,840</u>
Chemical investigations:			
Services—			
3 chemists, at \$2,500 .....	\$7,500		
1 assistant chemist .....	1,800		
5 assistant chemists, at \$1,500 .....	7,500		
3 assistant chemists, at \$1,200 .....	3,600		
3 laborers, at \$720 .....	2,160		
		<u>22,560</u>	
Chemicals and apparatus .....		3,500	
			<u>26,060</u>

## Boiler and steam-producing investigations:

## Services—

1 superintendent of tests	\$2, 000
1 chief engineer	3, 000
1 chemist	1, 800
2 observers (at \$1,800)	3, 600
2 observers (at \$1,500)	3, 000
3 observers (at \$1,200)	3, 600
2 computers (at \$1,500)	3, 000
1 expert fireman	1, 200
1 fireman	900
1 assistant fireman	700
	<hr/> \$22, 800

Rent on 1 new (\$5,000) boiler, 500 horsepower	1, 000
Rent on 1 induced mechanical draft (\$3,000)	800
Resetting of existing boilers	2, 500
Rent on 1 new boiler, special construction (value, \$10,000)	2, 000
Setting of same	1, 500
1 special long combustion chamber	4, 000
Mechanical stokers for 2 boilers	2, 000
Special instruments of precision	4, 000
Miscellaneous appliances for weighing and pumping water, measuring temperatures, etc	2, 000
Rent on 2 boilers now in use	1, 000
Traveling or field expenses	1, 600
	<hr/> 22, 400
	<hr/> \$45, 200

## Producer gas investigations:

## Services—

1 superintendent of tests	2, 000
1 chief engineer	3, 000
1 chemist	1, 800
3 assistant engineers (at \$1,800)	5, 400
6 observers (at \$1,200)	7, 200
4 computers (at \$1,200)	4, 800
6 producer operators (at \$720)	4, 320
1 gas-engine man	2, 400
2 assistant gas-engine men (at \$1,200)	2, 400
	<hr/> 33, 320

## Additions and changes in equipment—

Special foundations and supports for heavy machinery	2, 500
Miscellaneous equipment for measuring temperatures for gas analyses, etc	5, 000
Rent on special brake for measuring and regulating power of engines (value, \$4,000)	500
Travelling or field expenses	400
	<hr/>

Total ..... 41, 720

## Briquetting investigations:

## Services—

1 engineer	\$2, 500
1 assistant engineer	1, 800
1 chemist	1, 800
1 general assistant	1, 200
4 laborers (at \$600)	2, 400
	<hr/> \$9, 700

## Additions and changes in equipment—

Rent on 1 briquetting machine	1, 800
Miscellaneous appliances for handling and testing briquettes	1, 200
	<hr/>

Total ..... 12, 700

## Coking investigations:

## Services—

1 expert.....	\$2,500
1 assistant.....	1,200
1 assistant.....	1,200
3 laborers, at \$600.....	1,800
	<u>\$7,300</u>

Traveling or field expenses..... 1,200

Equipment for special temperature measurements..... 1,500

Equipment for studying coke and by-products..... 2,200

Total..... \$12,300

## General and office expenses:

## Services—

1 expert in general charge.....	\$4,700
1 mechanical engineer.....	3,000
1 accountant.....	2,400
1 stenographic assistant.....	1,500
1 stenographic assistant.....	1,200
1 stenographic assistant.....	1,080
1 messenger boy.....	300
1 keeper of records.....	1,800
2 watchmen, at \$720.....	1,440
Timekeeper and custodian of equipment.....	900
1 machinist.....	1,200
1 electrical engineer.....	1,800
1 assistant electrical engineer.....	1,200
1 head carpenter.....	1,000
6 laborers, at \$600.....	3,600
Incidental expenses.....	2,640
	<u>\$29,760</u>

Traveling expenses..... 2,320

Total..... 32,080

Grand total..... 200,000

*Appropriation for structural materials.*

## Expenditures to April 1, 1906:

Salaries.....	\$61,924.00
Equipment.....	3,000.00
Rental of extra equipment.....	150.00
Travel and field expenses.....	1,215.00
Supplies.....	585.00
Freight and haulage.....	611.00

Total..... 12,465.00

Unexpended balance..... 34.00

Amount of appropriation..... 12,500.00

*Summary of expenditures for fuel investigations to April 1, 1906.*

Services.....	\$77,594.00
Labor.....	22,444.00
Field and travel.....	5,610.00
Rent of engines and other equipment (paid to March 1, 1906).....	8,504.00
Freight and hauling.....	681.00
Construction, washing, etc.....	282.00
Briquetting equipment.....	3,000.00
Supplies and materials.....	25,594.00

Total paid out..... 143,689.00

Estimated outstanding obligations..... 15,000.00

Estimated expenses for April, May, and June, 1906..... 36,000.00

Total..... 194,689.00

Appropriation..... 202,000.00

Balance for contingencies..... 7,311.00

*Estimate of expenses for investigation of structural materials.*

<b>Services:</b>		
1 engineer .....	\$3,500	
1 engineer .....	3,000

<b>Total</b> .....		<b>100,000</b>

**STATEMENT OF MR. J. A. HOLMES.****INVESTIGATION OF FUELS AND STRUCTURAL MATERIALS.**

MR. SULLIVAN. I have two questions to ask which I think are fundamental in their nature. One of them is whether these investigations have now proceeded to the point at which it is a governmental policy to cease them and allow the business interests of the country, those interests which are most affected, to continue the investigations, and, secondly, if we have not arrived at that time, for how long a time should these investigations by the Government extend, and how much money is likely to be appropriated to that end. I want to get your idea on all of those things before we take up the matters in this report in detail, to see how much of a field we are going to enter.

MR. HOLMES. In reply to the first question, I will say that there are two lines of investigation which we have opened up concerning which I think that question may be answered in the affirmative.

MR. SULLIVAN. What lines of investigation?

MR. HOLMES. The lines are with reference to the briquetting of anthracite coal dust and with regard to the testing of certain of the coals as to their relative fuel values. There are certain limited areas where we feel we have made tests enough to determine the relative values of the coals in those particular regions; but there are a number of other coal fields in the Middle States, and some of those in the Eastern States even, together with the coal in the lignite fields of the South and West, which you might say we have barely touched.

MR. SULLIVAN. On those two items which you mention, namely, the briquetting of anthracite coal dust and testing of the relative fuel values of coals, you have spent how long now in investigating those conditions in the districts you have mentioned?

Mr. HOLMES. We have carried that work on, you may say, incidentally, or as a part of the other work, for the past eighteen months.

Mr. SULLIVAN. And you would proceed in the future along in the same way, as merely incidental to doing other work?

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. What is the proportion of these two fields you have touched—the fields to be investigated—the percentage? I ask that in order to get some idea of the length of time it will take.

Mr. HOLMES. I will explain that it is not possible to estimate it in that way.

Mr. SULLIVAN. If you have some better way of investigation, very well. I am only trying to get at some measure of the time to be employed.

Mr. HOLMES. That will depend upon our success in solving the problems upon the investigation of which it may be deemed wise to enter. Take the question of briquetting anthracite coal dust; that investigation was concluded in a comparatively short time. I presume the total amount done upon that was done within five weeks. We have since said to inquirers that it was now up to private interests to develop such industries as might properly be based upon our results. If we investigate further any special phases of this subject, this would be incidental to other work and because some new general question has been raised.

Mr. SULLIVAN. Next assuming the same rate of progress and the same degree of success in the investigations which are to take place, what do you say as to the length of time that shall be occupied in making these particular investigations you have mentioned?

Mr. HOLMES. The solutions of the problems which I believe it is proper for the Government to investigate in connection with the fuel industries of the country are so many and so difficult that it would not be possible to place a lower estimate than ten years for the work.

Mr. SULLIVAN. That is for the investigation of the relative values of fuel and for the briquetting of anthracite coal dust?

Mr. HOLMES. No; for the briquetting of bituminous and lignite coals and for the solution of the general fuel problems which may be regarded as basic in character, inasmuch as they serve as a basis for the industries of the country, and general in their application in that upon their proper solution depends the efficient production of heat, power, and light for the people in every State.

Mr. SULLIVAN. Do those two particulars cover the entire field of the investigation of fuels?

Mr. HOLMES. Yes, sir. Of course there are limited quantities of gas and petroleum used for power, and incidentally, as that work progresses, it is the purpose of the Survey, if this work is continued and it is thought wise by Congress to go into that branch of work, to test, while we are testing these, the relative fuel values of other substances—for instance, petroleum, peat, waste forest products, such as sawdust, and the by-products obtained from coals, oils, wood, and other substances.

Mr. SULLIVAN. They would run on the plan of the other investigations and would take no longer time, would they?

Mr. HOLMES. No. Of course to say that a certain investigation can be finished within a given date is risky. No one knows how soon

something may be discovered to make a part of that investigation unnecessary, because of the problem having been solved. Every investigator's reputation is at stake in securing the solution of these great industrial problems as quickly as possible.

#### INVESTIGATION OF STRUCTURAL MATERIALS.

(See also pp. 618, 643, 656, 666.)

Mr. SULLIVAN. This proposed investigation covers other items—cement, sand, and clay, and so forth?

Mr. HOLMES. That is under the head of structural material.

Mr. SULLIVAN. Can you give us any measure of time which will be employed in such investigations, measuring what remains to be done by the same yardstick that measures what you have done?

Mr. HOLMES. I believe that the same length of time would be necessary to investigate thoroughly the building-material resources and how they can be utilized most efficiently, but it might be done in less time.

Mr. SULLIVAN. You would complete all of these investigations, or you would hope to, in ten years?

Mr. HOLMES. Yes, sir; bearing in mind the explanation just made under fuel investigations. Many of these problems we hope to solve in less time. Others might, of course, require a longer time.

Mr. SULLIVAN. Now, you ask this year for \$100,000, and \$250,000 for investigating fuel.

Mr. HOLMES. Two hundred thousand dollars for the regular investigation and \$50,000 for extra expenses.

Mr. SULLIVAN. And that, you think, would be a fair average of appropriation for ten years in which to conduct these investigations?

Mr. HOLMES. I think it would be regarded as a sufficient sum. There is no idea, so far as I know, in anyone's mind to ask for a continually increasing appropriation for fuel investigation, as is the custom in the development of some other lines of work.

Mr. SULLIVAN. It is \$350,000 this year?

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. You can expect in round numbers, then, that some three million dollars would be required for completing these investigations?

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. You have stated that investigations have been conducted by the Government to a sufficient length to warrant a cessation of them in two, I think you said, coal fields of the country.

Mr. HOLMES. Two of the smaller coal fields and limited portions of two of the larger coal fields.

Mr. SULLIVAN. Now, have your investigations of the values of structural materials been conducted to such a point as to make it good policy for the Government to cease that investigation in any particular place?

Mr. HOLMES. I think not, Mr. Sullivan. The appropriation for the last year was so small that it was exceedingly difficult to accomplish any definite results—that is, along many different lines we have gotten some results which are not only of great value within

themselves, but they have very greatly interested the architects and the engineers of the country. That is one reason why they have so urgently asked that the appropriation be increased, so that the work could be extended to a larger field. By investigations and inquiries we have shown that much of our so-called knowledge on this subject is really misinformation and absolutely misleading, and the only way in which we have escaped from disastrous consequences of this unbusinesslike policy has been in the use of excessive quantities of expensive materials. This is one reason why our public buildings cost so much.

The CHAIRMAN. The first item on page 150 of the bill is "For the continuation and completion on or before July first, nineteen hundred and six, of the investigation of the structural materials of the United States." That is the current law, making an appropriation for this fiscal year. Did you, at that time, or did anyone connected with the Geological Survey at the time this estimate was made and the appropriation made for it by Congress, estimate that the work would be completed by July 1, 1906?

Mr. HOLMES. We estimated, Mr. Chairman, that there was a certain work which could be completed within that time, and that work will be completed within that time.

The CHAIRMAN. You say the estimate at that time was based on the idea that that particular work could be completed?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. State what that particular work was that you were engaged in, and which at that time you thought would be completed by July 1, 1906.

Mr. HOLMES. For two years preceding that date at which this work was done, the Geological Survey had been collecting certain materials for testing purposes—materials which were suitable for the manufacture of cement, and materials suitable for use as crushed stone, with or without sand and gravel to mix with that cement. It was the purpose of the Director, in asking the continuation of that appropriation, to ask that these materials which have been collected or brought together should be tested during the current year as to their character and their behavior with cement in concrete, etc., and that is the work upon which we have been largely engaged in connection with this subject.

The CHAIRMAN. Was that investigation instituted by the Geological Survey at the instance of any Department of the Government that was using material such as you asked an appropriation for in order to make the investigation?

Mr. HOLMES. At that time it was not. It was an investigation of materials which the Geological Survey had selected in connection with its regular field work, in part from Alabama, in response to a resolution, which I think had passed, introduced by Senator Morgan, for the investigation of the materials in that particular State, as to whether they might be suitable for the manufacture of cement. And a number of similar requests had been made during the preceding year from people in the different States to know whether the materials which they found in those States would be suitable for the manufacture of cement.

The CHAIRMAN. Then this investigation, with respect to materials

for building and construction materials, was instituted upon the instance or initiative of States, or the people in the States, and not at the instance of any Department of the Government having occasion to use such building materials?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. Since that time, and during this investigation, in the making of these tests have you been requested by the Supervising Architect of the Treasury Department, or any other Department of the Government, to make tests of building materials to be used in any public building or in any other public work of construction that the Government is carrying on?

Mr. HOLMES. We have had several different requests for information about these building materials, which information we were unable to give, as the facts were not known. And we have been notified by the Supervising Architect of the Treasury that if, during the present session of Congress, provision was made for additional public buildings, it would be of great importance to him, or to his Department, to get the results of the investigations we were now conducting and were planning for the immediate future. Requests for the results of pending investigations have also come from representatives of the Isthmian Canal Commission and the Navy Department.

When this particular work was begun a year ago, Mr. Chairman, I believe there had not been a public building bill for some time. Am I not correct in that?

The CHAIRMAN. I do not think you are. They are building public buildings practically all the time. I do not know whether there has been a new authorization of public buildings within the last two years, but the authorizations made prior to that time included many public buildings the construction of which has begun within the two years.

Mr. HOLMES. What I had in mind particularly was the inauguration of plans for new buildings. Of course for buildings under way the questions as to materials have already been settled. We have had a number of requests which have come in from time to time during the past few years from the Supervising Architect's Office for information about materials used in construction.

The CHAIRMAN. What class of materials?

Mr. HOLMES. Principally building stone.

The CHAIRMAN. The Supervising Architect's Office of the Treasury Department has heretofore conducted tests of building stone or other building material, has it not?

Mr. HOLMES. Not that I know of. So far as I know, the tests which have been made for his purposes in the past several years have been made through the people connected with the Geological Survey or the National Museum.

The CHAIRMAN. Then the Geological Survey, prior to this time, has been making tests of material in connection with the Treasury Department and in connection with the construction of public buildings, has it?

Mr. HOLMES. Making examinations rather than tests. Until two years ago the Geological Survey had no equipment for testing the strength of materials such as the crushing strength of stone or concrete or their behavior under fire, etc.

The CHAIRMAN. I know from personal knowledge that the Treasury Department, through the Supervising Architect's Office, has for a number of years been testing the tensile strength of stone—

Mr. HOLMES. Yes—

The CHAIRMAN. Stone which was offered for use in connection with the construction of public buildings. They must, therefore, have had some appliances—necessary appliances—for making such tests.

Mr. HOLMES. Mr. Chairman, most of the tests which have been made in this country, testing the strength of stone, have been made by using small cubes, 1 or 2 inches square; and I do not know of any architect or engineer to-day who really believes those tests represent the actual crushing strength of stone as used in actual practice. Most of the tests made in the past have given us imperfect or misleading results, for the reason that they were made under abnormal conditions.

The CHAIRMAN. Do you know of any local board of public works or public construction in any of the cities that have appliances for making these tests?

Mr. HOLMES. Not for such elaborate tests, nor tests using such large-sized materials. No other laboratory in the country has undertaken or is equipped for undertaking such investigations as we have inaugurated and are preparing for.

The CHAIRMAN. Are the tests which they make sufficient to meet the requirements of the public in the localities in which these local buildings are being constructed?

Mr. HOLMES. The architects and engineers, Mr. Chairman, say they are not; and I may say, in part response to your remarks, and to make clear what I want to say in explanation, that there has been appointed by the several engineer societies of the country during the past three years a standing committee to bring together the results of all tests which might be found satisfactory in giving correct information, which the architects and the builders in the country really need.

That committee has gone very carefully over the tests which have been made in one way or another in this country during the past twenty years; and they have come to the conclusion, as expressed by themselves, that hardly any of these tests have any value as giving specific information to the architect or the engineer which is of service to him to-day. That statement was reiterated within the past three months by the American Institute of Architects; and both officially and individually the architects have expressed a doubt as to whether any of the information which is tabulated to-day for use is really of any service at all.

The CHAIRMAN. Is it not a fact, Mr. Holmes, that the means of making these tests are well known to engineers, architects, and scientific men—that is, how to make the tests is known to all of you?

Mr. HOLMES. There is a good deal of difference of opinion, Mr. Chairman, about that; and one of the works of this joint committee of engineers and architects that I spoke of has been to devise some uniform methods of tests so as to get uniform results. I am not a member of that committee, but in 1904 I had an opportunity of seeing a good deal of the work they tried to do, and I know that in order to get some possible uniformity of results they distributed materials to

a number of institutions in the country which had equipment of one kind or other for making certain tests, and the results obtained by half a dozen different institutions which had small laboratories for that purpose differed so much that they were unable to get anything out of the results that they were willing to publish for use of engineers and architects to-day.

The CHAIRMAN. Is it not a fact that there are many educational institutions in this country that are equipped for making these tests?

Mr. HOLMES. Not the tests which they say ought to be made. There are a great number of institutions which have a certain amount of equipment for making small tests of a certain kind, and it was to those institutions in the past two years that certain quantities of original materials have been distributed in the hope that certain definite results might be obtained. I happen to know, for example, that a lot of materials, specimens of the same cement and same stone and same steel and sand, were distributed to not less than six different laboratories, located at six different educational institutions in this country; and in the past year we have tried to help the engineers to tabulate the results of their investigations of that material and ascertain whether it had any value for use and information; and the conclusion arrived at even by the engineers connected with those institutions is that the larger part of this data can not be used in the future.

During the past year we tried to establish a basis of comparative work in order to avoid the necessity of asking for any large increase in the appropriation for this work. We wanted to see whether this work could not be arranged for in some other way. We distributed not only the materials, but we actually sent one of our men to the different laboratories, to be there during the time when the tests were being made, and we are now tabulating those results. But the tests were made largely by untrained students and they are only a little more satisfactory than the results of preceding years; and we have been forced to the conclusion, and I think the engineers have, that the way just mentioned is not a feasible way to make the tests that are needed to-day. We are to-day dealing largely with new building materials. The building industries are beset with new problems. Our investigations of the past and present years have indicated the possibility of increased efficiency and decided lessening of cost in all construction work by a more intelligent use of materials available in different parts of the country.

It is not proposed, in connection with this present investigation of the Survey, to simply test this or that stone for its crushing strength when it is a fairly good, solid stone, because most of the stones of the country, like our splendid granites, are strong enough, and everybody knows it; but many otherwise good stones are defective in some particular, weakening on exposure, discoloring on account of foreign mineral matter, etc. In many cases stone for public buildings are carried half across the continent because of a lack of knowledge concerning the quality or quantity of local stone deposits. During the last four years the changes in the character of the materials used in buildings have been so great, and the materials coming into use are so new as building material, that no adequate tests have been made of them as to their strength, or as to what temperatures they will withstand, or

how best they can be protected against fire, or against collapse in case of fire.

The CHAIRMAN. Will you mention what new materials you refer to?

Mr. HOLMES. The principal new material is concrete and reinforced steel concrete.

The CHAIRMAN. Has that investigation gone far enough to demonstrate the practical utility of material of that kind in the construction of buildings of enormous size?

Mr. HOLMES. If I may quote these engineers again, Mr. Chairman, instead of expressing a personal opinion about it, they have said to us in our public meetings, emphatically, that they have no data which they can use. They do not know how much cement to use. They do not know how much cement ought to be put on the steel beams or columns in order to prevent their collapse on account of heat. They do not know the proportions of steel and sand and stone to be used in order to furnish a certain strength; and furthermore it is known that the proportions of these various materials would differ in different localities, where the local materials differ. It is not economy, for instance, to carry crushed granite and crushed limestone from New York State to Iowa or any considerable distance if local materials near at hand are available.

The CHAIRMAN. Is it not a fact that men can be induced to invest in the construction of a very large building, 15 stories high, made out of concrete or reinforced cement, and is not that fact the best practical evidence of the fact that the test has gone to that extent that they no longer have any doubt of the practicability of the use of that kind of material?

Mr. HOLMES. There is no doubt, Mr. Chairman, about the practicability of using that material, but they do not know whether they are using half enough or twice too much.

The CHAIRMAN. Would they not naturally want to know that before they would authorize the construction of a large building that would involve the expenditure of many hundreds of thousands of dollars, or millions perhaps, like the building in Cincinnati, where they have constructed a 15-story building?

Mr. HOLMES. Yes, sir; the Ingalls Building.

The CHAIRMAN. Would it not seem natural that these men must be reasonably well satisfied that that material is cheaper and superior before they would authorize the construction of such a building out of reenforced cement? And if the investigation has gone to that extent, to demonstrate its practicability, is it not probable that the other things you mention will, as a matter of course, be naturally worked out, because it is all more or less a matter of evolution, is it not?

Mr. HOLMES. Yes, sir; but this "working out" by ordinary experience is costly and accompanied by great risks. Take any one of the few reenforced concrete buildings in existence to-day. No one knows what strain they will bear nor how they will behave under fire action.

The CHAIRMAN. For all practical purposes the investigation into the matter of utilization of concrete and reenforced cement has gone far enough to satisfy the public that that material, from the standpoint of economy and utility and practicability, is equal, if not superior, to other materials?

Of course they may not have reached the scientific results as yet as to how much concrete they should build around an iron column to protect the column in case of fire, and that requires, of course, experience in order to determine it; but it is not absolutely essential to a demonstration of the main fact, to determine whether this is more economical or equally good for practical purposes as any other building material. The inquiry I had in mind was whether it was necessary to continue the investigation any further, from the Government's standpoint, or the scientific standpoint, than to demonstrate to the public that certain materials which are not now in use can be used safely and economically.

Mr. HOLMES. If the investigation had gone that far, Mr. Chairman, I should say, yes, it was time to stop that particular line of investigation. But it has not. There are many and important factors of uncertainty in the use of these building materials, involving both economy and safety.

The CHAIRMAN. I stood beside a fifteen-story building in Cincinnati, completed and occupied, and inside of another twelve-story building in course of construction, built out of cement, and I understand they are building these large structures of reenforced concrete all over the United States.

Mr. HOLMES. They differ greatly in the character of the work being done. I know of less than a dozen such buildings in the United States. In all of them there are large factors of uncertainty as to their behavior under fire and other conditions.

The CHAIRMAN. But is that the business of the Government, to educate the public in uniformity of character in work and material?

Mr. HOLMES. Not except to determine the limits of safety and factors of economy and efficiency in the Government's own work. For example, leave the public out of consideration for the moment entirely and take the work of the Government itself. I may say a considerable part of this present agitation is a result of recent conferences with the Supervising Architect of the Treasury Department, the engineers in the Bureau of Yards and Docks in the Navy Department, and others connected with Government work. The Supervising Architect says frankly that, being held responsible for the plans of Government buildings, he does not know under what conditions nor to what extent it is safe to use the reenforced concrete construction or other new forms of construction which, if practicable, would greatly reduce the cost of public buildings. He realizes, as do other architects and engineers, that these factors of safety, efficiency, and economy can only be determined by such investigations as are now proposed or by a long and much more expensive and dangerous experience.

I asked him if it was a safe estimate that these investigations might save 1 per cent of the cost of these buildings for the Government, and he thought that was entirely safe. If we can demonstrate the absolute safety of this new system of construction by these investigations, the saving in the cost of construction will be more than 10 per cent. The Supervising Architect will be glad to come before this committee and testify if invited to do so; but being a public officer he could not come unless he was invited.

The CHAIRMAN. Who was this?

Mr. HOLMES. The Supervising Architect. He mentioned the fact that there are in Minnesota (his own State) practically only two fairly well-known granite quarries. The many others that might be developed have not been investigated.

Many times he said the question was up to him as to whether he should use this or that stone, and that he had no way of solving that problem without appealing to the Geological Survey; and this whole problem of concrete and reenforced concrete was one concerning which he along with other engineers and architects felt very uncertain; and they did not know whether, in the case of a great fire, or under unusual load, etc., it would collapse or not.

The CHAIRMAN. Is there any building material that will withstand a great fire, such as we had over in Baltimore two or three years ago?

Mr. HOLMES. That is one of the things that we are trying to determine.

The CHAIRMAN. Were not some of those buildings in Baltimore that were burned constructed of granite?

Mr. HOLMES. Yes; and the granite peels in the presence of great heat, and the probabilities are that in a building constructed of reenforced concrete, if it has a thin stone face of granite or marble or other stone, even if that were to peel off, if the steel framework in the concrete is sufficiently embedded in concrete the framework of the building would not then collapse, but whether it would not be so damaged as to necessitate its being taken down and replaced is an unsettled question.

Take, for instance, the steel columns of a building to-day, which support not only the walls, but the frame: Nobody knows what the strength of steel is at any temperature except the ordinary atmospheric temperature. Nobody knows what steel will do at a temperature of 500 degrees, or 800 degrees, or 1,000 degrees. Nobody knows what load it will carry at these temperatures; nor what thickness of concrete will protect the steel from collapsing at these and higher temperatures.

That is one of the chief factors that we want to try to determine in this investigation, even if you limit it to Government buildings. This is to determine at what temperatures steel will give way under a certain given weight, and how far it may be protected from that giving away by being embedded in concrete, or terra cotta, or other fireproofing materials.

The CHAIRMAN. Do you know how many large buildings have been constructed with concrete or reenforced cement in the United States in the last two years?

Mr. HOLMES. I do not, sir. I know of about one dozen. There is one large building now being constructed in New York that I am watching with a good deal of interest.

The CHAIRMAN. Did the construction of this building commence before you began this investigation or since?

Mr. HOLMES. That one, since our work began; several others were begun before that; as, for instance, the Cincinnati building.

The CHAIRMAN. Your investigations were begun, then, as the result of the use of reenforced cement in the construction of those large buildings?

Mr. HOLMES. Yes, Mr. Chairman; but in one way we do not claim

to have discovered the use of reenforced concrete; but we thought we saw in this and some other materials great possibilities in the way of cheapening the construction of buildings if these materials can be used safely under different conditions, and on this behalf we have planned these investigations; but prior to that, for several years, the Geological Survey was investigating statements in a general way with regard to the possibility of cement manufactured from stone in the United States, and making general inquiry with regard to cement, and what was done in regard to cement in other countries. A certain amount of educational work in that way has been done by the Survey for a number of years, and, of course, engineers and others, keeping in touch with what went on, made application of the knowledge that had been gained.

The CHAIRMAN. I was going to ask if engineers and architects in this country did not have other means of informing themselves with respect to various building materials used here, outside of the investigations that are going on in the Geological Survey?

Mr. HOLMES. Certainly.

The CHAIRMAN. What means have they?

Mr. HOLMES. Simply the means of finding out what takes place in other countries from the engineering and architectural journals, and, of course, they also keep in touch in that way with what takes place in this country. But data obtained from other countries can not safely be applied in this country, because of differences in the nature of the local materials used.

The CHAIRMAN. In making these tests, have you been working around in different cities in connection with the construction of public buildings in cities?

Mr. HOLMES. None at all. All our testing work is concentrated at St. Louis. But we send men at intervals in connection with their examination of materials out to other places. For example, we examine materials, so far as we can, in the great building centers, and when one of our men goes to Cincinnati to examine building materials that are being used in construction work in that vicinity his orders are to examine buildings in process of construction in that neighborhood generally.

The CHAIRMAN. Are the persons for whom the examinations are made charged with that expense?

Mr. HOLMES. No, sir; these examinations are not made for private individuals, but for the general public.

The CHAIRMAN. That is done at the expense of the Government?

Mr. HOLMES. Yes.

The CHAIRMAN. For instance, you have recently sent a man to Minneapolis in connection with street paving there to investigate materials that are proposed to be used for street paving. Who is paying that man's expenses?

Mr. HOLMES. That paying must be done by the Office of Good Roads Inquiry.

The CHAIRMAN. In the Geological Survey?

Mr. HOLMES. No; the Agricultural Department.

The CHAIRMAN. I understand the Geological Survey had a man up there not long ago.

I was so informed by a Member of Congress from my State, that there was a man from the Geological Survey testing paving materials that were offered for use in connection with the paving of streets there, and I was wondering by what authority the Government was sending out its employees for the purpose of advising citizens as to the best material to be used for purposes of that kind.

Mr. HOLMES. I do not know anything about that at all, Mr. Chairman. I did not know that one of the Survey men had been there at all.

The CHAIRMAN. I do not know; I was so informed by Mr. Stevens, of St. Paul.

Mr. SULLIVAN. What is the nature of the examination made by one of your agents who goes to a city to inspect building materials? Is it anything more than a superficial inspection?

Mr. HOLMES. The man sent to New York, for example, would not examine the materials in New York except incidentally, but would find out the materials most used in that part of the country for building purposes and would determine their characteristics and see whether there is anything else not being used that is superior to them, or whether there is any way in which that material could be improved. But we never do that in response to an application from any individual. I do not know of any case where we have done that in response to the application of a city, even.

Mr. SULLIVAN. Or in response to the application of a society?

Mr. HOLMES. No; I do not know of any of that.

Mr. SULLIVAN. What is it that moves the Department in that regard?

Mr. HOLMES. It is a general request for information as to how building materials can be used most effectively; and in order to answer those inquiries we have not tested simply limestone from one locality, but—

Mr. SULLIVAN. I am simply speaking of examinations made by one of your men in a city. I understand no tests are made by such a gentleman, chemical or otherwise, of those materials, but simply a superficial examination of them.

Mr. HOLMES. Samples of those materials are shipped to the laboratory.

Mr. SULLIVAN. He collects samples and sends them?

Mr. HOLMES. Yes.

Mr. SULLIVAN. I see.

The CHAIRMAN. In any laboratory you could treat this material and make this same investigation, could you not?

Mr. HOLMES. There are certain tests, Mr. Chairman, which can be made, as you say, in almost any laboratory. But I know of no laboratory in the country that is adequately fitted for it.

The CHAIRMAN. Then this is only a question of adequately fitting up a laboratory, and of securing men of sufficient knowledge and intelligence to make the tests; and as the Government is better able to afford the expense of constructing a great laboratory and employing these people, it is a desire that arises from the engineers and architects to saddle this expense on the Government. Is that the fact?

Mr. HOLMES. Yes; bearing in mind the fact that the Government itself is in the greatest need of information of this kind, and they

think this should be done by the Government because it needs it itself, and then let them have the benefit, too.

Mr. SULLIVAN. On the principal that a hungry man should buy ten turkeys, and eat a portion of one of them and distribute the other nine to the community? That seems to be the principle it works out on.

Mr. HOLMES. If I may try to answer that, Mr. Chairman—

Mr. SULLIVAN. Is not that exactly so? 'The Government erects such buildings. You say there is a necessity, in order to ascertain the value of the materials that enter into those buildings, that we make tests of the materials that enter into the buildings of all the country. That is so, is it not?

Mr. HOLMES. If I may try to make that point plain, Mr. Sullivan—it is a little difficult, because of the relation between this work and the general work—the Geological Survey has for its work, of course, the examination of the mineral resources of the country, including building materials and things of that sort.

Mr. SULLIVAN. Now you are not going to explain, but to confound two things, in my judgment. I agree with you that it is the function of the Department to ascertain the extent and character of the mineral resources of the country. That is conceded. But so far as determining the value of structural materials is concerned, the Government's function should be restricted in its exercise to those solely which enter into its public buildings, and there would be no need of going further. That would not require, it seems to me, any very long time for an examination or any very great outlay.

As I read your report, for instance, to develop my idea further, if some citizen in a remote section of the country thinks he has discovered a material which will be valuable in the construction of buildings, he invites the attention of the Department to that material. The Department, as I understand, does not go haphazard about the work, but goes first to that part of the country, to ascertain if there are deposits there of that material sufficiently large to make the examination of practical value if it should be ascertained that the material is particularly useful commercially. Having determined that there is a sufficiently large deposit of the thing to make it of value commercially, you then ascertain whether or not it is particularly valuable as structural material. That is so, is it not? Is not that the method of procedure?

Mr. HOLMES. That is so, if we proceeded that way.

Mr. SULLIVAN. Is not that the way you proceed?

Mr. HOLMES. No.

Mr. SULLIVAN. Tell us how you do proceed.

Mr. HOLMES. We have not responded to any application of that sort whatever. We have tried to limit these investigations, not necessarily to particular materials which would enter into that or any other particular public building, but to the solution of questions which would be of service in the construction of this or that public building; and the investigation of local materials has been entirely incidental to the investigation of the general problem, which would be just as valuable to the public here at Washington as it would be in St. Louis or anywhere else.

Mr. SULLIVAN. Your answer is too comprehensive for the precise inquiry I was making. I direct your attention to page 11 of this

document, Document No. 691, which contains the statement of the Director of the Survey. He states:

The investigations now pending include the following:

(1) The examination as to nature and extent of the deposits of material suitable for building and construction purposes, which are largely used at or near the important building centers of the country.

(2) The testing at the laboratories at St. Louis of the building materials collected by the Survey experts in different parts of the country and shipped to St. Louis for this purpose.

Now, you do make investigations of the nature and extent of deposits of building materials, do you not?

Mr. HOLMES. Yes.

Mr. SULLIVAN. What moves you to make such investigations? You say it is not as a result of an application by an individual. Tell me how it does come about. What is it that sets the machinery of the Department in motion?

Mr. HOLMES. One of the questions we wanted to solve in connection with these investigations was whether a strong, firm concrete, for example, could be made by using different grades of material; for example, one by using crushed limestone, as compared with crushed granite—which would make the strongest concrete.

In different parts of the Mississippi Valley, for example, as near Cincinnati and other places, there are typical limestones covering a wide area. We have gone to the center where that limestone was being most largely used, not testing the limestone arbitrarily, but where it was most largely used, and we have tested that material. It is true it was a local material, but it has got to be local somewhere. We shipped that material to St. Louis for the purpose of testing it as to the way in which crushed limestone could be used in the making of reinforced concrete; and so we have gone into different cities and centers, not with a view to settling the problem for those cities, or individuals in those cities, but to settle the whole problem, which would be of service throughout the country wherever a material similar to that might occur.

Mr. SULLIVAN. I see now. Coming back to the suggestion of the chairman, is there any reason why the parties most interested in these experiments, namely, the architects and builders in the country, should not be required to send their materials at their own expense to St. Louis or some other testing station in order that the tests might be made by Government officials?

Mr. HOLMES. Yes.

Mr. SULLIVAN. Why should not that be?

Mr. HOLMES. If I may express, in response to that, a personal opinion, my opinion would be this: That in the establishment of a Government laboratory for general testing purposes the work should be done under people in whom everybody in the country had confidence, and for that work the person sending the material should pay the cost of testing it. That is, in my judgment, what ought to be done.

The CHAIRMAN. That is not what you recommend, though.

Mr. HOLMES. What we are driving at now, Mr. Chairman, is, first of all, the settling of general principles in connection with building materials. I do not think the interests of a single individual in the United States ought to be considered in connection with it. I do not

believe, in connection with this investigation, that the interests of a single citizen or State or community or individual should be considered for one moment. But there are certain investigations which all these people say ought to be made, and which they demonstrate are greatly needed, and which are of just as much interest to Birmingham, Ala., or New York, or Chattanooga, or Louisville, or Washington as they are to any other city.

If one of those cities were required to make those investigations they would be getting information that would be of just as much value to the others as it would be to themselves. If the State of New York conducted those investigations they would be just as valuable to the State of Ohio as to the State of New York; and it is the investigation of things of that kind, of problems that underlie the modern building industry of the country, that we are anxious to see conducted under the Geological Survey for the next few years.

In connection with such an investigation at this laboratory, after having gotten these facilities and men together, and thoroughly training the men so that everybody has confidence in them, if the city of New York, or John Smith, in the city of Birmingham, Ala., wanted to make experiments there, Mr. John Smith or the city of New York ought to pay the expenses. That is the policy which has worked admirably in Germany and other countries.

Mr. SULLIVAN. That is not the policy which is recommended here for adoption by this committee, but we have here, rather, a policy which will cost us upward of \$3,000,000.

In view of what you have just stated, would you not recommend to the committee another plan, namely, that of developing to a slight extent the principles you have already investigated, and then abandoning experimental work pro bono publico, and do just such work as those interests in different portions of the country feel it important to do by sending on their checks for the performance of the work?

Mr. HOLMES. You mean the combination of those two plans?

Mr. SULLIVAN. Yes; to allow the Government to conduct its own experiments to a limited extent, for whatever Congress, for example, might think wise from time to time, but to leave established one testing station, or as many more as might be necessary, for the purpose of making tests for business firms and individuals throughout the country at their own expense, and restricting, of course, even those tests to new materials and new processes and new combinations. In other words, not commit the Government to the course of duplicating tests.

The CHAIRMAN. Or indulging in expensive experiments. What new materials has your department developed in its investigations so far that were not known before this investigation commenced?

Mr. HOLMES. We have already added, I may say, Mr. Chairman, a considerable amount of knowledge concerning the character and strength of concrete made out of certain classes of material.

But, to answer that question a little more specifically and, if I can, make the thing a little clearer: A number of these tests require a year before you can get the results. Take, for example, the question of testing concrete beams. The reason that can not be done in the ordinary laboratories of the country is that if you develop the beam 20 feet in length and the full size to be used in the structure it requires a machine of a certain character to make that test, and you

The CHAIRMAN. I know from personal knowledge that the Treasury Department, through the Supervising Architect's Office, has for a number of years been testing the tensile strength of stone—

Mr. HOLMES. Yes—

The CHAIRMAN. Stone which was offered for use in connection with the construction of public buildings. They must, therefore, have had some appliances—necessary appliances—for making such tests.

Mr. HOLMES. Mr. Chairman, most of the tests which have been made in this country, testing the strength of stone, have been made by using small cubes, 1 or 2 inches square; and I do not know of any architect or engineer to-day who really believes those tests represent the actual crushing strength of stone as used in actual practice. Most of the tests made in the past have given us imperfect or misleading results, for the reason that they were made under abnormal conditions.

The CHAIRMAN. Do you know of any local board of public works or public construction in any of the cities that have appliances for making these tests?

Mr. HOLMES. Not for such elaborate tests, nor tests using such large-sized materials. No other laboratory in the country has undertaken or is equipped for undertaking such investigations as we have inaugurated and are preparing for.

The CHAIRMAN. Are the tests which they make sufficient to meet the requirements of the public in the localities in which these local buildings are being constructed?

Mr. HOLMES. The architects and engineers, Mr. Chairman, say they are not; and I may say, in part response to your remarks, and to make clear what I want to say in explanation, that there has been appointed by the several engineer societies of the country during the past three years a standing committee to bring together the results of all tests which might be found satisfactory in giving correct information, which the architects and the builders in the country really need.

That committee has gone very carefully over the tests which have been made in one way or another in this country during the past twenty years; and they have come to the conclusion, as expressed by themselves, that hardly any of these tests have any value as giving specific information to the architect or the engineer which is of service to him to-day. That statement was reiterated within the past three months by the American Institute of Architects; and both officially and individually the architects have expressed a doubt as to whether any of the information which is tabulated to-day for use is really of any service at all.

The CHAIRMAN. Is it not a fact, Mr. Holmes, that the means of making these tests are well known to engineers, architects, and scientific men—that is, how to make the tests is known to all of you?

Mr. HOLMES. There is a good deal of difference of opinion, Mr. Chairman, about that; and one of the works of this joint committee of engineers and architects that I spoke of has been to devise some uniform methods of tests so as to get uniform results. I am not a member of that committee, but in 1904 I had an opportunity of seeing a good deal of the work they tried to do, and I know that in order to get some possible uniformity of results they distributed materials to

a number of institutions in the country which had equipment of one kind or other for making certain tests, and the results obtained by half a dozen different institutions which had small laboratories for that purpose differed so much that they were unable to get anything out of the results that they were willing to publish for use of engineers and architects to-day.

The CHAIRMAN. Is it not a fact that there are many educational institutions in this country that are equipped for making these tests?

Mr. HOLMES. Not the tests which they say ought to be made. There are a great number of institutions which have a certain amount of equipment for making small tests of a certain kind, and it was to those institutions in the past two years that certain quantities of original materials have been distributed in the hope that certain definite results might be obtained. I happen to know, for example, that a lot of materials, specimens of the same cement and same stone and same steel and sand, were distributed to not less than six different laboratories, located at six different educational institutions in this country; and in the past year we have tried to help the engineers to tabulate the results of their investigations of that material and ascertain whether it had any value for use and information; and the conclusion arrived at even by the engineers connected with those institutions is that the larger part of this data can not be used in the future.

During the past year we tried to establish a basis of comparative work in order to avoid the necessity of asking for any large increase in the appropriation for this work. We wanted to see whether this work could not be arranged for in some other way. We distributed not only the materials, but we actually sent one of our men to the different laboratories, to be there during the time when the tests were being made, and we are now tabulating those results. But the tests were made largely by untrained students and they are only a little more satisfactory than the results of preceding years; and we have been forced to the conclusion, and I think the engineers have, that the way just mentioned is not a feasible way to make the tests that are needed to-day. We are to-day dealing largely with new building materials. The building industries are beset with new problems. Our investigations of the past and present years have indicated the possibility of increased efficiency and decided lessening of cost in all construction work by a more intelligent use of materials available in different parts of the country.

It is not proposed, in connection with this present investigation of the Survey, to simply test this or that stone for its crushing strength when it is a fairly good, solid stone, because most of the stones of the country, like our splendid granites, are strong enough, and everybody knows it; but many otherwise good stones are defective in some particular, weakening on exposure, discoloring on account of foreign mineral matter, etc. In many cases stone for public buildings are carried half across the continent because of a lack of knowledge concerning the quality or quantity of local stone deposits. During the last four years the changes in the character of the materials used in buildings have been so great, and the materials coming into use are so new as building material, that no adequate tests have been made of them as to their strength, or as to what temperatures they will withstand, or

how best they can be protected against fire, or against collapse in case of fire.

The CHAIRMAN. Will you mention what new materials you refer to?

Mr. HOLMES. The principal new material is concrete and reinforced steel concrete.

The CHAIRMAN. Has that investigation gone far enough to demonstrate the practical utility of material of that kind in the construction of buildings of enormous size?

Mr. HOLMES. If I may quote these engineers again, Mr. Chairman, instead of expressing a personal opinion about it, they have said to us in our public meetings, emphatically, that they have no data which they can use. They do not know how much cement to use. They do not know how much cement ought to be put on the steel beams or columns in order to prevent their collapse on account of heat. They do not know the proportions of steel and sand and stone to be used in order to furnish a certain strength; and furthermore it is known that the proportions of these various materials would differ in different localities, where the local materials differ. It is not economy, for instance, to carry crushed granite and crushed limestone from New York State to Iowa or any considerable distance if local materials near at hand are available.

The CHAIRMAN. Is it not a fact that men can be induced to invest in the construction of a very large building, 15 stories high, made out of concrete or reinforced cement, and is not that fact the best practical evidence of the fact that the test has gone to that extent that they no longer have any doubt of the practicability of the use of that kind of material?

Mr. HOLMES. There is no doubt, Mr. Chairman, about the practicability of using that material, but they do not know whether they are using half enough or twice too much.

The CHAIRMAN. Would they not naturally want to know that before they would authorize the construction of a large building that would involve the expenditure of many hundreds of thousands of dollars, or millions perhaps, like the building in Cincinnati, where they have constructed a 15-story building?

Mr. HOLMES. Yes, sir; the Ingalls Building.

The CHAIRMAN. Would it not seem natural that these men must be reasonably well satisfied that that material is cheaper and superior before they would authorize the construction of such a building out of reenforced cement? And if the investigation has gone to that extent, to demonstrate its practicability, is it not probable that the other things you mention will, as a matter of course, be naturally worked out, because it is all more or less a matter of evolution. is it not?

Mr. HOLMES. Yes, sir; but this "working out" by ordinary experience is costly and accompanied by great risks. Take any one of the few reenforced concrete buildings in existence to-day. No one knows what strain they will bear nor how they will behave under fire action.

The CHAIRMAN. For all practical purposes the investigation into the matter of utilization of concrete and reenforced cement has gone far enough to satisfy the public that that material, from the standpoint of economy and utility and practicability, is equal, if not superior, to other materials?

Of course they may not have reached the scientific results as yet as to how much concrete they should build around an iron column to protect the column in case of fire, and that requires, of course, experience in order to determine it; but it is not absolutely essential to a demonstration of the main fact, to determine whether this is more economical or equally good for practical purposes as any other building material. The inquiry I had in mind was whether it was necessary to continue the investigation any further, from the Government's standpoint, or the scientific standpoint, than to demonstrate to the public that certain materials which are not now in use can be used safely and economically.

Mr. HOLMES. If the investigation had gone that far, Mr. Chairman, I should say, yes, it was time to stop that particular line of investigation. But it has not. There are many and important factors of uncertainty in the use of these building materials, involving both economy and safety.

The CHAIRMAN. I stood beside a fifteen-story building in Cincinnati, completed and occupied, and inside of another twelve-story building in course of construction, built out of cement, and I understand they are building these large structures of reenforced concrete all over the United States.

Mr. HOLMES. They differ greatly in the character of the work being done. I know of less than a dozen such buildings in the United States. In all of them there are large factors of uncertainty as to their behavior under fire and other conditions.

The CHAIRMAN. But is that the business of the Government, to educate the public in uniformity of character in work and material?

Mr. HOLMES. Not except to determine the limits of safety and factors of economy and efficiency in the Government's own work. For example, leave the public out of consideration for the moment entirely and take the work of the Government itself. I may say a considerable part of this present agitation is a result of recent conferences with the Supervising Architect of the Treasury Department, the engineers in the Bureau of Yards and Docks in the Navy Department, and others connected with Government work. The Supervising Architect says frankly that, being held responsible for the plans of Government buildings, he does not know under what conditions nor to what extent it is safe to use the reenforced concrete construction or other new forms of construction which, if practicable, would greatly reduce the cost of public buildings. He realizes, as do other architects and engineers, that these factors of safety, efficiency, and economy can only be determined by such investigations as are now proposed or by a long and much more expensive and dangerous experience.

I asked him if it was a safe estimate that these investigations might save 1 per cent of the cost of these buildings for the Government, and he thought that was entirely safe. If we can demonstrate the absolute safety of this new system of construction by these investigations, the saving in the cost of construction will be more than 10 per cent. The Supervising Architect will be glad to come before this committee and testify if invited to do so; but being a public officer he could not come unless he was invited.

The CHAIRMAN. Who was this?

Mr. HOLMES. The information, as we were able to get it, has been published just as promptly as we could get it out. It has been published not only in connection with the Survey publications, but in newspaper bulletins and in technical journals.

Mr. SULLIVAN. So that probably some of it has been availed of in the construction of these later buildings?

Mr. HOLMES. Yes.

Mr. SULLIVAN. I understand that in some of these buildings the construction was begun before you began your experiments.

Mr. HOLMES. Yes; a limited amount of work of this kind was done in other countries several years ago.

The CHAIRMAN. We have been using concrete in the construction of buildings for the last twenty-five years, have we not?

Mr. HOLMES. Yes; but not reenforced concrete.

Mr. SULLIVAN. Can you tell me why it will be necessary to spend more time in these tests?

Mr. HOLMES. They should not be continued longer than is necessary to get definite results. We may get the results in two years, or five years, which will be perfectly satisfactory to the public and the demands of the Government; and then I think the work ought to be curtailed or stopped.

Mr. SULLIVAN. Then you think you will have arrived at results wherein it will be commercially profitable for men to follow what you have suggested, and from that time you will devote your attention to the perfection of scientific theories?

Mr. HOLMES. Yes; to matters growing out of this, which need investigation.

The CHAIRMAN. That is most likely to happen, is it not, so that the investigation would continue indefinitely?

Mr. HOLMES. I do not wonder that you gentlemen should think so. From the way Government bureaus have been developed in Washington during the last twenty years.

Mr. SULLIVAN. Have you any reference to any particular one, Doctor?

Mr. HOLMES. No, sir; the general development. Yet, when you come to think of it, take the mining industry and the agricultural industry; the Government expenditures in every State and Territory for agricultural experiment stations and agricultural colleges, to train people in that work, aggregate between two and one-half and three million dollars per year. This is in addition to the several million expended annually through the Department of Agriculture for investigations, and all this is rendering enormous benefits.

Mr. SMITH. What do you mean by institutions to train people?

Mr. HOLMES. I mean agricultural colleges.

Mr. SMITH. The States maintain those themselves.

Mr. HOLMES. Twenty-five thousand dollars a year is given by the Government to each State and Territory for that purpose; besides the income from the land-script fund.

Mr. SMITH. That has nothing to do with the supporting of colleges in the Western States that are carrying millions.

Mr. HOLMES. The experiment stations and the agricultural colleges in the States receive a limited amount of help from the Government, as just stated, which is a good thing. But the investigations now under consideration will result in equally great benefits to the mineral

and manufacturing and building industries as these other investigations have brought to agriculture.

Mr. SULLIVAN. Much of the value of your work is in warning the public against the use of certain materials which they might otherwise use?

Mr. HOLMES. It certainly is; and also to prevent the great waste in our resources. We have been called upon for advice as much in the negative line as in the positive line. It is certainly the purpose, in connection with this investigation, to devote the work as largely as may be done to settling the specific problems developed in the construction of Government buildings.

Mr. SULLIVAN. Have you any opinion to express, based upon your scientific knowledge and the experiments with which you are familiar, as to whether in time cement or concrete, and particularly reinforced concrete, will in any large measure supplant the use of iron and steel in the construction of the framework of buildings?

Mr. HOLMES. I think it will very largely do that. I believe they will also render less lumber necessary in our building operations, and we know how costly lumber is becoming. One of the things we are determining now is the extent to which steel may be limited or reduced in amount when employed with the concrete mixture, and still the latter have sufficient strength to support the framework and floors of a large building.

Mr. SULLIVAN. And increase the protection against fire as well as reduce the cost?

Mr. HOLMES. Yes. No doubt some of you gentlemen have seen some of the large steel-frame buildings after a big fire, during which they had been sufficiently softened and lost their strength at the higher temperatures, so that the frame collapsed and carried the whole structure down with it?

Mr. SULLIVAN. Yes.

Mr. SMITH. What branch of the public service conducts investigations of the tensile strength of metals?

Mr. HOLMES. The only tests made in that line, outside the Geological Survey, are those made by the Ordnance Bureau for gun building and for the Army. Those are made at Watertown and at the laboratories of the steel companies.

Mr. SMITH. Does your bureau investigate the tensile strength of metals?

Mr. HOLMES. Only so far as metals are used in connection with building and construction purposes.

Mr. SMITH. A large volume is issued by the Government from some bureau or other on the tensile strength of metals.

Mr. HOLMES. I think that is from the Watertown Arsenal.

Mr. SMITH. I wanted to make some little inquiry about the statement on which you got your appropriation a year ago for this coal and lignite.

The CHAIRMAN. Before you pass that, I want to ask him one question. You estimate for \$100,000 to be expended in the next fiscal year in the making of these tests of structural materials. How do you intend to expend that \$100,000?

Mr. HOLMES. If you will let me have the papers given you this morning I can read you the item. There is a detailed statement of

the estimate, Mr. Chairman, and the salaries and equipment [submitting same].

The CHAIRMAN. It is your purpose to employ two engineers? What kind of engineers are they?

Mr. HOLMES. Engineers trained in testing work—testing engineers.

The CHAIRMAN. One at \$3,500 and one at \$3,000; two assistant engineers, at \$1,800; two chemists, at \$1,800; two geologists, at \$1,800. Is it not your purpose to send geologists out over the country in search of deposits of building materials?

Mr. HOLMES. No, sir; not in search of deposits, but to examine the nature and extent of deposits from which the material is obtained for making these investigations.

The CHAIRMAN. The nature and extent of deposits from which the material is taken?

Mr. HOLMES. Yes.

The CHAIRMAN. Then if you received a sample of material to be tested you would send your geologist to the place from which that sample was shipped for the purpose of examining the conditions and the extent of the deposits?

Mr. HOLMES. Yes; they would themselves collect the materials to be used in these investigations.

The CHAIRMAN. Why should it be necessary to carry the investigation to that extent? If you are limited merely to making the test of the material that is sent to you, why should not the people interested, if that test proves satisfactory, determine for themselves or by their own employees or through their own geologists the extent of their holdings or deposits?

Mr. HOLMES. Let me make clear, Mr. Chairman, just what that means. For example, suppose you wanted to put up a large Government building and we wanted to test the materials, not only for the outer and exposed surface, but the materials suitable for the concrete and for the framework. It would not do to take the sample sent by a prospective contractor. You could not be sure that that would represent anything. Indeed, only such samples should be tested as are known to represent extensive deposits of materials of the same quality.

The CHAIRMAN. That would be true as a matter of construction of a Government building, but in the Geological Survey, if you have a geologist you could use for that purpose, could you not send him instead?

Mr. HOLMES. We could, if that was all; but in connection with settling these general problems as to the strength of concrete, and so on, we want to test not simply one material, but others also. If we used only one kind of crushed stone and sand it might be simple, but there is a large variety of these materials to be considered. If we take type materials, such as granites or limestones, etc., in making our test, and if we can know what areas those samples represent, this adds that much to the public value of the tests which we make. When a public building is to be erected it will be good business policy to determine the nature and extent of all materials in that vicinity suitable for building operations.

The CHAIRMAN. I notice you have here 17 mineralogists. You

propose to employ 17 mineralogists in connection with this work—1 at \$1,800; 4 assistants, at \$1,500, and 12 assistants, at \$1,200.

Mr. HOLMES. They are not mineralogists, Mr. Chairman. There is only one mineralogist and a number of general assistants in testing. There are 4 special laboratory assistants and 12 general assistants and 4 laborers and 2 draftsmen. That refers to the general force, not to assistant mineralogists.

The CHAIRMAN. From your statement, it would seem to me that they are assistant mineralogists.

Mr. HOLMES. That is not the case. That appears from the way it is copied, merely. It should be simply "One mineralogist," who is simply a testing assistant who must be familiar with the mineral constituents in the rocks, sands, etc.

The CHAIRMAN. I observe from your plan that it is far more elaborate and extensive than the mere construction and maintenance of a plant for testing material for the use of the Government, and also for the accommodation of the public, is it not?

Mr. HOLMES. I think not, Mr. Chairman. It is not intended to be. To what particular point do you refer?

The CHAIRMAN. Notwithstanding your explanation, I still fail to see the necessity of employing one mineralogist and one geologist. Those men are such men as are employed in the Geological Survey, that could be utilized in this special work when you have necessity for their use in connection with the examination of material which the Government of the United States might have occasion to use in the construction of its buildings. Those instances would be comparatively rare, and it seems to me you could draw on the geologists more and more in the Geological Survey for temporary service without employing permanent men whom you would have occasion to utilize only at very rare intervals.

Mr. HOLMES. It is expected, Mr. Chairman, that one, at least, of these geologists will spend a considerable part of his time in this investigation which is provided for. If this man were to be a mature geologist it would be necessary to give a much higher salary. But it is intended that he aid in the listing work in the laboratory, and when not so engaged that he examine and collect the materials in the field for subsequent investigations.

The CHAIRMAN. It looks as though you were planning to have the Government do a great deal of work that ought to be done by the individual who has particular interest and benefit in doing the work.

Mr. HOLMES. I see your point, and I do not wonder at its being understood in that way, although it is not at all intended that way. It is intended that this work shall be pushed as rapidly as possible, because I think it ought to be pushed. If the Government needs the work at all in connection with its public buildings, it ought to have the results as quickly as they can be obtained, so that instead of taking a long time with a comparatively few men, I would deem it much more advisable to employ a considerable number of men for a shorter time.

The CHAIRMAN. Are you not magnifying the Government interest so far as it relates to the public buildings? Most of the buildings authorized by Congress, and those that will be authorized, perhaps, at this Congress, are small buildings. The materials used in their

construction are so well known that the Supervising Architect would not require any special test to be made. It is only in the larger cities where very large buildings are being constructed by the Government that it would be necessary, if necessary at all, to have such tests made of materials. Very few of those large buildings are authorized by any one Congress.

Mr. HOLMES. It is important in small buildings also, and other Government construction work, which aggregates many million dollars every year.

The CHAIRMAN. Take the public building in my own town, built of limestone, gotten right out of the bluffs in the Mississippi River. I doubt if there is a better building stone anywhere in the United States. The small post-office buildings throughout the country are constructed in places where the local building materials have been tested by experience and use for many, many years; and then there are other localities where there are deposits of building materials with which the Supervising Architect is thoroughly familiar, and those would not require any test at all.

It would appear that this project is planned on the theory of satisfying the demands of the engineers and architects throughout the United States; to furnish them information that will guide them or their clients as to what they should use in the construction of their buildings, whereas that would be of no interest to the Government. That is the way it looks to me.

Mr. HOLMES. Take the isthmian canal. It is expected that one of these geologists, or geological assistants, for example, will spend a large part of the next twelve months in examining the materials that will be needed in connection with the construction work of that canal. It is the plan that those materials will be collected and shipped back to this plant and tested. On this canal the Government will expend probably \$35,000,000 in construction work—locks and dams—and we want to help solve the problem of using the most efficient local materials there for the Government work.

Mr. SULLIVAN. These tests would be made here?

Mr. HOLMES. Yes, sir. Of course any unimportant tests that could be made there would be made there locally. This whole work is planned primarily for taking care of the Government business itself, and doing the public work in so far as the information so gained will be of general use to the public.

During the next ten years the expenditures of the Government for building and construction work will exceed \$100,000,000. During this same period the amount expended by the people of the country will approximate \$10,000,000,000. The purpose of these investigations will be to indicate how the structural materials of the country can be used most efficiently and economically.

#### TESTING FUELS (AGAIN).

Mr. SMITH. You started these coal investigations—and I will call them coal investigations—on two appropriations of \$30,000 each, made two years ago?

Mr. HOLMES. Yes, sir.

Mr. SMITH. And these appropriations were secured from Congress, as you are aware, by the representation that the material to be tested was to be furnished free to the Government?

Mr. HOLMES. Yes, sir.

Mr. SMITH. And that the buildings, substantially, were to be furnished free to the Government, in which to make the tests, so that all that the Government should furnish was the scientific test itself?

Mr. HOLMES. Not the building, but the equipment.

Mr. SMITH. And the building, also?

Mr. HOLMES. No, sir.

Mr. SMITH. I thought it was. At any rate, the total appropriation covering this proposition at the World's Fair, made two years ago, was \$60,000, in two appropriations of \$30,000 each?

Mr. HOLMES. Yes, sir.

Mr. SMITH. Then you came in at the last Congress with an estimate of \$202,000. At that time you reported you were having the use of machinery worth from one hundred to one hundred and twenty-five thousand dollars free of charge, except for the wear and tear, and with the \$202,000 you asked for you wanted to spend only \$28,000 for extending and remodeling the plant, of which \$2,500 was for chemical laboratory, \$2,500 was for boiler rooms, \$5,000 was for storage bins, conveyers, and so forth, for storing carload samples of coal, \$4,500 was for gas-producer plant, \$12,000 for briquetting plant, including purchase of additional equipment and remodeling plant for lignite tests, and \$1,500 for other incidental charges—a total of \$28,000. Has the Government acquired any property whatever at the present plant except these items?

Mr. HOLMES. Only certain incidental or smaller equipment, which we had to buy in order to operate the equipment which is there.

Mr. SMITH. So that the Government has practically no plant except this \$28,000 worth of items here?

Mr. HOLMES. I think that would about cover the plant the Government has.

Mr. SMITH. In your present estimate you ask for \$250,000 for the investigation of coal, lignite, and so forth, of which you ask \$50,000 for the removal of the plant. What have you got to move?

Mr. HOLMES. We have two large 210-horsepower boilers, which we are using and for which we are paying rent. We have two large gas producers and one gas engine of 250 horsepower on which we are also paying a rental to cover their depreciation in value.

Mr. SMITH. Do you own them?

Mr. HOLMES. No, sir; except one briquette plant, coal-washing equipment, and some smaller equipment. Other equipment we rent or use without cost, such as the Corliss steam engine, two steam boilers, a gas engine, together with one briquetting machine, two generators, of approximately 200 horsepower each, and half a dozen motors of smaller size.

Mr. SMITH. Substantially all the important machinery you have in use was rented?

Mr. HOLMES. Yes; rented or loaned, except what was covered in that \$28,000.

Mr. SMITH. Now, how do you expect to do anything with \$50,000 for the removal of equipment if you have been using a plant worth from one hundred to one hundred and twenty-five thousand dollars, to which you added \$28,000 of plant?

Mr. HOLMES. We expect to continue to use the material which we are using now.

Mr. SMITH. To rent it?

Mr. HOLMES. Yes.

Mr. SMITH. What rent are you paying?

Mr. HOLMES. I have a statement of what is being paid, sir, for rent. (See p. —.)

Mr. SMITH. Were you responsible for the preparation, Mr. Holmes, of the report or estimate on which this request for an appropriation of \$202,000 was based for the investigation of coals, lignites, and so forth?

Mr. HOLMES. I helped to prepare it, so that I am as much responsible as anyone.

Mr. SMITH. You state in there at one place that the equipment, having the value of more than \$100,000, is to be removed, and then you state its value to be \$125,000, and the estimate of wear and tear you put at \$10,000. Did you participate in the making of these figures?

Mr. HOLMES. Yes, sir.

Mr. SMITH. Your figures, as a matter of fact, on the rent are about \$8,000. Is that correct?

Mr. HOLMES. Yes, sir. I recall no other rentals we pay except those.

Mr. SMITH. Do you pay wear and tear besides the rental?

Mr. HOLMES. We are supposed to keep this equipment in good repair. The wear and tear in much of the equipment is inappreciable. We have kept the equipment in repair from time to time, of course, while using it. The rent paid on the equipment as per the attached list is expected to cover the depreciation in value. When the amount of the rent paid equals the prices named the equipment becomes the property of the Government.

Mr. SMITH. What do you mean by the statement a year ago that—

The equipment loaned to the Government for these tests and now being used includes 3 boilers, 2 steam engines, a gas-producer plant and gas engine, coke ovens, coal washing and drying plants, 7 electric generators, and various subsidiary equipment, having an aggregate value of more than \$100,000. This equipment is described in the appended statement. The larger part of it can be continued in the service of the Government for making these tests during the next year on payment of the actual wear and tear of the machinery.

Did you not mean that Congress should understand that you are not paying any rent at all except the wear and tear?

Mr. HOLMES. All the rent we pay is calculated as depreciation in value of the equipment; but on a large part of this equipment we pay no rent whatever—such as the large Corliss engine, 250-horsepower generator, the drier plant and subsidiary equipment, the large meters for measuring the gases, the coal crushers, the conveying equipment.

Mr. SMITH. You are paying straight rent, just as anybody else would pay, are you not?

Mr. HOLMES. No, sir. It is called rent, but it is estimated on the basis of wear and tear, or depreciation in value, and if the equipment on which this "rent" is paid is retained until the aggregate of charges equal the fixed value, these articles of equipment become the property of the Government. But, as stated above, on many articles of equipment we pay no charges whatever except repairs.

Mr. SMITH. Who was thus generous in letting the Government have anything for the wear and tear without rent?

Mr. HOLMES. The Westinghouse Machine Company, of Pittsburg; the Westinghouse Electric and Manufacturing Company, of Pittsburg; R. D. Wood & Co., of Philadelphia; John Ramming, of St. Louis; Heine Safety Boiler Company, of St. Louis, have charged a rental sufficient to cover wear and tear or depreciation in value. In addition to this the Bullock Electric Manufacturing Company, of Cincinnati; the Allis-Chalmers Company, of New York and Chicago; the Frost Engine Company, of Galesburg, Ill.; the C. T. Bartlett & Snow Company, of Cleveland, and the Pittsburg Meter Company, of Pittsburg, and other companies have permitted their equipment to be used without charge of any kind, except an agreement to return the articles in good order to the owners.

FUEL TESTS.

Rentals of equipment <sup>a</sup> (intended as covering the wear and tear or depreciation in value).

	Rate per month.	Total paid to March 1, 1906.
Westinghouse Machine Company: Rent of 8-cylinder gas engine.....	\$250.00	\$2,500.00
Westinghouse Electric Manufacturing Company: Rent of electric equipment.....	150.00	1,500.00
Camden Iron Works (R. D. Wood & Co.): Rent of 2 gas producers.....	250.00	2,000.00
John Ramming: Rent of Ideal engine from Sept. 18, 1905, to Mar. 18, 1906.....	15.00	90.00
Heine Safety Boiler Company: Rent of 2 safety boilers.....	83.33 1/3	666.66

Mr. SULLIVAN. Did you not state a while ago that you made the repairs yourself?

Mr. HOLMES. We make the repairs that are necessary in connection with the tests; because, in order that each test be accurately made, the equipment must be inspected after each test, and kept for each test in exactly the same state of efficiency; but the general wear and tear is the natural deterioration that takes place as a result of using machinery. The machinery is necessarily not in as good condition as when we received it. This is aside from any damage due to accident or breakage or unusual service.

Mr. SULLIVAN. So that you not only make the repairs yourself, but you also pay to the owners of the machinery a sum that will pay for the wear and tear?

Mr. HOLMES. Yes; the wear and tear or actual depreciation in value is what we are expected to pay on the equipment listed under that head.

Mr. SULLIVAN. That is rent, is it not? The sum you pay under such circumstances is rent, is it not?

Mr. HOLMES. Repairs and depreciation: or you can call it rent on this part of the equipment, which we were otherwise unable to secure, and which would have small commercial value after we have finished with it.

<sup>a</sup> Whenever these charges equal the fixed value of the equipment the articles become the property of the Government; or the Government can at any time purchase this equipment at these values less the amount of rental paid to date.

Mr. SMITH. I notice that in this report to the Senate you speak of your securing \$85,000 in the three acts passed during the year 1904, while in the report of a year ago it is spoken of as having been started under two appropriations of \$30,000 made during the latter part of Congress, 1904. Did you, in fact, get only \$85,000 or \$25,000?

Mr. HOLMES. Eighty-five thousand dollars.

Mr. SMITH. When did you get the other?

Mr. HOLMES. In December, 1904.

Mr. SMITH. This plant was intended in part as an exhibit at the St. Louis exposition, was it not?

Mr. HOLMES. Yes, sir.

Mr. SMITH. You made three separate estimates for that purpose and you got in one year \$85,000?

Mr. HOLMES. No; the \$25,000 came after the close of the exposition in December, 1904. The exposition closed on December 1.

Mr. SMITH. You had only received \$60,000 up to the close of the exposition?

Mr. HOLMES. Yes, sir; and that was the original estimate.

Mr. SMITH. And next year you wanted \$202,000, and got it?

Mr. HOLMES. Yes, sir.

Mr. SMITH. And now, in the third year of this system's existence, you want \$250,000?

Mr. HOLMES. Yes sir; \$250,000, of which \$50,000 is for additional equipment and removal expenses.

Mr. SMITH. When you ask for \$50,000 for the removal of the plant and necessary equipment, do you mean for the removal and purchase of necessary equipment?

Mr. HOLMES. Yes, sir; for the removal of the plant and the purchase of necessary and additional equipment.

Mr. SMITH. If that be true, it would leave you \$200,000 for the exposition proper.

Mr. HOLMES. Yes, sir; that is for the investigations proper.

Mr. SMITH. Which would be far and away in excess of anything you ever had.

Mr. HOLMES. For actual investigation the amount is very little in excess of the current appropriation.

Mr. SMITH. In December, 1904, when you had not received but \$60,000, including whatever you were paying for wear and tear, you made the following statement: "And while the difficulties to be overcome in preparing for these tests were such as to delay their beginning until September 1, yet the results obtained were of such importance and magnitude that the demand for continuing the work is quite general, and comes especially from consumers of coal," etc. Now, if your discoveries were of great magnitude under an appropriation of \$60,000, and at a time you were initiating the work, and when it would necessarily be more expensive than at other times, how do you account for the fact that next year the expense rose to more than \$150,000 and now must rise to \$200,000 for the ensuing year?

Mr. HOLMES. That is due to the fact that during the first year, for example, during the exposition period we tried to solve certain problems, and we felt that we were quite successful in doing so. In connection with this investigation there developed a number of additional problems which were seemingly of equal importance, and which we also desired to solve. In order to do so we found it was necessary to

add certain additional equipment and employ certain additional men, and it was with a view of enabling us to conduct those additional, and yet as we believe equally important investigations, that we asked to have that enlargement in the appropriation.

Mr. SMITH. So these secondary matters call for investigations constantly greater in number and importance than the primary ones?

Mr. HOLMES. They were outgrowths, I should say.

Mr. SMITH. May I ask you whether they were more numerous and more important than the primary ones?

Mr. HOLMES. Yes; more numerous; and some of them certainly more important and more promising in immediate benefits. In other words, we inaugurated certain lines of investigation. In some cases they were successful, and we felt we had fairly solved certain phases of those problems, but other problems which we were not able to undertake at that time were regarded as of equal importance to the ones we originally undertook to solve.

Mr. SMITH. I am not objecting to the finding of problems of equal importance, but you are finding problems of increasing cost, so that your expenses rose from \$85,000 to \$202,000, and now to an estimate for \$250,000. The difficulty with this committee, I have no doubt, will be to find where this thing is to stop with this percentage of growth.

Mr. HOLMES. Of this not more than \$200,000 is for full investigations; the \$50,000 being for removal of plant and additional equipment. Meanwhile the fuel bills of the country during this year aggregate \$1,500,000,000, and we are pointing out the possibilities of great savings.

Mr. SMITH. Where do you expect to run this plant hereafter, if you are given this appropriation this year?

Mr. HOLMES. That is an unsettled question. The work should be done wherever it can be done to the best advantage—perhaps at several places.

Mr. SMITH. At St. Louis?

Mr. HOLMES. The recommendations of the Department are that the Director have the work done at such place or places as in his judgment may prove most suitable.

Mr. SMITH. Are you still receiving all of your samples free?

Mr. HOLMES. Yes, sir; we have not bought any coal at all. The only case in which the purchase of coal has been raised is with a view to replacing a large sample accidentally burned at the plant.

Mr. SMITH. You say in this estimate that you don't know whether you are going to establish one place or twenty to make these investigations.

Mr. HOLMES. We don't know whether there will be one place or several places.

Mr. SMITH. You have been conducting investigations in eighteen or nineteen States?

Mr. HOLMES. Yes, sir; that is, the field investigations have been carried on and the samples of coal have been received from that many States.

Mr. SMITH. So, if you don't know anything about the future location, you don't know whether you will have one branch or twenty?

Mr. HOLMES. To make that plain, I would say that there are certain investigations which would cost a good deal more to conduct at

a central plant where everything must be erected by the Government than to conduct them at some other place where for the time being we could borrow the buildings and certain equipment already existing. Take the by-products of coke ovens, for instance. We are using 40,000,000 tons of coal and coke, a larger part of this being made in beehive ovens which permit the valuable gases, tar, and ammonia, known as the by-products, to go into the atmosphere and are absolutely lost. We wanted very much, as one of the problems, to investigate that question, but it would have cost at St. Louis \$75,000 to construct a by-product-recovery coke plant. The wording of the act was such that we could not conduct the experiments anywhere else. Although we were offered two other places, where all equipment necessary for scientific investigation was available, we could not go to either one of them, because the wording of the bill limited the work to St. Louis.

Mr. SMITH. You had only \$150,000 last year, which you estimated for the salary and labor account and for maintenance and repairs. How do you explain the rise in that to \$200,000 this year?

Mr. HOLMES. I have submitted an estimate showing just what we need for the next year. The labor and technical force for certain investigations, notably the chemical, coking, and briquetting investigations, during the current year have been entirely inadequate.

Mr. SMITH. You only investigated the coal and similar products during the past year of one additional State above what you had given attention to the year before, did you not? That is, you had examined in a measure into the coal and similar products of 17 States when you made application for the \$202,000, had you not?

Mr. HOLMES. We had gotten samples from those States.

Mr. SMITH. You had investigated, had you not?

Mr. HOLMES. We had only investigated the samples collected from that number of States; but the difference between investigating samples from a State and investigating the coals of that State is considerable.

Mr. SMITH. I understand that. Up to the present day 65 different coals have been tested from 17 States and Territories.

Mr. HOLMES. Yes, sir; more than 200 coals (including those from Alaska) have been tested or analyzed more or less completely.

Mr. SMITH. Your report this year shows 18 States and Territories.

Mr. HOLMES. Yes, sir.

Mr. SMITH. How many samples of coal have you examined now?

Mr. HOLMES. You will find at that same place as to the number of samples examined for each of the different purposes on page 5, where it tells you the number of determinations, giving all of the results.

Mr. SMITH. Please read it to me.

Mr. HOLMES. It says: "More than 1,600 such chemical analyses have been made."

Mr. SMITH. But that is not the question.

Mr. HOLMES. Right below that: "In the gas producer and gas engine, 85 tests each, extending over two or three days, of coals, lignites, and peats from 18 States."

Mr. SMITH. You say up to the present day 65 different coals. I am not talking about the number of tests. How many coals have been tested now?

Mr. HOLMES. Each test refers to coal in that sense.

**Mr. SMITH.** You do not mean to say that you tested 1,600 different kinds of coal?

**Mr. HOLMES.** No; but 1,600 chemical analyses have been made, using different samples of coal; in certain cases a number of these samples having been collected from the same coal seam in the same district.

**Mr. SMITH.** How many different varieties of coal have you examined, using the term just as you used it?

**Mr. HOLMES.** In the line below, "In the gas producer and gas engine, 85 tests;" that means 85 coals, collected from 85 different localities.

**Mr. SMITH.** So you had only added 20 more at the end of this year to those you examined a year ago.

**Mr. HOLMES.** You have confused certain figures. We received 65 carloads altogether during the exposition period, but we made only 18 gas-producer tests during that time, as it required from three to four days for each test. We made about 80 steam-boiler tests during the same time.

**Mr. SMITH.** When you had only \$60,000 you had examined 65 different coals, and when you had \$100,000 more you only examined 20 more.

**Mr. HOLMES.** Up to the present time we have made 110 gas-producer tests, one of which extended over twenty-four days. We have made over 300 boiler tests. These have all been made from nearly 200 carload samples received mostly from different mines.

**Mr. TAYLOR.** What does the next line mean, "In the steam boilers 283 tests, each of nine to eleven hours' duration, of 170 coals from 18 States?" And the next line, "In the coke ovens, 110 tests, each of forty-eight to seventy-two hours' duration, of 95 coals from 16 States."

**Mr. HOLMES.** We have received samples representing, say, 170 coals. On some of these two or three boiler tests were made under different conditions of draft and firing. Producer and coking tests were not made on all samples, and in a few cases no boiler tests were made or desired.

**Mr. TAYLOR.** Originally it was said to be 65, and then 85, and here I find 283 tests of, respectively, 170 coals from 18 States and 110 tests of 95 coals from 16 States. What would that make in the total number of tests?

**Mr. HOLMES.** In the printed statement, as explained, the 65 refers to the total number of coals received for test during 1904. The 85 is the number of gas-producer tests made to the close of 1905. The 283 the total number of boiler tests. One hundred and seventy-three carloads altogether received up to that time. Of these 85 had been tested in the producer. This enumerates the tests made using the different equipments. There were all told some 600 of these tests.

**Mr. SMITH.** I want to know how many coals you have tested, not how many tests you have made. Do you know how many coals you have tested?

**Mr. HOLMES.** We have not tested the same coals for all purposes. We have tested 85 different coals altogether up to the end of 1904.

**Mr. SMITH.** Is that what you referred to last year when you said 65?

**Mr. HOLMES.** There were 65 steam or boiler tests made on these coals during 1904.

Mr. SMITH. You tested 65 coals from 16 States, and you tested 85 coals from 18 States?

Mr. HOLMES. Yes, sir; 65 steam tests from 16 States up to the close of 1904 and gas-producer tests on 85 coals from 18 States up to the close of 1905.

Mr. SMITH. "One thousand six hundred chemical analyses, involving 7,000 chemical determinations." Do you mean that, from the current year's appropriation in the last six months?

Mr. HOLMES. These figures indicate the work done during 1904 and 1905.

Mr. SMITH. Did you prepare this yourself, so that you know what it means?

Mr. HOLMES. I did not tabulate it.

Mr. SMITH. The connection would seem to indicate that it was the entire number you had made since the origin of the project, although it is not plain. You speak about the fact that this is much better than the private test, because a complete history of every sample is indicated and the record is authentic and reliable. And then you go on to state what kind of tests you have made.

Mr. HOLMES. In the case of the 1,600 chemical analyses, that unquestionably means the number of analyses made from the time the work began up to near the end of 1905.

Mr. SMITH. Does not everything on that page mean the same thing?

Mr. HOLMES. It does in the case of the steam-boiler tests—the 283 tests, and the 110 coke tests. I am not certain about the gas-producer and gas-engine tests. There is a misprint in the figures. The 100th producer test was made about February 1, 1906.

Mr. SMITH. If all these things mean the same thing, the work seems to be falling off rather than increasing under the increasing appropriation.

Mr. HOLMES. Let me state one fact. During the past six weeks, for example, we have made on the gas producer and gas engine one test that required twenty-four days. That illustrates how difficult it is to make some of the tests and to estimate for them at so many tests per month.

Mr. SMITH. I presume that is true.

Mr. HOLMES. That illustrates also the importance of the work, and why the individual can not do it.

Mr. SMITH. Where are your reports on these coals and lignites?

Mr. HOLMES. Here is one report [indicating]. This is the final report on the work for 1904, in three volumes. The preliminary report on that same subject was printed a year ago and has long since been out of print. I have one copy of it here. The preliminary report on the work of the past year, 1905, has just gone to the printer.

Mr. SULLIVAN. Have you Professional Paper No. 48?

Mr. HOLMES. This is it—the three volumes here.

Mr. SMITH. Don't you think that a fair interpretation of this report made a year ago would lead one to believe that this work would practically end with that appropriation? That is, didn't you understand at that time that was to complete the investigation?

Mr. HOLMES. I would say both yes and no. I understood that we would undertake a certain series of experiments which were begun during the exposition period, and that we were enabled to finish

and determine something of the relative merits for fuel purposes of the coals. We have, or will have, completed by the 30th day of June practically what we started out to do in connection with that specific appropriation. We have not been able to do quite as much as we had hoped to do, but we will practically have completed by the end of the present fiscal year the tests which we started out to make under that appropriation.

Mr. SMITH. In the estimate upon which that appropriation of \$202,000 was given you, you say, "It is the purpose of the Survey to push this work to completion as rapidly as possible." Did you have any idea that that meant ten years or more at that time?

Mr. HOLMES. No, sir; I did not.

Mr. SMITH. About how much coal will you consume a day in these tests?

Mr. HOLMES. In the steam-boiler tests, about 6 to 10 tons, varying with the coal; in the gas-producer tests, about the same per day, but those tests extend over a period of days.

Mr. SMITH. How much coal do you consume, do you think, in a year in those tests, upon your present scale?

Mr. HOLMES. We have not estimated that, but I should say it would be, on a rough guess—I can count it up and give you an estimate of the exact quantity.

Mr. SMITH. What do you mean in this detailed statement by "six observers?"

Mr. HOLMES. In connection with that test, will you let me make a running statement?

Mr. SMITH. I would rather you would answer these questions at this time.

Mr. HOLMES. Very well. In these gas-producer tests the equipment runs night and day, and it requires three shifts of men. Everything has to be observed or watched with great care, so as to determine exactly the conditions under which that test is being made, and those men who attend to that are the men whom we call observers—the men who are the constant witnesses under whom the tests are being made. The temperature and the nature of the gas which is being driven off, the regularity with which it is being driven off, and all data of that kind, is observed and recorded.

Mr. SMITH. So the boiler and gas-engine tests go on simultaneously?

Mr. HOLMES. Yes, sir. You see it takes three or four times as long to make a test of the gas producer and gas engine as it does the boiler.

Mr. SMITH. I see I made a mistake. You have seven observers, as I make it out now. Does it take seven observers to make these notes of what is indicated by the combustion of this coal?

Mr. HOLMES. Yes, sir.

Mr. SMITH. What are their hours of work?

Mr. HOLMES. Eight to nine hours on the gas producer and engine. The plant is operated day and night, and the observers are arranged in three shifts. Some of the men work nine hours, some ten, and some twelve hours, on different branches of the work. Most of the men about the plant work nine or ten hours per day.

Mr. SMITH. Then there are two on duty all the time?

Mr. HOLMES. Yes, sir; two observers about the gas producer and one or two about the boilers. Now, Mr. Chairman, if I can be permitted to make that general statement, I think I can clear up many points.

Mr. SMITH. Very well; go ahead.

Mr. HOLMES. One of the things we have tried to find out in connection with the investigation is what you might call the situation with regard to the coal industry in the United States, and if I may be permitted, I might call attention to one or two facts which we have established as a basis, not only in the work which we have done but in planning the investigations which are here proposed. We have found, for example, that in the mining of coal in the United States to-day fully 50 per cent of the coal remains in the ground. I don't mean that they mine one vein and leave another vein, but in the actual vein of coal which is being mined, in order to mine it as cheaply as can be done, only the best part is taken, so that of the coal which is actually found in the veins, nearly 50 per cent is left under the ground.

We estimate that from 5 to 10 per cent is lost in handling and transportation, so that when the coal finally gets to the dealers, we have gotten less than 50 per cent of that which it was possible to get out of the ground. That when that coal gets to the boiler, and we start to use it in connection with the supply of heat and power and light for the country, of the coal actually shoveled in the boiler to-day, not more than 5 per cent of it is actually converted into power for manufacturing purposes, the other 95 per cent being used in making steam and in overcoming the friction of the engines, the belting, and so forth. When you want to use that for lighting purposes you will get, over the electric wire bringing the current for power or lighting purposes not exceeding 5 per cent of the actual power which theoretically existed in the coal when it went into the furnaces, and not to exceed one-fifth of 1 per cent of these heat units is converted into electric light.

The CHAIRMAN. Heat units?

Mr. HOLMES. Yes, sir; not exceeding 5 per cent of the heat units converted into power, or one-fifth of 1 per cent converted into light.

Mr. SULLIVAN. Particularly because of the friction of the machinery.

Mr. HOLMES. Yes, sir; lost in making the steam, in the friction of the engine, in the heat lost by radiation and through the stack, and in overcoming the friction of the pulleys and the shafting. To give you some idea of the distribution, I will say that about 40 per cent is lost in making steam, and at least 40 per cent is lost in overcoming the friction in the work of the engines and about 5 per cent in the belting and shafting. That leaves you 5 per cent when that power actually gets to the loom to weave the cloth, or to any piece of machinery where work is to be done. When you want to put the electric power into light, you get in light rays, about the highest known, one-fifth of 1 per cent of the theoretical heat unit which existed in the coal.

That is a problem which it seemed to us of no interest to any particular Territory or city or State, but of vast interest to the people in every section of the country where either heat, light, or power is being utilized. We started out not with the hope of being able to

solve all the problems, but to see what could be done in an investigation with a view to helping to increase the efficiency in mining and utilization of coal in this country, believing that it is a matter of interest to the nation as a whole. That was the purpose of the original investigation. If you will look at this map, you will see that St. Louis is located at this central point [indicating]. Here are indicated the coal fields of the United States—the Michigan coal fields here, and here the Kentucky, Indiana, and Illinois coal fields. And here are the fields from Iowa down to Kansas and Texas. The lighter colors represent the lignites and limits of the coal fields of the West, and the lighter colors lower down indicate the lignite fields of the Southern States.

Now, we wanted to do something accurate and reliable, because we all felt that if it was worth while for the Government to go into this work at all it ought to go into it in a manner that would command perfect confidence; so, as I said, we did not accept any coal from anybody, nor do we test any coal because such coal is requested to be tested by any corporation. We thought we ought to make tests and settle the general characteristics of a coal field like this [indicating on the maps]. We sent men into the field to examine the coal in the mines. They tested to see where they would like to locate to test samples in that region and to ascertain if the coal could be given us for tests, because we could not buy any.

The men went into the mines, examined them carefully, took samples, and sent them under Government seal to the laboratory at St. Louis to be analyzed, so that it could not be contaminated in any way. They stayed there until 1, 2, or 3 carloads had been collected in that region. When that coal came to St. Louis it was unloaded and about, we will say, 10 or 12 tons of it used in making tests under the boilers to determine how to use it in the most efficient manner in steam-producing methods. About 10 or 15 tons would be used in a gas producer and stored in a bin for that purpose. Another quantity would be used for coking purposes, and another quantity for briquetting investigations, and still another quantity used to determine, as far as we could, chemically, the by-products.

In the boiler tests we had ordinary modern water-tube boilers, two of them, of 250 horsepower each. They were exact duplicates, and both were not operated at the same time, one being cleaned while the other was in use in order to be sure the boiler was in good condition. We coupled with that 250-horsepower engine a generator to see if any conditions which we might be able to suggest would lead to an increase in the enormously low efficiency in the use of coal for power purposes. We had to have equipment to determine temperatures, because we found that the temperature in the burning of the coal under the boiler is different in different parts. Some would give the highest temperature when in front, and some after the volume had passed beyond the limits of the tubes of the boiler. So there was another great loss.

Now, the gas producers of the plant operated day and night, and we would use 15, 25, 30, 40, and sometimes 50 tons of coal in making that particular test. In the coke ovens, using the ordinary beehive ovens, we used 7 or 8 tons for making those tests, sometimes duplicating them. One of the results of those investigations showed us that in several of those coals used in the gas producer we got nearly

three times the amount of power which could be gotten out of the coal when used under boilers. I don't mean by that that there would be the same difference with higher unit boilers, 1,000 or 2,000 horsepower; but the gas producer was  $2\frac{1}{2}$  times more efficient, as an average of a hundred different tests, giving their average with our 250-horse-power boilers. It is in connection with that part of the investigation that we need so many men, observations being made and recorded at twenty-minute intervals continuously, day and night.

As I said a moment ago, we had the tests running night and day frequently, and a week would be consumed in testing one coal, sometimes two weeks. When we started those investigations we tried to get one of the large manufacturers of gas engines to lend us a gas engine for our experiments; but he replied that we would never be able to run for twenty-four hours a gas engine with gas from bituminous coal. His statement is one of the things we have demonstrated false, and that these bituminous coals which we have tested can be used for producing power in this new way, and that in producing power in that way there was an enormous gain in efficiency.

Now, that particular investigation on those particular coals we do not expect to extend further except in this way, that we find even at best with that increased efficiency, the gas engine and the gas producer is to-day imperfect, particularly the gas producer. The gas engine we do not bother about, because that is up to the manufacturer. In the gas producer various coals behaved very differently. We would find one coal with 10 per cent of ash which would give very good results, and another coal with 5 per cent would give greatly inferior results in spite of the fact that it was high in heat units; and the trouble was found on careful investigation to be that the ash was of such character that it would clinker on the grate bars and prevent the draft going through properly; and so it would in that way greatly diminish the amount of combustion.

Now, those investigations, as I have been trying to describe them, may seem simple enough, but they required constant watchfulness to see that the test conditions were fair and that no mistake, however slight, might be made. So we have been exceedingly careful in regard to all points. In that way we have employed a number of men, but they all keep busy around the plant. We had a fire some time ago which burned up our briquetting house and destroyed a part of the washing house which held the storage bins for coal, but the gas producer and gas engine parts of the plant did not burn.

Mr. TAYLOR. I understood that the whole affair was burned up.

Mr. HOLMES. Oh, no. It was not true any more than was the report that a dam that had never been built had been washed away in the Reclamation Service.

In connection with this investigation we have, in that estimate, provided liberally for men, I admit, but not a man has been included in that estimate that, in my judgment, could be omitted if the work is to be carried on and conducted on a basis that will not lessen its efficiency. As to whether or not this is work which the Government ought to do, you, of course, must decide; but it seems to me that it is, for the reason, in the first place, that the results of these investigations, if they amount to anything at all, as they seem to do, are results which are important to people in every section of the country. There is no local question, so far as our investigations go, in connec-

ion with them. It is true that there are certain local phases, but the problems which we are trying to solve are problems which underlie the industrial life of the nation itself; and if the Government does not conduct the investigation I can not see who we can expect to do it. You can not expect the assayer to do it, the boiler men won't do it, the gas-engine people are not able to do it, and if it should be done by any private individuals the results are open to suspicion, and will not be accepted with confidence by the people of the country. In conducting the investigations we have tried to keep them on the plane of general public utility and to avoid doing the things that could be left to private enterprise.

The CHAIRMAN. Is not the Pennsylvania Railroad conducting coal tests independent of the Government tests?

Mr. HOLMES. They are conducting locomotive-boiler tests for their own use in connection with the operations of the railroad, but for no other purposes. They were testing the efficiency of different locomotives, using the same coal.

The CHAIRMAN. They had a plant of that kind in St. Louis, did they not?

Mr. HOLMES. Yes. The Pennsylvania company was testing locomotives and using one brand of Clearfield coal. It did not test the coal, but the locomotives.

Mr. SULLIVAN. What are they doing in the tests—trying to determine the relative fuel values of coal?

Mr. HOLMES. It is a question with them not to determine the especial value of the fuels, but the adaptability of the locomotives to that fuel and how the efficiency of the locomotive can be increased.

The CHAIRMAN. And also to utilize more of the heat units than had heretofore been utilized in locomotives.

Mr. HOLMES. Yes; but they are making no effort toward the improvement of the fuel. They tell me their whole purpose is as to the adaptability of the locomotive to the fuel which they have.

As an illustration of the character of the work we are doing, I may say that we have found in some coals which would have 20 per cent of ash, that by a washing process, at a cost not to exceed 3 to 5 cents per ton, the ash could be reduced to less than 10 per cent; not only this, but a considerable part of the sulphur can be removed, so that the quality of the coal in both of those respects was greatly improved.

The CHAIRMAN. In respect to the lignite and lignite territory, are any private interests being engaged in the matter of investigating this subject very extensively?

Mr. HOLMES. I know of only one case where that is being done, and that is at St. Paul; and the last time I saw General Washburn, who had that matter in charge, he said that they had failed in their efforts to make a satisfactory briquette, and were now awaiting the results of these Government investigations.

The CHAIRMAN. General Washburn has failed in the matter of securing a binder; but is it not a fact that the lignites of Germany are being briquetted by the dried process with machinery which they have invented over there? And is it not a fact that General Washburn has brought with him, or his engineer has brought from Germany, where he investigated this subject for at least six months, plans and specifications for the construction of machinery on the same general plan that they are using over there?

Mr. HOLMES. I don't know just what those plans are. I have not seen them. He was telling me about them—

The CHAIRMAN. But the machinery that is being used in Germany is patented?

Mr. HOLMES. In Germany; yes, sir.

The CHAIRMAN. And can not be used in this country without infringement?

Mr. HOLMES. I understand that their lignite press is not covered by patents.

Mr. SULLIVAN. Therefore they might be used here.

The CHAIRMAN. I think they are patented in this country, or protected in some way, so that the only way that this German machinery can be used to-day in the briquetting of lignites here would be in the importation of that machinery, and because of the patents, in addition to the duties on machinery of that kind, the expense has been so high as to prevent the utilization of that machinery here for that purpose.

Mr. SULLIVAN. In this statement there seems to be a statement here inconsistent with that theory. On page 5 of this communication of Doctor Walcott's it states that "a number of lignites, representing both the extreme Northwest and the Southwest, have been briquetted under high pressure without the use of binding materials, and it has been shown that the cost of briquetting such materials should not exceed 50 cents per ton." Does that mean that that has been shown in your experiments?

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. It states further that "it has been shown further that in the use of certain briquetted coals for railway and domestic uses the increase in the efficiency of the coals used in the briquetted form is more than sufficient to cover the cost of the briquetting operations."

Mr. HOLMES. In several cases; yes.

Mr. SULLIVAN. And it also says that briquetting plants have been installed in California, and new briquetting equipment is now being tested in New York, St. Louis, Pittsburg, and Chicago. That means that this equipment is being tested by individuals at their own expense.

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. And that that plant in California is being installed by private business interests.

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. So that the science seems to have proceeded beyond the stage of mere indefiniteness and uncertainty and experiment, and has become ascertained to be profitable commercially.

Mr. HOLMES. No; I can not say that that is true.

Mr. SULLIVAN. It would seem to be so with the plant established in California, would it not?

Mr. HOLMES. That plant in California failed, so far as the briquetting work is concerned, until they began making by-products in connection with it. That is the only plant in the country that I know of that is being actually operated.

Mr. SULLIVAN. There are two in California.

Mr. HOLMES. The other one has just started, and is not running on a commercial scale.

The CHAIRMAN. Is it not a fact that the difficulty in the way of utilizing lignites is in the machinery—the construction of the machinery—for the briquetting of lignites without the aid or use of a binder?

Mr. HOLMES. That is partly true.

The CHAIRMAN. The use of a binder makes the cost as great, if not greater in many instances, than the cost of the coal itself.

Mr. HOLMES. Provided you have to use very much of a binder. One of the things that we have experimented on slightly, and it is eminently promising for the future, is using no binder for holding the material together, but just enough to help in the waterproofing. You know of your own experience in the lignites of the West that it disintegrates or slacks—goes to pieces—so they are unsuited for many purposes, and in drying it it becomes a fine pulverized material.

The CHAIRMAN. But if we had machinery like they have in Germany, we could utilize it the same as they utilize it in Germany.

Mr. HOLMES. Yes, sir. Here is one of the briquettes which I made from Texas lignites [showing], which stands very much better than the North Dakota lignites so far as going to pieces is concerned.

The CHAIRMAN. Is there more moisture in it?

Mr. HOLMES. No; they dry it more. There is, perhaps, more tarry material in it. That briquette was made without any binder whatever.

Mr. SULLIVAN. Why do you give it a German name?

Mr. HOLMES. Because it is made with German machinery. I went to Germany, took a lot of lignite over, and made these tests myself. Those people told me that the reason they could not do business in this country was because there was no demand for it; that it did not pay them to take it up with their machinery. I understood from those people that they had no patents in this country at all.

The CHAIRMAN. Perhaps I misunderstood, but I understood from what General Washburn said that that was one reason why they could not construct the German machinery, because of the protection afforded by patents. I may have misunderstood him, however.

Mr. HOLMES. I asked upon what basis they would let us have one of those machines to bring here and use in testing our lignites in the different parts of the West, and they told us we could have a plant for just what they sold it for in Germany. They estimated that it would cost, shipped and erected at any place where we wanted it, about \$25,000. I asked them whether or not they wanted to make an arrangement in this country by which people should manufacture machinery of this kind, and they said that they did wish to make such an arrangement, but there seemed to be no demand.

The CHAIRMAN. I understood from General Washburn that the lignite which he shipped over there in sealed packages briquetted successfully on the German machines.

Mr. HOLMES. Yes.

The CHAIRMAN. Did your lignite which you took over there briquette successfully?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. It did not disintegrate afterwards?

Mr. HOLMES. Not at all; not in a single case.

The CHAIRMAN. It would seem that the only question involved in the lignite problem, then, and in the problem of utilizing the lignite in this country is the construction of the machinery used in the making of the briquettes so as to prevent its disintegration after it is made.

Mr. HOLMES. As to the question of preventing the disintegration of the lignite briquette when it is completed, unfortunately that is the same thing we are up against in connection with this investigation. We are experimenting with quite a number of materials, and the most likely is the addition of 2 or 3 per cent of a certain kind of pitch or asphaltic petroleum. It looks as though the increased cost of adding 2 or 3 per cent of this would be offset by the adding of an increase in efficiency in heat and volume of flame.

The CHAIRMAN. To what extent do you increase the heat units by the addition of the pitch?

Mr. HOLMES. More than 10 per cent. Not only that, but we find that one trouble about burning briquettes where you use a forced draft is the fact that the tendency is to burn slowly, and I am told that that binding material increases the volume of the flame nearly 100 per cent, so that it looks as though we were really going to succeed in putting in the binding material which will waterproof it and make it burn well under forced draft, and at the same time sufficiently increase the heat units in it to more than pay the cost of that addition.

The CHAIRMAN. Have you in mind also the investigation of the problem of reducing crude petroleum to a solid for purposes of fuel?

Mr. HOLMES. Only with a view of using it in connection with the briquetting of coal and lignites, in improving the coking qualities of coal, and improving the quality of the gas made from coals and lignites.

The CHAIRMAN. The Standard Oil Company has been investigating that, hasn't it?

Mr. HOLMES. But they would not furnish us the material to use in our investigation, because they said it was of no use, as it could not be done. We are using, however, the crude asphaltic petroleum in our experiments in connection with lignites and coals.

Mr. TAYLOR. I want to know the meaning of the word "briquette," and also what you mean by "binder."

Mr. HOLMES. The briquette is simply a brick made of coal, and the binder is what holds it together or keeps it from falling to pieces.

Mr. TAYLOR. What is the binder?

Mr. HOLMES. Usually pitch is used. That is one of the by-product of coal in the making of gas and coke.

Mr. TAYLOR. From what I gather here the binder really helps in stead of hurts.

Mr. HOLMES. Yes, sir.

The CHAIRMAN. There are other binders manufactured out of certain chemicals.

Mr. HOLMES. I suppose there are 50 different binders which we have tested. In the testing of binders we found that 1 per cent of crude starch would make a briquette of certain coals strong enough to drop it against a wall, and in case of coals of certain other classes it would take 2 or 3 per cent. The trouble is that this starch binder softens under the action of water, and the briquette falls to pieces.

We are trying to find a waterproofing material which will not make the additional cost too great.

The CHAIRMAN. You spoke a moment ago, at the outset of this inquiry, about the very general demand throughout this country for the continuation of the testing of these materials and the testing of these coals. I will ask you whether that demand has been a natural demand growing out of the result of your investigations thus far, and benefits accruing therefrom, or whether it is to a great extent due to your own efforts and the efforts of the Geological Survey in advising engineers all over this country that this estimate would be made and this appropriation would be asked for and requesting them to communicate with members of Congress on the subject?

Mr. SULLIVAN. Before he answers that I would like to ask one question. I wondered if the experiments as to the gas producers and gas engines might not be abandoned by the Government, in view of the facts stated in your report that "already fourteen or more different companies are reported to be making producers for power purposes, and others are endeavoring to perfect new designs. It may be added that at two of our great steel plants blast furnace gas engines have been introduced for power purposes, and a dozen companies are now either manufacturing or are working on plans for the manufacture of gas engines. In other words, it seems to have been demonstrated that the thing is commercially profitable in those two lines."

Mr. HOLMES. I think the time will come in the course of two or three years when this investigation will have gone so far that they can be safely abandoned. But at the present time there are a large number of unsolved problems, not with gas engines, but there are serious difficulties in the way of the proper production of gas for power purposes using bituminous coal. Most of the engines and producers referred to as starting up will use anthracite coal, which produces no tar or other complicating by-products.

Mr. SULLIVAN. That is a question for the man who is financing that particular gas producer that he intends to put on the market.

Mr. HOLMES. That will be true after a while, but there are certain underlying problems which, if they can be solved satisfactorily, will enable the gas producer to manufacture it more cheaply, and in that way the use of gas will become more rapidly introduced for heating and power and for metallurgical purposes.

Mr. SULLIVAN. My idea is, and which we have been trying to develop all day, that so far as your work is concerned, it is principally the blazing out a track in the primeval forest, but when it comes to making a macadamized road there, that at that point you enter upon a field which is properly the field of the business man and the financier.

Mr. HOLMES. We try to guard that point, and stop a certain investigation just as soon as we feel that the general question has been solved without going into any details at all.

There was mention in this paper [Senate Document 214] in one or two places about improvement in the equipment connected with the gas producer; for example, on page 7, where it says, "The separation of the tar and other by-products from the gases made in the producer and the commercial recovery of these by-products," and "Possible improvements in the producer equipment which would increase

the efficiency of various coals used." There is where we are bordering upon the work which ought to be done by private enterprise, and our looking for improvements in the equipment would be entirely incidental to our endeavoring to determine how that kind of coal can be used most efficiently.

As another example, we made a suggestion, which seems to be accepted very generally by the gas-producer people, that one of the great causes of loss of power in the gas producer and the gas engine and one reason why the efficiency is not greater as compared with the steam engine is the loss of heat in cooling the gas and cooling the engine cylinders, and that the water which is heated in cooling the gas and also that heated in cooling the engine cylinders might be used to heat buildings. As this gas leaves the producer it has a temperature of 600°-1,200° F. Before it goes to the engine, and in order to remove the tar and other materials that are a nuisance, it has to be cooled down to the normal temperature of the atmosphere.

In like manner when this gas explodes in the cylinders of the gas engine it heats the cylinder walls. When you make steam in a boiler and it goes out through a pipe to the cylinder, the steam pressure in the cylinder against the piston forces the latter back and in that way turns the wheels. When, on the other hand, the gas enters the cylinders of the gas engine it is exploded by an electric spark; and this exploding gas forces back the piston rod and turns the wheels of the engine. When that explosion takes place it will heat the water to a temperature of several hundred degrees, the water circulating around the cylinder, in order to prevent the engine itself becoming so hot that the steel will weaken and give way under the gas explosion; and the suggestion is that this heat also ought to be utilized for heating purposes. So that is what we mean in general when we say that we do not intend trying to invent new devices but simply suggest that the public utilizes improvements indicated through these investigations.

Now, with regard to the question which was asked by the chairman concerning a letter sent out by me, I will say that I have been asked that question by several persons; and I understand that a number of letters have come to members of Congress and to members of this committee from persons in different parts of the country concerning this work. I sent out some four weeks ago to a number of mining engineers a circular letter, of which I suggested that the Director, Mr. Walcott, give a copy to the chairman of this committee.

The CHAIRMAN. He has not given me a copy, but I have a letter sent to me from another source, and I will ask you if that is the letter [showing letter to Mr. Holmes].

Mr. HOLMES. That is the letter. I was under the impression that that these reports were distributed through members of Congress. My own connection with the Geological Survey is a recent matter, and I am not familiar with all of the details concerning the distribution of public documents.

The CHAIRMAN. You say "if, in writing for this report, you feel sufficiently interested in the work to express an opinion as to its continuance, I am sure that any such expression of opinion on your part will be considered appropriate."

Mr. HOLMES. I wanted to know myself, and I believed that the Director of the Survey and members of Congress would like to know, whether or not the mining engineers in different parts of the country really thought this work should go on, and whether our investigations were following along the right lines. That and the notifying them that this report was ready for distribution was my purpose in sending out that letter. I carefully worded this letter so that I did not ask anybody to write to a member of Congress urging him to support this measure, nor at any time have I done so. I have been asked several times to give out lists of members of this committee—once at a recent meeting of engineers—but I refused to do this.

Mr. TAYLOR. Did you say that that letter was submitted to Mr. Walcott?

Mr. HOLMES. Not until after it had been sent out.

The CHAIRMAN. In this letter, in the last paragraph—and I will print the letter in connection with your testimony—you say “I may add that these fuel and structural material investigations will hereafter be conducted under an advisory board made up of representatives from the national engineering and allied societies,” and then you go on and give the names of members of this board. Are they to participate, and are they to receive compensation for their services as members of this board?

Mr. HOLMES. No, sir; excepting in this way: When they are called upon to do specific work to assist in connection with these investigations, then they will be paid for services rendered, but they receive no regular compensation.

The CHAIRMAN. Have you any authority to create a board of people, consisting of men who are not in the employ of the Government, for the purpose of assisting the Government in carrying on investigations of this kind?

Mr. HOLMES. They are considered to be in the employ of the Government in that sense, Mr. Chairman.

The CHAIRMAN. Would this not amount to the creation of a board consisting of people who are not now or will not then be in the employ of the Government, and that they will be compensated in the discretion of the Director of the Geological Survey for the time that they are actually engaged in the work of investigating?

Mr. HOLMES. Yes, sir; except that this board is composed of experts, each of whom is employed by the Government for a specific work and receives pay for the service rendered.

The CHAIRMAN. Have you any idea what compensation they will demand—such men as, for instance, John Hays Hammond, of New York?

Mr. HOLMES. In no case to exceed \$5 a day, and limited to the time of service rendered.

The CHAIRMAN. Now, I have another letter here, signed by Mr. Emil Swensson, of Pittsburg, addressed to Hon. John Dalzell, and dated April 16, 1906, in which Mr. Swensson says to Mr. Dalzell: “Supplementing my letter to you of February 14, 1906, relative to an item of \$100,000 in the civil sundry bill for the work of testing structural material at the laboratory, World’s Fair Grounds, St. Louis, under the direction of the United States Geological Survey, I am advised this morning by the gentlemen in charge of the laboratory

as follows: 'I find that there is some doubt in the minds of the subcommittee of the civil sundry bill as to whether or not the Government should carry on tests of concrete and reenforced concrete. Knowing my impersonal interest in getting at the truth of this important subject and my desire to see this matter which is now spreading over the country like wildfire put on proper scientific basis, he goes on to ask me to assist in the matter, even to going before the subcommittee and explaining its importance to the country at large.'

And then he expresses his regret on account of important engagements, that he is not able to come on to Washington, and states that he will rely upon his Representative in Congress, Mr. Dalzell, for that purpose. Did you write a letter to that gentleman?

Mr. HOLMES. No, sir; I have never written a letter to Mr. Swenson of that kind, and I do not know who did write it. I am sure Mr. Walcott had no knowledge of any such letter. I am satisfied, furthermore, that no one now on the rolls of the Survey wrote or caused to be written such a letter. It may have been written by one of the engineers appointed from among themselves, to keep in touch with these investigations.

The CHAIRMAN. It would seem as though somebody has been very active in the matter of securing the aid of outside influence for the purpose of getting appropriations here to carry on the work of this department.

Mr. HOLMES. I have never known of a case, Mr. Chairman, in which the engineers and the architects of the country took a more active interest in regard to Government work than they have shown in this. I have received several hundred letters, and so has Director Walcott, from different parts of the country, urging an enlargement of this work. To these I have replied frankly that the importance of enlarging the work was fully appreciated, but that the appropriation necessary for this was a matter for Congress to decide. I am certain that this movement has been largely independent of any agitation on the part of anybody connected with this Bureau. Several of the engineering organizations have taken up the matter on their own initiative, and the American Society of Mechanical Engineers without my knowledge or suggestion, passed a resolution suggesting to its members the propriety of their taking up this matter.

Following are the letters referred to:

DEPARTMENT OF THE INTERIOR.

UNITED STATES GEOLOGICAL SURVEY.

Washington, D. C., March 12, 1906.

DEAR SIR: The United States Senate recently passed a resolution asking the Secretary of the Interior for an expression of opinion concerning the continuance of the investigations of fuels and structural materials by the United States Geological Survey.

I am sending you herewith a copy of his report in response to this resolution, in which he recommends the continuance of these investigations, giving reasons therefor, and asks Congress to make an appropriation of \$350,000 for this work during the next fiscal year.

The final report on the fuel investigations during 1904 is now ready for distribution (Professional Paper No. 48).

The report on the investigation of structural materials during the past year, and also the preliminary report on the fuel investigations during 1905, will also be published at some time in the near future, and copies of these reports should be applied for through the same channel.

I may add that these fuel and structural material investigations will here-

after be conducted under an advisory board made up of representatives from the national engineering and allied societies, and on this board the mining engineers will have five representatives: Mr. John Hays Hammond, of New York; Mr. Robert W. Hunt, of Chicago; Mr. B. F. Bush, of St. Louis; Mr. Julian Kennedy, of Pittsburg, and Mr. C. S. Robinson, of Denver.

Very respectfully,

J. A. HOLMES.

APRIL 16, 1906.

HON. JOHN DALZELL,

*House of Representatives, Washington, D. C.*

DEAR SIR: Supplementing my letter to you of February 14, 1906, relative to an item of \$100,000 in the sundry civil bill for the work of testing structural materials at the laboratory, World's Fair Grounds, St. Louis, under the direction of the United States Geological Survey, I am advised this morning by the gentleman in charge of the laboratory, as follows: "I find that there is some doubt in the minds of the subcommittee of the civil sundry bill as to whether or not the Government should carry on tests of concrete and reenforced concrete." Knowing my impersonal interest in getting at the truth of this important subject, and my desire to see this matter, which is now spreading over the country like wildfire, put on proper scientific basis, he goes on to ask me to assist in the matter, even to going before the subcommittee and explaining its importance to the country at large. I regret very much that previous important engagements prevent me from lending my assistance by going to Washington in person and will have to content myself with falling back on our energetic Representative in Congress. Pardon me for again bothering you about this subject, but the matter is really of serious importance to the country at large, and I therefore venture to again remind you of this matter.

Thanking you for your interest in this matter, I am,

Yours, very respectfully,

EMIL SWENSSON.

MR. SMITH. If they were so active on that subject, what is the necessity of writing letters?

MR. HOLMES. The letter referred to as signed by me related to the fuel report and fuel investigations. This letter was sent to a number of mining engineers, who are more especially interested in the fuel investigations. The agitation for investigations of structural materials has come mainly from the civil engineers who have the largest of the engineer organizations. I have not written such letters to any of these.

MR. SMITH. You wrote the first letter?

MR. HOLMES. Yes, sir; that was the letter sent to some of the mining engineers relative to the reports and investigations of fuels.

MR. SMITH. What was the necessity of writing that letter if they were more active?

MR. HOLMES. That was a specific case of men who are eminent engineers, and I wanted to get specific opinions; and I am frank to say that while I did not suggest their writing to members of Congress, except in the way indicated, I thought the members of Congress would also like to know the opinion concerning these investigations of mining engineers in their own State.

MR. SMITH. Why did you not ask them to write you instead of the members of Congress if you wanted to know their opinions?

MR. HOLMES. I don't know how many wrote to members of Congress, but I know that I had four or five hundred letters written to me in response to that circular letter.

MR. SMITH. What I wanted to get at is this: If these mining engineers were displaying more interest in the matter than any matter,

in your knowledge, before the Government, why did you deem it important to write a letter suggesting their member of Congress and stating that "if in writing for this report you feel sufficiently interested in this work to express an opinion as to its continuance, I am sure that any such expression of opinion on your part will be considered appropriate?" Why did you deem it necessary to send such a letter as that if there was so much activity?

Mr. HOLMES. I had two purposes. In the first place, I wanted to let them know that the report was ready for distribution, and the general way of getting the report was to write for it; and in the second place, that if they had any definite convictions about the work I wanted them to express them where they would do most good. Bear in mind that the mechanical engineers had visited our plant from time to time during the year, probably on an average of a half a dozen during each week. They came from different parts of the country, and I had this information in regard to their interests, but I had no definite expression of opinion from the mining engineers of the country, and I wanted such an expression of opinion.

Mr. SMITH. The advice to write Congressmen was in connection with writing for the report; and secondly, after earnestly advising them that the Congressman had the reports for distribution, you would have been able to have brought in this suggestion—

Mr. HOLMES. Is it not true that Congressmen do have these reports for distribution? I am under the impression that they have a quota. For many years I obtained all the public documents sent to me by applying for them through members of Congress.

The CHAIRMAN. No; they have not; it is a public document.

Mr. SMITH. Do you think it is a part of your business, Mr. Holmes, to advise anybody to apply to your Department or a Congressman for public documents when they have not solicited any information on the subject?

Mr. HOLMES. I don't know, sir; I have not thought about that seriously. But I have been requested by many engineers to let them know when the reports were ready for distribution. Indeed, I had in hand several thousand requests for this fuel report, received before it was ready for distribution.

Mr. SMITH. You know, do you not, that in the case of these scientific publications that if Congressmen do receive a quota it is only five copies?

Mr. HOLMES. No, sir; I do not. The time has been when nearly all of the reports printed were distributed through members of Congress.

Mr. SMITH. Do you know of any scientific report of the Government of which any member of Congress gets over five copies?

Mr. HOLMES. I must confess that I am not familiar with the Government regulations in that respect. I only know this, that for many years, as State geologist, nearly all of the reports that I got were through members of Congress. That was the way I was in the habit of writing for reports.

Mr. SMITH. Do you think that members of Congress, with a limited quota, want you to send out circulars to people to apply to them for certain reports?

Mr. HOLMES. I suggested that they apply to members of Congress or the Director of the Geological Survey if they were interested in getting them. I knew of no other parties to whom they might apply.

Mr. SMITH. Do you think that members of Congress want you to send out circulars asking people to request books which they do not have?

Mr. HOLMES. I have seen at least a hundred letters from Congressmen to the Director, asking that copies of this report be sent to parties named. In every case these reports have been sent promptly, accompanied in each case by the statement that they have been sent at the request of the member of Congress. They have gone out to these persons as though they came directly from the members of Congress.

Mr. SMITH. I notice that there is inscribed upon that briquette, "Briquette Fuel Company, Dallas, Tex." Do I infer from that that the making of briquettes is already a commercial industry in the United States?

Mr. HOLMES. No, sir. Only one plant is operated, and that is the plant established in California recently.

Mr. SMITH. Is there a briquette fuel company in Dallas, Tex.?

Mr. HOLMES. They have a briquette fuel company there.

Mr. SMITH. Are they manufacturing it?

Mr. HOLMES. No, sir.

Mr. SMITH. There is one commercial house of that kind in California?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. And that briquette was made at your plant in St. Louis?

Mr. HOLMES. No; I think this was compressed in San Francisco from materials sent there.

The CHAIRMAN. That is peat [pointing]?

Mr. HOLMES. That is peat. That is one of the most important investigations that we have inaugurated. That is briquetted crudely, so as to prepare it for burning in the gas producer.

Mr. SMITH. What was probably the dimensions of that before it was pressed?

Mr. HOLMES. Half of a cubic foot. It is almost liquid or semi-liquid in the bog from which it came.

Mr. SMITH. Are there any peat swamps or bogs in this country in which the peat is substantially solid when dug out?

Mr. HOLMES. No.

Mr. SMITH. Are there any in any other country?

Mr. HOLMES. Yes; as in Ireland and Russia, where they have dried out considerably.

Mr. SMITH. They dig this peat out and put it in the fire without any treatment whatever?

Mr. HOLMES. Yes; in those countries, only drying it. But the great purpose for which we are experimenting is to get power gas. We have enormous bogs in northern Iowa, extending northward to Minnesota along the border of the Lakes, and also all through portions of New England, where we have peat bogs extensive enough to furnish fuel to run the manufacturing interests of those States for a long time.

Mr. SMITH. Take this pressed piece of peat here, what would you say was the amount of heat in it as compared with the average grade of bituminous coal of the same size?

Mr. HOLMES. If this were pressed a little more, so as to be as compact as the coal, I should say about seven of peat as compared with ten of coal. But the quality of gas made from this peat for power purposes is superior to gas made from coal, so that where the great future development lies is in two directions—for power purposes in gas producers, and for metallurgic purposes as a substitute for coal in the manufacture of iron and steel. And it is along those two particular lines that we are conducting those investigations.

TUESDAY, APRIL 19, 1906.

### INVESTIGATION OF STRUCTURAL MATERIALS— (Again).

**STATEMENT OF MR. RICHARD L. HUMPHREY, OF PHILADELPHIA, PA., PRESIDENT OF NATIONAL ASSOCIATION OF CEMENT USERS, CHAIRMAN COMMITTEE ON TESTS, AND SECRETARY OF COMMITTEES ON CONCRETE AND REENFORCED CONCRETE OF THE AMERICAN SOCIETY OF CIVIL ENGINEERS, AMERICAN SOCIETY FOR TESTING MATERIALS, AND AMERICAN RAILWAY ENGINEERING AND MAINTENANCE-OF-WAY ASSOCIATION, ACCOMPANIED BY CAPT. ROBERT W. HUNT, OF CHICAGO, ILL., AND MR. RUDOLPH P. MILLER, OF NEW YORK, N. Y.**

Mr. SMITH. I will ask you a proper question or two, and then ask you to make a general statement. What is your business?

Mr. HUMPHREY. I am a consulting engineer and a chemist.

Mr. SMITH. What official position, if any, do you hold in any scientific society?

Mr. HUMPHREY. I am appearing here as the president of the National Association of Cement Users. I am also secretary of the joint committee on concrete and reenforced concrete of the American Society of Civil Engineers, a member of the American Society of Testing Materials, and also of three or four other affiliated societies. I am also chairman of the committee on tests of that same organization.

Mr. SMITH. Are you interested in both the reenforced concrete tests and the fuel tests?

Mr. HUMPHREY. Yes; I am interested in both of them, but the major subject is that of structural materials.

Mr. SMITH. The committee will be glad to hear such a statement as you desire to make with reference to the continuance of the appropriation for experiments in structural materials, but I would suggest to you that the committee has no doubt about the value of those experiments, but that the only question in the minds of members of the committee, so far as I am advised, is whether the matter is not in such an advanced state now that it ought to be left to private effort to develop it, as in the case of other inventions.

Mr. HUMPHREY. I would like to say, if I may be allowed, that I did not personally expect to do much talking. My presence here is due to the fact that as president of the National Association of Cement Users and as the secretary of the joint committee on concrete

and reenforced concrete. I had been intrusted with the duty of looking after this appropriation and helping to furnish information which would help you and guide you in determining its merits. In accordance with that idea I had invited Mr. William Barclay Parsons, Mr. Alfred Noble, Professor Burr, Professor Swain, Mr. E. L. Corthell, and two or three other gentlemen to come, and they were to be here; but Mr. Parsons was engaged in a law case, and Professor Burr advises me that he has been unavoidably detained and can not be here; Mr. Noble and Mr. Parsons have sent letters indorsing the appropriation and stating why it should be granted. Mr. John Bogart and Mr. Charles A. Hexamer were also invited to be here, but Mr. Bogart was subpœnaed in a trial in New York and Mr. Hexamer has illness in his family which prevented him from coming.

Mr. SMITH. Pass those letters to the reporter, and he will incorporate them in the proceedings.

Mr. HUMPHREY. I would like those gentlemen to be allowed the privilege of appearing personally, so that you can question them on the subject. I think that they could give strong testimony. Mr. Corthell says he would like to explain to the committee his ideas upon this subject. He stated that a better knowledge of concrete and reenforced concrete in connection with the New York Barge Canal would save \$16,000,000.

Mr. TAYLOR. Knowledge derived from what?

Mr. HUMPHREY. Derived from proper data. That is, he did not feel certain that there was sufficiently reliable data at the present time that would enable him to design safely structures in which reenforced concrete would be used. I think that is the feeling of everyone who has to do with reenforced concrete. Personally, I have been connected with cement since 1891.

Mr. TAYLOR. I wish you would define "reenforced concrete."

Mr. HUMPHREY. It is simply a mixture of sand and stone, or slag, or cinders, which are bound together with Portland cement. This material has no strength whatever to resist what we call bending. It is all right in a mass, for resisting a compressive pressure, but it has no tensile strength; so it is the practice to reenforce or strengthen it by inserting bars of steel at the points where the maximum tension occurs, and in that way it is being used to-day for beams and girders and posts. Of course the amount of metal put in, how it is put in, and the character of the action of the metal and concrete in combination and the strength that should be allowed for that material are not yet determined. They are largely used by rule of thumb.

The most progressive in this line are those who have patented methods of reenforcement, and each has its own tables and formulæ for the design of structures, and is usually based on an excessive use of this particular reenforcing material, because this is what they are selling.

Our committee, which embraces about 40 of the best-known engineers in the country, have been trying to collate all the existing literature and existing tests with a view to obtaining some general information upon which we could base proper and reliable formulæ, so that we could give to the people at large rules for the proper design of structures in concrete and reenforced concrete. We also have a committee on failures, and we are endeavoring to collate information as to structures that have collapsed or failed in any way and to

determine the causes. It is almost impossible to get information of this character, because the people interested in the erection of such structures are equally interested in concealing the information as to why the structure failed. We are trying to get data from which we can draw safe conclusions, so that we can prepare proper rules for the design of buildings and other structures.

Mr. TAYLOR. Can you tell why the Government should do that rather than an individual?

Mr. HUMPHREY. A private laboratory engaged in the business of making commercial tests has not the time or opportunity to do this work properly and exhaustively. At first our committee thought we might carry on such investigations at the technological institutions and for the last two years we have had 12 institutions making the tests for us, with a view of determining whether we could secure from this source the information we felt we must have. We have collated the information thus obtained. It is interesting individually, but you can not compare the information obtained from one institution with that from another, and the reason for that is that the students who have conducted the investigations are unskilled, and the results show such irregularities that the results can not be depended upon. Such institutions do not have the time, and generally neither the facilities or apparatus for carrying on an extensive series of tests such as are required for reliable data, besides the inexperienced, unskilled student labor greatly impair the results.

Mr. TAYLOR. In other words, it is amateur work, and the Government is the only expert in the country?

Mr. HUMPHREY. Yes; and not only that, but such investigations involve the expenditure of a great deal of money. We tried to raise money for this purpose, and found that it was not practical to raise \$100,000 by outside contributions.

Mr. TAYLOR. Is the matter of money of as much importance as the character of the work, as to its being amateur work or experts' work?

Mr. HUMPHREY. If you are going to have amateurs do it the results will not be valuable. The results in order to be of value must be backed up by a disinterested person who has authoritative standing, and only the Government can give that standing. If you rely upon commercial interests to do this work you will find that they are more or less biased in favor of their own specialty. For example, every test published in a trade journal concerning a reenforcing bar, usually a patented bar, carries with it evidence that the tests made are particularly favorable to that bar, or else would not have been published. Not only that, but such tests are made on test pieces especially designed to exploit the best points of the particular bar under test, so that such results are unreliable.

To-day we have a peculiar condition, in which, through a lack of adequate information, we are using large quantities of patented bars in excessive percentages in order to insure a sufficiently large factor of safety, or more properly called, a factor of ignorance. Columns are often reenforced with steel where it is unnecessary, while beams and girders are often insufficiently reenforced. I have recently personally inspected buildings that have collapsed, and in nearly every case the cause was improper design and bad workmanship, due to a lack of a proper knowledge of the subject.

Mr. TAYLOR. What do you mean by "recently?"

MR. HUMPHREY. Within three or four months. At Duluth, Minn., a grain elevator passed through the fire successfully, and the fact is being widely heralded, and yet people forget that when that elevator was originally built it collapsed, through faulty design, and had to be rebuilt.

There is very little accurately known of the value of the materials of construction, and this is particularly true of concrete and reenforced concrete.

The rapid and practically unchecked development in the use of concrete has been a matter of wonder even to its most enthusiastic advocates, and has been viewed with apprehension by those best informed on the subject and who are as well aware of its weaknesses as of its strength.

The extensive use of this material at the present time, in the absence of adequate knowledge of its properties, is made necessary by reason of its great economical importance, which becomes yearly more so as wood and other temporary structural materials become more scarce. Besides, its great fire-resisting qualities make it especially desirable as a building material.

As already stated, the joint committee on concrete and reenforced concrete, composed of the leading experts of this country, after several years of labor in an effort to secure reliable data on which to base a report, has reached the conclusion that such information does not exist, and further that it appears impracticable to secure it from private laboratories or technological institutions.

The only feasible plan would be to conduct such investigations as would yield the desired information at some central point by disinterested persons, where the conditions are uniform, and with skilled men, thereby securing as comparable results as possible.

Such conditions are to be met only in a government laboratory; no other interests could conduct such investigations as would be reliable and as comparable as possible to secure, and as would be received as imparital and authoritative.

The necessity for exhaustive tests to determine the value of the various materials which enter reenforced concrete and of the combination of these materials is very great and affects more or less every big industry of this country.

The question has been asked me why men will go into this matter of investigating these materials and devote their time to it without compensation if they are not interested in it and do not expect to receive some direct benefit. The professional engineer is peculiar in this particular. He spends money and time in advancing scientific research without expectation of remuneration. Take our 40 men interested in this particular work. Every one attends the meetings of the committee and personally spends from \$100 to \$200 a year for the expenses incident to these meetings, and for which they never get a cent in return.

These contributions to science by the engineer are made readily and without expecting to profit in any way, personally.

The various committees composing the joint committee find they can not make a report to their respective societies under the present conditions and in the present state of our knowledge of the subject, and they therefore appeal to the Government to carry on these tests and investigations. It is only the Government that has the power

and the facilities to carry on these tests as they should be carried on, and it is only the Government that has the confidence of the people, which is necessary for the acceptance of conclusions reached in such investigations.

This country is not keeping pace with the progress in other countries, such as England, Germany, Switzerland, and France, who are all carrying on investigations and work of this kind, and it helps those countries materially in their commercial progress. Germany has taken a leading position in the world in the study of industrial economics, largely because that Government has been in sympathy with and given financial assistance to the investigations of such matters. Wood is rapidly disappearing in this country, and other structural materials are becoming quite expensive. Reenforced concrete is being used now to a great extent in the most dangerous and often absurd manner by people who know little or nothing about its properties, and I think the reason is that it affords an economical substitute for these materials. Builders find that they can erect these structures with cheap, unskilled labor, and quickly, and that in the construction of such structures they can save anywhere from 20 to 50 per cent on the cost.

The average builder does not care very much about the stability of the thing, if he can deliver the building and get the work done quickly and profitably. And in order to increase his profit often reduces the amount of material used to as near the limit of safety possible and not have a collapse. This is the condition that prevails to-day. The fact that we have not had more serious collapses involving loss of life is more miraculous than otherwise. It has not been due to any considerable amount of foresight on the part of the builders. The failure of the Johnson Service building, in Milwaukee, Wis., was due to a lack of knowledge as to how the beams and girders should be erected.

MR. TAYLOR. Where is that?

MR. HUMPHREY. In Milwaukee. One of the large buildings on the Pacific coast, one of the earliest buildings constructed there, has required strengthening, because the material of which it was constructed (reenforced concrete) was failing. You may ask, "How do you expect to determine the value of reenforced concrete at the end of a number of years in a year's time?" In answer, I would state that you can, for instance, load and unload a test piece a great many times with a load well within the elastic limit of the material and determine in two or three months what effect such repetition of that load is going to have on its strength. Thus obtaining in a relatively short time results which, in actual construction, would require years to develop. You can not get a single constructing engineer to-day that can give you any authoritative statement on the subject of the proper formulæ for the design of structures of this material. Every person that writes a treatise on the subject will give you his own particular theories and formulæ, but there is no concordance.

We hope that the United States Government will do this work. Within a year at the outside they can give information that we must have, and information that the world must have. You gentlemen are very busy, and your time is limited. I am full of this subject. I do not know what information you desire. I have endeavored to give you some valid reasons for the continuance of this work by the Gov-

ernment, and reasons why I think this appropriation should be made. If you desire further information on this subject I shall be glad to answer any questions.

Mr. SMITH. What foreign countries do you say carry on these experiments out of their government treasuries?

Mr. HUMPHREY. The royal station at Charlottenburg, Germany, and the station at Zurich, Switzerland, and a similar institution in Paris, France, under the Ponts et Chaussées.

Mr. SMITH. If that is true, why are they not able to furnish the data to the world?

Mr. HUMPHREY. I think we Americans are much more rapid, and work much more rapidly than they do abroad. They go ahead and spend twenty years, perhaps, in study before they get any results. What we want is immediate results that we can use now. We are pioneers, more or less, in this country in reenforced construction. The reenforced concrete was first used here in this country; and while the foreign countries have carried it on and probably have done more things than we have, nevertheless to-day America is beginning to lead the world in the application of concrete as a structural material.

Mr. SMITH. How many years has Germany had this governmental support for it?

Mr. HUMPHREY. I could not tell you in actual years, Judge, but I should say twenty or twenty-five years. Perhaps Captain Hunt could tell.

Captain HUNT. That is about it; not necessarily in concrete, but as to the tests.

Mr. HUMPHREY. Yes; tests on the technicology of building materials.

Mr. SMITH. Which of these three countries you have mentioned has been at it the longest?

Mr. HUMPHREY. I should say Germany, probably, and after that Switzerland.

Mr. SMITH. Your reason for believing that the American Government should continue experiments on that line is that you think we could progress more rapidly than they can?

Mr. HUMPHREY. Not solely. The reason is an economic one.

Mr. SMITH. I ask you the question, If other foreign countries have been at work upon this for ten or twelve years, why can we not use that data? As I understand, your only reason is that you think the Americans can progress more rapidly than the scientists of those other countries.

Mr. HUMPHREY. You misunderstood my answer, and I misunderstood your question. Germany has been investigating building materials for years, but they have not made much progress on this question of concrete.

Mr. SMITH. Has any foreign Government spent any considerable amount of money on the study of reenforced concrete?

Mr. HUMPHREY. Yes; they have.

Mr. SMITH. Then, if there are other countries that have pursued this investigation, why will not that furnish to the world an abundance of data upon this subject, unless, as you claim, the Americans will make more rapid progress than the foreigners?

Mr. HUMPHREY. The material that enters into reenforced concrete is crushed stone, limestone, sand, and gravels. One of the things

that was done last year at St. Louis was the gathering of such materials from all parts of the country and making comparative studies of the strength of these materials in different mixtures. You will be surprised to see the range of strength there is in these materials.

Mr. SMITH. Is there any more range in those materials as to relative degrees of strength than there is in the strength of different qualities of limestone? The strength of limestone, you know, varies very much—from nothing to something which may be very great.

Mr. HUMPHREY. Yes; that is true. If the aggregate is weak, you concrete must be weak; and it is in order to give the engineer and the users of concrete some idea of the strength of the material which he is going to use that these investigations and inquiries are necessary. All these factors of the strength of materials vary with different localities and the classes of materials used. The results at one point will only approximate those at another.

Mr. SMITH. That is a study of the subject of concrete, not reinforced?

Mr. HUMPHREY. Yes; but the investigations would embrace not only the materials that enter into concrete, but the material as it must be reinforced to resist the strains that it is subject to.

Mr. SMITH. The chief persons who would be directly and financially interested in this would be the cement manufacturers, would they not?

Mr. HUMPHREY. Of course they are. Anything that establishes the qualities of a material so well that it becomes generally used would naturally benefit the producers of the material. But the manufacturers will go on manufacturing cement indefinitely. Cement will always have its uses, whether these investigations are made or not, and the consumption will constantly increase.

Mr. SMITH. It has been multiplied in recent years, has it not?

Mr. HUMPHREY. Yes.

Mr. SMITH. And all the cement establishments in this country are in a combination, are they not?

Mr. HUMPHREY. I know them all very well. They have an association, but it is not a combination. They can not control prices. It has been absurd the way the prices have ranged in recent years.

Mr. SMITH. They were able to control prices in the bids on the Arizona irrigation dam not long ago.

Mr. HUMPHREY. The railroad rates operated materially in determining the price of cement in that case. The cement manufacturers could not quote a low enough price for the product to be delivered there.

Mr. SMITH. The Government, however, could produce it on the spot for about half.

Mr. HUMPHREY. I hardly think they will be able to make it for half. Probably they could make it for less. There is no question about that.

Mr. SMITH. Why should not these cement men be the proper men to pay for the discovery of things that would tend so greatly to increase their business?

Mr. HUMPHREY. I might say, in representing our committee, that personally I have tried to raise money from these people, and I confess to you it is like trying to get blood out of a stone. I will be absolutely frank with you. We have good reason to know that it would

be impossible to raise sufficient funds from them. You may ask, "Why are you so interested in this appropriation?" I have been, unfortunately, delegated by our committee to look after this appropriation.

Our committee, aside from the prospect held out in the establishment of this governmental testing plant, has no prospect of being able to formulate a report, because thus far they have not been able to secure the information they require. They have appealed to the manufacturers of cement and failed to secure adequate assistance. They can go to the patented bar people, and they will say, "Yes, we will give you all the money you want, but you must investigate our bar." They are interested only in the investigation of their bar and in its exploitation. What we want is to make tests of this material independently of any patented process.

MR. SMITH. Should you not experiment with every patented apparatus if you are trying to find out the tentative rules that govern the principles of construction in this line of work?

MR. HUMPHREY. Yes; but there should not be any restrictions placed on these tests.

MR. BROWNLOW. If the cement people themselves should take this matter up and investigate it, would the authority given by them, or the acceptance of their authority on the part of the country, be worth anything? That is, would the country accept their findings?

MR. HUMPHREY. No, sir. That would be another drawback. If it was shown to be particularly favorable to concrete, it would not be accepted by the engineers and other users of the material, because it would be felt that the manufacturers being interested in this thing they are naturally biased.

MR. SMITH. Do I understand you have taken this thing up as a cement manufacturer or as a cement user?

MR. HUMPHREY. The organization of which I am the president is made up of men who use cement in all parts of the country. Our convention at Milwaukee in January of this year had a thousand men in attendance, and they came from all parts of the country. They were men not accustomed to spend a dollar for nothing. They were men of moderate means. They were the fellows who put down sidewalks and make concrete blocks, and build structures in concrete and reinforced concrete.

They spent their own money. Why? Because they want information about the properties of this material.

At this convention of which I speak they passed a resolution requesting the president to come down before your committee and tell you why they wanted the investigations at St. Louis under the direction of the Geological Survey continued, and how important the work was to them. Letters have been sent to the various Congressmen by these men, urging them to see that the appropriation is made. That has been done because these men want to be helped, and they deserve to be helped.

MR. SMITH. The evidence here shows that the most of the letters that come to Congressmen have been sent out by these men in the Geological Survey, asking people to write letters to their Congressmen to influence this legislation. There has not been a letter that has come to our attention that did not emanate from the Geological Survey.

Mr. HUMPHREY. The various committees with which I am connected have reported to their societies and associations and have stated that unless the requisite information was obtained through the Government they would be unable to make a report, and advised that this appropriation was now pending and requested everyone interested to write to the Member of Congress from his district calling attention to the matter and bespeaking his consideration in securing its passage. The members of our societies have written to their Congressmen asking their services in behalf of this bill. It may have been a mistake, but it was done feeling that this was the best way of interesting Congress in the merits of this work.

Mr. SMITH. My district is covered with these men making cement blocks, but, nevertheless, I have not heard from any of them.

Mr. TAYLOR. I have not got a letter from a single soul in my district about this except from the State geologist, who makes it a practice of writing me regularly every year about the Geological Survey.

Mr. HUMPHREY. I was out in Ames, Iowa, at the convention of the Iowa Association of Cement Users. I delivered an address there. I do know that this association passed a resolution asking Congress to make adequate appropriation for the continuance of the investigation of structural materials, and the president of this association requested the members to write to the Members of Congress asking them to advocate this appropriation.

Mr. SMITH. I suppose there are 500 people in my district interested in cement factories and things of that sort and I have never got a letter from them about this.

Mr. HUMPHREY. The association, Judge, passed resolutions asking Members of Congress to advocate this appropriation. Your name was mentioned as one of those they should write to, and I have received letters from members of this association stating they have written to the Member of Congress from their district. In some cases the replies of the Congressmen were inclosed.

Take the situation up in the Dakotas. I attended a meeting of the North-West Concrete Products Association, and in that district men came from all over that section of the country for the purpose of securing information as to how they could get the best results with the materials available, because their wood and stone was scarce and becoming more so each year. They had only sand in abundance, and they wanted to know how to best utilize it in the manufacture of concrete blocks, etc. You probably may know how difficult it is to turn out a good block, one that has the compressive strength and is impervious to water and is durable.

Of course investigation work of all kinds can be looked at from great many points of view, but we never make progress unless we get facts that are right. For instance, in France many investigations have been made and many theories have been advanced, notably those of Considere, which have proven to be wrong. Information is not available in reliable form, and the present condition of the subject is chaotic. We hope, therefore, the Government will come to the rescue and will make such investigations as will yield data on this subject that will be reliable.

Mr. SMITH. How many years do you think this should be carried on?

Mr. HUMPHREY. If the Government undertook this investigation next year they would get information that would be valuable to all

parts of the country. Everybody interested, whether they be engineers, contractors or not, would be benefited.

Of course you understand, Judge, that the amount of investigation work on any subject can be made voluminous or not, just as you wish. Take the investigation of timber, for instance. No better work in the world has been done than that by the Bureau of Forestry, and it has been invaluable to all users of this material. Mr. Miller, who is to follow me, has been trying to collate information for use in the preparation of a new building code for New York, and he will tell you of the trouble he has had to get reliable information that could be put into this code which would so control building operations as to properly safeguard the public.

There is another important reason why the Government should take this up, and that is the immense amount of money that the Government is spending in the construction of the Isthmian Canal and in its irrigation work, in the construction of its public buildings, and in the work under the control of the War and Navy Departments. That information, if available, would save millions of dollars to the Government, and this appropriation would be a mere drop in the bucket compared with what would be gained or saved.

The CHAIRMAN. Has not the Government facilities now for making tests independent of the tests of the Geological Survey?

Mr. HUMPHREY. The Government, of course, is the purchaser of material, and makes tests for the examination of that material, but—

The CHAIRMAN. For example, the Government is spending several million dollars in the construction of a House of Representatives office building. All of that material is tested, and it is tested by the Bureau of Standards.

Mr. HUMPHREY. There is a distinction between tests such as we know as commercial tests, made to determine certain strength values regarded as necessary, and tests or investigations of structures in which principles are involved—principles of design. That is the trouble at the present time.

There is no governmental bureau to carry on investigation work of this sort, because it should be done by persons who do nothing else if results of value are to be secured. Where it is conducted in conjunction with the tests of materials being used in the various structures erected by the Government it must be carried on as the routine tests will permit. At times in the rush of routine work it must be dropped entirely and often for a long time, and in that way you lose the valuable data that can only be obtained by a consecutive or continuous and regular system of tests; and it should be taken up by somebody that is not involved by routine tests for the reception of materials going into public buildings. This work should be the investigation of principles under which the material is to be used, the theories involved in this question. That such information is needed by the Government is attested by the fact that those departments having the facilities endeavor to sandwich such investigations in with the routine work.

This work should be coordinated so as to avoid duplication.

Mr. SMITH. They had only \$7,500 last year, and they want \$100,000 for next year. We have just been through the tests of coal and lignites, in which they got \$70,000 the first year and \$227,000 the second year, and now they want \$250,000 for next year. We are somewhat timid

about getting into these enterprises, because we do not know how far we will have to go.

Mr. HUMPHREY. An appropriation of \$7,500 is utterly inadequate. A testing machine would cost you at least \$2,000 to begin with. The testing of a concrete beam alone takes four or five men, the load being applied to it at regular points, and the behavior of the beam measured with instruments; the beam is tested to destruction. It takes five hours to make a test of that kind. If you give them a certain amount of money and it is small, say \$20,000, then the amount of work they can do with that amount of money is limited. If you give them \$100,000, then they can do more than five times that amount of work, and the public can get the information that much more quickly.

Mr. SMITH. Personally I would like to get you committed. Mr. Humphrey, on this: If we give you this \$100,000 this year whether you would not come back and ask for \$200,000 next year?

Mr. HUMPHREY. I do not mean to say that you can exhaust the subject in a year. That would not be within the bounds of reason. But \$100,000 expended this year would give an immense amount of valuable information to the public and to the Government. It would result in a saving of an amount many times more than the amount involved. The more the Government grows, the more raw materials are consumed by it, the better the Government is; and the encouragement of this industry, which is yet an infant industry, such as would result from these investigations, is the same as the encouragement the home industries receive through a protective tariff, by which products from other countries are kept from competing injuriously with those produced in this. You should furnish information so that men can construct these structures with safety. Some parts of buildings as constructed now are ten times stronger than they need be, and at the same time other parts are not nearly strong enough. The builders do not know where the weak points are. That is the situation to-day.

Furthermore, Mr. Hexamer, who is the expert for the National Board of Fire Underwriters, wants to present to you the reasons why these investigations would be of great value from an insurance standpoint. The insurance companies are not willing now to make low rates on these reinforced concrete buildings, because the properties of that material have not been demonstrated thoroughly, and the insurance companies are discriminating against concrete as compared with timber and other forms of construction. Yet I am of the opinion that there is not a better fire-resisting material to-day than concrete. By carrying on this work of investigation you are going to help every man that has such a building, by giving the insurance companies data on which they can lower the rates of insurance and not discriminate against it.

Mr. SMITH. Have you any questions, Mr. Chairman?

The CHAIRMAN. Mr. Witness, have you any further statement that you wish to make?

Mr. HUMPHREY. I would like to say, Mr. Chairman, that while on my fixed Thursday for the last day of this hearing, I was obliged to make a hasty trip for the purpose of asking Mr. Parsons, Mr. Noble, Mr. Corthell, Professor Burr, Mr. Hexamer, Mr. Crosby, and a number of others to appear before you gentlemen. Mr. Corthell is detained in New York by a meeting of the barge canal board, Mr. Burr is detained

by an accident, and Mr. Parsons by a lawsuit. We want to give you ample reasons why these tests should be made. We want you to have all the facts. I think these letters that I have filed here from these gentlemen will tell you why these tests should be made. These gentlemen are all men of standing in their profession and their opinion should carry weight.

The CHAIRMAN. Why is it that the importance of making these tests was not discovered long ago? Why is it that so recently the importance has dawned upon the building profession, that of engineers and architects?

Mr. HUMPHREY. Two and a half years ago, when concrete first began to be used to a marked extent, the American Society of Civil Engineers appointed a committee on concrete and reenforced concrete, with instructions to prepare recommendations covering its use, and to affiliate in its work with similar committees of the American Society for Testing Materials, the American Railway Engineering and Maintenance of Way Association, and others, and they worked for two years trying to collate the existing literature on the subject and the results of such tests as had been made; but they found that these tests had been made for the most part in colleges by students inexperienced and unskilled, and they were, therefore, of little or no value.

Then they tried to supervise a series of investigations in some twelve college laboratories, under competent inspection, and after collating these investigations they found they were not comparable and did not furnish the information desired.

During the World's Fair at St. Louis a series of tests was inaugurated, which, at the close of this exposition, the Geological Survey undertook to complete, and the results obtained were so good that our committee tried to get the Geological Survey to take up the investigations it desired to have made, and the Survey did agree to take it up. That is the condition to-day.

Mr. TAYLOR. Who originated the tests at St. Louis?

Mr. HUMPHREY. You mean in the laboratory?

Mr. TAYLOR. In the exposition. Who began that business of testing structural materials?

Mr. HUMPHREY. These investigations originated in this way: The cement manufacturers decided to make an exhibit at the exposition for the purpose of exploiting the American Portland cement industry, and as a part of this scheme they decided to erect a building there of reenforced concrete, a single story building, simply to exploit the use of this material. They installed a model testing laboratory in this building for the purpose of showing how Portland cement should be tested. They found they had some spare time, and they thought they had better take up some other testing work, and then they commenced the investigation of sands, gravels, and stone from different parts of the country with a view of securing data of value on the strength of these materials in the various parts of this country.

Mr. SMITH. You say this cement building at the St. Louis Fair was made of reenforced concrete?

Mr. HUMPHREY. Yes, sir.

Mr. SMITH. There was no necessity for reenforced concrete in a building of that magnitude, was there?

Mr. HUMPHREY. Yes; although it was primarily to exploit the use of reenforced concrete. The girders, for instance, are of 30-foot span,

and the walls are only 4 inches thick. It is entirely of Portland cement. There is nothing to burn. It is fireproof. That was one of the objects in view—the exploitation of a thoroughly fireproof building. The roof, the top covering, was only 2½ inches thick. The whole was an attempt to exploit how thoroughly Portland cement could be used in every part of a building. The windows would have been metal with cement-filled sashes if we had been able to get deliveries in time. That was the only defect in the whole building. Ordinarily they veneer concrete with brick or some other material, but that building has a natural concrete finish.

Mr. SMITH. I never dreamed until now that it was reenforced concrete.

Mr. HUMPHREY. Yes. The center beams are 30-foot span, and reenforced with ½-inch round bars.

If the committee should be willing, I would like to take some short time next week, when we can get these other gentlemen here, to make a number of statements to you. I do not know that I can add anything to what I have already said. I do not want to reiterate all the points I have already made.

In conclusion I want to repeat, by way of emphasis, that the 40 men composing the committee which I represent after two years' labor have been unable to secure, either from tests already made or from tests made under their direction, the information required in order to prepare rules governing the safe and economical use of concrete and reenforced concrete, and, further, that such investigations as will secure this data must be conducted by an impartial and disinterested party and that they believe that the proper party is the United States Government.

Captain Hunt, of Chicago, is here, and I would like to have him present his reasons why these investigations should go on.

APRIL 17, 1906.

RICHARD L. HUMPHREY, Esq.,  
*Cosmos Club, Washington, D. C.*

MY DEAR SIR: It is with much regret that I find myself unable to join the other engineers in appearing before the committee to urge the passage of an appropriation for testing reenforced concrete. This is a material the use of which has developed tremendously in the past few years, and which is certain to take a much greater part in general construction in the future. It is something which will not only be utilized in heavy engineering construction and make possible the building of structures that would be too costly in steel, but it can also be used in the building of houses where wood in the past has been so much used.

Investigators all over the world have been examining the properties of this combination of metal and cement, but such investigations have been individual in character, have been conducted along special lines, and have not been of such an order as to form the basis for absolute deduction for all cases. Unfortunately, too, a great number of these investigations have been made by parties who had special interests in the results, and their conclusions, therefore, can not be safely followed.

If reenforced concrete can be used safely in all sorts of building construction, small as well as large, the people of this country will reap the benefit of being able to secure fireproof and permanent construction at moderate cost. To know how to make two such dissimilar materials work in unison requires a careful, accurate, and systematic investigation of such a broad and general character as to form an absolutely safe basis for deduction. Such an investigation is beyond the scope of any individual investigator or the laboratory of any of our great universities; it can not be done by a combination of manufacturers or parties interested, because the results must be obtained by persons absolutely disinterested if they are to be relied upon. It seems to me that this investigation can be carried on only by the aid of the Government.

eral Government; and as all the people are interested in the results, it would seem to be a perfectly proper thing for the Government to undertake.

I certainly hope you will be successful in your efforts, and you may have me recorded as being unqualifiedly in favor of the movement.

Very truly, yours,

WM. BARCLAY PARSONS.

NEW YORK, April 17, 1906.

MR. RICHARD L. HUMPHREY,  
*Care of Cosmos Club, Washington, D. C.*

DEAR SIR: I regret very much that it is not practicable for me to appear before the committee Thursday, for reasons which I have explained to you.

The subject of reenforced-concrete construction is one of great importance to all who are interested, financially or otherwise, in economical building. The saving in cost often effected by this system of construction is very marked and is attested by many examples, both in the United States and in other countries, but the too frequent failures of such construction, resulting in great losses of property and in some cases even loss of life, cause many engineers and builders to distrust the system, and therefore the possibility of great saving in cost is frequently lost.

The failure of an engineering construction is usually due to faulty design or bad construction. Unfortunately, when a failure occurs the parties responsible are pretty certain to be interested in concealing the facts, and the several failures that have occurred have not furnished information as to cause, which might have been expected, but have caused distrust of the system, which to a large extent is groundless.

During the last few years quite a large number of tests of reenforced concrete beams and reenforced concrete floors have been made, the former at various colleges where expert workmen were not available, and the latter by patentees of various forms of steel rods; in either case the results are open to question, and, in fact, there are great discrepancies in them. Like all new methods of construction this one is being used unskillfully, and the many failures show that too great risks are taken.

The only practicable way to make the undeniable advantages of this method of construction immediately available, to determine the conditions suitable for its use, and to lay down the principles which should govern the design of such structures, is a careful and thorough investigation by competent men with sufficient funds to carry it out. The committee of which you are a member is well fitted by experience for the work and has the confidence of engineers and builders, but the work will require a considerable sum of money which its members can not provide, and I earnestly hope that Congress may grant you the assistance you ask.

Very truly, yours,

A. NOBLE.

[Telegram.]

R. L. HUMPHREY,  
*Cosmos Club, Washington, D. C.:*

Regret greatly impossible to be in Washington to-day. Would gladly aid in securing appropriation.

WM. H. BURR.

# STATEMENT OF CAPT. ROBERT W. HUNT, OF CHICAGO, ILL.

MR. HUNT. Mr. Chairman, I have been invited to come here, and I come with great pleasure, simply because my heart is in this thing, through my conviction.

THE CHAIRMAN. Who asked you to come, Mr. Hunt?

MR. HUNT. Mr. Humphrey asked me to come. I will start my talk either in my own way or as you may desire, Mr. Chairman. I do not know whether you know who I am or not.

THE CHAIRMAN. Tell us what your occupation is.

MR. HUNT. I am an engineer, and I am a manufacturer of steel. For the last ten years I have been at the head of Robert W. Hunt & Co., testing and inspecting engineers, with offices in the principal cities of

the United States and in England. We are the largest concern of that kind in the world. Our clients are principally the railways of the United States, as well as private individuals, and very often the United States Government. We test and inspect material of all kinds, and fuels, and make efficiency tests of fuels—of their consuming capacity and cooking qualities. We have our chemical laboratories and our physical laboratories.

I happen to be president of the American Institute of Mining Engineers this year, which perhaps gives me some status. I have been president of the American Society of Mechanical Engineers. I am a member of the American Society of Civil Engineers, and a member of other scientific and engineering associations. I have had quite a long life, gentlemen, and naturally I have seen a great many things happen in this country, some of them historical, that bear upon this subject.

In the early seventies the Government made a small appropriation for the testing and reporting upon iron chains, particularly cables and hawsers. If my memory serves me aright, on that Commission were Commodore Beardsley and Alexander L. Holley, a noted scientist, meteorologist, and engineer. They went as far as they could, and made a report which remains to-day the only reliable report on iron chains, up to the extent they could go. The appropriation was exhausted. Congress, in its wisdom, or the committee who had charge of it, voted not to continue it. The engineering societies of the United States and the manufacturers generally entered a solemn request that it should be done, and presented their arguments and reasons to pretty much the same extent as is being done here before you now. It was ignored. That was in the seventies.

The world saw what good they had done and thought there was a field for them to continue that work and to help the commercial and industrial interests of the country.

It happened just about that time that a new metal came into the world, through the discovery of the manufacture of Bessemer steel, as to the use of which very little was then known. It was accepted under the name of steel, and it was thought that it had to be treated accordingly. A great many mistakes occurred in that use. The principal way in which it was applied was in the form of railway rails, in place of iron rails, and while it gave wonderful results, still in some cases it was unsatisfactory. There was nobody whose business it was to investigate that, and to carry on a regularly planned investigation, and so there was a general discussion, and it resulted in a number of railroads refusing to use it at that time.

The Pennsylvania Railroad reported that their observation was such that they decided that it was a mistake to use rails with steel of high carbon; that it ought to be steel of low carbon. While that was combated by others, still, having the indorsement of the Pennsylvania Railroad, it was accepted, and if you will ask the railway experts whose experience dates back to the seventies, they will tell you it cost the railroads of this country millions of dollars because they were wrong in that opinion.

The Pennsylvania Railroad, in their business way, based their deductions upon too few observations, and were deceived, whereas if the investigation had been pursued on well-defined and extensive lines, in all probability it would not have happened. They said the steel should not have over 30 points, that is, thirty one-hundredths of 1 per cent

of carbon; but to-day there is not a rail that will be received that will have less than a half of a per cent. They wore out just like pot metal.

I instance that case as having happened largely through the fact that, through a mistaken policy, the United States Government declined to contribute a few thousand dollars to allow those investigations to be taken up and to employ experts to whom this new metal could have been referred for advice.

Now another new metal has come up. Bessemer steel is being crowded out of the market through the ore necessities of the country, from the development of the ores, the character of the ores, by a steel that is known as basic open-hearth steel. The engineering profession to-day is not settled as to exactly the discrimination in the classification that ought to be made in the use of these two metals. There is a field that ought to be investigated by somebody.

When you come to the use of fuels, it is notorious that the very largest per cent of fuel is wasted. A very small fraction of efficiency is obtained. The rest goes into the air, is dissipated, and does good to nobody. That is wicked, because while you may make bad flour and spoil wheat you can sow wheat next year and raise more, but you can not get any more coal ever. The system of mining is carried on in such a way that a large per cent of the coal is left in the ground in such a condition that it can not be obtained again. That ought to be investigated.

Then we come to questions of coking—what fuels will coke and what ones will not, and how in some instances other fuels will not work satisfactorily, and whether that ought to be done so as to save by-products.

I can not give you the exact figures, but it is so startling that if the nitrogen that is wasted could be saved it would be a boon to the agricultural interests of the country, amounting to about 2,000,000,000 of tons, multiplied by over \$50 a ton. Nitrogen is worth that for fertilizing purposes. We do not know that that can be saved. Probably it can not all be, but a large percentage of it can.

As I take it, this investigation, for the continuance of which we are asking money, is right along those lines. Then, again, this material of reinforced concrete is a new thing presented to us. Of that very little is known, as you have just heard from the preceding speaker.

Now, as to the values of cement, let me answer one question you asked of my predecessor: "Why will not the results obtained abroad in similar investigations be equally desirable to us here?" The answer is, as he said, because they are obtained through different materials. Everything is now called Portland cement, but it is of no value to us to know what that will do, because we can not afford to use it in Iowa and Illinois. We want to use the material that is met with at our doors. In the Far West you want to know how to use that material upon your dams and irrigation works to the best advantage.

The CHAIRMAN. Why is it that genuine Portland cement can not be used here?

Mr. HUNT. It is because of the cost. We make just as good cement to-day here; but I mean the cement made at Portland, England, from that Portland stone. We can not use it because we do not have it. It would cost us too much to get it. We must take the materials we have and try to get equal results with them.

The CHAIRMAN. We are doing it.

Mr. HUNT. Yes; but all cements are not "equally good" as a certain Kentucky product is said to be. [Laughter.]

The CHAIRMAN. You speak of its being the duty of the Government to make these investigations for the purpose of demonstrating the best way of utilizing these new discoveries of metals, minerals, and so forth. How many branches of industry in which the people of the United States are engaged are there where it would be just as much the duty of the Government, upon your reasoning, to make investigations for the benefit of those who are interested in those industries?

Mr. HUNT. I have no doubt there are a number of them. The Government recognizes a number of them. Take agriculture, for example. You are expending, if I mistake not, \$25,000 a year on each of the agricultural colleges of the States, and about \$15,000 a year in every State and Territory, I believe, to make or maintain experimental agricultural stations. Now, I think it is due to these other industries just as much as to the man who plants to receive Government aid.

The CHAIRMAN. In those cases, however, the Federal Government is simply cooperating with the States. The States take the initiative, and the States are responsible for the administration. The Government of the United States is merely aiding by cooperation the investigations which the States themselves are making. But in this case, and in many instances in the Agricultural Department, the Government has been asked, and is asked, to take the initiative, and bear not only all the expense, but also conduct the investigations under its own supervision. The question that most bothers me, as a member of this committee, in view of the great growth of this service in the interest of special industries, if we are to continue it, is, Where is it going to stop, and what will be the ultimate expense? Are we not to a certain extent destroying the independence of the people as well as the independence of the States by having the Federal Government assume the initiative and carry on all these investigations which have heretofore been conducted by individuals and the States themselves?

Mr. HUNT. In this particular it has never been conducted by the States. In this line, to my knowledge, the individual has conducted it for his own individual benefit, and if he is a manufacturer for his trade benefit and not for the benefit of his neighbor, and I do not take it, as I understand it, that this is for any special industry. It is for the people at large, because the people at large are going to benefit by the results.

The CHAIRMAN. You might say that of 50 other industries where the Government could conduct scientific investigations with respect to such industries, where the people at large would be benefited, and yet is it a part of the governmental function to undertake to supervise and investigate the domestic affairs of the people to the extent that Congress is now being asked to exercise such investigation and supervision?

Mr. HUNT. Broadly, to my mind, yes, sir; emphatically, yes; because the people pay for it, and they are only getting back in that form that which they give. This money is not created by the Government. It is money created for the Government, and it is for the people to say how that money should be expended and get some of it back, at least in the results. This is to a large extent only an opportunity to individuals who are not members of the Government or employed by it to contribute to the great results. I am not getting any-

thing out of this, and still if this investigation goes on as far as I can I am only too glad to contribute by knowledge and judgment and advice in its prosecution.

I can not do it myself. I have got to live. We have over a hundred investigators. We have over 100 men. We have a pay roll of \$125,000 a month, but those men are obeying instructions. An engineer comes to me with specifications; he has made a contract. No matter what the material may be it is our duty to take those specifications and to take that contract and see that he has delivered to him what he has purchased.

In my judgment his specifications may be all wrong; but it is not to my interest and living to argue with him and tell him he is wrong. He does not want me to do that. The results that I obtain for him are his personal property, and I am not at liberty to give those results to any other man. Therefore they do not do the general public any good. If they are satisfactory, they do that particular concern good, but I can not publish those results. I can not use them in my writings, to say that under these specific conditions certain things happen. Of course I can assert it as a general principle. It seems to me that the light I need in my business allows me to see the necessity for the maintenance of some place, some establishment, where you will have unbiased determinations.

If I mistake not, I think you will have requests from practically every engineering society of the country to foster this work.

I am going to be perfectly frank with you as to how long it should continue. If I were a member of your committee I should want to look into that, just as you do; but I give you my judgment that it is wise and right for you, and in accordance with the proper performance with your duties, to recommend this appropriation for this year.

Now, if these people do not accomplish the worth of that money, next year is another proposition. If they do, and if they will present to you something to be done next year, it is the duty of the next Appropriations Committee to continue them. If they do not, discharge them and get somebody else; but if they get results that are of use, continue them.

I should be sorry to say and believe that this year will wind it up. It may wind it up on a particular thing. But they will get together a trained corps of men, and nobody but a trained corps of men are worth anything. I will not employ a boy just out of college to put him in a position as inspector. I want to employ a man who has learned the value of observation, and that is the only way I can get results that will enable me to continue my business, and so it will be a valuable thing if they can get together a corps of good men—men who are devoting their lives to it. It is their life. It is just like an army officer. What does his pay amount to? No man could afford to go into the United States Army now for dollars and cents; it must be above that. So it is with the scientist. It is not the money he is getting, but it is what he can obtain as to results, and if these men get results, you ought to keep them; if they don't, take their places away from them.

Mr. SMITH. Is there any more difference between the value of the concrete blocks in the United States as now manufactured and brick; that is, the value of the service, durability, and strength?

Mr. HUNT. We can not tell you, but there are bricks and bricks.

Mr. SMITH. Isn't there just as much difference between the best brick and the poorest brick marketed to-day and the best cement blocks and the poorest cement blocks?

Mr. HUNT. Excepting this: That a brick is a simple proposition, and any man who has had any experience at all can tell by taking that brick and handling it; he can get very close to an accurate opinion as to whether it is going to resist water, and he will know whether it will resist crushing strength. If it is soft it will crush, and if it is porous we know very well that freezing and thawing will disintegrate it; we know it will go to pieces. When you come to a cement block, there is a chemical action going on in cement.

You take concrete or cement that apparently does not waste in years and years, prehistoric cement you might call it, it has become adamant; but you take a fresh piece of cement work you can take your knife and pick it all to pieces, but as that gets older it is harder and harder, and sometimes there is such a thing that it will reach a certain stage and then go backward and become worthless. That can only come from chemical action going on between the ingredients in the cement. Therefore it is a much more complicated proposition than the plain brick. Personally, I suppose it is a good thing for me if there are no investigations, because nobody will then know anything, and they will have to go and try to find out.

The CHAIRMAN. I was going to ask if you were not advocating something to injure your own case.

Mr. HUNT. Possibly, but I don't think I ever jeopardized any man's business, because these things always straighten out themselves.

The CHAIRMAN. Of course it would enable you to conduct your business with greater facility.

Mr. HUNT. We want information. I had the honor of making the first steel made by the Bessemer process some time ago, and I didn't know much about that, I can assure you. I thought I did. I had to get it by hard knocks.

The CHAIRMAN. That develops the individual. When the Government undertakes all that, what becomes of the individual?

Mr. HUNT. We didn't want it to do that. When the man turns the sample over to us and says, "Tell us what that is worth. If it is not good, why is it not good?" We will send to you the coals and you tell us how we can coke that coal." That coal may be reached for only a few thousand dollars; but if I have to go down and down I may not be able to touch it unless I have many thousands of dollars, and if I fail I am broke. Of course you can not keep the United States people back. It does not rest whether you do this or not or whether we stop or go on. But I believe it will be a great labor to help us to go on. The foreigners have had this thing going on in many directions. One reason it has not been of value to us is because the materials are different; and the other reason is because we were too slow—too slow to accept results obtained.

The CHAIRMAN. It is true, also, is it not, that the foreign governments have pursued this policy of governmental investigation in subjects of this character for a great many years?

Mr. HUNT. Yes, sir; and they have very largely subsidized other people, too.

The CHAIRMAN. Isn't it a fact, then, that the people are too slow to meet the requirements of the American, due to some extent, at least,

to the fact that the people of those countries have to depend upon the government to do it for them instead of doing it themselves?

Mr. HUNT. They have had a hand on them, and when it is taken off they expand. You know as well as I do the different social status between the two countries. You take an engineer over there, and if he gets \$150 a month, or at most \$2,500 a year from the Government, he sits down happy. You take a fellow here and he wants to go along and do better.

The CHAIRMAN. What I can not see is wherein our condition in respect to these investigations is such as enable us to differentiate them from a hundred other lines of investigation that the Government could be just as reasonably asked and expected to make for the benefit of the people engaged in these various industries. I can not differentiate this in its condition from a great many others, and the question is where are you going to stop the paternalism?

Mr. HUNT. Exactly; you may be right, but you can say, "We are taking this step and are going to try it, and you people have to wait to see whether you get results. If you don't get results we are going to stop the whole thing." If, on the contrary, we want the results from this expenditure of a couple of hundred thousand dollars, we will feel it our duty to do something for you on the same lines if you convince us. I don't think we want it done all at once, but I don't think that you ought to feel that you ought not to do something for the people. The people own you, it is their money, they gave it to you to use—

The CHAIRMAN. They gave it to be spent for Government purposes.

Mr. HUNT. They left it to your wisdom to tell where one ends and the other begins. Of course we can not all agree on these things, or we would not have two parties, and so on.

I don't think I have anything more to say except to tender my testimony and my judgment that I believe in this; and I believe it is the outline. I believe this scheme is well conceived, and from what these people have already done at St. Louis I think it gives us confidence to trust them in a bigger project.

The CHAIRMAN. If the committee should conclude to make this appropriation, is there any special reason why St. Louis should be the place designated where the test should be made?

Mr. HUNT. Not at all, excepting that there is a plant there—the coal plant is there. But there is no reason why it should not be moved. Moving is not particularly expensive. That, to my mind, would be a secondary proposition. It can be conducted here in Washington if you desire.

The CHAIRMAN. I wanted to inquire, however, whether there is anything in the location with reference to material that is being used, or is it more central there?

Mr. HUNT. Geographically St. Louis is a good location. You have the great West and the Northwest, and it is a railway center.

The CHAIRMAN. Isn't Chicago more centrally located?

Mr. HUNT. I think the Chicagoans will say that it is.

The CHAIRMAN. I am asking you to give your candid opinion.

Mr. HUNT. Chicago is a good place. I presume that a location could be obtained in St. Louis for less than in Chicago.

The CHAIRMAN. Do you mean the site for the plant?

Mr. HUNT. The city is spread out there so, and so taken up by industries and things of that kind that you probably would have to go to the frontier of Chicago to find a location.

Mr. SMITH. Are not the works at Hannibal the largest in the world?

Mr. HUNT. I think not, by a good deal.

Mr. HUMPHREY. About 4,000 barrels a day. In the mills of the Lehigh district they manufacture practically about half of the cement of the country, and the Atlas mill at North Hampton has a capacity of about 30,000 barrels a day.

Mr. HUNT. The Atlas mills make about 100,000 barrels a day.

Mr. HUMPHREY. They have a capacity of 35,000 barrels a day and make 25,000.

Mr. HUNT. The Illinois Steel Company has become a purchaser—

Mr. SMITH. Is there any material difference in the price of cement in the different localities of the United States?

Mr. HUNT. Yes, sir. Of course the point of delivery plays a very great part. Cement is like anything else, the manufacturer is going to get as much as he can for it.

Mr. SMITH. What do you say as to the relative price of cement in other places in the United States; how does it compare with Hannibal?

Mr. HUNT. I should be quite positive that St. Louis would be a cheap point of delivery. You would command more than one district, the Illinois district, the Michigan district, and the Chicago district as well as Missouri.

Mr. TAYLOR. We have a plant at my little town, at Demopolis, where they make about 1,500 barrels a day. They charge exactly the same price for that cement right there as you would have to pay for German cement delivered in that town, and I suppose that is true at Hannibal.

Mr. HUMPHREY. To show the difference in the price of cement, I would say that there is relatively about 30 cents a barrel difference at present in the average price in what is known as the Middle West, Chicago, St. Louis, and in the East, New York, Baltimore, and Boston. That is due entirely to the relative productive capacity of these sections of the country. Fifty per cent of the cement is produced east of Pittsburg, and that very production, if you might use the term, covers the price here. Of course, the character of material used makes a great difference. Out West they use limestone and shale, and it costs more per barrel than the stone in the East. Up in Michigan they burn it by the wet process, and the capacity of the kiln is much less and the cost is greater because it requires more coal.

Mr. SMITH. They don't burn it wet at Hannibal?

Mr. HUMPHREY. They burn it dry.

Mr. Miller was asked to come, among the other engineers. He has gone into this subject pretty thoroughly, and I think he can tell you the best reasons why this should go on.

Before he starts I would like to answer a question you asked about these other laboratories. There is one reason why the Government should concentrate its efforts, and that is, when you consider that you have a number of laboratories at present in the Government that are making, outside of the routine tests for the inspection of material used in the various public works, investigations to determine principles. Now, we will say there are four laboratories making those tests. They are all made under different conditions, different materials, different squads of men, and the results are variable—not to quite the extent, but nearly as variable as you would get in different technological institutions where you had inexperienced men. Now, if you concen-

trate that work you will save the Government money, because you will do away with the repetition in the laboratories carrying on such tests.

Another point mentioned by Judge Smith, which is an important one, is that the value or strength of this material as affected by chemical changes. The peculiar characteristic of cement is that it sets, crystallizes under the action of water. Just as soon as you add water to cement the process of crystallization or hardening commences and never ceases. There may be ingredients in that material which will make it go to pieces, and it is those points that ought to be investigated to determine the standard of material. That can only be determined by disinterested persons. The effect of sulphur on the material is one of great importance. I have seen steel that has been absolutely corroded because of bad conditions, and I think that is one of the points to be thoroughly investigated. It is not merely a mechanical question, but it involves the safety of people. Take the big structures in which this material is used, and if of an inferior quality there is liability of collapse, endangering life as well as property. In this particular the Government has a right to safeguard the life of the people and at the same time help them.

#### STATEMENT OF MR. RUDOLPH P. MILLER, OF NEW YORK, N. Y.

Mr. MILLER. I came in the capacity of a public official, one who has charge of looking out for the safety of the public. I represent the bureau of building of the Borough of Manhattan, city of New York, and I think I can say that I represent the building department in general, for this reason, that I have found in my experience in passing upon questions of safety of construction that what is done by our particular bureau in New York is very largely the guide to what is done elsewhere in the country. About three years ago we were confronted in New York with this question of reenforced concrete construction. The law as it stood then made no provision for such construction. We were offered constructions of that kind, and we could have taken a stand and said "You can not build them, the law does not provide for that," and it would have been a long, tedious wait, I imagine, for a new industry such as this one, a new form of construction, to persuade the law-making power to provide for that construction.

We are now trying to get our building laws revised, and we have been at it for, I might say, two years. Those things are difficult to bring about. We did not take the stand, however, and say, "You can not put up your buildings," but the superintendent in his authority, in a general way, prescribed under what conditions those buildings shall be erected.

Now, in trying to find under what conditions such buildings should be erected, it became the duty of myself and my assistants to investigate this subject and to find out what is safe and proper, and this will give you the main reason why I think your appropriation should be made for this investigation work, and it is this: That we find very little on the subject, very little reliable information, on which we could base our requirements. We did the best we could. There was some building going on in New York, and, as I intimated before, since we have taken this step we have had requests from architects in numerous parts of the country asking us for our requirements, as they

intend to build buildings of similar character elsewhere, and asking us to state what we think is proper and safe. As I said, this information is not complete—is not satisfactory.

We feel that if the Government will take up this matter and make these investigations, that the information can be speedily given to us, and we will then be in a position to say such constructions are, if designed in accordance with these requirements, absolutely safe. You may say, "Why should we make such tests?" It is not the duty, it is not reasonably so, of a Department or bureau or officer who is charged with the enforcement of police powers—and that is all it is—to say more than this, that the material offered or the construction used is in accordance with the law and requirements, or is not contrary to public safety. If we were to go further and pass upon the merits of these questions, we would be immediately charged with discrimination, advertising one form of construction as against another, because we must immediately make differences. That has already been pointed out. If the people who are now making these investigations are all more or less interested, then there are certain materials that they want to push on the market, certain forms of reinforcing bars; and to pass upon these questions, upon their merits, would simply put us in the position where we are defending one bar probably as against another, which we can not do.

Mr. SMITH. Within twenty-five years the whole system of construction of large buildings in cities has been revolutionized—I mean the masonry construction of modern steel buildings—has it not?

Mr. MILLER. Yes, sir.

Mr. SMITH. Who gave you your light as to how strong those buildings ought to be constructed, and as to what rules should govern you?

Mr. MILLER. That has all come about by investigation of those matters, more particularly, possibly, by the individual concerns. But the point I make is simply this, that if we wait for that information from individual concerns we will find that it is not as reliable. We must find out about it. It will take a long time to cull out the reliable from the unreliable information, and the reason why I think the Government should take it up is because they can do it from an unbiased standpoint, and they can without discriminating say that such and such are the characteristics developed by such and such mixtures treated in such and such a manner; and that is what we are after.

To illustrate one point, we have practically no information on the question of the ratio or the relative elasticity of concrete and steel. In the construction of reinforced concrete this is an important matter. We must know how those two materials are going to act together in unison.

We don't know whether they act in unison. That is what we must find out; how much will the steel stretch and how much will the concrete stretch under given loads, and will they stretch together and will they continue to act together, and how long will they continue to act together; and these are questions that are very difficult to get at as long as the only people who are investigating them are people interested in certain particular types.

Mr. SMITH. Did not that same question arise with reference to the facing of steel buildings with brick, stone, and other forms of material now used? If these steel frames should expand more than the brick or stone they would tear the buildings to pieces, would they not?

Mr. MILLER. That question is an entirely different one. In reenforced concrete construction you are dependent upon the action of two materials together for the strength of the combined material. In the skeleton construction and other forms of construction each individual part is dependent upon itself. The steel frame must be able to stand by itself, and then you fill in with your brickwork and encase your steel with your fireproofing material.

Mr. SMITH. I understand. But you do not depend greatly in that case upon your fireproofing material for strength; and what I am getting at is, if your building expanded much more rapidly in the steel frame than in the outer facing would it not destroy the facing?

Mr. MILLER. It would if that was the case, but it is not the case. You have the steel frame encased in your construction, and your steel can not be hotter than material adjacent to it.

Mr. SMITH. But all does not expand alike under the same heat?

Mr. MILLER. No; but you are protecting it. There is a certain amount of elasticity in all these materials, but you can not count on that when you get these two materials together.

Mr. SMITH. As a matter of fact, you solve all of these problems without coming to the Government for aid in the evolution of building.

Mr. MILLER. Yes; but it has taken us a long time to do it. We want this form of construction to come, but we want it to be proven when it does come in so that we will be perfectly safe.

Mr. TAYLOR. How long has this reenforced construction been going on?

Mr. MILLER. It has been going on in a way for possibly thirty years.

Mr. HUMPHREY. The first building was erected in 1875 in New York.

Mr. MILLER. But it has not come in general use until within a very few years. The reenforced concrete is a very complex material. It is not as simple a material, for instance, as steel or any other structural material. You are depending in reenforced concrete on many ingredients, and its constitution and general characteristics should be known and must be known in order to obtain good results.

And in no construction is it so important that the three elements entering shall be well taken care of. For instance, good design, good workmanship, and good material; they are all equally important. In other forms of construction you can readily tell by inspection what your results are going to be and whether you are getting satisfactory results. In the case of reenforced concrete you can not tell by inspection.

In the matter of design. As I pointed out, in this one question of getting the ratio of medial elasticity, that is an important thing in the design, and any slight variation or differences in reenforced concrete construction may create a difference in the strength as the result of the combination. So in the case of materials it is important that we should know on what materials we can rely. One of the great advantages in reenforced concrete construction over other forms of construction is the fact that it is very much safer as against fire. That point has been brought out; but we are not sure that any combination of stone with cement, or steel with cement, will give you a fireproof material. And this is a matter, I think, which should be investigated,

and thoroughly investigated. I think it is well that the Government should take up the question to determine for us which materials we can safely use in order to obtain satisfactory fireproof material as against those which we can not safely use.

I don't know that I can add much more to what has already been said in this matter, but, as I said, from the standpoint of one who is looking out simply for the safety of the general public in this matter I believe the Government is well justified in expending the money asked for in this investigation.

Mr. BROWNLOW. Is there any construction material to-day used in building that is absolutely fireproof?

Mr. MILLER. I consider that a good steel frame, well incased in cinder concrete, is a satisfactory fireproof construction; but cinder concrete is a material that has no strength, so it can not be used very well for reenforced concrete work.

Mr. HUMPHREY. I would like to add further to that that there is no material that is fireproof; that the fire-resisting qualities depend entirely upon the temperature. Take the Baltimore fire, for instance. There were some parts of that fire where there were tremendous temperatures—temperatures so high that steel would melt. So it is only a question of relative fire-resisting properties. But one material can have the maximum fire-resisting quality, and we think that such a material is cement. But on the other hand these materials can all be disintegrated if the temperature is raised high enough.

Mr. SMITH. There is a distinction, is there not, between combustion and melting or evaporating?

Mr. HUMPHREY. Oh, yes.

Mr. SMITH. I suppose all you enumerated as fireproof material is noncombustible?

Mr. HUMPHREY. I think most of those things are noncombustible. At the same time some forms of terra cotta will, under the action of heat, splinter, will come off, and will even melt under sufficient heat.

Mr. MILLER. It is a matter of degree. If the material will stand a continued temperature of 1,700° F. for long hours it is supposed to be fireproof. Steel is noncombustible, but when you heat steel to a temperature of 1,000° it loses its strength, it will not hold anything, and it will go to pieces under a load at that temperature. That is the reason why it is encased, simply to keep the heat away from it. When you can keep the heat down to 400° F., you have safe construction.

Mr. HUMPHREY. There is another point, and that is the question of the concrete insulating the steel skeleton construction. There is very little information, for example, on the rate of conductivity of heat in concrete, and the question as to the thickness of the concrete covering which will give sufficient protection to the steel itself is a very important one.

Mr. SMITH. To what extent is concrete a conductor of electricity?

Mr. HUMPHREY. It is a nonconductor.

Mr. SMITH. In your judgment are steel buildings absolutely safe from electrolysis?

Mr. HUMPHREY. There is this to be said, that if you use concrete reenforced with steel, and if it is not properly done and cracks develop, letting the moisture in there, which will enable electric current to reach the steel. Under these conditions you may have more or less electric action; but under ordinary conditions insulation would be perfect and you would have no action of this character.

MONDAY, *April 23, 1906.*

INVESTIGATION OF STRUCTURAL MATERIALS—Continued.

**ADDITIONAL STATEMENT OF MR. J. A. HOLMES.**

The CHAIRMAN. Have you an additional statement, Mr. Holmes, that you wish to make with respect to coal and building material tests?

Mr. HOLMES. Yes, sir.

The CHAIRMAN. Very well. Proceed.

Mr. HOLMES. One thing, Mr. Chairman, I wanted to mention, and it is a somewhat personal matter, in regard to the letter signed by Mr. Swenson. I knew nothing about it, and Mr. Walcott knew nothing about it. I have been trying to find out how that letter happened to be sent. I have not found out, but I have found out that it was sent by no one connected with the pay roll of our laboratory. I have charge of the laboratories myself, and I watch them pretty closely. I think probably it was sent by one of the members of the committee of engineers associated with the work. I will ask Mr. Swenson himself to straighten that matter out.

The CHAIRMAN. It was a letter written by Mr. Swenson, of Pittsburgh, to Congressman Dalzell.

Mr. TAYLOR. I thought that was a letter written by Mr. Holmes.

The CHAIRMAN. No.

Mr. HOLMES. That gives me an opportunity, Mr. Chairman, to explain one other thing, as to the connection of the engineers with this work. There are, as you know, a number of different kinds of engineers; the engineers interested in the investigation of structural materials are the civil engineers, of whom there are some five to ten thousand in the United States. I have never taken this question of the appropriation for this work up with the civil engineers at all. This agitation concerning structural materials has come largely from them and from the architects of the country. They have come to me time after time for information, and several times have asked for lists of members of the committee, which I have always refused to give to them; and they are the people, along with the architects, who are pushing this agitation throughout the country. I have been asked a number of times if I would write resolutions for societies to pass on this subject, but I have refused to do this.

Mr. TAYLOR. To whom was the letter written—the letter that you wrote?

Mr. HOLMES. It was written to mining engineers.

Mr. TAYLOR. What is the difference between mining engineers and civil engineers?

Mr. HOLMES. The mining engineers have to do with mining operations and mining construction, work involving largely timber material. They have to do with fuels, explosives, and mining machinery. The agitation from mechanical engineers, who have to do more especially with fuels and their utilization for the production of heat, power, and light, comes perhaps from the fact that the American Society of Mechanical Engineers asked its members to take up the question of securing the continuance of these investigations by the Government.

Mr. TAYLOR. Are you a member of the mining engineers?

Mr. HOLMES. Yes, sir.

Mr. TAYLOR. You are not a member of the civil engineers or mechanical engineers?

Mr. HOLMES. No, sir. So far as I know, nobody connected with the Geological Survey knew that the mechanical engineers were going to pass such a resolution or do anything in that connection.

Now, passing from that phase of the question to another, I want to say, further, that in this whole question of agitation I really feel that I have done more to suppress an agitation of that kind than to encourage it, because I realize that too much agitation of that sort would look as though it were being worked up by the Geological Survey, which, of course, I realize would be an unfortunate impression to make.

Now, passing from that personal explanation, Mr. Chairman. I want to say just a word in regard to the increase of appropriations asked for in connection with this work.

In connection with the question of fuels, the increase is divided between equipment and a slight increase of services. The force employed in connection with the coal-washing processes and in connection with briquetting and coking investigations has been entirely inadequate to keep up with the other branches of the work.

Then there come up in connection with this the questions concerning explosions in coal mines. During the past year there were something like 1,500 men killed and 2,500 men injured in the coal mines of this country, largely as a result of the use of explosives and lights in the presence of coal dust and coal gas. We are anxious, in connection with these several investigations, to try and solve the problems as to how coal-dust and coal-gas explosions in mines can be prevented and ordinary explosives can be used in the presence of coal dust and gases without resulting in general explosions, which are so destructive of life and property—like the recent terrible catastrophe in one of the French coal mines. I felt that this investigation should be carried on largely in connection with our laboratories without any great increase in the cost of the work. It would be not only a humane investigation, but it would also be a very useful one. In England, Belgium, and Germany such investigations, and the intelligent regulations based upon them, have greatly reduced mine disasters. In Belgium, though the mines are more dangerous than in the United States, the loss of life from such explosions is less than one-third that in the latter.

Mr. TAYLOR. Have you any data as to accidents?

Mr. HOLMES. I have here a statement of accidents in coal mines in the United States—those which proved fatal and those which were nonfatal. This is the statement:

*Number of fatal and nonfatal accidents in the coal mines of the United States for the year 1904.*

	Fatal.	Non-fatal.	Total.		Fatal.	Non-fatal.	Total.
Alabama .....	184	78	262	Montana .....	9	31	40
Arkansas .....	12		12	Ohio .....	131		131
California .....	0	0	0	Oregon .....	(b)	(b)	(b)
Colorado .....	89	118	207	Pennsylvania .....	633	1,116	1,749
Georgia .....	7	1	8	Tennessee .....	28	129	157
Illinois .....	157	507	664	Texas .....	(a)	(a)	(a)
Indian Territory .....	(a)	(a)	(a)	Washington .....	25	83	108
Iowa .....	24	85	109	West Virginia .....	140	211	351
Kansas (first six months) ..	16	46	62	Wyoming .....	17	11	28
Kentucky .....	19	78	97				
Michigan .....	6	34	40	Total .....	1,497	2,528	4,025

<sup>a</sup> No record.

<sup>b</sup> No mining bureau maintained.

This I will file with the secretary, if you wish, Mr. Chairman.

In connection with the structural materials, the increase seems so large that it looks like a new appropriation. The reason for that is because of the fact that the appropriation for the past year was entirely inadequate for the work that we felt the country really needed to have done. The results of this investigation have been both positive and negative. We have shown how certain of these materials can be used to greater advantage. We have shown by investigation the situation as it exists in building and construction work to-day, namely, that materials that are largely used are used with great risk, because of the fact that when emergencies like fire and shock arise the combinations of materials prove unsatisfactory and result in collapses of one kind and another. The engineers and architects of the country employ what they call a "factor of safety" of from 2 to 8 for different materials. That is, they use from two to eight times as much of different materials as they deem theoretically necessary in order to avoid possible mistakes. This illustrates how important are such investigations as we are now considering, with a view to preventing this waste of materials.

The need for this sort of work comes from a double source. In the first place, consider the work which is being done by the Government itself. I did not realize until we had got into this investigation the large extent to which the Government itself is a builder, and I find on looking into the matter that the probable cost of governmental building and construction work, what is in progress now and what will be done in the next ten years, will aggregate from \$150,000,000 to \$200,000,000. That work is carried on under a number of different bureaus of the Government, using a great variety of materials, and materials used under a great variety of conditions.

Mr. TAYLOR. During what period of time, did you say?

Mr. HOLMES. Ten years. Through the action of the President we have formed a board, which represents the different bureaus of the Government doing construction work, with a view to carefully investigating at this testing plant and elsewhere all the materials used by the Government in its building and construction work. My belief, based not so much upon personal experience as upon opinions expressed to me as the personal opinions of architects and engineers, is that the saving out of this large Government expenditure will be very considerable. The estimates of the amounts that might be saved have ranged between

1 and 10 per cent. If we can accomplish that, and if we can accomplish also greater safety of the buildings, and greater economy and efficiency in connection with the use of materials in these Government buildings and engineering works, this saving alone will more than equal the total appropriation asked for the works.

In addition to that, we should bear in mind the fact that the people of the United States expend, each year, about \$1,000,000,000 in construction work. And if, as now seems likely, judging from recent experience, these investigations result in this increased efficiency and economy and safety, they will bring about a saving to the country at large of enormous proportions.

There are one or two other things, Mr. Chairman, that I would like to refer to in connection with this subject.

Mr. TAYLOR. Before you go beyond that, I would mention that I was speaking yesterday with a Baltimore gentleman largely interested in railroad enterprises, but who is not an engineer, mechanical or civil, and he told me he did not believe cement would ever do in the matter, whether it were reenforced or not, because he had been told by the Pennsylvania Railroad people that in building their culverts of cement they frequently found, in the center of blocks, that the half of it would be soft and had not set.

Can you tell me why that was? Was it due to the chemical constituents, or due to the mechanical failure in the manufacture of the cement?

Mr. HOLMES. It may have been due to the character of the sand, or to the character of the cement, or to imperfect workmanship. Either one of those three causes may have been operative; and one of the things we are trying to settle is to determine, if possible, the conditions under which cement and concrete can be used safely and to advantage for purposes of protection against fire and for strength to resist pressure.

One of the cases that happened in Baltimore, which was heralded all over the country by the concrete people as a case where concrete absolutely withstood the effects of fire, is worthy of attention.

I know a competent engineer who signed a paper to the effect that the concrete had withstood the effects of the fire satisfactorily, but he told me later that he had come to regret having signed that statement, because a careful examination made later showed that the wall which was supposed to have stood intact had to be knocked to pieces because it was found ultimately to have been so injured that it could not be used. It was taken down, and it was a serious undertaking to bring it down.

Some reasons occurred to me in this connection, growing out of our experience, as to why this work can be done by the Government, and why it should be done by the Government rather than by other agencies, or by the Government in combination with other agencies. One is that the Government itself is an interested party. The fact was stated the other day by the chairman with reference to coal investigations that the Navy Department, which is the largest user of coal in the Government force, is testing its own coal. That is true, but at the same time the naval officers are watching closely the more extended fuel investigations by the Survey.

The Bureau of Navigation had a man stationed at our laboratory in autumn for two months or more, and all of our results are turned

over to them as rapidly as they are tabulated, so that they can use that information in connection with their own more limited tests. Their tests are to show the adaptability of the various varieties of coal to naval boilers. They watch our tests in regard to the possible substitution of other coals, possible improvements in the quality of coal, with a view to increasing its efficiency in use or safety in storage and as to the possibility of substituting the gas engine on board ship for the ordinary steam boiler and steam engine; because, if that can be done ships can go twice the distance they can now go with the ordinary steam boilers, using the same quantity of coal.

The result of our investigations showed that less than nine-tenths of a pound of coal was required to develop 1 horsepower per hour, whereas on our new battleship *New Jersey*, recently tried and about to be accepted, the best that could be done with the marine steam boilers was the production of 1 horsepower with 2.2 pounds of coal.

Again, the enormous waste of coal and other fuels is coming to be a national question. We are throwing away, by leaving in our mines and wasting above ground in handling, nearly 50 per cent of our coal, and we are leaving the underground part in such a way that it can never be taken out.

Mr. TAYLOR. By the way, I made that statement the other day, quoting you as authority, about the waste of coal being left in the ground—

Mr. HOLMES. That statement can be proven by a great many different mining engineers, who explain the process by which that is done. It was repeated to me by Mr. White, the State geologist of West Virginia, who is not only one of our highest authorities on coal and coal mining, but was recently selected by the Brazilian Government to examine into and report upon the quality and extent of the Brazilian coals.

Mr. TAYLOR. I believe you stated at the last hearing how you arrived at your conclusion. If you did so then it is of no use to repeat that now.

Mr. HOLMES. It comes about not only from leaving the coal in the vein which is being worked, but when there is a vein of coal above the vein that is being worked and the walls of the vein being worked are allowed to fall in so as to break the continuity of the upper vein then the upper vein can not be removed. Furthermore, in many cases only the best part of the vein of coal is taken out, the poorer or leaner portion being left undisturbed in the mine. These facts and the waste in handling must be taken into consideration in making up this 50 per cent of actual waste.

That brings up the next question of increased cost in mining. There is not only this great waste, but we are now mining coal next to the surface, and that which can be mined most cheaply; and the statistics show an increase in the cost of coal mining in parts of England and Germany of from 25 to 50 cents per ton during the last ten to fifteen years, and we will soon begin to feel this increase in cost here in our own country. While we need not concern ourselves just now as a matter of national policy in regard to the early exhaustion of our coal, yet we are soon coming against the fact that the increased cost of mining coal will bring about an increased cost of coal and of heat, power, and light to the people.

Not only that, but it is also a fact that the supplies of our best coking coal are being so rapidly consumed that they will be exhausted in the near future, and then we will be dependent upon the possibilities of making coke of other coals which are not now recognized as good coking coals.

Mr. SULLIVAN. The value of your investigations concerning structural materials and the value of fuels has an intimate relation, it seems to me, with the question of our national resources in both coal and iron ore.

Mr. HOLMES. Yes, sir.

Mr. SULLIVAN. I have read a statement recently to the effect that the supply of iron ore in the United States will be exhausted at a comparatively early day, and we are all familiar with the statements concerning the limited supply of coal in the United States. Have you any facts or statistics showing the possibility in point of time of an early exhaustion of our coal and iron ore supplies in the United States?

Mr. HOLMES. I have, with reference to the iron ore supplies and lumber supplies; and with your permission I will file them with this statement rather than give them offhand.

Mr. SULLIVAN. I would be glad if you would incorporate them in the record.

Mr. HOLMES. We have a large number of iron ores which are so near the margin of what you might call bad ores, because of the presence of sulphur and other foreign materials, that the kind of coke to be used in the manufacture of iron and steel becomes an important factor. If you have sulphur in the ore and sulphur also in the coke, there will be more sulphur in the pig iron than there should be. In our investigations into the matter of washing coal we have shown in many cases how the sulphur can be in part removed; but the sulphur is of so nearly the same weight as the coal that we can not always remove any large portion of it. We are now investigating the possibility of removing the sulphur from the coal in other ways, thereby bringing into use coke from other coals and a number of iron ores which would otherwise be unavailable in the manufacture of high-grade iron and steel—unless their sulphur can be profitably removed by treating the iron ores.

Mr. SULLIVAN. In connection with the statement which you say you could give us, could you give us also a statement of the anticipated time at which, on account of the exhaustion of iron ore and coal, both iron ore and coal would be increased in price to such an extent as would make it necessary to resort to other materials and other fuel for the purposes of industry and commerce? That would be a very valuable thing in that connection.

Mr. HOLMES. I will do that also if the data are obtainable.

Concerning the future increase in the cost of structural materials I may add the following data:

The lumber supplies of the country are rapidly diminishing and the demand for lumber is steadily growing. As a result of this situation the prices of lumber have of late been increasing and may be expected to steadily increase in the future unless suitable substitutes can be found. The recent increase in prices is illustrated by the following tabular statement:

	White pine.			Yellow pine.		
	Uppers.	Culls.	Stumpage.	Edge flooring.	Common flooring.	Large size timbers.
1895.....	\$45.00	\$11.50	\$4.00 to \$6.50...	\$22.50	\$13.00	\$16.25
1896.....	44.00	11.00	4.00 to 6.50...	18.00	11.50	15.50
1897.....	45.00	10.50	6.00 to 8.00...	20.00	12.40	15.90
1898.....	45.00	10.50	8.00 to 10.00...	21.00	13.00	17.00
1899.....	48.50	13.00	8.00 to 10.00...	24.20	15.65	17.85
1900.....	57.00	18.00	8.00 to 12.00...	25.12	16.79	19.17
1901.....	59.00	16.50	10.00 to 15.00...	26.60	16.90	19.90
1902.....	70.50	16.00	10.00 to 16.00...	29.23	17.87	20.62
1903.....	81.00	16.50	10.00 to 17.00...	29.00	17.37	20.62
1904.....	81.00	18.00	10.00 to 18.00...	27.50	17.62	21.12
1905.....	82.00	18.50	10.00 to 20.00...	31.50	21.50	23.27
1906.....	91.00	.....	.....	.....	.....	.....

In relation to stone, brick, and other clay products there are in sight no definite increase in prices due to a shortage of materials. Prices of these materials have been influenced in the past by labor conditions and freight rates rather than by the quantities of raw materials available.

As to the cost of the future supply of steel for construction purposes several recent estimates—though none of these were made by the Geological Survey—indicated a supply of iron ores suitable for the manufacture of high-grade steel sufficient to last at the present rate of increase in production for from twenty-five to fifty years. There have been as yet no increases in the price of this material traceable directly to a threatened shortage in suitable ore supplies; but within the present generation such an increase in price may be expected unless new ore supplies are discovered or manufacturing processes are improved so as to bring into use much larger deposits of low-grade ores, or unless the demand for steel in construction work can be lessened by a supply of other materials which may in a measure take its place.

The prices of cement have varied considerably with labor and market conditions, but the supply has, in a measure, kept pace with the rapidly increasing demand, through the establishment of new mills in different parts of the country. A possibly continually increasing supply of this material in different parts of the country is indicated by the results of our investigations of the raw materials suitable for its manufacture; and this continually increasing supply will serve to keep down the future price of the product.

The benefits to result from these investigations of structural materials will be along the lines of greater safety and greater economy in building and construction work as follows:

- (1) In the selection of the best materials.
- (2) In improvements of the quality of these materials.
- (3) In reducing the quantity of materials used through a more thorough knowledge of their strength and other properties.
- (4) Through the discovery of new supplies of raw materials suitable for building purposes, either as such in the form of stone or materials suitable for the manufacture of cement, concrete, "artificial stone," brick, terra cotta, etc., in many different parts of the country, thus avoiding the expense of long distance transportation.

Concerning the possible reduction in the quantity of materials used, it may be explained that architects and engineers in building and construction work now generally use a quantity of material far beyond what would be necessary if the properties of these materials were better understood. In the case of steel they use from two to four times

and in the case of concrete from three to eight times the amount of material which theoretically they estimate to be necessary for a support. This they designate the "factor of safety;" but this large "factor of safety," as they admit, is not so much necessary in order to "meet emergencies" as because of our ignorance of the real strength of these materials, under normal conditions. Although steel has been more carefully investigated than any of our other structural materials, being manufactured from different ores and by different processes, it varies in quality; and much additional investigation is needed to indicate its limits of strength under different conditions and at different temperatures, and how it can be best protected from excessive heat in case of fire.

It is believed, furthermore, that as another result of these investigations we will show how the local manufacture of cement and the use of this cement with local supplies of gravel, sand, crushed stone, and steel rods can be made to go far toward furnishing local efficient substitutes for timber, cut stone, and structural steel in the building operations of the country. This would mean the possibility of utilizing efficiently in different parts of the country local building materials in such a manner and to such an extent as to render this work largely independent of long-haul freight charges.

And it is expected that these investigations will also largely lessen the cost of building operations by lessening both the risks of fires and the damages from fires.

As regards our supply of fuels, it may be said that, in spite of the enormously rapid rate at which our coal consumption is increasing and the wasteful manner in which we are mining and using it, there need be no fear of its exhaustion or a shortage of the supply within the present century. But our supplies of coal suitable for the manufacture of coke, which is the basis of our larger metallurgical industries, are more limited, and there is here risk of a shortage within the present generation unless through better methods of manufacture the quality of the coke from other coals may be improved. Increases in the cost of structural steel are perhaps likely to occur from this shortage in the supply of suitable coke before they do from a shortage in the supply of suitable ores.

Unquestionably in the case of all our coals, year by year, as our mining operations extend deeper and the seams become thinner, the cost of mining, and hence the cost of coal, will increase. One of the aims of the present investigations is that, in spite of this inevitable increase in the cost of coal, by discovering how we can mine this coal with less waste and utilize it with greater efficiency, we can continually cheapen the cost of heat, power, and light to the people. If these investigations can increase this efficiency to the extent of 1 per cent, this will mean a saving to the country of \$15,000,000 per annum.

The fuel problem, as well as the problem in relation to structural materials, Mr. Chairman, seems to me a national problem, because these both have to do with the basal industries of the whole people. I need not argue that question, because these problems are at the basis of our mining and manufacturing work everywhere—based upon the fuel which can be profitably used for heat and power and light.

The magnitude of these industries, too, is so manifest that this hardly needs to be elaborated. The amount of coal used during 1905 in the United States cost the people of this country about \$1,500,000,000.

and as illustrating how rapidly our industries are developing, I may add that the amount of coal consumed during any recent decade equals or exceeds the amount used by the people during all the preceding decades. While that is true to-day, there is every reason to suppose that these increases will continue in the future. If, now, these investigations can increase the efficiencies in the mining or in the use of this fuel to the extent of even 1 per cent or one-tenth of 1 per cent, the actual saving to the country will be very great in proportion to the cost of the investigations.

We claim to have shown how the efficiency of coal in these new processes can be increased two and one-half times in many cases, so that if our claim is made that we increase the aggregate saving by one-tenth of 1 per cent, it certainly seems like a moderate claim.

MR. TAYLOR. You say that 5 per cent is utilized now of the heating capacity?

MR. HOLMES. Yes. In ordinary manufacturing plants about 5 per cent of the heat units in the coal are converted into actual work.

MR. TAYLOR. Have you in mind any expectation as to the extent to which it can be increased?

MR. HOLMES. I have, decidedly, sir. As a result of at least 100 tests it has been shown that on the basis of 250 to 500 horsepower, which would be the average on a small plant in the country, the saving can be two and one-half times; that is a 250 per cent increase, or, by this process, 12½ per cent of the heat units would be transformed into manufacturing work instead of the 5 per cent, as is now the case at the ordinary power plant, and I have no doubt but that further investigations will show how still greater efficiency is possible.

MR. TAYLOR. That would make about what percentage, then, that could be utilized, as you figure it? I am not much on figures.

MR. HOLMES. From 12 to 15 per cent of the heat units would be converted into actual work on this improved basis. There is still much room for improvement, and this improvement will come as we investigate the possible methods of utilizing our fuels more efficiently.

THE CHAIRMAN. Mr. Holmes, is there any reason for designating the place at which these coal tests and experiments should be conducted? Is there any reason why they should be conducted at St. Louis, other than the fact that this testing plant was located there originally in connection with the exposition and the fact that it is now there?

MR. HOLMES. That is all, Mr. Chairman. It is centrally located and accessible to the coal fields over a number of independent railway lines. It is better that no place be designated.

THE CHAIRMAN. Are there any other locations, if the law did not designate the place and the committee should see fit to make an appropriation, where the tests could be carried on more economically, either for the Government or for those interested in the tests, than at St. Louis?

MR. HOLMES. I know of no other one place, Mr. Chairman. We have had requests for the plant from other places, and we have been asked to consider requests for the location of the tests at these other places.

THE CHAIRMAN. Do you consider the operation of this testing plant from the standpoint of economy in transportation?

Mr. HOLMES. Yes. I should say that either St. Louis, or Chicago, or Indianapolis, or Pittsburg, or any one of those places in the great Mississippi Valley which are accessible to other parts of the country by a number of independent railway lines would be suitable as a location. The disadvantage of naming any one location is illustrated in one way: We wanted last year in connection with our coking investigations to take up the investigation of the by-products of coal. But we had at St. Louis no by-product coke ovens, and as their erection would have cost about \$75,000 that was out of the question, and although we were offered the free use of ovens elsewhere we could not avail ourselves of this offer because of this limitation of our work to St. Louis.

We lose now by-products amounting to over \$100,000,000 per annum by allowing those materials to go up in the atmosphere instead of saving them.

The CHAIRMAN. To what do you refer particularly—the aniline dyes?

Mr. HOLMES. No, sir; more particularly ammonium sulphate, pitch, creosote, etc. Bituminous coal contains from 1 to 1½ per cent nitrogen. If all of this could be manufactured into ammonium sulphate it would give us a value greater than that of the coke itself. The output of ammonium nitrate from the Chilean deposits, the great supply of the world, at the present time is about one and one-half million tons. So that we could manufacture from coal as a by-product this large supply of ammonium sulphate, better suited for our uses as a fertilizer in some respects, and considerably larger than the output of Chilean nitrate. The principal use of these materials is as a fertilizer, and as such they are most valuable and are expensive. This great supply, obtainable as a by-product from our coals, will in the future, if saved, be of incalculable benefit to the agriculture of this country.

The CHAIRMAN. What interests are specially interested in the coking industry of the country? Large corporate interests?

Mr. HOLMES. They are to a large extent, but also the individual small foundries. Every foundry in the country needs coke of good quality.

The CHAIRMAN. I mean in the manufacture, not in the use of coke.

Mr. HOLMES. A great many coal companies manufacture their coal directly into coke and sell this coke instead of selling the coal.

The CHAIRMAN. Would it not be to their interest to institute some process by which these by-products could be preserved and utilized and disposed of commercially?

Mr. HOLMES. They say not, because they claim that the quality of the coke made with the by-product oven is not so good as that made from the ordinary beehive oven; hence they are perfectly willing, apparently, to let the by-products go into the atmosphere, inasmuch as it is the coke they are after. This is due largely to the excessive cost of the by-product coke plants under the existing system.

The CHAIRMAN. If it is as profitable as you say, why should they not be desirous of making that profit?

Mr. HOLMES. I believe they will be desirous of doing that, Mr. Chairman, if the method for collecting that material can be perfected, which of course would be of as much use to one of those people as to another, and hence no one of them seems willing to undertake the

necessary but expensive preliminary investigation with a view to improving the process and cheapening the plant.

The CHAIRMAN. Has it been demonstrated to them yet that there is the profit you speak of in these by-products? And if there is, would they not be prompted by their own interests and by the profit that would thereby result to secure and adopt these methods themselves?

Mr. HOLMES. I think they would do this unquestionably if the processes can be simplified and cheapened.

The CHAIRMAN. Would not their failure to do that indicate, then, that there is some question as to the correctness of your judgment with respect to the profit in by-products?

Mr. HOLMES. I do not say there would be \$100,000,000 of profit in them, but that these by-products would have a value of more than that, but the expenses, due to the imperfections in existing processes, are heavy.

The CHAIRMAN. I understand you say 100,000,000 tons.

Mr. HOLMES. No; nearly 2,500,000 tons of ammonium sulphate, which is worth \$62 a ton at the present time, could be obtained from the 40,000,000 tons of coal converted into coke every year, if the processes were so perfected that we could save it all. It would have a value amounting to more than \$100,000,000.

Mr. TAYLOR. Is not the purpose of your tests to enable you to demonstrate that identical fact?

Mr. HOLMES. Yes. The difficulty at present is a twofold difficulty. One is that there is no known process by which all of this nitrogen in the coal can be converted into ammonium sulphate. Even when the coke men try to save it now five-sixths of it is lost, and the process by which this one-sixth of the nitrogen is saved is an expensive one.

Mr. TAYLOR. If that could be demonstrated, you would not after that need to make these investigations?

Mr. HOLMES. We would then publish all such information for the benefit of the public and leave off that investigation. That illustrates the policy we would pursue in all such investigations. Just so soon as we settle any fundamental fact that something can be done along a certain line, and can suggest a process or method for its accomplishment, then all our data are published as a basis for individual effort and enterprise, and that line of investigation is discontinued.

Pursuing that just a moment further, Mr. Chairman, as to this increased cost of materials of construction, you realize the enormous increase in the cost of lumber, and the cost of steel will undoubtedly increase, because of the increased scarcity of high-grade iron ore and high-grade coke. That one of the chief purposes of this investigation is to help discover new and untried resources in the country to serve as substitutes in one way or other for the present materials—to serve as substitutes without increasing the cost.

In regard to the cooperation which I mentioned, there is an important fact bearing on the question you asked. The policy of this laboratory is to do what it can in settling these basal problems, and at the same time to encourage investigation that can be conducted by everybody else who can be brought into cooperation with this work. In the work we have already had under way during this past year we have endeavored to get the cooperation not only of each Government bureau, and without the unnecessary duplication which has existed in

Government work for so long a time, and we have gone further than that, and have endeavored to secure the cooperation of good laboratories in several parts of the country, so that they would take up one phase of a problem, and we would take up something else which they could not do. Another laboratory elsewhere will take up something still different, and we can encourage it to cooperate in the manner indicated. We can thus combine on methods and problems, and endeavor to get results that will either corroborate or disprove the results obtained.

To that end it is the purpose of this laboratory to see that every dollar expended in this country for such investigations, whether from Government funds or other is expended in such a way as would count as a permanent contribution in the extension of our knowledge as to the resources of the country, and how they can best be utilized.

As to the question you raised a moment ago, it is and will always continue to be the policy of this laboratory, that just so soon as we have reached, in any investigation, the point where we feel that the fundamental questions are practically settled, we will turn the results over to the public with all the information we have in regard to them, and let everybody make use of that information. There are so many other problems to be investigated that this policy is the correct one in order that the Government laboratories can be continually accomplishing new results. These results thus promptly become available as a basis for individual effort and enterprise in many parts of the country.

In regard to the confidence which this work seems to command, this is due to the Government's position of impartiality. I do not understand how any other organization could secure the confidence and the cooperation which, in this way, we are securing. We have the cooperation of the railroad companies, the manufacturers, the miners, and of the various smaller laboratories of the country. We are trying to work everyone of them for all the cooperation we can get out of them for the furtherance of these investigations.

The CHAIRMAN. But the expense comes wholly out of the Government?

Mr. HOLMES. No, sir; not at all, Mr. Chairman. From these various smaller laboratories we have actually derived more help than we have extended to them.

Mr. TAYLOR. What do the railroads contribute?

Mr. HOLMES. Freight and transportation. We do not get any money out of them.

Mr. TAYLOR. What do the manufacturers contribute?

Mr. HOLMES. They contribute much of the material that we use in the investigations, and the miners furnish the coal, so that we do not have to buy any coal and we get the free use of much equipment.

In regard to the question, Mr. Chairman, which you just asked, we get all the cooperation that we can. To these smaller laboratories at different institutions we do not contribute money; we simply cooperate with them in helping them to secure better methods in furnishing materials with which they can carry on their investigations, and we try to watch their work to see whether their results fit in with those obtained at our Government laboratories.

In connection with the transportation of materials, we guard carefully the materials which we collect in their shipment. When we

started into this work occasionally a railroad company would take a carload of coal shipped to our plant for testing purposes and later put another carload of coal in place of it. To prevent a recurrence of this we had to put Government labels on these cars, and put them under Government protection. In this way we secure the integrity of every sample to be tested, and we know the history of every sample as it is collected by our own men. The Government does in this way what a private individual could not do, and this is one reason why the public has confidence in this work. We are trying to make every dollar appropriated by the Government to this investigation count as a definite contribution for some beneficial result, and we are also trying to make every other available agency cooperate in helping to accomplish this result.

Mr. TAYLOR. Can you give any idea of what the proportion of expense would be—that contributed by the railroads in the matter of transportation of material and men as compared with the money which the Government contributes?

Mr. HOLMES. We estimated a saving last year of about \$12,000 in freight and transportation.

The CHAIRMAN. Speaking of these by-products, are you aware of the reason why the Henry C. Frick Coke Company, connected also with the steel trust, I believe, and other large coke companies capitalized anywhere from \$10,000,000 to \$25,000,000, with practically unlimited means and unlimited credit, and with every facility at their command necessary to develop the profit in their products and in their by-products—do you know why, and can you state to the committee and give any reason to the committee, why they have not, with their means and facilities and desire for profit, conducted the investigations necessary to ascertain the methods by which these by-products can be utilized for the purposes of profit such as you have indicated?

Mr. HOLMES. I can, Mr. Chairman, because it has been only a few weeks since I talked over the exact situation with the president of the Frick Coke Company, who said to me that the question before them was a question of coke for the manufacture of steel; that he did not believe that the coke which was made from a by-product oven was as valuable for the manufacture of steel as the coke made by the old-fashioned beehive oven, and that the purpose of his company was the making of coke for the one purpose, namely, the manufacture of steel.

The CHAIRMAN. In other words, as I understand you, his reason is that in making coke from a by-product oven they would lose as much, if not more, from the value of the coke for the manufacture of steel under the value of the coke manufactured in the beehive oven as would offset the profits you think the by-products would bring?

Mr. HOLMES. Yes; that was his opinion.

The CHAIRMAN. That being the case then, what would be the practical net result if, as a result of your investigations, you had demonstrated the theories or ways whereby these by-products could be produced, they would not go into the business of manufacturing coke from a by-product oven? What would be the benefit of making the investigation?

Mr. HOLMES. Coke with them, of course, is the means to an end. Their great purpose is the manufacture of steel. They are, therefore, interested in making coke, because it helps them to make a good quality of steel. They do not sell coke. They are not in the market

at all for that purpose, nor for the manufacture of by-products or side issues. Nevertheless these large corporations are investigating this subject. Their results are "confidential," and they are purchasing coal properties, and I feel certain that these large corporations will sooner or later be saving these by-products. One important difference between their investigations and those of the Government laboratories is that our results are for the benefit of the public, and they help all owners to handle their coals intelligently. A large part of the coke of the country—I can not say just what proportion—is used in the foundries of the country. That is manufactured by coal companies, and is not used in the manufacture of steel, but for the manufacture of cast iron of different kinds used in foundry practice. A number of these companies have expressed the opinion that they would like to go into the by-product coke manufacture if any process could be contrived by which they could save this five-sixths of ammonium sulphate, which under existing processes is lost.

The CHAIRMAN. But if that saving were made at the expense of the coke itself, what advantage is it even to that class of coke manufacturers?

Mr. HOLMES. At the present time, Mr. Chairman, they can save perhaps one-sixth of that nitrogen in the form of ammoniate sulphite, but five-sixths of it is lost by the existing process. This loss swamps the profits. We wish to show how the other five-sixths can be saved for the benefit of the farmer as well as for the coal men.

The CHAIRMAN. Suppose they had to sell their coke at a less price in consequence of this manufacture of coke in a by-product oven; unless that gain was greater from the sale of the by-products than the loss in the manufacture of the coke itself, what advantage would there be?

Mr. HOLMES. If they could save that five-sixths of the loss of ammonium sulphate, now lost, that would save the by-product coke situation. In the manufacture of by-product coke, the pitch for roofing and briquetting, the creosote for timber preservation, and the aniline dyes all constitute useful materials, and we now pour them into the atmosphere from 40,000,000 tons of coal every year. Meanwhile we purchase our ammonium nitrate from Chile, and a large part of our creosote from England, Germany, and Belgium. We are wasting our fuel resources in a manner that is absolutely criminal. One great purpose of our investigations is to show how this great national waste can be transformed into a national profit.

---

THURSDAY, *April 26, 1906.*

## INVESTIGATION OF FUELS AND STRUCTURAL MATERIALS—Continued.

### STATEMENT OF MR. EDGAR MARBURG, OF PHILADELPHIA, PA.

The CHAIRMAN. What position do you hold—any official position?

Mr. MARBURG. I am professor of civil engineering in the University of Pennsylvania, and secretary of the American Society for Testing Materials, a society whose work is very closely related to this subject.

The CHAIRMAN. When was this society organized?

Mr. MARBURG. About eight years ago in this country. It forms part of an International Association for Testing Materials, which has chapters, or rather divisions, in all civilized countries.

The CHAIRMAN. Has the society any facilities for practical tests of material?

Mr. MARBURG. None at all, except those that are provided incidentally by members, through the courtesy of members who are in position to extend such courtesies. The society has no permanent headquarters and no facilities for carrying on work in a systematic manner; in fact, no effective facilities of any kind.

Mr. TAYLOR. Have they any funds for their use?

Mr. MARBURG. Very limited. The funds now are limited to membership dues, \$5 a year.

The CHAIRMAN. What class of men constitute the membership?

Mr. MARBURG. In a large sense, all those interested in building materials, scientists, engineers, and manufacturers of cement, iron, steel, and so forth.

Mr. TAYLOR. What is your membership?

Mr. MARBURG. To be exact, it is now 790. It has risen to that from 175 in the last four years, and is going up at the rate of 150 a year.

Mr. SULLIVAN. I presume the international society has no facilities for conducting the experiments?

Mr. MARBURG. No; except they are very much better situated inasmuch as the facilities in foreign countries are incomparably better than in this country.

Mr. TAYLOR. The facilities in foreign countries—are they governmental?

Mr. MARBURG. They are quasi governmental. I can not say offhand just what the relations are between those laboratories and the foreign governments, but they are official relations. I can not define them closely.

Mr. TAYLOR. The government has some part in all the technical institutions?

Mr. MARBURG. Yes; they are endowed by the government. They are endowed, some of them at least, in part by the municipalities in which they exist; and they have other sources of income. The leading institution of this kind is at Berlin. May I say a word about that?

The CHAIRMAN. Yes, certainly.

Mr. MARBURG. That is a marvel in its way. I was looking over an elaborate publication, a quarto almost as big as this [indicating a volume], this morning before taking the train to come here. That volume was gotten out two years ago. It is a history of that laboratory, and it is a thing of which to say it is a credit to the nation that produced it is putting it very mildly. That institution started practically in a stable thirty years ago. Two years ago it moved into its present quarters, which as a perspective view of the building shows in this publication, must have cost a million or two dollars. It is a governmental laboratory. It would cost that much in this country with its equipment. I was over there five years ago, and the establishment then was incomparably better than anything this country affords, and the buildings they were in then have been abandoned for this new one.

Mr. SULLIVAN. Is there any cooperation between these societies abroad and the governmental institutions? In other words, do the societies, as such, contribute anything to the experiments which are

made by the Government, or do they simply take the results of governmental experiments for their own uses?

Mr. MARBURG. I can not speak definitely as to that; I can not speak positively about that. But I should say this, in a more general way, that the work that is carried on there at those laboratories is, in part, carried on at the instance of the Government, of the various branches of the Government, and in part for private plants, men who want investigations made, and in part the work comes from other countries; and the provisions for conducting that work are designed to make the laboratory as largely useful as possible in promoting knowledge concerning the work that these laboratories are designed to further.

Mr. SULLIVAN. I take it from your statement that there is really no cooperation, but if a person wishes to have experiments made at the governmental laboratory he can get them by paying for them?

Mr. MARBURG. The testing for the Government is conducted there.

Mr. SULLIVAN. As the darkey said: "It is not mutual on both sides." I do not see how you can have quasi cooperation. It seems to me the Government does it all, from your statement.

Mr. MARBURG. I do not know whether I quite catch the point.

Mr. SULLIVAN. I was trying to ascertain whether these societies, either as societies or through their members acting individually, contribute either money or knowledge or services to the work which the Government is doing in the way of testing materials.

Mr. TAYLOR. Who provides the running expenses?

Mr. SULLIVAN. The Government does that.

Mr. MARBURG. The Government, and also through personal channels; but mainly governmental. Perhaps this statement will answer that question. The head of the International Association for Testing Materials is also the head of this testing laboratory at Berlin, and the scientific investigations that are carried on there by him and by his staff are published in large part by the International Association of Testing Materials in their publications.

Mr. SULLIVAN. But his salary is paid out of Government funds?

Mr. MARBURG. Yes; almost wholly out of the revenues of the establishment.

Mr. SULLIVAN. Does the Government give publicity to the work as well as the society?

Mr. MARBURG. Yes, sir; it does. To what extent the work done there is published solely through its own channels and to what extent it is published through extraneous channels I can not say, but it is done in both ways.

Mr. SULLIVAN. I was trying to find out whether the societies of architects and so on are more public-spirited abroad than here. Here, as I understand it, they contribute nothing, but expect the Government to pay the entire expense. That is true, is it not?

The CHAIRMAN. Has your society at any time any plans of cooperation with the Government in connection with carrying on these tests of building materials?

Mr. MARBURG. So far as we know, there are no channels through which that can be effected. We know of no channel through which that can be done. The Watertown Arsenal is the only testing establishment, and the facilities there are not at all adequate.

The CHAIRMAN. We have the National Bureau of Standards in Washington, and it is engaged in the testing of building material.

Mr. MARBURG. So far as I know, they have not gone into the field, as yet, to any extent. That institution is intended to serve the pure-science side more than the applied-science side, so far as I am informed. They have lately made a departure in sending out standard samples, and are preparing to send out standard samples to the foundry interests of the country. I was talking to their chemist a week ago; I was talking about that work—and it is truly of a very useful kind, and it is carried on at very small expense.

The CHAIRMAN. This association of engineers and architects in foreign countries that you speak of is cooperating with the Governments of European countries in the carrying on of these tests, is it not?

Mr. MARBURG. Oh, yes.

The CHAIRMAN. They are not relying wholly on the Government to establish and maintain laboratories for the conduct of these investigations?

Mr. MARBURG. Essentially so. I think without governmental support those laboratories could not exist, and the contributions from their own sources are relatively insignificant. Those laboratories are maintained practically under governmental auspices.

The CHAIRMAN. Are there any other European governments except Germany that maintain governmental laboratories for purposes of this kind?

Mr. MARBURG. The little Republic of Switzerland has a laboratory, and has done work for years.

The CHAIRMAN. How extensive is it? Is it any greater than the one at Watertown Arsenal or the Bureau of Standards here in Washington?

Mr. MARBURG. Very much more so. I have not seen the Bureau of Standards in its latest development, but I was over at the laboratory at Zurich five or six years ago, and their plant and their publications are of such a character that nothing done in that line in this country can be compared with it.

The CHAIRMAN. Now, Professor, we started in on a line of inquiry here which was perhaps foreign to what you had in mind. If you have any statement which you wish to make now in connection with the appropriations for the testing plant, we would be very glad to hear from you.

Mr. MARBURG. Gentlemen, I will make a little statement offhand. I will not make a speech or tax your patience unduly, I hope, but I will mention a few points that occur to my mind.

I have been interested in this field for a good many years. The first thought is this: That the need of an establishment of this sort, whether the funds are provided by the Government or through private sources, no matter—the need is so apparent that the sentiment of engineers, architects, manufacturers, and builders, and all classes who are most immediately interested in accurate knowledge concerning building materials, would be a unit on the extreme desirability of providing facilities of that kind.

Now, as it appears to me, such facilities can only come through one of two channels; first, through the National Government, and second, through private endeavor on a large scale. The second one is a very remote one, because—

Mr. SULLIVAN. It lacks organization also?

Mr. MARBURG. Yes; it lacks organization also. A man may give money to establishments to benefit men who sound his praises afterward, but when it comes to putting money into an establishment of this kind on a large scale—as, for instance, Mr. Rockefeller, in maintaining in New York and in founding there a laboratory of medicine on the scientific side—that outlook seems very remote to me.

Now, save through Federal governmental support, it is difficult to see through what channel such work can be carried on on a scale at all commensurate with its extreme importance. To a layman it would be difficult to understand how unsound our knowledge concerning building materials is, and how we have to pay for that ignorance.

You have heard of “factors of safety,” which means the extent to which materials can be subjected to pressure and the safety with which they can bear weight and resist fire. That “factor of safety” is more often a factor of ignorance. No matter how much our knowledge of materials and construction may advance, we should make some provision for contingencies which are unknown and which in the nature of things are unknowable. But as matters are now in the present state of knowledge, there is no doubt that enormous sums are wasted every year by making things unnecessarily strong. The conservative man realizes that he has insufficient knowledge; that he can not approximate very closely to the proper size of things. Now, the conservative man will err on that side. On the other hand, the man who is unscrupulous or unduly venturesome will err on the other side, and the results are disastrous, and they will occur with more or less frequency.

I might mention a single instance which is typical—the collapse of that Ireland building in New York city, built of cast-iron in accordance with the requirements. It was examined by the building inspectors of New York City, and it met the ordinary requirements. The same tests of cast-iron were made at Phoenixville, and the results were astonishingly low. The usual values allowed for cast-iron columns, sanctioned by the building laws in certain municipalities, were entirely too high, and the safety of buildings erected under those laws is due to the fact that the building is seldom loaded on the floor space to the extent to which it may be.

That is a single instance. It is not necessary to multiply them. Just as soon as a new material or a comparatively new material or a combination of new materials, as for example reenforced concrete, is found, that moment a host of problems present themselves. A layman may say such buildings are constructed safely. On the other hand, it is true that a number of such buildings have collapsed. It is also true that any man of experience and ability can design a reenforced building, so that he can say, “That is certainly safe.” But he can not say how much material has been wasted in the construction of that building.

Now, the amount of saving in all lines of construction that can be brought about through the carrying on of work of this kind is disproportionately large to the sum involved for the maintenance of such a building and plant as is now proposed under the auspices of the Federal Government; and taking a larger view of it, as a matter of national pride, we have to rely to a large extent now for knowledge and information of this kind upon European governments.

The thought has often been thrown out that this country is not contributing its share toward furthering knowledge in a line of work

which has developed more largely in this country than in any other. In other words, the need of information is greatest in this country. We are the largest users of materials, and we contribute least to the promotion of knowledge of that material.

Now, it has been suggested frankly, as it is said occasionally: "They have been getting results; why not use those results ourselves instead of building a laboratory of that kind in this country?" Men have gone so far as to say, "What is the use of having polytechnic schools in this country? Let our young men learn in those schools abroad, and come back over here and do the work for us."

It is not necessary to answer that argument. Wholly aside from the sentimental aspect of the question, from the practical standpoint, their problems abroad are not our problems. Their building materials are not our building materials. Their attitude in work of that kind is not the American attitude. They are apt to carry on their work there with ultra refinement. Here in America we want practical results. We are not so prone to go to hair-splitting refinements. The information we need does not seem to be forthcoming, and the point is to get it in the most direct and practical way.

A laboratory of this sort that is properly equipped and properly manned and properly managed in the right spirit, not as an ornamental appendage, to investigate things which no one cares about after they are published, but to cooperate and decide upon an enlightened policy and formally prospect for us in consultation with such an advisory committee as was recently appointed by the President, whose work every year is subject to scrutiny and criticism, would be invaluable. As to the value of such an establishment in this country, I wish you could see it as I do, gentlemen. The perspective is almost boundless.

Mr. TAYLOR. Can you form an idea of what such an establishment would cost, or in regard to a system of testing?

Mr. MARBURG. I am not a prophet, and I hesitate to hazard a prediction or make such a statement. Any statement I might make would be a mere estimate. But if fairly viewed, I think the inauguration of an establishment of that kind would involve a large expenditure, if it was commensurate with the work done by other countries, and it would mean an increasingly large outlay for a period of years. We feel that the time is bound to come when that will be done, whether through governmental channels or otherwise.

Mr. TAYLOR. Can you not give us an estimate?

Mr. MARBURG. It would be mere guesswork; say, \$100,000 a year as a starter.

The CHAIRMAN. If I understood you correctly, this project is another one of the numerous incidents which are the outgrowth of our new international leadership? [Laughter.]

Mr. MARBURG. I would not like to put it that way, but the responsibilities do rest upon us. We must either use knowledge at second-hand, gotten at somebody else's expense and warmed over to suit our needs, as best we may, or get it homemade and for home consumption.

The CHAIRMAN. I want to ask you if you think, along this line at the present time, we are wholly dependent upon individual research and effort in this direction. Up to the time that the Government commenced the construction of this testing plant, and independent of the few institutions I have named—the National Bureau of Standards and the one at Watertown Arsenal—the building interests of the

country were wholly dependent upon individual research and effort for the purpose of ascertaining the relative values or strength of building material. Now, if the Government goes into this business for the entire country, to what extent, if at all, will that tend to retard or stop the growth of individual effort in that direction? Would it not take away one of the most powerful incentives to individual effort?

Mr. MARBURG. That which the Government can do, sir, compared with that which ought to be done, is, I am frank to say, as the finite is to the infinite. No matter how large an establishment might be brought into being overnight, they can begin with the most important problems—problems that are recognized as problems crying for solution; but so far as exhausting the field or covering it adequately, or tending to dwarf the initiative of individual effort, I think there is no danger of that. I think that has been the experience of other countries.

The CHAIRMAN. Suppose years ago the Government had started out and established a bureau for investigating questions relating to the necessary improvements in transportation of all kinds. Would not that have prevented the individual effort which has given us our development in that direction to a far greater extent than we would have succeeded in obtaining if the Government had undertaken it?

Mr. MARBURG. The cases to my mind are not parallel, if you will pardon me for saying so. I think it is certain that if such public improvements as you mention were conducted under Government auspices, rather than being left to individual initiative, the results would have been to the disadvantage to the country. I think there is no doubt about that. But when it comes to providing machinery for ascertaining the physical properties of the natural resources of this country, in the natural state or in a modified state, in a manufacturing form, the question, it seems to me, is a very different one.

It is almost impossible for me to conceive of any channels through which such work can be carried on privately on a scale at all adequate. For instance, take the manufacturer of iron and steel. What incentive has the manufacturer of iron and steel to make tests of iron and steel? He knows his product will be used; whether economically or not he does not care. In fact, on the contrary, the more steel that is used, wasted, and misused the more interest he has in it and the more he is benefited, from his standpoint.

So far as the consumer is concerned, it is to the interest of the consumer to promote knowledge of the principles of engineering. But what facility has he for doing so? Occasionally, when a large enterprise is inaugurated, like the Blackwell Island Bridge, and certain things are discovered and adopted, as, for instance, the nickel-steel I bars, it is not known in ninety-nine cases out of one hundred, and the only thing to do is to guess on enough and make things strong enough. But investigations of engineering designs are distinctly hampered through a lack of adequate knowledge concerning the physical properties of the material with which engineers deal. There is no question about that.

If any evidence be needed to emphasize that point, I would suggest, for example, the responses that came in pursuance of a circular sent out by the Bureau of Forestry some years ago, when the timber industry was under discussion. With one accord it was hailed with delight that the timber resources of the country and their physical characteristics were to be determined. The knowledge brought to

light up to date concerning timber has far more than repaid the Government the relatively little cost attached to the making of those tests.

The CHAIRMAN. What department of the Government has conducted these timber tests?

Mr. MARBURG. The Bureau of Forestry.

The CHAIRMAN. In what particular is the result of those tests valuable?

Mr. MARBURG. For example, they maintained that the bleeding of pine did not impair the strength; that bled and unbled pine had the same value. That was made apparent by many experiments that had carried conviction to minds unwilling to see.

Mr. TAYLOR. You refer to Southern pine?

Mr. MARBURG. Yes. I can not follow that thought out further. I am trying to make very careful statements. I can not tell you just what advantage that was to the timber interests of the country, but it was of very great value, I have no doubt. I can not give you statistical information about that. It is certain that those tests showed that fact conclusively.

If you want to go into further details, I can tell you other things that those tests brought to light. That was a matter of important economic interest.

Mr. SULLIVAN. If there are other things, I would like to hear from him, would you not [addressing Mr. Taylor]?

Mr. TAYLOR. I would not mind it if he gave us things as good as that. But bringing the discussion back to the market of the turpentine orchards of my State of Alabama and the State of Mississippi, they must have doubled, at least, the lumber resources of that country and the wealth of the country.

Mr. SULLIVAN. Unless the chairman has some objection, I would like to have you [addressing Mr. Marburg] give us briefly the results of some other given tests that have been of benefit to other interests, in addition to that one.

Mr. MARBURG. I can not mention their other results in connection with the timber tests that will appeal to you as laymen, perhaps, as forcibly as the point I have just mentioned, but there are a great many unknown elements in the designing of a timber structure on which light has been thrown through these tests. I will mention what I consider the most important one first.

The most important one was this: It was shown that most of the tests that had been made prior to this series of tests were comparatively valueless, and many of them wholly valueless, owing to the fact that the percentage of moisture was a variable one. Timber will hold about 10 or 12 per cent of moisture in a room of this temperature, at 70°. Now, wood exposed to out-of-door exposure is very much weakened in consequence, and unless in the testing of timber the pieces are reduced to a constant moisture of 10 or 12 per cent the results are in no way comparable. That was not known before—the influence of temperature on timber. It was not recognized but by one man—Bousenger, of Munich.

Another point brought out in those tests was that most of the public tables concerning strength of timber beams were valueless, because those tables were based on the assumption that if you load a beam it will break in the middle, and if not weighted at the middle it will shear

in the center or slide out like this [indicating]. Suppose you have a pack of cards, glue the cards together, cut them in the middle and bend them, and they will slide both ways.

Mr. MARBURG. The load that a beam can carry is constant. A beam 5 feet long can carry just as much as a beam 10 feet long, the same load; that is, a 12-inch beam up to 20 feet. The safe load is constant. The strength of the beam depends on the shearing, not on the fibers. That fact was not brought out by these experiments; the knowledge was not sufficiently great. It was known that if you took small pieces of wood and tested them, and they would shear, and longer beams would shear. But those tests were carried to a sufficient extent to show that the load—that is, with a soft timber beam up to a certain span—the load was constant. That was an important fact that the architects were wanting to know. I can show you a table that was prepared as recently as five years ago, and is contained in a certain handbook, which says that the strength of certain beams was much greater than it really is. As I have just stated to you, the strength of a wooden beam is constant for a span up to about 20 feet, provided the load be uniformly distributed; while, according to those tables, the load for short beams is several times as high as it ought to be.

Mr. BROWNLOW. What would be the difference in value to the country of a test made by the Government of these building materials, and a test made by an organization of architects, engineers, or corporations.

Mr. MARBURG. No difference; but it is almost inconceivable that a work of that kind can be carried on on a sufficiently large scale by other bodies. Such work is carried on now in a desultory way, but to map out a broad programme and carry it out adequately through private channels appears to be almost hopeless. Where is the money to come from? If one of our millionaires should endow an establishment of this kind, as Rockefeller has endowed an establishment on medical research in New York, and appoint the ablest men in the country, as he has, to manage it, I have no doubt it would receive equally high credit.

The CHAIRMAN. Professor, if there is such a universal demand for knowledge on the subject of building material in so many different and specific cases, would it be practicable for your association or any body of engineers to incorporate a company for the purpose of establishing a plant such as the Government is now asked to establish and conduct their investigations for the benefit of those who are in need of the information concerning material which they contemplate using in the construction of buildings that they are erecting or are going to erect so as to make it a profitable enterprise?

Mr. MARBURG. No, sir; I should say, unhesitatingly, no. Such things can not be made profitable.

The CHAIRMAN. Why not? If the demand for these tests is so great, would it not be profitable for the people who are to erect these buildings, or who are going to erect them, to have their material tested in advance?

Mr. MARBURG. It would be profitable—it might be profitable if the knowledge that might be accumulated in a laboratory of that kind were parceled out for private consumption; and that is what is being done now more or less. Each railroad maintains its own little establish-

ment, and brings to light certain information which is carefully guarded, and which the men are not at liberty to publish.

Mr. SULLIVAN. To add a suggestion there: If the knowledge could be monopolized, if the fruits of the knowledge could be secured by patents so as to give the patentee all the products of his invention, then there is a possibility that it might be done.

Mr. MARBURG. Yes.

The CHAIRMAN. If the individual or the corporation that is contemplating the erection of some great structure could save in the amount of material a large sum such as we are led to believe from the descriptions we have had here would be saved, it would be worth a good deal to him, and he could well afford to pay for the tests of the material which he contemplated using in a structure of that kind, or a work of that kind. Take municipalities for example.
